Which of the New Deal Measures Should I Have Voted Against?

EXTENSION OF REMARKS

OF

HON. JOHN A. MARTIN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

ARTICLE FROM THE COLORADO SPRINGS NEWS OF MAY 13, 1938, AND RADIO ADDRESS BY HON. JOHN A. MARTIN, OF COLORADO, ON NOVEMBER 4, 1938

Mr. MARTIN of Colorado. Mr. Speaker, under leave granted by the House, I submit for the RECORD a radio talk made by me over station KVOR, Colorado Springs, Colo., in my congressional district, on Friday evening, November 4, 1938, immediately following a national broadcast by the President, and repeated over station KGIW, Alamosa, Colo., in my district, on November 5, 1938.

Under the same leave, I submit and preface my radio talk with an editorial from the Colorado Springs News, in which the editor, Mr. John M. Green, meets the charge that I was a "rubber stamp" by showing that I was an advocate of the social and economic philosophy of the New Deal years before the term "New Deal" was coined.

MARTIN NO RUBBER STAMP

[From the Colorado Springs News of May 13, 1938]

JOHN A. MARTIN, of Pueblo, in recent years an attorney, but proud of earlier affiliations with both the newspaper and the railroad industries, in the latter of which he was a heavy-shoveling fireman, will seek reelection as Congressman from the Third Congressional District. We don't think there's any doubt of it.

Mr. MARTIN is a Democrat—a progressive Democrat, a Roosevelt Democrat. Dispatches from Washington state that "MARTIN has indicated he will run as a '100 percent new dealer.'" His record, he said, "is too completely on the side of the administration to do anything else." We imagine that pretty well tells the story. For Congressman JOHN A. MARTIN has been and is a new dealer. In his representation in Congress of the people of his district—southern and southeastern Colorado, including El Paso County—he has been consistent in his support of President Franklin D. Roosevelt and his policies. Some of his constituents don't like that. Others do. But upon one thing all should be able to agree, whether they are political friends or enemies of the Congressman. That is, he has shot straight as he has seen it. And despite the consistency of his support of administration policies, he is far from what is now being charged to many of such consistency. In brief, he is no rubber stamp. Not in any sense of the word. For JOHN A. MARTIN always has stood on his own feet and always has done his own thinking. To that extent he is a rugged individualist.

If time and tide have found JOHN MARTIN supporting the New Deal faithfully, consistently, it is because the plain-speaking, hard-hitting Puebloan is a leader, not a follower in New Deal philosophy. He is a New Dealer himself, has been for many a year past, will be for many a year to come.

So, whether you like JOHN MARTIN and his political philosophies or you don't, it is well to keep in mind one thing: They are his very own. He is not compromising with himself when he supports the New Deal. He is furthering his own convictions. And that isn't rubber stamping in any possible interpretation of the phrase.

My radio address is as follows:

WHICH OF THE NEW DEAL MEASURES SHOULD I HAVE VOTED AGAINST?

Friends and fellow citizens in Colorado Springs and El Paso County, it is a big assignment for a mere Congressman to follow the President on the air; vastly more difficult than following him in Congress, for doing which an element in the Third Congressional District is demanding my defeat next Tuesday.

They say this district should be represented by a man who will assert his independence and exercise his own judgment, instead of following the leadership of the President. Now, how would this be done? The only way I know is by opposing the President, by fighting him. And in order to assert his independence and exercise his judgment, what would he fight the President on? It has been a big program with many major acts, the greatest in the history of Congress. It has taken a big program to pull this country out of the wreckage in which Franklin D. Roosevelt found it on March 4, 1933. It must have been on some of these measures, and on which the President was wrong, that I should have asserted my independence and opposed my judgment to his and voted against him. Surely they would not ask me to oppose him when he was right.

Now, let us take a run over the record and see where he was wrong and when I should have opposed him:

Was it the legislation empowering the President to break the strangle hold of the gold-standard dollar on the economic throat of the Nation? I voted for that. The Supreme Court has sustained it.

On March 4, 1933, the dollar was worth $1.75 in all other commodities. A dollar could buy $1.75 worth of anything else. Under the authority given him by Congress the President cut it 40 percent. As a part of the process he raised gold from $22.67 per ounce to $35, and silver from 27 to 77 cents, pulling the mining camps of the West out of the graveyard. It was predicted that the devaluation of the dollar would result in ruinous inflation and destroy the value of the American dollar. Six years have passed and it is the soundest dollar in the world. Why not? We have twelve billions in gold, more than half the monetary gold of the world, and it is ours, and nearly three billions in silver. That ought to make a good backlog

for the five billions of currency in circulation, about 250 percent. The law only requires 40 percent.

Was it the legislation striking the gold-payment clause out of $100,000,000,000 worth of debts, public and private? I voted for that. The Supreme Court has sustained it.

This $100,000,000,000 never could have been paid in gold, but the metropolitan newspapers and the CONGRESSIONAL RECORD of that day are full of direful predictions that repeal of the gold-payment clause would absolutely destroy the credit of the United States at home and abroad. The answer is the credit of the Government has never been better, either at home or abroad. Its credit is still worth untold billions.

Was it the legislation to reform and control the Federal Reserve banking system of the country so that it could not again pour the people's deposited wealth into Wall Street to finance another orgy of speculation and placing upon the System some checks which would make it more a servitor of public interests and less a servitor of private banking? I voted for that. It was not even attacked in the courts.

I studied that legislation and supported it on the floor, although my remedy would have been for the Government to take over the Federal Reserve System. Some day it will. But I learned a long time ago that you can't win a war by sniping the commander in chief simply because he doesn't fight it your way.

Was it the legislation placing a Federal guaranty under the bank deposits of the Nation, which the American Bankers' Association said would destroy the banking system and advised its members to disregard? I voted for that.

This act is the reason bank deposits have gone up to $50,000,000,000, about where they were before the panic, and your money is safe as long as there is a government of the people at Washington.

Was it the vast enlargement of the loan powers of the Reconstruction Finance Corporation? I voted for that.

This legislation went far beyond the original very limited objectives of R. F. C. as set up by Mr. Hoover, such as the $90,000,000 loan Mr. Dawes made his own banks just preceding his resignation as Chairman of the R. F. C. The Government will lose half of this. Under the New Deal, R. F. C. refinanced and reopened more than 5,000 banks. Uncle Sam is the Nation's biggest bank stockholder. Don't tell me he is not interested in the welfare of the banks. R. F. C. refinances building and loan associations, mining companies, irrigation and drainage companies—it has done this for every such company in the Arkansas and San Luis Valleys—now it is extended to small manufacturing and commercial businesses. I am very strong for R. F. C. as a permanent agency of the Government.

Was it the legislation to place the gambling stock and commodity exchanges of the country under Government regulation to make them play the game fairly and requiring them to lay their securities on the table at Washington before unloading them on the public, in order to avoid another such orgy of speculation as that which wrecked the prosperity of this country in 1929 and cost American investors $100,000,000,000? I voted for that.

Mr. Whitney, then president of the New York Stock Exchange, who led the fight against the act, predicted that it would destroy the exchange and securities business of the country, but the Supreme Court has sustained the law, the stock exchanges are still doing business at the old stand, and Mr. Whitney is in Sing Sing Prison.

Was it the legislation to reform the outlaw power empire of this country, with its fantastic 10-story holding-company structure, whose fictitious stocks shrank from $19,000,000,000 to $3,000,000,000 when the crash came, a loss of $16,000,000,000 to investors? I voted for that. The Supreme Court has sustained it.

The holding-company magnates are unbending their necks, and their companies are coming down from 10 stories to 2 stories, getting a little closer to the foundation, a little closer to the lowly power companies at the bottom of the heap which sustain and support them.

Was it the Social Security Act? I voted for that. The Supreme Court has sustained it.

That act is the basis and model of every State social security act in the country, including that enacted by a Democratic administration in Colorado, under which 37,000 families are assured the necessities of life, and under it the Federal Government contributes one-half the amount of the pensions now being paid the country over. That act also established unemployment insurance, under which today 40,000,000 workers are enrolled. Just think of it, 40,000,000 workers! A number greater than the combined armies of the world. That act also carries and helps finance mothers and children's compensation, and aid for the blind, and for hospitalization.

The Republican Party in its last national campaign denounced that great humane measure and proposed to repeal it.

Was it the Home Loan Act, under which more than a million homes were refinanced for more than $3,000,000,000, or the Farm Credit Act, under which the same number of farms were refinanced for a similar amount and at little more than half the old private interest rate? I voted for that. And for supplementary acts setting up Federal building and loan, and crop loan, and other agencies, to make the home owner and farmer self-helping.

Was it the farm program, to rescue agriculture from the state of absolute bankruptcy in which Roosevelt found this basic industry of the national life, and give the unorganized farmer some degree of that economic security which highly organized industry, both employer and employee, is able to secure for itself? I voted for that.

The new Farm Act is the product of the best minds in the Department of Agriculture, in the agricultural colleges, in Congress, and in the farm organizations. It retains the best features of the methods heretofore attempted to stabilize agriculture. It is a little early to say it will not work. For this fiscal year the farmers were voted $1,000,000,000 on their program by Congress. Thirty percent of all tariff payments goes into this billion. This had long been talked about by the Republican Party, but the New Deal did it.

Was it the Sugar Act? I voted for that. Sugar comes close home to a man from the Arkansas Valley. What has been done by this administration for sugar, they ask? Well, first, may we ask what they did for sugar? Let us take a look at the record. On March 4, 1933, the Republican Party had been in power for 12 continuous years—in the White House, in the Senate, in the House of Representatives. If the Republican Party wanted to do anything for sugar, or could do anything for sugar, it certainly had a long time and all the power necessary to do it.

But on March 4, 1933, the sugar companies were broke, their stocks were down 80 to 90 percent and going begging, their stockholders were holding the sack; the beet growers were broke, the beet workers were on relief; sugar was in the ditch.

What the Republican Party did for sugar reminds me of an incident that I heard on the floor of the United States Senate when I was first in Congress, when that body was distinguished by the presence of John Sharp Williams, of Mississippi. That was back in the days when the Civil War was still an issue, and occasionally a northern Senator would air his views about the wayward South, and what the North had done for the South. On this day a northern Senator was holding forth on the old theme, when John Sharp Williams rose to his feet and made an interjection about as follows: He said, "All this continual talk here in the Senate about what the North has done for the South reminds me of an incident at a colored revival down in my home town in Mississippi. They finally got everybody up to the bench except a poor old fellow who hung back in the corner. He was half blind and all crippled up and pretty nearly a total loss. Night after night he was urged to go forward and tell the people what the Lord had done for him. At last the old man gave in and hobbled down the aisle and turned around and said, 'Well, brothers and sisters, I can tell you what the Lord has done for me; the Lord has done ruint me.' "

Since 1933 the sugar companies have again been making money; their stocks have gone back to nearly the 1929 level; their stockholders are again getting dividends; the farmers are getting $6.50 instead of $4.50 per ton for their beets; and the workers are getting $22 to $23 per acre instead of $12 and $13. And sugar now for the first time in its history has a fixed and assured place in the national economy.

Was it the legislation establishing the civilian conservation camps, which took hundreds of thousands of boys off the streets and highways and gave them a practical education in usefulness and citizenship, and with a check for $25 a month going home to their parents, or was it the legislation creating the National Youth Administration, which is helping to educate hundreds of thousands of American boys and girls who would otherwise be robbed of the privilege of an education? I voted for these acts and for every dollar that has ever been voted for them.

Was it the Tennessee Valley Authority, initiating a national water-power program and furnishing a yardstick for power? Or its offshoot, the Rural Electrification Act, to give the village and farm population of this country the comforts and conveniences of light and heat and power, such as the people of the cities enjoy? I voted for that, and I am working to establish these projects in my district. Two are already established and others are in process.

Was it the Flood Control and Soil and Water Conservation Act, under which the Federal Government has begun a great long-time program to save and to utilize the chief sources of the Nation's wealth, its soil, and its water? I voted for that.

In the long run, no program so vital to the future of America has been inaugurated by President Roosevelt, and all over in the land—in Colorado and in every State—the Government engineers are busy on the program to stop the ominous processes of erosion and waste and to convert floods into crops, into forests, into herbage, and into power.

Was it the Wagner Labor Relations Act, guaranteeing labor the right to organize and collectively bargain through representatives of its own choosing, free from the domination and interference of the employer? I voted for that. The Supreme Court has sustained it, although the National Manufacturers' Association and its Liberty League lawyers advised industry that it was unconstitutional and should be disregarded. The Republican Party is divided between repealing the Wagner Act or amending it so as to impose corporation liabilities on labor organizations, which would destroy them. The press has just carried a report that the National Manufacturers' Association, the hardest-boiled organization in the country, has retired its general counsel, the notorious James A. Emery, for 30 years the enemy of all men who work for a living and of all reform and all progress. They are going to substitute a man with a liberal front and play like they are going along. They have decided after 6 years to try fooling Roosevelt instead of fighting him.

Was it the Wage-Hour Act, to reduce the hours of labor and to make room for more of the unemployed on the job and to place under it the floor of a living wage, and abolishing child labor? I voted for that.

I voted for it the first time when it failed, and the second time when it passed. Recent decisions of the Supreme Court indicate that it will be sustained. There is a New Deal in the Supreme Court. The President lost a fight but won a war. At the last term it sustained 11 out of 12 New Deal acts. That's batting above 900.

The Wage-Hour Act, like the Social Security Act, and many other of these acts, was not hatched up in the White House or in Congress. They were forced on Congress by the pressures of an economic revolution, and they are on the calendar to stay. Many honest Representatives, with a last century background, think the administration at Washington is off on a detour, and they are straining their eyes for a glimpse of the old road, hoping some day, some way, to find themselves back on it. Never again!

Was it the great program of the Public Works and Works Progress Administrations to furnish employment to idle millions handed over to Roosevelt along with the rest of the wreckage, after the 12 long years? I voted for that. I voted for every dollar carried in every bill for 6 years for these great activities. Not a "no" vote. Under this great dual program thousands of schools have been built; thousands of gymnasiums and swimming pools; hundreds of colleges enlarged and modernized; many hundreds of municipal and county buildings erected; thousands of bridges and levees constructed; thousands of cities and towns paved and given new or enlarged water and sewer systems, setting higher standards of municipal utility and beauty to be carried on into the future; thousands of miles of highway paved; these and a multitude of other permanent and beneficial improvements, the greatest internal improvement program ever undertaken, and giving useful employment to millions of workers.

They say we still have a large army of unemployed. Some wit up here in the springs said, "Yes, but they're all eating." The wage hour, social security, and unemployment insurance, and similar measures are attacks upon this problem, thrust upon us by the machine age. We must solve it or perish. This country cannot endure with half the workers employed and supporting the other half in enforced idleness.

Great as have been the material values of work relief and pensions, their human values have been far greater. I have already mentioned that 37,000 families in Colorado are getting old-age pensions. Thirty-one thousand more are on public work. Many other thousands are getting Government aid. The grand total, some writer has said, amounts to 100,000 families in Colorado. And if it were not for this program, every town and city in this State and in this country would be swarming with hordes of human wolves fighting for bread. The old bread lines and soup kitchens would not be a circumstance. Scenes that would be a disgrace to civilization; yes, to savagery; riot, maybe revolution. Now the bread lines and soup kitchens are gone. Now, these folks are in their homes, and if they are not getting all they want, or even all they need, they have shelter and food and warmth and clothing, the necessities of life. They still look like good American citizens; they still are good American citizens. And every dollar they get goes over the counters of the merchants the day they get it. You can't buy stocks and bonds with pension and work-relief checks and you can't start savings accounts with them. It is the fastest circulating money in this country. The merchant who grumbles about his taxes should reflect. If it were not for this program, he would not have to pay any taxes because he would not have any business to pay taxes on. And a nation as rich as this, with an income such as no other country enjoys, can pay these taxes, is paying them, and is still doing business at the old stand.

Was it the legislation to levy upon the owners of the wealth of the Nation a tax sufficient to finance and sustain this program? I voted for that.

Ah, here we may have something! Perhaps I may as well concede that the Republican candidate for Congress would have voted against the legislation taxing corporate dividends and large individual incomes, and will vote against such taxes in the unlikely event of his election. They are going to balance the Budget by cutting out "waste and extravagance" and reducing taxes, but the only place they can cut is on public work and relief and pensions, on the millions at the bottom of the economic scale.

I have now given you a summary of the major acts in the program which goes to make up what we call the New Deal; and yet I have not exhausted the list of all the helpful things the Government has done under the leadership of Franklin D. Roosevelt to rescue this country from the ruin of 1933, and to establish enduring foundations of economic justice and social security, the grand objectives of the entire program and every act in it. There was much perfecting legislation on the great program and many lesser but important measures. What a stupendous program! Surely, the concept of a master mind.

Are these the things upon which the Republican Party in this congressional district would have had me assert my independence and vote against the President? Upon which of all of these great measures would they have had me vote "No"? I challenge them to come to this station and tell you.

I not only voted for all of these measures, every one of them, but I am proud of every vote, and if I had the voice to reach them all I would tell every voter in this district what I am telling you.

What does the Republican Party propose in the place of this program? During Roosevelt's first administration it was charged, and properly, that they had no program, but that is not the case now. During this Congress, the Republican minority developed a three-point program, which can be stated in three sentences.

1. Abolish public works and turn the unemployed over to the States on a dollar-matching basis. That means relief instead of work. That means the dole.

2. Reduce the taxes on wealth.

3. Stop Government interference with business and let business write its own ticket.

The answer to this program is that it has already been tried and failed. We had this program in effect before the New Deal. Before the New Deal there was no work relief or pensions either; big business was running the Government; and big business was writing its own ticket, taxes and all; but the Government and everything else was broke in 1933. Even the United States Treasury was empty, was as bare as the cupboard when Old Mother Hubbard went to get her poor dog a bone. Some day it can be told. Some day the looting of a Nation will be told, and it will make Teapot Dome look like petty larceny. It is no wonder that men of the vision of Will Allen White and BRUCE BARTON warn their party that the New Deal has become integrated in the tissue of our social and economic life and that if and when their party returns to power it must be, not to destroy but to build upon the foundations laid by Roosevelt.

A few sentences in conclusion: The general charge against me is supporting the President. I have furnished the prosecution a bill of particulars and plead guilty to all of them.

It is fitting at this point to quote a very short paragraph from the CONGRESSIONAL RECORD of June 16, 1933, which sheds additional light on my course. It is taken from a review I made on that date of the first New Deal session of Congress. That session of Congress has since been referred as as the "New Deal honeymoon." Everybody was for the President. Republicans vied with Democrats in praising his statesmanship, his vision, his courage—the man of the hour! It looked as though the millenium was at hand, but I knew better, as I shall quote:

"It is too early to boast of staying with the President. It will be time enough for that when the tide turns, as tides will. The big bridge is yet to be crossed. I hope then still to be found in the 'aye' column."

That statement was prophetic. In this Congress the tide turned. In this Congress we were on the big bridge. Even as far back as the "New Deal honeymoon" session some of them were grumbling in the cloakrooms and saying, "We will be back here next winter repealing a lot of this stuff." (I left out a bad word there.) They were ranging along hunting for a gap in the fence. In this Congress they thought they had found it. The corporation-controlled metropolitan papers proclaimed that the "honeymoon" was over.

As for my part in those troubled days, well, you have just listened to the voice of the man on the bridge. He was there when the waves rolled high and the people cowered in fear. He is there still, and still smiling, still fighting. I listened to his voice tonight with no troubled thought. I can look him in the eye with no twinges of conscience. He knows that if I am a member of the crew I will not go over the side, as the sailors say, when the storm breaks.

Navigation Improvements, Including the Development of Power and the Conservation of Water, for the People by the Congress

---

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

Mr. MANSFIELD. Mr. Speaker, in the early days of this, the Seventy-sixth Congress, it is appropriate to outline some important subjects which will come up for consideration. During the interim between the Seventy-fifth and Seventy-sixth Congresses there have been world developments which we have observed with no little apprehension but these have not submerged equally important matters within our own country.

As chairman of the Committee on Rivers and Harbors of the House of Representatives I have given careful consideration to the continued development of our waterway resources in combination with the conservation of the waters of our navigable streams and their tributaries. There is one valuable use of flowing water in which we have been for many years, and are now, keenly interested. This is the development of hydroelectric power which can be produced by falling water. The use of flowing water for navigation goes hand in hand with its use for the development of electric power. When locks and dams are constructed to form pools for stabilizing and regulating depths for navigation, the water flowing over the dams can be used for the development of power without any detriment whatsoever to its service to navigation; and the more the flow is stabilized and regulated by the storage of reservoirs and dams, the

more regular and dependable is the flow below the dams for navigation uses.

Early last summer I asked the Chief of the Army Engineers to give me information with respect to the navigable rivers of the country and their tributaries, with a view to determining where and when projects should be initiated or modified for the improvement of navigation and the development of hydroelectric power. In the light of the information that has been supplied as a result of this request, the Committee on Rivers and Harbors has passed a number of resolutions asking for specific information with respect to certain prospective projects capable of being developed for the dual benefits of navigation and power.

It is important that we pass a river and harbor bill during this session of Congress in order that the transportation facilities of our waterways may keep pace with the growth of the country and the needs of waterborne traffic. There should be in this bill a number of combination waterway improvements and hydroelectric developments. The electrical developments in such projects will yield a return to the Government, thus helping to pay for improved navigation, and they will also benefit the public by reason of the economical generation of electrical power. The national aspects of the proposed improvements are indicated by the fact that the projects under consideration involve construction in 30 or more States and affect directly or indirectly every State in the Union. I am sure that you will be interested in a brief outline of the prospective projects for which we already have plans and reports or for which we expect to have plans and reports before the river and harbor bill is finally completed.

Beginning with the New England States, harbor improvements, small but nevertheless useful, are needed in Maine at Northeast Harbor, in Connecticut at Clinton and at Greenwich, and in Rhode Island at Little Narragansett Bay. The canalization of the Connecticut River should be extended from Hartford, Conn., to Holyoke, Mass., by two dams, one of which, at Enfield, Conn., should include a substantial hydroelectric development.

In the Middle Atlantic States plans and reports are ready for improvements in New York State at Northport, Rochester, and Oswego Harbors, and on the Orowoc River; and in New Jersey on Shark River, and on the intracoastal waterway. In Maryland needed improvements have been planned for St. Georges Island, for Lower Thoroughfare at Deals Island, for Mill River, and for Duck Point Cove and St. Catherines Sound. In Virginia plans are ready for improvement of the intracoastal waterway near Norfolk; and of the Urbanna River, and on the Chowan and Blackwater Rivers in both Virginia and North Carolina.

In the Southern States reports are ready for improvements in North Carolina on Cape Fear River, in Edenton Bay, in Pamlico Sound, in Rollinson Channel, and in Swan Quarter Bay waterway; and in South Carolina on Abbapoola and Russell Rivers. There is an excellent plan for the improvement of the Peedee River by its canalization to Cheraw, S. C., with a lock and a dam which will also produce electric power. The canalization of the Santee River to Columbia, S. C., will extend navigation to the capital of South Carolina as well as provide a good hydroelectric development in that vicinity. Desirable and economical projects should be initiated in Florida at Miami Harbor; in Mississippi at Biloxi and in Galere Bayou; and in Louisiana at the mouth of the Mississippi River and in its channel between New Orleans and Baton Rouge. The Apalachicola River in Georgia, Florida, and Alabama can be improved for navigation by open channel works, and perhaps canalization to Columbus, Ga., should be included. In addition the Buford Dam might be constructed on the upper Apalachicola to help regulate the flow below and to develop hydroelectric power at the site The lower Guadalupe River of Texas should be canalized and the construction of the Canyon dam on the upper Guadalupe near New Braunfels, Tex., would regulate flow and permit the development of power in that vicinity.

For the past 60 years there has been revived from time to time public demand for a direct navigable waterway from the Tennessee River southward to the Gulf of Mexico through the State of Alabama. The narrow divide that separates the watershed of the Tennessee from that of the Tombigbee and Warrior Rivers, together with the availability of an ample water supply, are natural factors favorable to such an undertaking. The surveys and studies for the project have been under way for several years, and the plan contemplates modern 9-foot barge navigation through a lock canal.

The possibility of a shorter route to the Gulf coast and to New Orleans for traffic not interested in intermediate ports along the lower Ohio and Mississippi Rivers has made this improvement attractive to many shippers interested in through freight from the Ohio Basin to the Gulf coast. The canal would serve a nearby area embracing over 100 counties in Mississippi, Alabama, Tennessee, and Kentucky and connect Knoxville and Chattanooga in Tennessee with Birmingham and Mobile in Alabama. The adjacent territory to be benefited is predominantly agricultural, but it has important lumbering industries and extensive forest reserves. Moreover, it is one of the most important sources of basic mineral products in the entire country. Availability of such raw materials has made Birmingham one of our great manufacturing centers, and the proposed waterway would extend the area to be benefited by these resources.

The benefits of the cheap water transportation afforded by this canal would accrue not only to the nearby area but also to the more distant territories of the great Ohio River Basin. Producing and consuming areas in Pennsylvania, Ohio, Indiana, Illinois, West Virginia, Kentucky, and Tennessee would have an improved waterway connecting them with producing and consuming territory in Alabama, Mississippi, and other Gulf States. Increased interstate commerce of large proportions must necessarily result, but it is extremely difficult for anyone to make reliable estimates of the prospective benefits. In addition to the many commercial advantages to be gained from this proposed waterway, its value as a transportation artery for heavy tonnages for any character of national military preparation would be an invaluable asset to the defense of this country. A navigable connection between the Tennessee River and the Gulf is clearly an improvement of great national importance, whose benefits would surely exceed by large amounts its relatively small cost.

In the Ohio River Basin there are some low-head navigation dams at which private interests have desired to install power plants under Federal license. An economical power plant can be construced at the navigation dam on the Ohio River near Hogsett, W. Va. Also there can be constructed on the Ohio River a single dam near Ironton, Ohio, which will be a substitute for several movable dams now in the river, and at which a low head electric power plant can be installed. Similarly on the Cumberland River in Kentucky a fixed dam can be constructed at the Canton site to be a substitute for several lower dams and to permit the development of hydroelectric power.

The Lake Erie-Ohio River waterway is an improvement of national importance which was partially and provisionally authorized by the River and Harbor Act of 1935, subject to final approval of the whole project by the Board of Engineers for Rivers and Harbors. The plans have been perfected, but due to major changes that have developed with respect to the economics of the project the Board of Engineers has submitted a new report which is now before the Committee on Rivers and Harbors for consideration. The present plan contemplates a waterway extending from the Ohio River in Pennsylvania to Lake Erie near Ashtabula, Ohio, via the valleys of the Beaver-Mahoning and Grand Rivers. Such a waterway has been advocated by industry and transportation agencies for many years. Its Ohio River terminus would be 25 miles by water below Pittsburgh, and its route would pass through the industrial centers of Youngstown and Warren, Ohio. It would provide a direct water connection between the ore producing and industrial Great Lakes area and the coal, iron, and steel districts of the upper Ohio Basin. In a larger sense it would connect the Great Lakes water-borne commerce with the Ohio-Mississippi system of inland waterways leading to the Gulf of Mexico.

Plans are ready for the improvement of Cleveland Harbor on the Cuyahoga River in Ohio; of Erie Harbor in Pennsylvania; of St. Joseph Harbor, Michigan; of Green Bay Harbor and Fox River, and of Milwaukee Harbor in Wisconsin.

A much-needed meritorious improvement of the Calumet-Sag Channel in Illinois should be authorized.

A power installation should be added to the Hastings navigation dam on the upper Mississippi River near Minneapolis, Minn., and perhaps to the navigation dams at Rock Island and at Alton, Ill.

There has been formulated a comprehensive plan for the improvement of the stretch of the Mississippi River opposite St. Louis, Mo., just below the mouth of the Missouri River. This stretch of the river, known as the Chain of Rocks, has been difficult and unsatisfactory for navigation for a great many years. Involved in the improvement is the water front of the city of St. Louis, where there is a strong public demand for general improvement. The Army engineers have formulated a plan, coordinating all the advisable and desirable improvements, so that the comprehensive plan will do the greatest good to the greatest number. This project will be ready for our consideration and decision.

Definite projects are ready for localities on the upper Mississippi River at McGregor, Iowa; at Cochrane, Wis.; at Red Wing Harbor, Minn.; and in the vicinity of Lake of the Woods at Baudette Harbor, Minn.

In the Pacific Northwest reports are ready for the Committee on Rivers and Harbors for improvement of the Columbia River Channel at Arlington, Oreg.; of Tacoma Harbor, Wash.; and for the improvement of the Columbia and Snake Rivers in Oregon, Washington, and Idaho. The proposed dams on the Columbia and Snake River include extensive developments of hydroelectric power and comprise a comprehensive plan that may be authorized in part or in whole.

Last in this brief outline but by no means least is the development of the great Missouri River, which is longer than the Mississippi River and no less important than that great river. It is desirable that the authorized project for the Missouri River be definitely fixed now as providing for 9-foot depths from the mouth of the river just above St. Louis, Mo., to Sioux City, Iowa. This, however, is only a step in the ultimate development of the Missouri River Basin, which should aim toward the solution of the Great Plains problem.

The drainage basin of the Missouri River covers a territory of 529,000 square miles, embracing all or parts of Kansas, Nebraska, North and South Dakota, Montana, Wyoming, and Colorado, and extends from the Rocky Mountains to the Mississippi River. Included in its limits are extensive areas of arid or semiarid lands known as the Great Plains area, which, in spite of advances in farming technique, remain regions of great economic hazards. The principal sources of Missouri River water are melting snow and rain from the slopes of the Rocky Mountains and from headwater plateaus. The seasonal water supply which now passes off as flood flow should be conserved and put to use for navigation, hydroelectric generation, and for supplying water to agricultural lands deficient in moisture.

The fundamental need of the basin is to conserve water. One reservoir, the Fort Peck project in Montana, is now approaching completion, but several hundred reservoir sites throughout the basin have been investigated. The reports submitted to Congress discuss 71 reservoir sites in the Yellowstone Basin of Montana and Wyoming, 9 reservoir sites in the Cheyenne Basin of South Dakota and Wyoming, and 104 reservoir sites in the Platte Basin of Nebraska, Colorado, and Wyoming. The Yellowstone report is published as House Document No. 256, Seventy-third Congress, second session; the Cheyenne report as House Document No. 190, Seventy-second Congress, first session; and the Platte report as House Document No. 197, Seventy-third Congress, second session. The water conserved by reservoirs would augment the water supply of the Great Plains area in North Dakota, South Dakota, and Nebraska.

Weather experts are developing new theories as to the cycle of moisture from the air to the earth and back through plant life to the air. We know about evaporation and rainfall. Transpiration and absorption are modern terms for allied physical phenomena. Reservoirs would add moisture to the air through evaporation. Lands supplied with water from these reservoirs could grow crops and grass. This vegetation could increase transpiration and thus advance the operation of the hydrologic cycle. Like the plan for the use of the power of the Fort Peck Reservoir, the electricity generated at any dam can be transmitted and used for pumping river water onto neighboring lands. There will be released for the generation of power more water than can be pumped by the effective power, but the excess water will flow down to aid navigation on the Missouri.

It is impossible for me, in a limited time to describe all of the improvements that can be developed for the conservation of water in the Missouri River Basin and for the benefit of the Great Plains area. I might mention, however, the proposed project known as the Missouri River diversion project for the restoration of Devils Lake and for supplying water to areas in North and South Dakota. Devils Lake is said to have covered an area of 142 square miles in 1867 and to have been nearly 40 feet deep. It is now largely an alkali flat, with only 30 square miles of lake area and a maximum depth of 7 feet. The ground-water table has been lowered to a marked extent and many wells in the vicinity have failed. Some small bodies of surface water that do remain are said to be so polluted that they constitute a menace to public health. Sooner or later this condition will be corrected. With the flow of the upper Missouri conserved and regulated, it will be practicable to divert enough water to carry out the Missouri River diversion project. The principal benefits of this project, in addition to the restoration of Devils and Stump Lakes, will be to improve water supplies and increase sewage dilutions for towns on the Sheyenne River, N. Dak., on the Red River, N. Dak. and Minn., and on the James River, N. Dak. and S. Dak. The project also contemplates additional water for stock and lands along these rivers and some power development. It will benefit a considerable portion of the northern Great Plains area that has been at times parched by drought and suffers periodically from dust storms and an inadequate supply of water.

With additional headwater storage providing a constant, regulated flow, extension of existing navigation facilities on the Missouri River can be undertaken. The ultimate development of Missouri Basin contemplates the extension of navigation facilities through the Dakotas into Montana. Plans for such an improvement, involving canalization by locks and dams, have been prepared by the Army engineers. These locks and dams would be multiple-use improvements. The lock and dam planned for the Gavins Point site in Nebraska and South Dakota, to extend navigation to the mouth of the Niobrara River, would be particularly adapted to several uses, including the development of hydroelectric power and the supplying of water to about 100,000 acres of land.

The report on the Missouri River Basin, published as House Document No. 238, Seventy-third Congress, second session, was submitted in 1933, after cooperative investigations and studies by several agencies over a period of 4 years. In addition, reports on 23 separate tributaries of the Missouri River are available. These reports have all been painstakingly and efficiently prepared at a cost of only $1,500,000. They contain factual information for the use of the Congress and its committees, as well as for the use of State agencies needing such information. By legislative direction these studies must be kept up to date so that consideration may be given at any time to new data and to changes in economic conditions that occur from time to time. At this very time the Army engineer organization, in cooperation with other Federal agencies concerned, is reviewing its studies in the Missouri River Basin, and this governmental procedure is established as to continuity and effectiveness.

Time is not available for me to describe all the rivers in the United States that are potential assets for interstate commerce and the development of water-borne transportation and prosperity. In the Southwestern States of Arkansas, Oklahoma, Texas, New Mexico, Kansas, and Colorado there are many rivers for which comprehensive water conservation

plans, including navigation improvements, have been formulated. This territory now has the highest rail rate structure in the country. The people there pay more per pound for the transportation of the goods that they buy than do the people of any other part of the United States. As a result new industries are backward in developing in an area that is unusually rich in resources. In the basins of the great rivers of the Southwest lie 95 percent of our bauxite clay, 75 percent of our lead and zinc, coal fields surpassed only by those in West Virginia and Pennsylvania, two-thirds of our petroleum reserves, our greatest winter wheat regions, and our greatest cotton-producing areas. Sooner or later the rivers of this section must be improved for navigation.

The development of our rivers and harbors for water-borne traffic is essential not only to the peacetime prosperity of the country but also to preparation of national defense. The waterways of the country carry large tonnages more economically than the railroads and serve the demand for heavy and large traffic which is beyond the capacity of the railroads. The two types of transportation should not be regarded as competitive since from a broad national viewpoint they supplement each other in the development of river basins. Such general development is dependent on low transportation rates for bulky and low-cost commodities, which general development creates in turn greater tonnage of high-grade goods which can stand higher transportation rates by rail. The boats and tows moving in the Ohio River give the appearance by their number of large traffic. When the tonnages are computed the enormous amount of freight is more evident. On the Mississippi and Missouri Rivers an observer does not see so many tows, but when he realizes that 1 tow carries as much tonnage as 200 loaded freight cars or 3 freight trains, he realizes the great volume of the traffic.

One who works on the Committee on Rivers and Harbors of the House of Representatives is constantly impressed with the thoroughness, completeness, and comprehensive character of the plans which we have ready for the improvement and development of the Nation's navigable rivers and their tributaries. Not only do the Army engineers have all the information, data, and plans with respect to our great network of waterways, but the other agencies of the Government, each in its sphere of activity, also have their plans ready and up to date. The separate agencies are in constant contact and cooperation, exchanging information and plans, in such way that their effective operations meet and join so as to omit nothing, and so as to be effective as a unified whole with the minimum expense and the maximum efficiency and economy.

For example, the Army engineers have jurisdiction over the Fort Peck Dam and Reservoir and the discharge of the waters therefrom. The discharging waters are to generate power through hydroelectrical machinery also under the jurisdiction of the Army engineers, but the power will be turned over to the Reclamation Service at the switchboard, and that service will attend to disposition of the electricity from that definite point on. This seems appropriate since the principal prospective use of the power will be for pumping water from the river at points below the dam for irrigation. Both agencies are cooperative and sympathetic with each other and take pride in seeing that there is not a penny's worth of waste in the transfer of this electric power from the one to the other.

Another example is the planning and execution activities that obtained between the Army engineers and the Department of Agriculture in connection with the improvements in the valley of the Muskingum River. This same kind of cooperation has characterized procedures on all other watersheds where soil erosion and reforestation have presented problems. The Army engineers cooperate with the Weather Bureau in storm, rainfall, and run-off studies; with the Geological Survey on stream gaging; with the Geological Survey and the Coast and Geodetic Survey in mapping; with the Reclamation Service on river-basin studies of arid and semiarid regions; and with the Federal Power Commission with respect to dams suitable for the development of hydroelectric power.

The executive agencies of the Government administer the planning, execution, and operation of public improvements in cooperation and according to the directions of Congress. Each executive agency is manned with its own experts, who are fully occupied with their own specialties and are only too eager to exchange information and data and to make their several activities fit together with economy and without duplication and overlapping.

For coordinating the financial programs of the Government we have the Bureau of the Budget manned with financial and economic experts. We read in the newspapers that the President is to see the Director of the Budget in order to formulate the expenditure program for the next fiscal year. Within a day or two after we have read such a newspaper item we read another to the effect that the financial program has been decided upon. The time is miraculously short. Prior to the Presidential consideration of the Budget the executive agencies of the Government have furnished the Director of the Budget with all the figures and estimates needed by him. Coordination of the financial program of the Government is thus effected and only by a financial coordinator such as the Budget Director can this character of coordination be attained. Obviously the President must make the final decisions and he does this most effectively and efficiently with a Bureau of the Budget such as we now have.

The approved Budget is submitted to Congress, and the representatives of the people who furnish the money have the final say as to what will be done. The procedure in Congress needs no explanation. It is for the representatives of the people to determine the objectives as well as the procedure of the Government of the United States. And it is the function and prerogative of the Congress of the United States to say where, when, and for what the money of the people of the United States shall be spent. It is for the Congress to authorize and appropriate funds to be used for specific purposes, objectives, and projects with such administrative procedure and administration as will preclude any one individual from using the money of the people for his own personal ends.

Within recent months we have read of the troubles in Europe. While these troubles were filling the newspapers, a national election has been held in this country. No citizen be he rich or poor, be he statesman or private individual, be he running for office or not, has been afraid to think, say, and vote as his conscience dictated. And no dictator has been able to harm a hair of anyone's head. Such is the form of the American Government for which our forefathers fought the Revolutionary War. From the beginning the American people have zealously guarded this form of government with its checks and balances. Whenever the people of this country have sensed any tendency for their individual liberties to be encroached upon, they have been willing to fight and have fought. The American people have always ruled themselves and they will continue to do so through their representatives in Congress. We may rest assured that this democratic form of government will continue to rule this great Nation in the interests of the liberty and welfare of all the people all the time.

America, the Hope of the World—Introducing House Concurrent Resolution No. 1 of the Seventy-sixth Congress

---

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

Mr. LUDLOW. Mr. Speaker, America is the hope of the world.

Millions of human beings on this earth, cruelly deprived of the home, religious, and cultural life for which their hearts

yearn; robbed of their liberties and reduced to the status of mere serfs and pawns, whose lives are regimented, controlled, goose-stepped, and snuffed out at the will of dictators, are turning to America as the savior of the world.

The military madness that grips the nations is heading mankind down the road that leads to death, destruction, and the wreck and ruin of civilization. Unless some powerful regenerating influence appears in the world theater soon the doom of the human race will be sealed.

There is only one power on earth that can save the situation, and that is the United States of America. America can save the world if it acts, not as the protagonist of might but as the protagonist of peace. To win, it must reach out and extend its influence to world-wide dimensions, not in a campaign of military conquest but in a campaign of conquest over the hearts of men. It must find some way to get to the hearts of the common people all around the world and to impress them that there is something better in store for them than having to burn up their energies and sacrifice their loved ones in the everlasting flames of war.

To accomplish this mission America must burgeon forth as the good neighbor as it never has before in all of our history. It must make a tremendous appeal to the common run of mortals and must help to lift them out of the miasmas of war by the arguments of sanity and reason. Our moral strength, our great contributions to humanitarian causes, our unselfishness of purpose, and our record of never having coveted a foot of territory that does not belong to us should help us to fill this splendid role.

If we are to save the world it is important that we shall get started in the right direction, and that direction lies in the exercise of a moral strength that is more powerful than great battleships. When everyhing else has failed it will be found that a sincere application of the principles of Christianity is the best solvent of the world's troubles. Our beloved president, Franklin D. Roosevelt, expressed the thought beautifully at the recent Yuletide when he said, "The spirit of Christmas is the hope of mankind," and also not so long ago when he said, "I doubt if there is any problem—social, political, or economic—that will not melt before the fire of a spiritual awakening."

The crying need of the world today is a recrudescence of the spirit of Christianity. We need to tune our hearts to the song of the angels at Bethlehem: "Peace on earth, good will to men." We can go far to alleviate the distressing conditions throughout the world to lighten humanity's cross, and to insure the peace of America if we will preach the gospel of love, instead of the gospel of hate. We have tackled the psychosis of war on several fronts but not yet, I fear, on the right front to secure results. Let us now tackle it on the Christian front by striving for an agreement among nations to limit arms and to direct their courses into pathways of peace. May the good Lord make us realize the vastness of our opportunity.

America can do two things now to arrest the tide of butchery called war and to relieve humanity from the fears and the grueling financial burdens caused by the war insanity which has taken possession of the world. Those two things are:

First. Propose to the powers that we have a naval holiday.

Second. Call a conference of the powers on limitation of armaments.

Never did a nation have such an opportunity for leadership as now confronts the United States. If it were divinely ordered, it could not seem more perfect. The people all around the world are weary of war. They are weary of its griefs and heartaches. They are weary of its crushing burdens and of the pain it puts in the hearts of mothers.

Never was a more stellar role cast for the exercise of American statesmanship. Of all the nations on earth, America is best qualified to lead in this world-peace movement.

America's leadership, if brought into action at this time, can check the mad race for naval supremacy and can bring the powers together around a table to plan a reduction in armaments. In a concurrent resolution I have introduced in the House, known as House Concurrent Resolution 1 of the Seventy-Sixth Congress, I propose that the United States shall sound out the other nations on a suspension of all naval construction until January 1, 1941, and shall issue a call for a conference of delegates of all the leading powers to be held in Washington next June to take up the question of limitation of armaments. As my resolution suggests a definite course of national action that cannot fail to interest every peace-loving citizen, I ask your indulgence while I present its text.

It is as follows:

Whereas a competitive race of armaments is sapping the financial strength of nations, breeding international distrust and suspicion, and endangering the peace of the world; and

Whereas there are unmistakable indications that the world is weary of war and strife and the colossal burden of armaments and would welcome a sincere movement in the interest of peace: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress of the United States of America that a proposal to suspend by joint action all naval construction until January 1, 1941, should be submitted by the United States to all of the leading powers.

It is also the sense of the Congress of the United States of America that a peace conference should be held in the city of Washington on or about August 1, 1939, to which all of the leading powers should be invited to send delegates to discuss limitations of armaments and other questions associated with and promotive of international concord.

This resolution may be cited as the peace-by-conference resolution.

A great national ground swell of sentiment back of this resolution would insure its adoption. It is so worded that it does not interfere with the prerogatives of the President, the Secretary of State, or any other officials who are concerned with foreign affairs. It does not instruct or direct them to do anything. Its adoption would not be a mandate, but it would be informative as to the views of Congress and the country. The resolution does not contemplate any action outside the legitimate and proper jurisdiction of Congress. It does not infringe upon the province of any executive authority. It merely declares it to be the sense of Congress that America should now take the lead in declaring a naval holiday and in calling for a conference on limitation of armaments.

It has often been truly said that the function of a concurrent resolution is to register the opinion of Congress, and that is what this resolution will do if adopted. But it has even greater significance than that. The Congress of the United States, especially the House, is traditionally close to the people, and this resolution is proposed as the only means applicable to the situation of registering the will of the people on war. It will mean, if adopted, that the people of America think the time has come to cease the insane rivalry of armaments and to put a stop to the unconscionable butchery called war. In a democracy it is right and proper that Congress, the body that stands closest to the people, should express itself from time to time by concurrent resolution on questions of great and vital national interest. There is a strong and insistent national demand that Congress shall live up to its obligations as a coordinate branch in the scheme of government. Congress will abdicate its functions and will be untrue to its responsibilities if it does not keep forever vibrant the voice of the people. Certainly these are questions on which the people who have to do the suffering and the dying and to bear the unspeakable burdens and griefs of war have a right to express themselves; and if they do express themselves through their chosen representatives by the adoption of this resolution, there is no reason to doubt that officials of the Government who are charged with the responsibility of acting in foreign affairs will give conscientious attention and consideration to their wishes.

Some may say that dictators are not in a frame of mind to permit their countries to be represented in an arms limitations conference, but I believe this is a mistake. Japan, through her official spokesman, her foreign minister, already has stated that she will welcome an opportunity to send delegates to such a conference. I predict that other dictators will think more kindly of the proposition when they hear from the common people of their respective countries, and I venture to say that not one great power would fail to respond to such an invitation coming from Washington.

World public opinion still has strong influence, even with dictators. Hitler's willingness to listen to Chamberlain and Roosevelt in the settlement of the recent European crisis does not indicate that he would refuse to send delegates to a conference to agree on limitation of arms. Let us not permit an idea to die still-born that offers so much of hope for the future peace and security of humanity. Let us by adopting this resolution give it real promise and vitality so that something worth while may come of it. As a Christian nation, dedicated to high ideals, we could do nothing better, nothing nobler.

The world is ready for an arms limitation conference and if America does not propose such a conference it will miss one of the greatest opportunities to promote world peace that was ever offered. Diplomats and roving ambassadors may split hairs and may strive by all the unfathomable and inscrutable methods which only a diplomat can understand, to convey the impression that a peace movement is not practical at this time; but the people are tired of diplomatic circumlocution and tergiversation and are sick of the devious ways of the diplomatic gentry. The people want peace and they want it by direct action. They see nothing improper in inviting Japan and England and France and Italy and Germany and the other powers to get together around a table in Washington to ascertain whether an agreement cannot be reached that will stop the armament folly and insure peace to a weary world. They ask this question, If it comes to the worst and the movement fails, what harm has been done? The world will then be in no worse fix than it is now. It is well worth a trial.

It is entirely proper that Congress, representing the people of this great peace-loving Nation who are in deep sympathy with the common people of all other nations, should express themselves by adopting this resolution. The time is ripe for it. The world is crying for action to break the war psychology. Now is the time for America to rise to supreme heights in world service.

Will America heed humanity's cry?
There she stands—America, the hope of the world!

The Work of the Seventy-sixth Congress

EXTENSION OF REMARKS

OF

HON. PATRICK J. BOLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

RADIO ADDRESS BY HON. WILLIAM B. BANKHEAD, SPEAKER OF THE HOUSE OF REPRESENTATIVES, ON JANUARY 2, 1939

Mr. BOLAND. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Hon. WILLIAM B. BANKHEAD, Speaker of the House of Representatives, on the National Radio Forum, January 2, 1939:

Under the provisions of the so-called Norris or "lame duck" amendment to the Constitution, both branches of Congress will be convened promptly at 12 o'clock noon tomorrow, January 3. It will, of course, be remembered that before the adoption of that amendment on every other year the Congress met on the first Monday in December and adjourned by limitation of law on the 4th day of March succeeding, which embraced the so-called short session of the Congress, and before adoption of that amendment Members elected in November were not sworn into office and did not take up their duties until a year after they were elected.

In accepting this invitation to attempt a summary of the forthcoming activities of the Congress in its seventy-sixth session I cannot, of course, speak with any degree of certainty as to the results of a number of proposed measures of legislation that will undoubtedly receive the attention of the lawmaking bodies, and I shall have to be content with surmise and prediction only.

Of course, the first business on the program as far as the House of Representatives is concerned will be to perfect its organization and to proceed thereafter to the making up of the various committees of the House, and especially of filling many vacancies on House committees caused by the loss of a number of Democratic Members in the recent election. It is now practically assured that there will be no spirited contest over the election of Speaker, majority leader, and the other officers of the House, inasmuch as under our party system the Democratic caucus has today already acted in the selection of its nominees to be presented when the House meets tomorrow, and the vote will be largely a matter of form. I have learned that Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, has tonight been selected as the candidate of the Republican Party for Speaker, which carries with it his designation as minority leader on the floor of the House. The filling of a number of vacancies on the committees of the House is a matter of great importance and serious concern to the Democratic organization. All persons who are really familiar with the procedure of Congress and the passage of laws now know that the laborious and practical framing of all laws is largely accomplished in the committee rooms, although they are, of course, debated, often amended, and sometimes defeated after being recommended by the various committees when they come up for actual passage on the floor. It also may be a matter of some interest to those who are not familiar with our parliamentary procedure that, under the present system, all Democratic vacancies on committees are recommended by the so-called committee on committees, which is made up exclusively of the Democratic members of the Committee on Ways and Means; but, of course, after such committee makes its recommendations they have to be acted upon by the House itself. The Republican vacancies are filled in similar fashion by the recommendations of the minority leader.

The President of the United States will address the joint session of the House and Senate in the Hall of the House on Wednesday at 1 p. m., and arrangements have been made for the broadcasting of his address over three of our important radio systems and, no doubt, millions of our citizens will be interested to hear the President make his recommendations to the Congress at that time.

I feel that it is reasonable to assume that the President will discuss at some length, and will probably make some very definite suggestions with reference to our international situation and matters which, in his opinion, may be reasonably necessary for the strengthening of our armed national defense. I personally feel that in view of the very distressing situation in many parts of the world involving actual armed conflict among millions of people at this time, and in view of the apparent purpose of some dictator governments to enforce their will upon helpless minorities that the people of our country will hear with great interest the views presented by our President upon these subjects which so vitally affect the future safety and security of our Republic. There can be no question that the public mind of America as indicated by the press and by some specific surveys of public opinion is thoroughly in favor of a very full consideration of our problems of national defense and will endorse the actions of the Congress in making adequate and yet reasonable provisions for our safety and security.

It is also quite probable that part of the President's message may be devoted to a discussion of our transportation problems, particularly the plight of our great railway systems at the present time. This is a matter of very great concern to the future of our country, and it may be that a proper solution of the transportation situation may require a basic reconstruction of the entire system of transportation, including not only railroads but also highway-, water-, and air-borne commerce. It is a problem which, in my opinion, should not be acted upon hastily or without adequate consideration of all the factors involved, and I feel that before wise legislation can be recommended that it will be necessary to have a very full and complete congressional survey of every phase of the problem.

One of the first matters that will engage the attention of the Congress is that of providing a deficiency appropriation to carry forward until the 1st day of July the great burden of relief in its various phases. It has been indicated that the existing appropriation will be sufficient to run this program for only a few weeks longer, and it is quite possible that there will be sharp controversy in Congress not only over the amount that should be appropriated to carry on the work for the remainder of the fiscal year, but also that some limitations may be proposed as to the manner of the expenditure of these funds.

An effort will, no doubt, be made to secure consideration for another Government reorganization bill. Under both Democratic and Republican administrations I have consistently advocated legislation of that character. I feel that by the passage of a fairly conceived and properly administered reorganization bill a vast amount of greater efficiency in government can be obtained, and I am not unmindful of the possibilities of substantial economy in the operations of government under such a program.

Indications also exist that serious efforts will be made to amend or modify certain features of the National Labor Relations Act, but to what extent and by what specific alterations it is not now apparent.

It is also now apparent that a vigorous effort may be made by certain groups of opinion to modify some of the essential features of the Agricultural Adjustment Act of 1938, and this controversy may be rather vigorously contested before both the House and Senate Committees on Agriculture and in both branches of Congress.

It will be recalled that at the last session of Congress a resolution was adopted setting up the National Temporary Economic Com-

mittee, which is composed of representatives from the House and Senate and also an equal number of representatives from the executive branches of the Federal Government:

"To make a full and complete study and investigation with respect to the matters referred to in the President's message of April 29, 1938, on monopoly and the concentration of economic power in and financial control over production and distribution of goods and services and to hear and receive evidence thereon, with a view to determining, but without limitation, (1) the causes of such concentration and control and their effect upon competition; (2) the effect of the existing price system and the price policies of industry upon the general level of trade, upon employment, upon long-term profits, and upon consumption; and (3) the effect of existing tax, patent, and other Government policies upon competition, price levels, unemployment, profits, and consumption; and shall investigate the subject of governmental adjustment of the purchasing power of the dollar so as to attain 1926 commodity price levels; and

"(b) To make recommendation to Congress with respect to legislation upon the foregoing subjects * * *."

Such committee was set up soon after the adjournment of the last Congress and is now actively engaged in the studies and investigations required of it. The various and amplified subjects required to be investigated by this committee will necessarily require long consideration and extended sessions, and it is quite unlikely that it will be possible for that committee to make any recommendations for legislation to the incoming session of Congress, although they may see fit, after due consideration, to recommend legislation on some particular matters that have been developed by the hearings.

I am sure that it is gratifying to all groups of opinion in the country that it is evidently the purpose of this committee to pursue its investigation with great judicial calmness, without any semblance of punitive disclosures against any branch of industry or society, and to go to the bottom of our present industrial and social set-up with the purpose of undertaking to solve by future legislation any gross maladjustments of our present practices and to seek to establish equality of opportunity under the law for all persons and all industries in the country.

The present surface indications point to very spirited and possibly acrimonious discussion of a great variety of proposed changes in the present Social Security Act. Old-age pensions through some form of Federal assistance is undoubtedly one of the livest issues now before the country. A great number of proposals have been put forward of varying degrees of liberality and methods of financing. It is rather certain that the House Ways and Means Committee will early in the session set down hearings on these issues and give to all the outstanding proposals a fair opportunity to be heard.

There are in prospect the possibility of various other legislative proposals which may bring on unanticipated debate and differences of opinion.

As I stated in the beginning of this address, not having the powers of clairvoyance, I cannot enter upon the field of certain and definite predictions as to the course of legislation and have been compelled as a matter of fairness and prudence to indulge only in words of prophecy and speculation. It is now apparent that, because of the increase in the Republican representation in the House of Representatives especially, party lines may be more sharply and aggressively drawn than they were in the last session, when the Democrats had such a preponderant majority. As one who has had quite a long experience in the public service of the House of Representatives, it is my judgment that, from the standpoint of effective and militant party spirit and program, it may be better for my party to have had its majority reduced despite my very deep personal regret over the defeat of many of my Democratic colleagues. Speaking as one representative of the Democratic Party, I feel that we cannot afford to overlook the result of the last election. I think it the part of political expediency, as well as of public service, to undertake to analyze as far as we may the causes of the increased vote by the opposition party and if it is the definite conclusion that such results were obtained solely by either bad features of the laws that we have passed or by the unwise administration of those laws and not by local conditions entirely aside from Federal activities which had a profound reaction in some States, then to take steps to meet public opinion in the modification and correction of such criticisms as may have been influential in the recent election; and I feel confident that that will be the spirit animating the actions of the majority party in Congress.

If I may be permitted to do so, without appearing to be too partisan in this address, it is comforting to us who have been instrumental in securing the passage of many of these so-called New Deal laws that the leaders of the opposition very frankly concede that they recognize the wisdom and justice of most of the outstanding laws we have passed, and that they would not undertake to repeal them in principle or in substance, but that their efforts would be largely upon the basis of correction and modification of some features of such legislation that they see fit to criticise.

As practical politicians and as men who are anxious to preserve the dominance of their party in government, I feel confident that it will be the objective of Democratic leadership, as well as the purpose of the rank and file, to act with as much harmony and coherence as may be possible without the surrender of individual intellectual integrity upon some particular phases of legislation.

I wish to thank this forum for the opportunity to express these very fragmentary and inconclusive sentiments and to again express my great admiration for the wonderful possibilities of molding public opinion through the instrumentality of the radio.

I cannot refrain in closing from expressing very great satisfaction as an American citizen over the reassuring business prospects for the new year, which every present augury indicates will constantly improve. Above all other things, we should be grateful for the fact that our Nation is still at peace with all the world. May a merciful Providence preserve that happy situation for all the years to come.

Racial, Religious, and Political Persecutions in Germany

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

ADDRESS BY HON. EDITH NOURSE ROGERS, OF MASSACHUSETTS, AT LOWELL, MASS., ON DECEMBER 30, 1938

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to have printed in the RECORD an address delivered by me on Friday, December 30, 1938, at Lowell, Mass., as follows:

We are here tonight, all of us together, Jews and Christians, Catholics and Protestants, in a common cause. We are here to protest against religious and racial prejudice, against the persecution of the Jew, the Catholic, and the Protestant by the leader of one of the major nations of the world. Our protest is not against the German people, but against Adolf Hitler, their dictator. We who live beyond the boundaries of the German Empire and who are permitted to read what we will, listen to whatever radio program we wish, and to express our own opinions whenever we care to do so, know that the political program of Germany is not the will of the German people, but is the frenzied dictatorial policy of the Nazi leader of that misguided country.

We realize that the people of Germany are not permitted to express their disapproval of the acts of their leader. Such an expression would not be condoned. Fear of punishment and fear of being denounced as a traitor have sealed the lips of many Germans who are not in accord with the Nazi policy. As a member of the Foreign Affairs Committee of the House of Representatives I have reason to know foreign affairs.

On May 11, 1933, almost 5 years ago, I spoke on the floor of the National House of Representatives in protest against what I termed the brutal and unwarranted treatment of the nationals of Jewish extraction in Germany by Adolf Hitler. This was the first time that a National Representative had made such a protest to Congress. Since then I have made other protests on the floor of Congress and elsewhere.

Serious as were the actions of the Hitler regime at that time, what has happened since is almost beyond belief or comprehension. It is unnecessary to tell you in detail of the indignities and cruel treatment this dictator has visited upon the Jews who were so unfortunate as to live in Germany. Hitler's actions have been so startling, so inhuman, as to command the attention and indignation of everybody throughout the world.

In the last 5 years Adolf Hitler has broadened his campaign to control all thought and opinion in Germany by maintaining a drive against the Catholic clergy. Priests and nuns have been arrested and imprisoned for long periods on the flimsiest of charges. Protestant churches have been closed by the police. Storm troopers have arrested ministers of the gospel merely because these clergymen have refused to admit the supremacy of Hitlerism over Christianity. Masonic lodges and other secret organizations have been liquidated and properties built up by these organizations for hundreds of years have been confiscated. Labor has been deprived of all rights of collective bargaining. Striking, or even talking of a strike, are crimes calling for the severest punishment.

These are but a few of the persecutions inflicted upon Germany's racial, religious, and political minorities. We in America find it difficult to visualize such treatment. It is a negation of everything for which our country stands. It is a reversion to the Dark Ages of medieval despotism, when governmental suppression of speech, press, liberty of conscience, and political belief were the order of the day.

The plight of the Jew in Germany is pitiable. The stray dog roaming the streets of Lowell is more fortunate than one of these oppressed people. Here at least the authorities will not permit the dog to be mistreated, kicked, and browbeaten.

We all recognize the right of the people of any country to establish the kind of government they deem best for their requirements. But when a nation establishes rules and laws entirely against the principles of justice and morality, then such a nation will find itself

criticized and condemned for those actions. To make it a bit clearer: We recognize the fact that our next-door neighbor has certain rights with which we cannot interfere, but suppose that neighbor inflicts cruel and inhuman treatment upon one of the members of his household—then the matter becomes the business of the community, as the general welfare of the people at large has been violated. So it is with nations. In this modern era of civilization we expect nations to protect and accord their nationals a just and humane government. When they do not do so, then it becomes the affair of the world at large.

The heaviest burden of this terrible oppression in Germany has fallen upon the Jews, as has so often been the case in central Europe. These oppressed people have been persecuted for 30 centuries. They have been driven from land to land until they have become wanderers seeking a haven of rest and contentment in a world that does not hesitate to profit by their standards of culture and their examples of loyalty to family and home.

The Jewish race has always been renowned for its ancient culture, its love of peace and simple living. America owes them much. More than 300,000 young Jewish men served with the American forces in the World War. They have a glorious record upon the battlefields. Eleven hundred Jews were cited for conspicuous valor; three of these won the highest military decoration our Nation bestows—the Congressional Medal of Honor. One hundred and fifty Jews won the Distinguished Service Cross. We cannot remain silent while the relatives of these men are being subjected to this unwarranted treatment in Germany today. They are being driven from their homes, forced to abandon their trades and professions without recourse to trial or law.

While we have not heard so much of the persecution of the great Catholic Church in Germany, there have been numerous instances of this policy of hatred by the Nazi Government. In the early months of last year Hitler started a rigorous anti-Catholic campaign. He suppressed numerous Catholic schools and ordered the children to join his Brown Shirt Hitler Youth Group. In many places in Germany parents were urged by the Nazi party not to send their children to Catholic schools. In an effort to destroy the prestige of the Catholic Church in Germany he ordered the arrest of more than 1,000 lay brothers on very unjust charges of immorality. Through the very effective and huge propaganda agency of the Nazi regime the German people were kept informed of these charges, unfair and unproved though they were. This propaganda so aroused the Catholic Church and its friends and the repercussions were so loud that the Nazi anti-Catholic program was halted, for the time at least. Since then, however, there have been numerous instances that indicate that when the anti-Jewish drive has been completed the anti-Catholic program will be taken up again and a further drive begun against the Protestant Church.

I feel very sorry and very sympathetic for the German people. They are powerless against the Nazi machine which seeks to subjugate all to the will of the leader. Its first attack was against the Jews, but it soon became evident that this was but a prelude to a threat against all religions, against freedom of thought, freedom of conscience. There was no valid reason for this persecution and oppression. The Jews in Germany were a very small minority of the nation. In a total population of 68,000,000 of people, only about 600,000 were Jewish, according to the pre-war census. One out of every six of these Jews fought for Germany in the World War. More than 35,000 of them were decorated for bravery. More than 165 Jewish aviators fought at the front, 30 of whom were killed in action. The heroes of yesterday are the oppressed of today. For some of these, more fortunate than the others, America has become a haven of safety. From its earliest days this country has always been a place of refuge for the oppressed of other lands. Because of the Nazi policy America has made herself richer by the advent of some of the leaders of German culture.

The question is asked on all sides: "What can we do about it?" Nobody wants war. It is abhorrent to all of us. But I believe that we as a nation should make our position very plain to Germany; we should serve very definite warning to her leaders that America does not condone this ruthless persecution and shameful hate and bigotry. In doing so we shall show ourselves to be true friends of the real Germany in our wish for a restoration of the normal life and health of that great nation.

In closing let us be truly thankful that we live in a country which permits liberty of conscience and freedom of thought and action. Let us keep before us the picture of oppression and servitude now so prevalent in Europe that we may guard carefully and well our own inherent rights as Americans.

The following resolution was unanimously adopted by the meeting:

LOWELL, MASS., *December 30, 1938.*

Whereas the freedom to worship as one pleases is a traditional American principle guaranteed by the Bill of Rights and cherished and preserved by numerous generations of liberty-loving Americans; and

Whereas the American people, when their sympathies are touched, when their humane instincts are challenged, and when their hatred of oppression is aroused, are not afraid to speak; and

Whereas we cannot forget and must not forget that this Nation was settled, established, and made strong by refugees in other times; by Pilgrims, by Puritans, by Hugenots, by refugees from the potato famine, and by refugees from the Palatinate, and by refugees from bolshevism; and that this Nation's position as an independent state is due to the heroic sacrifices of men who preferred death to the loss of liberty; and that throughout our history we have extended a sympathetic and helping hand to those who fought for liberty in other lands; and

Whereas there is no room in our Nation for the smoldering fires of racial hatred that have brought over the centuries untold misery to the Old World; and

Whereas oppression of one group inevitably leads to oppression of other groups: Therefore be it

Resolved, That we, the citizens of Lowell, Mass., assembled this evening in a beautiful memorial building dedicated to the men and women who gave their lives to preserve American liberty and American institutions, do most vigorously condemn the action of the German Government in persecuting the Jewish people in a wave of unsatiated hate that threatens to sweep the world like another black plague; and be it further

Resolved, That we do with equal vigor condemn man's inhumanity to man as exemplified in the past 20 years by the slaying of 2,000,000 Christians and the closing of 60,000 churches in Russia; by the murder of 6,000 diocesan clergy and the desecration, burning, and pillaging of 20,000 churches and chapels in Spain and by the exiling of 11 bishops and the destruction of 131 churches in a single State of Mexico; and, finally, be it

Resolved, That we as loyal American citizens reaffirm our belief in the integrity of the American form of government and that we strike at those who seek to create dissension and disunity among us by fostering distinctions that are un-American and by instilling hatreds and prejudices that have brought Europe to its present deplorable condition.

How Can the Menace of Nazi-ism Be Curbed?

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

Mr. CELLER. Mr. Speaker, concerning this very vexatious subject, words are interesting. Oratory is intriguing. But mere protests are not enough. Action—forceful action—is essential.

I herewith give a list of suggested measures which might be taken. They may be called punitive laws against the savagery of the Nazis and their loathsome, foul leaders—Hitler, Goebbels, Goering, and others equally despicable. It shall be my studied purpose in the present session to introduce most of them in the House and push same for passage. It will be readily discernible that some of these suggested measures are matters for State legislation, in which event we should endeavor to persuade the States to take appropriate action.

First. Germany shall be kept on a tariff blacklist, and there shall be absolute refusal to deal with her on any reciprocity basis. Her products are now discriminated against by higher tariffs, and that discrimination shall continue. I am sure the State Department under Hull will not dissent.

Second. Germany must assume the payment of the relief and construction loan bonds due this country from the erstwhile Republic of Austria. She has failed to give the State Department an appropriate answer as to such assumption of payment. Continued refusal should merit an ultimatum from the State Department whereby she shall be given a short period within which to pay or we shall confiscate all moneys found in this country due the German Government and levy an attachment upon all property owned by the German Government—for example, the ships of the Hapag-Lloyd.

Third. We shall compel the registration of all moneys in this country and all property in this country owned or held by German nationals or the German Government. We shall furthermore compel registration of any interest any German entity has in such property, with a view to subsequent appropriation of same for unpaid German obligations or debts due either to the Government or to our citizens. Furthermore, why should it not be feasible to refuse the transfer of interest and dividends due German subjects on account of their investments in American securities and property esti-

mated at more than $300,000,000 as long as American investors in Germany are unable to collect on their holdings?

Fourth. Investigation shall be had of all operations of the Hapag-Lloyd Lines and its officials and employees, in the interests of ferreting out espionage and spying activities. The piers, warehouses, and offices of this line are hotbeds of subversive Nazi activity. This line brings in tons of vile Nazi literature. The privileges and immunities usually granted to steamship lines in the case of the line should be carefully scrutinized and if there be violations of law found, such privileges should be curtailed or withdrawn. The city of New York rents its piers to this line. Raising of the rent or refusal to renew the lease might prove efficacious. Mayor LaGuardia, therefore, has a powerful weapon with which to punish. I realize our ships in German waters may be similarly treated. What of it? Nazis have more to lose than we. Our ships reaching German shores are few in number, far fewer than Nazi ships reaching our harbors.

Fifth. Any citizen, as, for example, the unspeakable and vile Dr. Kuhn, who may be guilty of incitement to riot and encouragement to violence shall have his citizenship revoked, after which deportation shall be in order. All aliens, or Nazis, whether they be declarants or nondeclarants, engaged in activities and propaganda having for their purposes incitements to riot, violence, and destruction, shall be similarly deported. Our naturalization and deportation laws shall be amended accordingly.

Sixth. Parades of so-called Nazi bunds in uniform shall be prohibited. All Nazi military or semimilitary organizations shall be suppressed. The hundred-or-so Nazi camps, wherever it shall be found that same are being used for stirring up religious strife, race prejudice, and incitement to riot, shall be disrupted, under severe penalties, and dissolved.

Seventh. The use of the mails shall be denied to all persons or organizations deliberately and intentionally sending misleading and false matter for the purpose of arousing religious strife or race prejudice. I admit I am on tender ground here—great care must be exercised lest the right of freedom of religion be violated. But sheer lies and patent distortions do not constitute freedom of religion. That would be freedom run riot. That would be license for carrying through our mails all manner of vicious and false propaganda. The line must be drawn somewhere.

Eighth. Any naturalized citizen who becomes a member of any subversive organization, such as the Nazi bunds, within 10 years of obtaining his second or final papers, shall be deemed guilty of acting in bad faith in the taking of his oath of allegiance and his final citizenship papers shall summarily be revoked.

Ninth. The Reich saw fit by enforced liquidation to sell at sacrificial prices real, personal, and industrial property of all Jews. The State Department shall continue to insist that American Jews, who are citizens of the United States, and who are temporarily in Germany, shall be exempt from such enforced liquidation. This demand is in pursuance of the German-American Treaty of 1923, which shall be deemed held contravened. If the Reich refuses such exemption, German nationals in this country shall be subject to the same treatment, and the moneys obtained from such enforced sale of the property of German nationals shall be used in refugee work. Suitable and vigorous protest has been made by an efficient State Department to the Nazi foreign office. I have read carefully the notes that Von Ribbentrop sent to Mr. Hull. They are full of sophistry and fake claims. They are just clumsy subterfuges. If I were an ordinary businessman claiming certain rights of a debtor and the latter answered me as did Von Ribbentrop, I would call him an unmitigated liar and an unvarnished scoundrel—nay, more, I would be tempted to give him 5 days to make restitution, failing which I should take him by the seat of his pants and dump him into a manure pit.

Tenth. The Government shall set up at the Panama Canal Zone a huge radio station in pursuance of my bill, to counteract and checkmate the vicious and ruthless German propaganda by radio and short wave pouring into all South American countries. It is as ceaseless as it is villainous. The United States, our President, and other high governmental officials are especial targets of attack. Americans are portrayed as naught but cutthroats, bandits, racketeers, cheats, and scoundrels in their business dealings. These insults spill over the airways from Germany 24 hours a day, 365 days a year. As yet we have done nothing to meet this evil. But it is an evil that must be met and met soon—otherwise the wrong done will be irreparable. Nazi proselyting while damning us will have gone too far. I am encouraged by the State Department to reintroduce the measure. Frankly, I am tempted to ask the question: Don't you think we need such a station? If you agree, write me, write the Federal Communications Commission, and write your own Senator and Congressman.

Eleventh. When public opinion in this country shall be prepared for same and there are good prospects and likelihood of passage, I would suggest offering bills that would increase to a reasonable degree the quotas from Germany, Poland, Hungary, Italy, and Rumania. I would also provide—when public opinion approves—for the bringing into this country of some 5,000 to 10,000 old men and women over the age of 65 years yearly and 10,000 children between the ages of 5 and 16 yearly.

Such old people and infants, when sufficient guaranties are offered that they will not become public charges, present no question of drain upon our resources. Their entrance would not affect our unemployment problem, as they are too old and too young to work. They would benefit us economically, as they would add to our number of consumers and thus increase demand for goods and services.

However, I repeat I would not offer or try to influence these quota changes or effect rescue of old or young victims of Nazi hate unless and until the country as a whole so desires. It may be the country is not ready yet. I incline to the belief that it is not yet willing. Therefore such changes shall at this juncture be deemed, shall I say, forbidden fruit. Perhaps later sentiment may change. Who knows? We live and hope.

Frankly, I would not risk upon the floor of either the House or Senate in the coming session any bill for the increase of quotas. The cure might be worse than the disease. Any amendment offered from the floor cutting down by, say, 50 percent present quotas might easily pass. I say all this reluctantly. Therefore, we should leave well enough alone. All efforts to change the number of those who can come in permanently should be shunned for the present at least.

Our hats go off to Roosevelt for not torturing visitors from Nazi Germany into making immediate departure into a living hell under penalty of deportation. He has instructed the Department of Labor to allow so-called visitors from Naziland to remain here indefinitely.

Twelfth. We should refrain from sending back to Germany any ambassador until such time as Germany stops her persecution of the Jews, the Catholics, and others because of race or religion.

Thirteenth. We should continue with all possible vigor to extend the boycott of all German goods and products. German trade, because thereof, has been greatly curtailed. Boycott is our strongest economic weapon. It should be used without restraint. It has baffled even the most astute of Nazi bankers—Mr. Schacht.

The London newspaper, the News Chronicle, reports that the American boycott has hit the North German Lloyd (Hapag) Line so hard that it will soon withdraw the S. S. *Bremen* from trans-Atlantic service. The paper said that the liner carried only 36 passengers on its last trip. "Such is the efficiency of the boycott decreed by the Americans after the pogroms," it added.

Fourteenth. While the majority of German-Americans are definitely not Nazis, every conceivable Nazi pressure is exerted upon them to join the so-called German-American bunds and to contribute to the Nazi cause. Of the millions of German-Americans residing in the United States, there are comparatively few who do not have relatives living in Germany.

Threats of bodily harm, veiled hints of economic revenge against the relatives within the Third Reich cause many panic-stricken and loyal German-Americans to join the Nazi cause. Appropriate measures must be taken to protect such German-Americans from such threats and terrorism.

Fifteenth. The movements of German diplomatic and consular agencies should be carefully watched. In many instances their speeches and actions have gone far beyond generally recognized consular and diplomatic usage and the demand should be made for their immediate recall. The worst offenders have been Dr. Borchers, German consul general in New York, who in a recent speech attacked "democracy" in speaking of the Sudeten victory, as well as Herry Gyssling, the consul at Los Angeles, and Manfred von Killinger, general consul in San Francisco, who incidentally was among the first to practice "feme," which is secret political murder.

Sixteenth. While the freedom of the press shall be always recognized and preserved, I deem it within the power of Congress to preclude the subsidization of the Nazi press from sources abroad when such press has for its purposes the destruction of democracy and the selling of racial strife. At the present time the German Government supports indirectly, through wholesale advertisements by the Hapag-Lloyd Line, much of the Nazi press in this country. The Nazis do not restrict their activities to German-language papers. They are now in the American newspapers. Many American newspapermen are subsidized directly or indirectly by the Nazi Government; for example, George Sylvester Viereck and Edwin Emerson. Congressional control over foreign trade and exchange gives the power to intercept Nazi funds going to these periodicals and papers and can make the recipients of such funds criminals.

In the last Congress we passed a bill requiring—under dire penalties for failure so to do—all recipients of foreign funds for propaganda and nonmercantile purposes to register with the Secretary of State. That bill can easily be expanded and broadened.

Seventeenth. We should persist in our refusal to sell helium to Germany for her dirigibles. Secretary Ickes deserves our commendation for his persistent refusal.

Eighteenth. There shall be enacted a measure for Government clearance of all testamentary and intestate inheritances and probate cases between the United States and Germany. In many instances threats are used by Nazi agents against relatives in Germany of heirs here to compel the latter to yield and cede their interests to the Nazi cause.

Nineteenth. There should be substantial increases in appropriations for all Federal departments or bureaus having to do with running down and prosecuting spies and devilish agents of Nazi Germany hidden in Government bureaus, business offices, armories, ships, munitions factories, aerodromes, and airship plants, and who carry off to Hitler highly important secrets and information, all of which undermines our national security. The Secretaries of War and the Navy, by these greater appropriations, should be encouraged to make more efficient their intelligence units. The F. B. I. of the Department of Justice should be plentifully supplied with money to catch and brand and punish these despicable creatures.

We must ferret out not only in the United States but also abroad the activities of these Nazi spies and agents provocateurs and bar their entrance into our country. We must in this respect ape the secret service of Scotland Yard.

Twentieth. The Federal Communications Commission shall be encouraged by all means in its determination to support stations which refuse to allow their facilities to be used by those—enthusiastically misguided—who stir up race animosities and religious strife. Certain owners, courageous enough to brave the thrusts of those thus refused, should be encouraged.

There is not involved any violation of the right of freedom of speech. The radio is different from a newspaper or magazine. It reaches a far greater audience, running into the millions. Any damage done cannot be checkmated quickly enough. Passion and prejudices are easily raised and the unthinking in the radio audience may be easily persuaded to force and violence. Those who stir up these animosities refuse, ordinarily, to give their scripts in advance, thereby frustrating suitable answers by orators equally gifted. The station owner has a perfect right to close his facilities if the speaker refuses to give his manuscript in advance. He acts in the public interest when making this demand. There is no abridgment of free speech. The late Justice Oliver Wendell Holmes once considered a similar situation and stated that free speech never gives the right to any man to yell "Fire" in a crowded theater.

Twenty-first. We should all rejoice at the success that crowned the efforts of Messrs. Hull and Landon at Lima. The Lima declaration should be given every possible support to develop inter-American solidarity.

Twenty-second. Cancelation of exchange of professors and students with the Nazis. All universities in Germany are Nazi-controlled. Nazi philosophy permeates and animates these teachers. Assuredly we should shun like the plague the contaminating doctrine such professors and students would bring. Nazi-ism is the very antithesis of democracy. Shall our students be subject to such contamination? Congress can suitably urge the State Department to refuse visa to such poison carriers in case any of our colleges or universities dare brook adverse public opinion and insist upon importing these Nazi professors. Passports can be denied any of our students foolish enough to want to attend a Nazi school.

Hon. William A. Rodenberg

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

ADDRESS OF FORMER SENATOR T. P. GORE BEFORE THE DISTRICT OF COLUMBIA BAR ASSOCIATION, JUNE 14, 1938

Mr. KNUTSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by former Senator Gore on the life of our late colleague, W. A. Rodenberg, of Illinois, as follows:

Mr. Chairman, gentlemen of the District Bar, I arise this evening to perform a melancholy labor of love, to say a word in memory of my departed friend and your departed member, Hon. William A. Rodenberg.

I can say of him, as Mark Antony said of Caesar, "He was my friend, faithful and just to me." But his friends were legion and those who knew him best loved him best. His name deserves to be written beside the name of Abou Ben Adhem—he loved his fellowmen.

If I might be allowed to paraphrase the words of another, I would say if all his friends, if everyone to whom he lent a helping hand, if everyone for whom he performed some kindly service should bring a flower and lay upon his grave they would bury him beneath a wilderness of bloom.

He was born in Illinois. He lived beyond the allotted threescore years and ten and yet he went before his time. His going was tragic and untimely. I heard the fatal fall that sped him to his doom. He crossed the bar on the 10th of last September.

He was not only a good citizen, he was a faithful public servant. For more than 20 years he served his district, he served his country, in the House of Representatives. During the times that tried men's souls he exhibited the highest and rarest proof of statesmanship—moral courage—moral courage, the rarest if not the finest of all public virtues, that without which nothing else avails, that without which everything else counts for naught. When the question of peace or war, when the question of life or death trembled in the balances, he voted against the United States entrance into the World War. You may or may not approve his course but you must applaud his courage. I cite this one instance alone because I believe that he felt more pride and found more satisfaction in that one vote than any other that he ever cast, and I am sure that he recalled that vote with increasing satisfaction as the shadows lengthened toward the setting sun.

Before he entered and after he retired from public life he was engaged in the practice of the law, and I need not say that he observed the highest standards of the profession. In every relationship of life, as friend, as father, as husband, as private citizen, as public servant, he proved himself a manly man. Those of us who knew him best and loved him best all agree that there is less of good cheer, less of good fellowship, less of bonhomie in this valley of the shadow since William A. Rodenberg went his way.

Problems of the South

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1939

ADDRESS BY HON. JAMES F. BYRNES, OF SOUTH CAROLINA, AT NEW YORK, N. Y., DECEMBER 7, 1938

Mr. BANKHEAD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by the junior Senator from South Carolina [Mr. BYRNES] at the fifty-third annual dinner of the New York Southern Society at New York on December 7, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The 13 States known as the Southern States are a territory rich in natural resources. Beneath its soil is found coal and iron, crude oil and natural gas, marble and granite, phosphate and sulphur; in all more than 300 different minerals. Within this territory is 40 percent of the forests of the Nation. From its soil is produced a practical monopoly of such crops as cotton, tobacco, and naval stores, and a variety of grains, fruits, and vegetables, possible only in a country where for more than 6 months of the year there is no fear of frost and there is an assurance of ample rainfall.

With such a wealth of physical resources it was natural for observers a century ago to predict that the South would become the most prosperous section of the Union. But, instead of this being true today, the President of the United States has characterized the South as the Nation's economic problem No. 1, and a report filed with him by the National Emergency Council amply justifies the characterization.

Many things have contributed to bring about the economic conditions in the South to which the attention of the Nation has been so strikingly called.

More than a century ago the South made its choice as between industry and agriculture. The South chose agriculture. New England chose industry. As time marched on New England sought the aid of government to protect its infant industries. The agricultural South urged that taxes be levied solely for the purpose of raising revenue with which to pay the expenses of government. For the greater part of the time that has passed the political party believing in the doctrine of protective tariffs has controlled the Government. The manufacturers of the North have held fast to their principles and their profits. The farmers of the South have held fast to their principles and their poverty.

As a result of the choice of the South and the policies of the Government, the raw materials of the South have been produced by unskilled labor, receiving low wages. These materials have been shipped to the North and there processed by skilled labor receiving high wages. Because of the protection afforded by tariff duties against foreign competition, the manufacturers in other sections have been able to fix prices for their products high enough to enable them to pay high wages to labor and large profits to stockholders. When the South has repurchased in manufactured form its raw materials, it has not only paid these high prices, but in addition, has paid liberally for the transportation and all other handling of its products.

While buying in a protected market, the farmers of the South have been selling in an unprotected market. Their cotton and tobacco have been sold at prices fixed in the markets of the world. To the extent that tariff duties have restricted importations from abroad, they have lessened the ability of foreign customers to pay for the products of the South.

The large profits of the manufacturers in other sections resulted in the accumulation of capital which in turn resulted in low interest rates for northern industries, while high rates of interest were being charged in the South. Since 1933 there has been a reduction in interest rates but in June 1938 the average rate of interest in 27 cities of the West and South was 4.14 percent, while the average rate of interest for similar loans in New York City was 2.36 percent, and for 8 other northern cities was 3.38 percent.

The accumulation of capital in the North contributed to the organization of the great insurance companies. Only 2 percent of the assets of the life insurance companies of the Nation are in the Southern States. Seeking security, the people of the South have placed their insurance with the great companies of the East and their annual premiums have been invested by the life insurance companies in the securities of northern industries or in the real estate of northern cities.

About a half century ago northern capital began to realize the advantage of locating industries in the South in close proximity to raw materials. These industries prospered notwithstanding the fact that discriminating freight rates constituted a barrier against the shipment of their products to markets.

The freight rate structure has been built over a long period. Originally the high rates charged in the South were attributed by the railroads to the greater expense of operating in the South. As a result of improved engineering and increased traffic today the operating costs of southern railroads are lower than in the East.

But the rate barriers remain. The country is divided into zones. The northeastern zone contains 51 percent of the population of the Nation, and is the greatest market of the Nation. Under the existing rate system $1.12 will buy 200 miles of transportation in southern territory, but practically the same amount, or $1.09 will buy twice as much, or 400 miles of transportation in northeastern territory. To ship 100 pounds of butter, eggs, or dressed poultry from Dallas, Tex., to Chicago, a distance of 905 miles, it costs $1.48. To ship the same 100 pounds of the same commodities 900 miles from New York City to Chicago it costs 49 cents less, or 99 cents.

While tariff duties have operated as a penalty against the South for its choice of an agricultural economy, freight rates have prevented it from making greater progress industrially. As a result, if we can rely upon the figures of the National Emergency Council, in 1937 the average income in the South was $314, while in the rest of the country it was $604—almost twice as much—and the average gross income of the southern farmer in 1929 was only $186 per year, as compared with $528 for farmers in other sections. With such a disparity in average income it is not surprising that though the South is annually spending millions to educate its youth, the boys and girls when they graduate from the colleges and universities often leave for other sections offering greater opportunities.

The remedy for these conditions is said to be partly economical and partly political. I see no justification for the hope that the Congress will provide a remedy either for the problem of tariff rates or freight rates.

Should a bill reducing tariff duties be presented to the United States Senate, when it leaves that body it will provide for increased, instead of reduced duties. Senators from a copper-producing State will agree to let the Senators from the State of Pennsylvania fix any duties they desire for the protection of industries of that State, provided in turn they are permitted to fix the duties upon copper. That is true of the representatives of other States producing other commodities. If left to Congress, tariff duties would be fixed, as in the past, not upon a scientific basis but upon a horse-trading basis. The only difference today would be that more Democrats would participate in the trading.

Today the only hope for any relief in the readjustment of tariff duties rests upon action by the President under the reciprocal-trade agreements. Under that act we have made progress and we can hope that the Executive, considering the welfare of the entire Nation instead of a State or district, will make possible an exchange of products that will promote our foreign trade, and even more important, will promote good will between the nations and thus contribute to the preservation of peace in the world.

There can be no hope for a readjustment by Congress of freight rates in the South. If Congress reduces railroad revenues by the reduction of some rates, the Congress must provide for compensating increases elsewhere, or provide funds from the Treasury to care for the deficit. If this question were ever submitted to the Congress, any change would result only in greater discrimination against the South. By law the power to fix rates is vested in the Interstate Commerce Commission. Some rates have been increased and others reduced as a result of cases brought before that Commission. The communities and the industries of the North have had the financial ability to employ rate experts to present their causes and gradually have secured advantageous rates. The communities and the industries of the agricultural South were unable and today are unable to employ rate experts to present their cases, and consequently have suffered.

Congress could render assistance by making an appropriation to establish an office, which I would call "The People's Counsel," equipped with a staff of experts and authorized to present appeals for the readjustment of rates as to certain communities and commodities, where, in the opinion of such counsel, a readjustment would be in the interest of justice.

The President of the United States could grant a measure of relief by appointing to the Interstate Commerce Commission some person from the Southeastern States who is familiar with the economic problem of the South and sufficiently familiar with the complicated subject of rates to give cause for hope that intelligent consideration will be given to a readjustment of these prejudicial rates.

Notwithstanding the burden of tariff and freight rates, the industries of the South have grown and prospered. Many factories for obvious reasons have moved from the North to the South.

In the last Congress the wage and hour law was enacted. Many of its sponsors, particularly the leaders of labor, were actuated solely by a desire to improve the lot of the working man. But the driving force behind the legislation was the belief on the part of the manufacturers of other sections that a uniform wage rate would

put an end to the migration of industry to the South. The South was opposed, not to the principles of the minimum wage, but to the failure of the law to provide differentials as between communities and industries, just as is provided by the minimum wage laws of the States. The Congress would not think of legislating to provide uniform rates of interest or uniform rates of transportation, but it did not hesitate to provide for uniform wages—another factor in the cost of production.

We now have this interesting situation: While the wage and hour law provides that there shall be absolutely no difference in the minimum wage paid by the individual employer in New York City and the individual employer in Aiken, S. C., the Government, through the W. P. A., pays to the unskilled laborer in New York City a minimum wage of $60.50 per month and to the unskilled laborer in Aiken, S. C., only $30.80 per month.

The only direct assistance the South can hope for from Congress is the agricultural legislation providing for the payment of benefits in the nature of a subsidy for the withdrawal of acreage from cultivation under the plan for control of production. This is granted as an offset to the increased cost the farmers of the South and West must pay for everything they buy as a result of the protective tariff. It is granted because the interests of the South and the West are alike, and compensation cannot be paid the wheat grower of the West without compensation being paid the cotton grower of the South.

I know it is contended that the South profits by expenditures for work relief. On the contrary, it is a burden to the South. The 13 Southern States have a population, according to the last census, of 33,771,653—more than two and one-half times the population of New York State, which is 12,588,066. According to the figures presented to the Senate Appropriations Committee by Mr. Hopkins, the expenditures by W. P. A. in the 13 Southern States for the fiscal years 1936, 1937, and to April 1, 1938, amounted to $609,424,231, whereas in the State of New York the expenditures for the same period amounted to $737,219,651.

The expenditures for the State of Pennsylvania, having a population of 9,631,350, during the same period, were $455,563,795—only $150,000,000 less than was spent in all of the 13 Southern States, with three and a half times the population of Pennsylvania.

To bring it home to you of New York City, the population of three South Atlantic States, Virginia, North Carolina, and South Carolina, totals 7,330,833. The population of New York City is 6,931,446. The expenditures by W. P. A. in these three Southern States to April 1, 1938, total $93,874,177. The W. P. A. expenditure during the same period in the city of New York was $561,042,962, or just six times as much.

Some persons may say that the expenditure by the Federal Government of six times as much for work relief in the city of New York as in these three States is justified, because the people of New York City pay more taxes to the Federal Government. The farmer in Virginia who purchases a gallon of gasoline pays the same tax as is paid by the resident of New York. The corporation selling the gasoline may be incorporated in New York State and pay taxes there, but it is owned by the stockholders residing in many States. It fixes the price of gasoline in order to make a profit sufficient to allow for the payment of taxes. The tax may be paid in New York, but it is based on and paid out of profits made on the sale of gasoline to the people of many States. Few taxes are levied that are not passed on. If anyone can suggest a tax that cannot be passed on to the consumer, the suggestion will be welcomed by the Congress.

If any person thinks that relief expenditures should be based upon the amount of taxes paid the Federal Government by a State, and thinks such taxes do not come from the consumers scattered over the Nation, nor even from the stockholders scattered over the Nation, but solely from the people in the State where the taxes are paid, then I assert that the payment of taxes is evidence of wealth and income, and the people of a State with a large per capita income are more able to pay taxes for work relief in that State than are the people of the poorest States of the Union—States so poor that in the opinion of the President, they constitute the Nation's greatest economic problem.

I realize that within the last few years the unemployment problem has been serious in the great cities. By its support of relief appropriations the agricultural South has shown its sympathy. I realized that unemployment in the great cities constituted an emergency problem and supported this emergency legislation. If, however, it is to be established as a permanent function of government, then I want a change in the system of distribution, and I want the Congress to provide the formula to govern that distribution.

If these appropriations are to be based upon need, we cannot continue to leave the determination of need to local officials. That system has resulted in showing the greatest need in the richest States, and the least need in the poorest States. Under that system, the more people registered for relief, the more projects for the State. It rewards the local official who encourages persons to register for relief and penalizes the official who, having regard for the Treasury, discourages persons seeking relief.

I do not want the Government, as a permanent policy, to annually collect from the people two billion, or one billion, dollars, and give that immense sum to the head of any Department to spend as he pleases. I cannot now discuss the fundamental objections to this policy which affects even the form of our Government. Considering only its effect upon economic problem No. 1, I know that under such a system the people of the South will be forced to pay their proportionate share of taxes and will not receive their proportionate share of expenditures. This is true because the South is a one-party section and will remain a one-party section.

This administration has been more friendly to the South than any administration since the War between the States, and if under this administration the 13 States of the South have not received from work-relief funds as much as the State of New York with one-fifth the population, I dislike to think of what we would receive from an unfriendly administration.

In what I have said about our not relying upon the Congress to solve the problems of the South, I do not intend to reflect either upon the patriotism or the generosity of the men who represent other sections in the Congress. They represent their people, and I realize there has been a change in the attitude of the people.

Half a century ago, while expecting their representatives to protect their interests, the people nevertheless expected them to consider governmental problems from a national viewpoint. Today the Congress collects from the people in taxes billions of dollars and gives that money to department heads to be spent at their discretion. Local officials then demand the assistance of the Senators and Congressmen in getting back from the department heads for local improvements some of their money. The efficiency of the Senator or Congressman is determined by the amount of money he gets back. The more money a representative secures from the departments, the greater is his obligation to vote for additional appropriations which will be asked by the heads of the departments. In this competition with his colleagues to secure funds from the departments, it is inevitable that the viewpoint of the representative becomes more restricted to State and district.

The attitude of the representative is due to the attitude of the people. The business man and the educator will make splendid speeches about balancing the Budget. Immediately afterward one will write the Senator asking aid in securing funds for a Federal building while the other prayerfully pleads for a college stadium.

The businessman, who would never ask a public official to accompany him to a bank to borrow money, would not try to borrow money from a Government agency without the aid of a legislator. He thinks his collateral will be more acceptable when wrapped up in political influence.

The banker, who would not give serious consideration to the applicant for a loan who brought with him a United States Senator, will himself ask the aid of a United States Senator when he seeks a loan from the Reconstruction Finance Corporation.

The result of it is that the Senator and Congressman have little time to give to the consideration of national problems because their time is absorbed acting as superintendents of employment agencies and as glorified secretaries of chambers of commerce.

I assume that it is utterly impractical, but I know that if the Congress would enact a law prohibiting a Senator or Congressman from making representations to an official of any executive department as to the making of a loan, the granting of funds for work projects, or the appointment of an official in the executive departments, the Congress could reduce the appropriations for the next fiscal year by at least $500,000,000. And, at the same time, the Senators and Congressmen would again become legislators and have an opportunity to devote their time and thought to the problems affecting the welfare of the Nation.

Some of these views will not meet the approval of the "professional" liberal. But the record of southern Representatives and Senators in not only supporting but in sponsoring nearly all of the great social reforms of the last 5 years prove them to be liberals in the true sense of that term. Some people believe that to be "liberal" means only to be liberal in spending the money of other people. If that be the correct definition, then I admit the political leaders of the South are not liberals. No matter how great may be the public spending today, it would be greater were it not for the influence of the political leaders of the South.

There is a reason for their attitude. The South is still agricultural. The farmer of the South knows what debt means. He knows, too, that debts must be paid. The small-business man of the South likewise knows that no individual can daily spend more than his income without winding up in the bankruptcy courts. They both know that government is but a group of individuals and cannot indefinitely pursue a course that individuals cannot pursue.

I do not think that the public debt is dangerous, but it can become dangerous if life continues to be just one emergency after another, and if we adopt as our national slogan, "As long as it is going to be spent we may as well get ours."

I have spoken to you plainly because you are of the South, and though you may today be engrossed in the problems of your new home, I know you are still interested in the problems of your old home. The problems of the South will not be solved by politics or politicians. But I have an abiding confidence in its future. That confidence is based upon the interest shown by the business leaders in the unexampled opportunities for southern development. They are wise. There was a time when capital looked to other nations for investment. Millions were loaned to foreign countries in order to bring about the purchase of our goods. Today business leaders know that in the vast empire from the Potomac to the Rio Grande there is a better market than any foreign land. In that empire there lives a people 98½ percent native born, anxious to buy the products of the factories of the North and contribute to the wealth of the Nation. In that territory raw materials exist; hydroelectric power is being developed; efficient labor awaits employment; and a mild climate permits work outdoors the entire year and work indoors at little expense for heat. Congress may try, but it can no more restrict the industrial development of the South than it can regulate the climate of the South.

The most serious loss of the South has been the loss of its youth. At the same time those who have gone to other sections have become ambassadors of good will. Today as their eyes and hearts turn to the homes of their childhood, they see a people facing the future with courage and with hope. When gloom surrounds them, they think of another day. They recall the conditions existing when, after Appomattox, the Confederate soldier returned to his home. He found no factories operating. He found few farms cultivated. He had no stock and no money with which to buy stock. He had little clothing and little food. He found barren lands and dilapidated homes. He faced a hostile government in State and in Nation. He had lost all—all but character and courage. With love of liberty and faith in God, he faced the future and began the work of restoration. History discloses nothing comparable to his success in overcoming the economic and political obstacles confronting him. He survived and in surviving preserved the civilization of the South. The blood of the strong-hearted men and women of that day courses through the veins of the men and women of the South of this day. With the same courage and the same fine spirit of self-sacrifice, they will overcome the obstacles confronting them and restore the South to the place it once occupied in the economy and in the political councils of the Nation.

Corruption and the W. P. A.

EXTENSION OF REMARKS
OF
HON. RUSH D. HOLT
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1939

STATEMENT BY HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by myself entitled "Corruption and the W. P. A."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We are winning our battle to clean up relief. Hopkins has gone; his methods must follow.

As the Seventy-sixth Congress begins, I assure the citizens of West Virginia that my fight against corruption in the handling of relief funds will go on. The prospect to clean up relief is much brighter today than it was in 1935, when I started to protest against its handling. It is not an easy job now. Too many political machines have used it. They want to continue to use relief funds for campaign purposes. In our State, as you know, honest administration of relief will be fought by the politicians. I need not recall to you the bitter, personal attacks made by the W. P. A. bosses and their henchmen against me because I told the truth. They hid behind the word "humanitarian." They dodged the issue behind a political smoke screen. Some of them have been uncovered. Some have been smoked out. We cannot stop this fight until the rest of them are brought into the open. I need not recall to you the so-called punishment by Members of the Senate and others in the administration circle because I dared to speak the truth. It is more popular to tell the truth in 1939 than it was in 1935 and 1936. I look for more expressions in the next few months than in the past few years. This has been caused by the citizens of the country who believed in decency and honesty. They must cooperate in the future to make certain that the practices will not be resumed. They must be ever vigilant.

I am sure the people are not misled by the removal of Harry Hopkins from the Works Progress Administration, even though there is an improvement. He was the head of the W. P. A. since its inception. He was responsible for its conduct. Never once when it would have done good did he raise his voice against using relief as a political club. He winked as he talked about reformation of relief. He had a common and definite understanding with those who used it for politics. I shall discuss this later.

In the last days of the Seventy-fifth Congress I said:

"Who pays for this politics?

"1. The one who needs relief, because the politician gets the money that should go to the needy to feed and clothe his family.

"2. The taxpayer, because he must pay for the waste and extravagance which, in turn, means heavy taxation, contributing to more unemployment by closed factories.

"3. The Government, because the use of the public money as a slush fund corrupts government.

"What must we do?

"Drive politics out of relief and drive out politicians who play politics with human misery. Public opinion will do it."

Time will record the handling of W. P. A. to be the worst scandal this country has known. All of it may not be uncovered now; however, it will be. Corruption in W. P. A. will and must be stopped. As the President said: "There will be no retreat."

Attorney General Murphy

EXTENSION OF REMARKS
OF
HON. H. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1939

ARTICLE FROM THE NEW YORK HERALD TRIBUNE

Mr. BRIDGES. Mr. President, inasmuch as we have recently had some major appointments to political office in this country, I ask unanimous consent to have inserted in the RECORD an article appearing in the New York Herald Tribune of Tuesday, January 3, entitled "How Murphy Vetoed Court Order," tracing the record of Mr. Murphy, who is now elevated to the attorney generalship of the United States after being defeated by the people of his own State of Michigan, campaigning on his record in taking action in violation of court orders and in violation of the laws of the land, of which he will be the chief enforcing officer if his nomination shall be confirmed by this body. We can well survey this record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of January 3, 1939]

HOW MURPHY VETOED COURT ORDERS IS RECALLED AS HE IS ELEVATED—MARK SULLIVAN TRACES MICHIGAN SIT-DOWNS IN WHICH THE NOW CHIEF LAW ENFORCEMENT OFFICER OF UNITED STATES REFUSED TO EJECT STRIKERS SEIZING PLANTS

(By Mark Sullivan)

WASHINGTON, January 2.—The facts here given about Governor Murphy of Michigan, now appointed to be Attorney General of the United States, are taken in part from official records, in some part from newspaper accounts at the time of the happenings. I think the facts can be relied upon as accurate.

In January 1937 workers in a plant of the General Motors Co. at Flint, Mich., engaged in a sit-down strike. The company went into court and asked for a writ of ejectment. The court held a hearing, with both the company and the strikers represented by counsel. The court issued a writ of ejectment. The sheriff read the writ to the strikers. The strikers "booed" the sheriff. In the same spirit they, according to a newspaper account, sent a telegram to Governor Murphy saying, "We have decided to stay in the plant."

When the court's writ was disobeyed, the court issued what is called a "writ of body attachment." Under this writ it was the duty of the sheriff to arrest the sit-downers and remove them. Obviously the sheriff could not alone arrest and remove several hundred men. The sheriff asked Governor Murphy for the help of the National Guard. Governor Murphy did not order the National Guard to help. Instead, according to testimony given later by the judge, the sheriff reported to the court that "the Governor did not want me to execute the order of the court."

VICTORY FOR SIT-DOWNS

Governor Murphy, after telling the sheriff to withhold enforcement of the writ, called a meeting of heads of the company owning the factory and of the union conducting the sit-down. After about a week of conference, the company agreed to negotiate the matters at issue between it and the union. Thereupon, and not till then, the sit-downers evacuated the plant voluntarily, cheering as they marched out. The sit-downers won the sit-down and won it through Governor Murphy's unwillingness to give help to the sheriff to enforce the writ of the court.

In this situation two charges were made against Governor Murphy. One was that by his action he encouraged the sit-down strike as a strategy of labor disputes. This charge is hardly disputable, although Governor Murphy's friends say that in words he has never encouraged or condoned the sit-down. But the Flint sit-down was the first important use of this device in America. The success of it led to an epidemic of sit-downs in Michigan and throughout the country.

The second charge against Governor Murphy was that when officially called upon as commander of the National Guard he failed to give help for enforcement of a writ of a court. This charge is correct. The writ of the court was never executed. The break-down of law enforcement was plain. The Flint break-down, standing alone, was brief. Taken in connection with the other sit-downs which it encouraged, the break-down was serious. The man responsible for the break-down in law enforcement is now appointed to be the chief law enforcement official of the country, Attorney General of the United States.

In the talk that has arisen since President Roosevelt appointed Governor Murphy there have been statements or implications that Governor Murphy acted in consultation with President Roosevelt. There are implications that President Roosevelt was as responsible, perhaps more responsible, than Governor Murphy.

For the imputation against President Roosevelt there is some evidence. On the day that Governor Murphy failed to give help to enforce the court's writ, and called a conference between company and strikers, he announced he was calling the conference "in accordance with the wish of the President of the United States."

Nearly 2 years later, when Governor Murphy was under criticism by witnesses before the Dies committee, President Roosevelt came to his rescue. In a published statement, President Roosevelt said that throughout the conference conducted between the company and the sit-downers under Governor Murphy's direction, and hence throughout the period of suspension on the writ of the court, "I received almost daily reports on the situation from the Governor."

FIGHT ON COURT RECALLED

In this connection there is a remarkable coincidence. The day Governor Murphy told the sheriff not to execute the writ of the court, and in consultation with President Roosevelt began his conferences between the strikers and the company—that day was February 5, 1937. This was the same day on which President Roosevelt sent to Congress his bill giving him the power to appoint six additional justices of the Supreme Court, and to reorganize the lower courts. The coincidence may lead to inferences that Mr. Roosevelt was in a mood of irritation against courts generally, possibly of wish to reduce their authority and their prestige.

It should be added that it seems clearly the policy of one agency set up by the administration, the National Labor Relations Board, to justify the sit-down strike as an incident of labor disputes in some circumstances. In two cases, Fansteel and Douglas Aircraft, sit-downers occupied a plant illegally. In both cases they resisted the attempts of law officers to remove them. In both cases the sit-downers were eventually arrested, and some of them tried, convicted, and sentenced to fine or imprisonment. In both cases the labor board ordered the companies to reinstate the sit-downers in their employment without loss of priority rights, or other detriment.

Politics in Relief

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1939

EDITORIAL FROM THE PHILADELPHIA INQUIRER

Mr. BRIDGES. Mr. President, I ask unanimous consent that an editorial from the Philadelphia Inquirer of January 4, which has something to do with the new Secretary of Commerce, Mr. Harry Hopkins, and the very able report filed by the Sheppard committee yesterday may be printed in the RECORD. The editorial is entitled "Politics in Relief a Scandal; End It."

Let us survey Mr. Hopkins' record. It is an interesting one.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of January 4, 1939]

POLITICS IN RELIEF A SCANDAL; END IT

Politics can stoop to no more shameful practices than to rob and coerce the needy to serve its own ends.

The report of the Senate Campaign Expenditures Committee offers convincing proof of the revolting charges that relief funds have been diverted to political purposes in Pennsylvania and many other States.

It should provide the final, decisive argument for vigorous and immediate congressional action to rid the whole relief system of the disgraceful machinations of politics.

The Sheppard committee's findings support accusations that the W. P. A. was made an election campaign tool in Pennsylvania.

It sustains charges of W. P. A. coercion in Luzerne, Northampton, Carbon, Allegheny, and other counties.

It corroborates assertions that the State highway department has been active in politics.

It constitutes an unequivocal reprimand to Aubrey Williams, former First Assistant Administrator of W. P. A., now head of the National Youth Administration, who, questioned repeatedly about W. P. A. coercion in Pennsylvania, replied that there wasn't "a scintilla of truth in any of the charges."

Although the Senate committee's report does not specifically connect Harry Hopkins, former W. P. A. chief, awaiting confirmation by the Senate as newly appointed Secretary of Commerce, with the politics-in-relief outrages which it cites, the implication is obvious.

While it appears unlikely that the Sheppard group's report will crystallize so much opposition against Hopkins in the Senate that his appointment to the Cabinet will be rejected, the committee's findings should be given thorough study by the Senators.

If the committee is unduly cautious about tying up Hopkins to the political activities of the Relief Administration, it is properly direct and emphatic in chiding Williams for trying to influence the votes of relief recipients and for his startling battle cry, "We've got to keep our friends in power." No more dangerous sentiment than this is conceivable in a free country.

It is no wonder that the Senate committee has labeled political activity in relief as "deplorable" in some States, notably Kentucky. "Dear ALBEN" BARKLEY's campaign for renomination to the Senate against "Happy" Chandler smelled to heaven of the improper use of relief funds.

Judged broadly, the Sheppard group's report represents an amazing indictment of a practice that is an outstanding disgrace to this great Nation.

It is plain that something must be done, without delay, to wipe out this shame and to insure that funds appropriated by Congress for relief will acually go to the care and keeping of the needy and no longer into the pockets, or to serve the purposes, of politicians.

The recommendations which the committee presents for erasing this scandal are good, so far as they go.

There should be tight prohibition against political contributions by relief recipients. There should be legislation forbidding relief officials to influence votes.

It may even be that all political contributions by Federal employees should be made illegal.

It should be a felony rather than a misdemeanor for officials to discriminate against relief workers on partisan or any other grounds.

Laws to keep candidates from using relief lists for partisan purposes and to forbid promises of benefits from relief funds ought to be considered.

Strengthening the United States Criminal Code and the Federal Corrupt Practices Act doubtless would aid in bringing to an end this insufferable disgrace of bribery and coercion in relief.

But all of these remedies are sure to fall short of the desired results if the present haphazard, unbusiness-like relief system is permitted to go on unchanged.

Along with direct measures to take politics out of relief there should be a complete and thorough overhauling of the relief set-up. Here is a gigantic agency, dispensing billions of the people's dollars, that operates under the most happy-go-lucky supervision imaginable.

In fairness to the needy who must and should have public assistance, and to the taxpayers who put up the money for it, an end should be made once and for all to this shocking, unspeakably vicious practice of using relief funds and relief organizations for political purposes.

It is a task that Congress should take in hand, not in some vague future, but at once.

The Cuban Trade Agreement

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

PORTIONS OF STATEMENT OF REPRESENTATIVE RALPH O. BREWSTER, OF MAINE, BEFORE COMMITTEE FOR RECIPROCITY INFORMATION AT HEARINGS ON REVISION OF CUBAN TRADE AGREEMENT, TUESDAY, JANUARY 3, 1939

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following portions of my statement before the Committee for Reciprocity Information on January 3, 1939:

POTATOES

Recently America was regaled with a visit from a colonel in the Cuban Army who as a sergeant led a military revolt that ousted a President and substituted himself as dictator. Although apparently without diplomatic status, he was accorded almost royal honors.

Promptly on his return to Habana this military gentleman announced that he had concluded an agreement with the United States for further substantial concessions on Cuban sugar and potatoes entering the American market. Promptly thereafter the State Department in Washington issued a notice of negotiations looking to these changes.

When, as, and if this revised agreement is announced, it would reassure the American public if there were at least some slight deviation in its terms from the fulsome pronouncement of Colonel Batista. Such a mild spanking might be an excellent lesson to this incipient Hitler who started as a sergeant instead of a cor-

poral. This unfortunate episode illustrates once again how careful a nation must be in the selection of its friends and how difficult it is for democracies to deal with dictatorships.

UNITED STATES QUOTA

In the new Canadian trade agreement 350,000,000 bushels is apparently fixed as a normal and adequate crop of potatoes, since the novel provision is introduced that Canada may ship in at reduced rates of tariff any amount of potatoes necessary to supply the deficiency below that amount "according to the estimate made as of September 1 by the Department of Agriculture." On September 1 this year and ever since down to the present time the Department of Agriculture has estimated the United States production of potatoes this year at more than 370,000,000 bushels.

Reciprocity would seem to require that Canadian and Cuban importations alike be eliminated until at least 20,000,000 bushels of surplus American potatoes are eliminated, but no trade agreements, curiously enough, carry such a provision.

"HEADS THEY WIN"

This is a clear case for our Canadian friends of "Heads they win; tails we lose." If our crop is abundant, they may still ship in under existing quotas. If our crop is small, they may then ship in that many more.

No theory of tariff making or reciprocal agreements has been suggested under which foreign commodities would be admitted at a reduced duty when the American consumer was already adequately and economically supplied with a comparable American product. Yet precisely that is being done in the case of potatoes, as the records clearly show.

DOMESTIC SURPLUS REMOVAL

Last year millions of Government money were spent to divert potatoes to other uses and remove the surplus. Yet at the same time the tariff on Canadian potatoes was being reduced to admit them more freely to our American markets. That simply does not make sense.

CERTIFIED SEED POTATOES

Nor is the situation better as to certified seed potatoes of which the United States last year produced 14,892,591 bushels. Maine turned out 8,519,901 bushels, or nearly 60 percent of the total. Yet United States producers were obliged to sell much of this expensive certified seed as table stock at a substantial loss while foreign seed potatoes were allowed to flood our market.

Now it is proposed to double the foreign quota and admit to our markets approximately 10 percent of our domestic production.

CANADIAN PRODUCTION

Canada produced approximately 7 bushels of potatoes per capita as against our production of 3 bushels per capita, which is also our consumption per capita. Canada does not consume anything like 7 bushels per capita, which indicates clearly enough that they are building up their consumption for foreign outlets, chiefly in the United States.

RECIPROCITY

The statistics are extremely illuminating as to the one-way reciprocity involved in the existing Cuban trade agreement. Presumably these agreements contemplate a fair exchange between the two countries.

How has it worked out? During the year preceding the effective date of the Cuban agreement Cuba shipped to the United States goods to the value of $14,000,000 more than the United States shipped to Cuba.

During the first 2 years of this reciprocal agreement Cuba has shipped to the United States goods to the value of $147,000,000 more than the United States has shipped to Cuba.

In other words, this agreement has cost us approximately $67,000,000 a year. A few more reciprocal agreements of this character would certainly complete the wreck of our domestic economy.

DICTATORSHIPS VERSUS DEMOCRACIES

One may be permitted to wonder whether this illustrates the superiority of a dictatorship to a democracy so far as reciprocal trade agreements are concerned.

Primary Reform in Indiana

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

Mr. LUDLOW. Mr. Speaker, what is the meaning of democracy? It means the right of the people to rule themselves—a right which we who subscribe to the faith of the founding fathers believe comes from God himself.

In a few States where the old convention system of making nominations still hangs over, the people do not have the opportunity which they should have to rule themselves. They take the dose which the State conventions prescribe for them, whether they like it or not, and they have nothing to do with writing the prescriptions.

The party leaders who pick the tickets under the convention system may be conscientious and high-minded, and it is not my purpose to reflect upon them or challenge their good intentions in discharging the responsibilities they inherited under the law, but the fact remains that under the American democratic system it should be the privilege of the people to select the candidates who will represent them in public offices. We need to build up our democracy along this line.

The direct primary furnishes the only way the people have of expressing themselves with certainty and accuracy in respect to the nomination of candidates. It is the only dependable means of registering the popular will. With the nineteenth amendment in force, women comprise half of our voting population, but they are practically disfranchised from having any choice in making nominations under the convention system.

In the march of progress practically all of the States have discarded the convention system and, following the advice of Woodrow Wilson and other great leaders, have substituted the primary. The State of Indiana, one of the most advanced of all the commonwealths, with a brilliant record of progress along many lines, still retains the convention system, but the legislature is to meet at Indianapolis this month, and in view of the strong and impelling demand for a change I believe it is virtually assured that a law will be passed substituting the direct primary for the State convention in making nominations for State offices and United States Senator.

I hope that the new Indiana law will meet the full expectation of those who believe in popular rule and liberal government. I have not seen the text of the proposed measure, but I predict that it will provide for an honest-to-goodness primary, in which the candidate receiving the highest number of votes will be the nominee. If I am a good judge, it will be a law that will relegate the State convention to everlasting oblivion in our State.

LETTER TO HON. E. CURTIS WHITE

By unanimous consent of the House I wish to present a letter I have written on this subject to Hon. E. Curtis White, one of our outstanding Indiana Democrats and Democratic leader of the Indiana State Senate, as follows:

NOVEMBER 23, 1938.

Hon. E. CURTIS WHITE,
Democratic Leader of the Indiana Senate,
Indianapolis, Ind.

DEAR SENATOR WHITE: I have noted with much interest and approval statements recently attributed to you forecasting repeal of the State convention by the coming legislature and the substitution in its place of the primary system of making nominations for United States Senator and all State offices, thus making the primary the universal method of choosing candidates for public offices throughout Indiana.

Permit me, as a citizen who has infinite pride in the history and traditions of our State and who wishes to see Indiana lead instead of lag in the march of progress, to give enthusiastic endorsement to your plan to bring the convention repeal issue to the front in the legislature and to express the hope that Democratic and Republican members will unite in repealing the archaic, undemocratic convention system and in substituting a universal primary for choosing candidates for all offices in the State of Indiana.

Public offices belong to the people, not to politicians, and the people have a right to say who shall occupy them. The duty of changing the system so that the will of the people will control in making nominations rests not on the Democrats alone but on the legislators who represent both political parties, and a partisan plea would be distinctly inappropriate and out of order. But in the light of history it seems to me that the party to which you and I belong is under a peculiar responsibility to stand for the repeal of a nominating system that is virtually obsolete in all other States, a system that is reactionary and abortive as far as registering the popular will is concerned. Thomas Jefferson, the founder of our party, had faith in the ability of the people to make their own decisions. He said:

"The will of the people is the only legitimate foundation of any government, and to protect its free expression should be our first object."

I am sure that in Indiana we are not going to flout as inconsequential the great primary reform fight made by Woodrow Wilson in New Jersey. In his day that fight was hailed as a regenerating triumph of colossal importance in American politics. Ray Stannard Baker, in his book on Woodrow Wilson, says:

"The news of the passage of the bill by the New Jersey Senate reached Wilson at Indianapolis, where, as a guest of Governor Marshall, he was about to begin speaking to a large audience. The toastmaster read the telegram aloud, and the crowd stood up and shouted for Wilson."

The Democratic Party of Kern, Ralston, and Marshall was sincerely and devotedly committed to popular rule. May we not hope that the Indiana Democracy of 1939 will take the lead in promoting the great ideal of Woodrow Wilson? The Democratic Party will be true to its fundamental philosophy if it keeps the lanes of opportunity forever open for the expression of the popular will.

Since the nineteenth amendment was adopted women have become a factor of increasing importance in our national life, and both political parties make a great deal over women in their political ideology, while at the same time virtually denying to them any participation in choosing senatorial and State candidates, as far as Indiana is concerned.

Everybody knows that the convention method of making nominations is a discrimination against women. In a primary, women may go to the polls and vote their sentiments free and untrammeled. But how many of them ever get into conventions as delegates? And how often it happens that those who are chosen have to fight their way to delegateships in caucuses under conditions that are positively disgusting and degrading to womanhood. I am not willing that these hobbles and handicaps shall be put on women in their efforts to express their choice for nominations, when under the primary system they may go to the polls and without worry, peacefully and without restrictions, vote their choice for offices from Senator down to the lowest candidate on the township ticket. Is it surprising that alert leaders of women are taking their stand in favor of the direct primary?

We have a right to be proud of Indiana and the splendid part it has played in the upbuilding of America, but we will be excused, I know, if we blush a little over its tenacity in holding on to the old convention system and all its evils when virtually all other States have cast it into the discard. Only three States in the Union have not adopted the primary. No State that ever adopted it has abandoned it entirely. If Indiana passes by the opportunity that will be afforded at the coming session of the legislature to repeal the State convention and to substitute in its place the instrumentalities of popular will, it will be a pioneer on the backward track.

In September, knowing that this issue would come up when the legislature meets, I wrote to the Governors of all of the States asking their opinion of the primary system as compared with the convention system of making nominations. I have not yet heard from all of them, but I have received enough replies to indicate that the sentiment in favor of the primary is practically universal. For your information and to show the general trend, I quote from some of these replies as follows:

Delaware: "We use the primary system. It has always seemed satisfactory."

Florida: "We have found that the primary system of making nominations has worked out very satisfactorily and seems to please the public."

Kentucky: "I am responsible for the present primary law, inasmuch as while Lieutenant Governor of the Commonwealth and Acting Governor in 1936, I called into extraordinary session the legislature of the Commonwealth which passed the primary bill. We, of course, believe this manner of choosing candidates is much more democratic than the convention system."—Governor Chandler.

Arkansas: "The Democratic Party in Arkansas has adopted the primary system of nominating candidates for public office and this procedure has proven quite satisfactory."

Maryland: "I am not prepared to say that we should go back to the convention system. I rather approve a primary system, but under our primary law, which is so complex, we find under the second-choice provision a great deal of confusion. I have written in my platform a plank calling for the elimination of the second choice and allowing the plurality to control."—Governor Nice.

Rhode Island: "Both systems have their advantages and disadvantages. I believe that the direct primary gets the fairer expression of the people's will. Under the convention system it is easier to control nominations by elaborate use of funds and other means than it is in the direct primary."

Idaho: "I am sure that Governor Clark is of the opinion that the primary is superior to the convention system."—Juneau H. Shinn, secretary to the Governor.

Virginia: "Virginia uses the primary system for nominating candidates for public office. This system operates satisfactorily and is preferred to the convention system."

Iowa: "The primary system in Iowa has operated very satisfactorily and I think most Iowans are in favor of retaining the law."

West Virginia: "Generally speaking, our primary system is considered to be quite satisfactory."

New Jersey: "We have in this State the primary system for nominating candidates for all public offices, and it works out very satisfactorily."

North Carolina: "We do have the primary system of nominating candidates for public office in North Carolina. Those who favor the primary insist that the privilege of nominating a candidate should belong to the people and argue also that is especially true in a State such as ours, in which one party has a large majority and nomination usually insures election."

Vermont: "Candidates for State office in Vermont are nominated by the open primary system. Ordinarily it might seem unfair to let voters of one party vote in the primary of another, but with half the voters undecided as to which party they belong to I have opposed changing it."—Governor Aiken.

South Dakota: "We have the primary system of nominating candidates for most of the public offices. I believe this method of nomination has proven quite satisfactory."

New Mexico: "At the present time we have the convention system in New Mexico. However, at a recent session of the State legislature, which I called into extraordinary session to take action on this matter, a primary law was passed and same will go into effect in December of this year."—Governor Tingley.

Oklahoma: "I wish to inform you that we have the primary system in Oklahoma and until just recently we had the run-off primary system. The latter—that is, the old run-off primary—seems to me to have worked satisfactorily."—Governor Marland.

Utah: "I may say that both political parties in the last State campaign favored some more direct system of nomination than that which had been practiced in Utah heretofore."—Governor Blood.

Michigan: "I wish to advise that in this State candidates for Governor, Lieutenant Governor, members of the legislature, and Members of Congress, as well as county offices, are selected at a primary election, in which the voter is free to vote whichever ticket he prefers without naming it. For other State offices candidates are selected at party conventions. Although criticism is frequently heard, the primary system now in use appears to meet with general public acceptance and approval."—Governor Murphy.

Montana: "We have a direct primary election in the State that nominates all officers from the justice of the peace to the Governor of the State, as well as judicial officers. The system is working satisfactorily."

Oregon: "The direct primary nominating election law was adopted in Oregon at the general election on June 6, 1904. I believe that in the minds of the people it has given general satisfaction and that the electorate would strongly oppose any effort to substitute the convention system for the primary system."—Governor Martin.

South Carolina: "I wish to advise that the State of South Carolina uses the primary system of nominating candidates for public offices. In my humble opinion the primary system exceeds by far the convention system of nominating candidates."—Governor Johnston.

Alabama: "State nominations for the Democratic Party since 1902 have all been made by a State-wide primary. So are our Congressmen and Senators. It is entirely satisfactory and in every way preferable to any convention system."

Nebraska: "Personally, I believe that the primary system as a whole is quite satisfactory, certainly very much of an improvement over the old convention system."—Governor Cochran.

Tennessee: "We have the primary system in our State and it is the only system I have much acquaintance with. My opinion is it is the best method yet used for making party nominations."—Governor Browning.

Louisiana: "Under the laws of Louisiana nominees of political parties are selected at primary elections and not at conventions. We in this State feel that this is by far the best method to follow as nominees are selected by a direct vote of the people themselves. We feel sure that the electorate by a great majority prefer the primary system to the convention system and believe that this State will never return to the convention system."

Texas: "Texas does provide for the primary system of nominating candidates. In my opinion it operates more satisfactorily in this State than the convention system. I would not advocate abolishing the primary system and returning to the convention system."—Governor Allred.

New York: "The Democratic Party in this State is responsible for the adoption of the primary system of elections. The proposal was part of the Democratic platform for many years. Neither party has found any fault with the system. No legislation has been introduced in the past 10 years to do away with that system."

Wisconsin: "The Governor prefers the open primary system to the old convention system. It has been much more satisfactory in its operation than the old convention system."

North Dakota: "It is our belief that if the primary election system is properly administered it is a more democratic system than the old convention system."

Georgia: "We have in our State the primary system of nominating candidates for public offices and it operates very satisfactorily."

Connecticut: "Until the present time Connecticut has operated under the convention system of nominating for State and National offices. There has been, however, included in the platform of the major parties of this State planks favoring the primary system on which action will be taken either at the coming State election or at the January 1939, session of the legislature."

May we not in Indiana profit by the unvarying experience of other States? Surely this universal testimony is worthy of careful consideration as our legislative session approaches and you and other public-spirited members are devoting attention to needed reforms in our election laws. No reform is so important or so much needed as the repeal of the unrepresentative convention system. The time has arrived when we should place our State in line with the progressive thought of the country. As a citizen I congratulate you and your associates in the legislature on the opportunity now afforded to render a great public service in making it possible for the people to exercise their right to make nominations for public offices and I am wishing you the best of luck.

Very sincerely yours,

LOUIS LUDLOW.

The Heart of American Democracy

EXTENSION OF REMARKS
OF
HON. CHARLES L. McNARY
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 5, 1939

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA, DECEMBER 17, 1938

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the distinguished senior Senator from Pennsylvania [Mr. DAVIS] before the Pennsylvania Society of New York, at the Waldorf-Astoria Hotel, New York City, December 17, 1938. I commend it to the attention of the Members of the Senate and to the great body of American citizens who are interested in preserving the true spirit of American democracy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

American democracy is of the heart as well as of the head. It will not function well on intellect alone. It has its source in the people as a whole, people whose words may not always sound logical but whose fundamental judgments are more to be trusted than the speculations of any one man. Essentially the people believe the test of democracy to be the equality of the individual citizen before the law. In the courts of the law and before the bar of public opinion every man is to count as one person. Every voting citizen is permitted to cast his ballot once only.

The impartiality of justice before the law should carry over into all civil life. The violation of justice, if permitted in a single instance, can speedily be multiplied in countless cases. In this way fundamental precepts and practice of justice may be destroyed. No encroachment on the rights of the people, or the right of any citizen, can be tolerated before the bar of public opinion. For American institutions of government are no stronger than their protection in common sense and commonly shared responsibility.

No absorption of power by centralized government should be permitted through subterfuge or indirection. No power of the people or of the States should be delivered to the Federal Government which is not openly recognized and approved by the Supreme Court or through constitutional amendment. The increase of Federal authority in government must be matched by an increase in all types of governmental authority, or the power now held through centralized government should be restored to the States and through the States to local agencies of government. The surest protection for the maintenance of local rights of the people is a definite exercise of those rights in civic and governmental responsibilities. Dictatorships flourish only when the people flounder. Local government and voluntary private organizations can give the answers to many problems which during times of emergency have been answered by the Federal Government alone. No task should be committed to the Government which can better be performed through cooperative action of the people in a voluntary and private way. No responsibility of local government should be imposed on the Federal Government which local government can itself carry. Failure to meet private and local governmental needs satisfactorily is the only explanation of the recent seizure of dictatorial powers in foreign lands. If America is to be safe, the individual American citizen must be strong. No American will be strong who expects others to do for him what he can best do for himself.

Authoritarian states can compel obedience to their man-made decrees, but no power on earth can control the movements of the divine spirit in the minds of men. No power can equal the force of truth. No substitute can be found for productive thought. Creative ideas spring up in the minds of men everywhere. No dictator can withhold them. The power of the mind is superior to kings, feudal lords, dictators, or any earthly ruler. Democracy has its roots in the thoughts and feelings of humble folk, whose minds no imperial decree can reach and whose hearts no bond of servitude can fetter.

The most democratic thing in the world is an idea. A great idea will choose a humble birthplace for itself, often in the mind of some obscure man or some neglected child, and from that idea will grow the force of a mighty movement which will shake the world and rock the thrones of princes and kings. Before the power of a great idea the forces of present-day dictators and tyrants must tremble. They will give way before the shining light of truth as the blackness of midnight yields to the approach of the rising sun.

The most hopeful thing in America today is that new ideas are being born. We live in a land where new ideas are welcomed, where those who nurture them are honored, and where liberty is possible for their growth and development. Dictatorships cannot harness free public opinion in America. This is a land of free ideas, of free schools, free churches, free market places, and free men.

America is the first and only place in the world where the idea of equality has been carried out on a large scale, over a long period of time, in every aspect of our common life. The American idea of government is the equality of the executive head, the legislative assembly, and the coordinate power of free courts. The American idea of religion is the equality of men before their Maker. Every religious group in America is expected to have equal place and opportunity with all others. Superiority complexes have no rightful place in a democracy. The American idea of economics is the equality of industrial management, productive labor, and free investment. The American idea of education is the equality of every boy and girl in the right to an education at public expense. The American idea of agriculture, as reflected in the fundamental principle of the original Homestead Act, is that every farmer should have as much land as he can cultivate. The American idea of science is the equal right of thinkers to the product of their thinking. A man's contribution to science in free America is expected to be judged, not by its source but by its social and human worth. The American scientist is expected to be rated, not by his economic status or his racial heritage but by his scientific output. Thank God America is still the home of free science, a free press, free assembly, and the fundamental freedoms which derive their vitality from a free people.

Equality is essentially an American idea. I am grateful for the opportunities which America has offered me. Only in this land of freedom and equality could I have enjoyed the life which has been mine. Anyone who seeks to upset or overturn the American ideal of equality is essentially un-American. Class conflict is un-American, because it is based on the idea that one class is superior to another and that the conquest of one class by another is necessary to social justice. Racial hatred is un-American, because it is based on the idea that one race is superior to others. Court packing is un-American, because it makes the courts subservient to the Executive whereas they were intended to be coordinate and free.

American freedom and essential equality are now being challenged chiefly in the market place. Industry and labor are logical partners, but it was never intended that government and industry should be partners, for they have different responsibilities, and such a partnership ignores the rightful place of labor as a partner. The partnership of government and industry is a Fascist idea; it is currently being demonstrated in the Fascist states of Europe.

The American ideal is the partnership of labor and industry in the task of production and distribution, with government to serve as an impartial referee in case of disputes and to insure fair play. The business of the Government is to be fair to both industry and labor. No interference with the economic processes of production or distribution by the Government, under the American system, should be tolerated except for emergency needs, and these should not be encouraged to last forever. Certainly governmental intervention does not require a club, for when the Government attempts to club either labor or industry it is well on the road either to fascism or communism, which are systems where governmental force has been substituted for private intelligence and public voluntary cooperation. We want neither fascism nor communism in America. There is no room for dictators here.

A dangerous idea of government has been gaining ground in America in recent years. Public funds have been spent by the billion to make the Government all-powerful. Many have come to accept the idea that the Goverment exists for itself and those who fatten at the public trough. Vast sums have been withdrawn from ordinary channels of trade and commerce, keeping labor, business, and agriculture weak, in order to make government needlessly strong. These funds have been spent in a partisan way for the perpetuation of one party in power.

This dangerous idea of government prevailed in ancient Rome when emperor worship had its day. The people existed for the sake of the state and the emperor whom they deified. The people were taxed until all business failed. The people were legislated to death. They were herded around at the whip of the bureaucrats. The courts and the Roman Senate were compelled to obey one-man decrees. Official corruption inevitably followed, and this was the beginning of the fall of Rome.

Public plunder has been the road to ruin for every monarchy in the world. This was the road of destruction which led to the end of the czaristic regime in Russia and setting up of a Communist government there. This was the way of death which was marked by the guillotine in France and the coming of violence in the French Revolution. This was the cause of the American Revolution and the setting up of free government in the United States.

Whenever government ceases to be the servant of the people and begins to exist for itself, good government ends and official corruption begins. A dangerous attempt has been made to displace the comparatively new idea of American government of liberty and equality and to substitute for it the age-long peril of government as a party right and for partisan political profit. There can be no rightful profit for agriculture, labor, or industry in the United States just as long as men are permitted under the guise of liberalism to make an unfair profit for themselves out of the Government.

The remedy for an overexalted power of state is more power in the people. For the Government is not the people but of the people, by the people, and for the people. The people must exercise their constitutional right of driving from office those who have usurped the power which belongs to the people alone. The people

should return to power, not through revolution, nor by the way of hate, nor by resort to crackpot schemes, nor through labor or industrial violence. The people must return to power within themselves. Every man must be the keeper of his own mind and heart, for out of them proceed the issues of democracy.

America needs strong men who accept as the ideals of their lives the patterns of individual initiative and social responsibility which led our American sires as pioneers from ocean to ocean. No one has yet found a substitute for their strength of character and the stout hearts which they brought to the making of America. America will not be restored to power through one-man government. War will not save America. Excessive governmental spending is not the way. Foreign "isms" will not keeps us free. Racial hatred is not the American way. Class conflict will not protect our local liberties. Restrictive legislation, with planned scarcity, is not the way. National leaders, who forget God and the people, have nothing to offer. The power of the Almighty, working in free minds and strong hearts, can save America. No sacrifice is too great to keep our institutions free. National defense on land, sea, and in the air is necessary, but it will not be enough if our people do not have spiritual defense in their own minds and hearts. We have tried the roads of bureaucracy, restricted production, and planned scarcity. These have failed. The good life lies open to good will among men, in America, among all nations, and throughout the world. Peace comes with plenty, not through poverty. Goodness comes with abundance, not through starvation. Our republican institutions of government come from the people, not from the word of one man. God keep America free. May we have a liberalism which will say truly with Jefferson "Equal opportunity for all and special privilege for none." May we have a liberalism which will follow Lincoln, who taught us that the "government of the people, by the people, and for the people shall not perish from the earth."

Presidential Third Term

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1939

STATEMENT BY HON. WILLIAM H. SMATHERS, OF NEW JERSEY

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the Senator from New Jersey [Mr. SMATHERS], in which he explains why Mr. Roosevelt should run for a third term. This statement was published in Paul Mallon's column in the Philadelphia Inquirer, Thursday, December 29, 1938.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of December 29, 1938]

PAUL MALLON—SENATOR SMATHERS EXPLAINS WHY MR. R. SHOULD RUN FOR THIRD TERM

(By Senator WILLIAM H. SMATHERS, New Jersey Democrat)

WASHINGTON, *December 28.*

The outstanding possibility for President in 1940, and I submit the best man, is President Roosevelt.

The Democratic Party, vitalized with the liberalism, the magnetism and the incomparable leadership of Franklin Delano Roosevelt, cannot toss away its greatest asset.

As a Democrat interested in party success I am convinced that he would be reelected, notwithstanding the third-term bugaboo.

As a liberal I cannot conceive a greater loss to the cause than his withdrawal from the Presidency.

As a citizen of a democracy, acutely conscious of world threats to replace popular government with various "isms," I object violently to retiring the man who has been the bulwark of democracy.

MERE COPYBOOK PRECEDENT

Democracy in the United States was saved by President Roosevelt's wise view of it as an adaptable, adjustable, malleable thing. As each new crisis threatened it, as new and unprecedented demands were made upon it, his skillful hands reshaped it and bent it and molded it until it fit each new exacting demand, until it rectified some irresistible complaint, until it satisfied a new public desire.

America could have cracked, and might still crack, without superb leadership and master statesmanship, and unless its leader makes it function so as to satisfy the complaints and desires of its citizens. To sacrifice this practiced hand at such a time is too great a maintenance price for a copybook precedent.

Washington was a tired man who wanted to return to his beloved Mount Vernon and rest on its peaceful acres in his declining years. But Hyde Park still cannot contain the energies of Franklin D. Roosevelt.

His capacity for leadership thrives on fighting the terrific battles and assuming the gigantic responsibilities that his office has encountered.

The office of President is supposed to be a man killer, and that is part of the third-term bugaboo. But this man Roosevelt, with responsibilities far heavier than perhaps any of his predecessors, is more than equal to a third term—physically, mentally, and in the public confidence.

If there at some time comes a Republican President with the same magnificent qualities of leadership, and the majority of the people do not want to lose him, let them elect him three times or four times—and that also will be real democracy.

PRACTICAL POLITICAL SIDE OF QUESTION

Even now, without rising to the heights he does in the heat of a Presidential campaign, President Roosevelt is the unrivaled hero of the masses whose battles he has fought, the unsmirched veteran of unceasing attacks by resourceful and powerful enemies.

The third-term superstition is being dusted off now as a stalking horse to disguise more selfish objections to his nomination.

Let us glance, however, at the practical political side of the question and weigh this precedent.

The West has always taken a keen delight in knocking precedent into a cocked hat when placed in the scales against liberalism or a liberal. The President would sweep the West like a whirlwind.

In the South the Democrats may differ in the primaries, but there is no doubt of the outcome in the general elections.

STAND OF DOORBELL PULLERS IN EAST

We come to the East, the conservative East. Let us take my own State of New Jersey and get at the roots of eastern politics—the doorbell pullers, the party workers who scour the neighborhoods and who can be depended upon to judge the temper of the man on the street.

I have asked them some questions:

"Would the people in your neighborhood vote for someone else in preference to a third term for Roosevelt?"

The answer is always enthusiastic:

"Give us Roosevelt again, and we can lick any two candidates put together."

Ask yourself a question:

"Whom would you vote for in preference to Roosevelt?"

The Tory will say "Anybody," but the great and countless masses of American citizens will inevitably reach the conclusion that Roosevelt, with his tremendous color, personality, and appeal, with his proven capacity for leadership, with his good sportsmanship and keen sense of humor, is the one man the Democratic Party can make the fight with and win with in 1940.

Fiscal Doctrine of 1933

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1939

PRESIDENT'S MESSAGE OF MARCH 10, 1933

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the RECORD the Presidential message of March 10, 1933. This message deals with the fiscal subjects which the President has been discussing in his last two messages, and does it in a significant way. I think it well for the country to be reminded of this other Roosevelt philosophy of action which at one time was intended to save the country from impending calamity and greatly succeeded so long as it was pursued. Then the President was declaring that national recovery depended on economy. Then the President was warning against "the rocks of loose fiscal policy." Then he was demanding "drastic retrenchment." All this sound doctrine is now abandoned. The Roosevelt of 1939 has deserted the Roosevelt of 1933. It is to recall the splendidly sound fiscal doctrine of 1933, to which the country must one day return, that I want the Presidential message of March 10 recalled.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

To the Senate and House of Representatives:

The Nation is deeply gratified by the immediate response given yesterday by the Congress to the necessity for drastic action to restore and improve our banking system. A like necessity exists with respect to the finances of the Government itself which requires equally courageous, frank, and prompt action.

For 3 long years the Federal Government has been on the road toward bankruptcy.

For the fiscal year 1931 the deficit was $462,000,000.

For the fiscal year 1932 it was $2,472,000,000.

For the fiscal year 1933 it will probably exceed $1,200,000,000.

For the fiscal year 1934, based on the appropriation bills passed by the last Congress and the estimated revenues, the deficit will probably exceed $1,000,000,000 unless immediate action is taken.

Thus we shall have piled up an accumulated deficit of $5,000,000,000.

With the utmost seriousness I point out to the Congress the profound effect of this fact upon our national economy. It has contributed to the recent collapse of our banking structure. It has accentuated the stagnation of the economic life of our people. It has added to the ranks of the unemployed. Our Government's house is not in order, and for many reasons no effective action has been taken to restore it to order.

Upon the unimpaired credit of the United States Government rest the safety of deposits, the security of insurance policies, the activity of industrial enterprises, the value of our agricultural products, and the availability of employment. The credit of the United States Government definitely affects these fundamental human values. It therefore becomes our first concern to make secure the foundation. National recovery depends upon it.

Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger.

It is too late for the leisurely approach to this problem. We must not wait to act several months hence. The emergency is accentuated by the necessity of meeting great refunding operations this spring.

We must move with a direct and resolute purpose now. The Members of the Congress and I are pledged to immediate economy.

I am therefore assuming that you and I are in complete agreement as to the urgent necessity, and my constitutional duty is to advise you as to the methods for obtaining drastic retrenchment at this time.

I am not speaking to you in general terms. I am pointing out a definite road.

The last Congress enacted legislation relating to the reorganization and elimination of executive agencies, but the economies thus to be effected are small when viewed in the light of the great deficit for the next fiscal year. They will not meet the pressing needs of our credit situation. Provision for additional saving is essential, and therefore I am asking the Congress today for new legislation laying down broad principles for the granting of pensions and other veteran benefits and giving to the Executive the authority to prescribe the administrative details. We are unanimous in upholding the duty of the Government to care for those who suffer in its defense and for their widows and orphans. The application, however, of this great principle to large numbers of people involves complications—so great that it is almost impossible to draw legislation with sufficient flexibility to provide substantial justice in varying situations. The proposed legislation states the principles and, limited to them, permits the Executive to draw the lines of differentiation necessary to justice.

In accord with the same purpose of substantial justice I request also the enactment of legislation relating to the salaries of civil and military employees of the Government. This would repeal the existing furlough plan, substituting therefor a general principle and authorizing the Executive to make application of this principle. The proper legislative function is to fix the amount of expenditure, the means by which it is to be raised, and the general principles under which the expenditures are to be made. The details of expenditure, particularly in view of the great present emergency, can be more wisely and equitably administered through the Executive. The flexibility of the measures which I am proposing is not only practical, but proceeds along the road of constitutional government.

Such economies which can be made will, it is true, affect some of our citizens; but the failure to make them will affect all of our citizens. The very stability of our Government itself is concerned, and when that is concerned the benefits of some must be subordinated to the needs of all.

When a great danger threatens our basic security it is my duty to advise the Congress of the way to preserve it. In so doing I must be fair, not only to the few but to the many. It is in this spirit that I appeal to you. If the Congress chooses to vest me with this responsibility, it will be exercised in a spirit of justice to all, of sympathy to those who are in need, and of maintaining inviolate the basic welfare of the United States.

I ask that this legislation go into effect at once without even waiting for the beginning of the next fiscal year. I give you assurance that if this is done there is reasonable prospect that within a year the income of the Government will be sufficient to cover the expenditures of the Government.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *March 10, 1933.*

Wages, Hours, and Profits

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1939

ADDRESS BY B. M. ANDERSON, JR., ECONOMIST, BEFORE THE CHAMBER OF COMMERCE OF KANSAS CITY

Mr. BAILEY. Mr. President, I ask to have printed in the RECORD an address on the subject of Wages, Hours, and Profits, delivered by B. M. Anderson, Jr., economist, before the Chamber of Commerce of Kansas City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CRUCIAL IMPORTANCE OF PROFITS

The volume of business activity and the volume of employment are governed primarily by the prospects of profit or loss. When profits are good in an industry or when profits promise to be good, there is a tendency to expand that industry, to invest more capital, and to employ more labor. When business, on the other hand, is being run at a loss, or is threatened with vanishing profits and deficits, it tends to contract its activities, ceases to bring in new capital, liquidates part of its debts, if it can, releases part of its labor. A profitable industry, expanding, draws in more labor, increases the demand for labor, maintains or increases its own wages easily, and tends to bid up the price of labor as it pulls in labor from the outside. The unprofitable industry, releasing labor, tends also to reduce the wage rates that it pays, and by increasing the supply of unemployed labor in the general labor market, tends to reduce wages all around.

Under a system of economic life different from our own, it is conceivable that the question of profit and loss should not be of crucial importance. The notion of production for use, instead of production for profit, has worked well in (frequently well endowed) monastic communities and in some other small communities bound together by a religious motive. Russia tried it with disastrous results in the period culminating in the crisis of 1921. But Russia got out of that crisis of 1921 through the "new economic policy" of Lenin, which gave large scope for the profit motive, and even for the profit motive on the part of private enterprise. And in the later developments of the Russian economic system, in which state enterprise largely supplanted private enterprise, the tendency has still been strong to hold each separate trust or collective enterprise to the necessity of showing profits, exceptions being made for certain strategic enterprises, which probably include gold production, whose losses are made good out of the profits of other enterprises. And even under the Russian system it does not seem possible to have a condition of widespread vanishing profits and deficits without disaster.

PROFIT AND LOSS SYSTEM TAKEN FOR GRANTED

But it is not my purpose here to argue the superiority of the profit and loss system over alternative systems of economic organization. There is no important political group in the United States which repudiates the profits system or profit motive. I take the profit and loss system for granted, therefore, as a basis for the present discussion. And my purpose is to give a realistic analysis of the relation of profits and wages with special reference to the factors making for the ups and downs of business activity and employment, and with further special reference to certain recently enacted legislation, notably the pay-roll taxes and the wage and hour law. The discussion will also involve a consideration of labor-union policy with respect to wages and hours.

COSTS, PRICES, AND BUSINESS REVIVAL

The whole story of business revival, prosperity, crisis, depression, and revival again involves many elements, including very fundamentally the large question of equilibrium among various industrial activities, and including also complicated financial factors. These I shall not discuss today. Nor shall I discuss today the question of the relation of commodity prices to volume of sales, important though that is. My concern today is with the relation of prices to costs, in which is immediately focused for most businesses the question of profit or loss.

Depression tends to turn into revival, when costs have been reduced sufficiently in relation to prices to enable businessmen to see the possibility of profits. Always in the worst business situation somebody is making profits, and always in the best business situation somebody is making losses. Turns in the business situation come when the prospects of profit or loss are changed for a substantial part of the business community, rather than for

the whole community. A period of crisis and depression is a period in which costs are being reduced. Wages go lower and labor costs are further reduced by the fact that the less efficient workers tend to be the first to be released, that overtime ceases, and that men who retain their jobs value their jobs. Bank interest rates go lower, and even long-term interest rates, in the case of the weaker debtors, are readjusted through bankruptcy or informal composition. Expiring leases are renewed at lower rentals, and even long leases, in the case of weaker tenants, are often readjusted. Raw materials have gone down, overhead of various kinds is cut, economies of many sorts are introduced, and the business community has had time to study its methods of production and marketing with a view to introducing new methods that cut costs or increase efficiency.

Expanding production in such a situation does not raise costs in proportion to volume. Capacity exceeds current output, and overhead does not expand as more laborers are taken on, and as more raw materials are purchased. Profits rise sharply, therefore, with any increase in volume. With increasing volume in one industry, moreover, there is a tendency for increasing demand to be directed toward other industries and commodity prices first cease to decline, then grow steady, and then begin to turn up.

For a time in a period of revival prices rise faster than costs per unit of output, even though wages also begin to rise. Profits grow larger and under the stimulus of increasing profits expansion proceeds more rapidly, and more and more of the elements of our economic life are drawn into the picture. Employment grows fuller and wages rise under the law of supply and demand.

PAY ROLLS AND PROFITS MOVE TOGETHER

I repeat that I am not here concerned with a full analysis of the business cycle. I am concentrating attention upon one very definite point—the relation of wages to profits. My first generalization is that as profits rise, wages rise, and my second generalization is that as profits fall, wages fall.

Now, this is a very different generalization from that which many are disposed to make. Looking at the problem statically, at a given moment of time, they see a certain volume of money income from business, part of which is to go to wages and part of which is to go to profits, and by a very simple process of arithmetic they reach the conclusion that the more there is which goes into profits, the less there is left for wages, and the more there is going into wages, the less there is left for profits. But what they fail to see is the dynamics of the situation. What they fail to see is that the amount of production is not a fixed and static thing but a varying thing—a thing which rises as satisfactory profits emerge, and which falls as profits vanish or as losses impend. The all-important thing from the standpoint of labor income itself is that there should be a large volume of production, a large volume of business gross income, so that the total to be divided between wages and profits shall be large.

WHEN COSTS OUTRUN PRICES

I pass over the middle phases of the period of prosperity and come toward the time when costs begin to rise faster than prices and volume, a phase which culminates in crisis, or at all events in a period of liquidation and readjustments. Various costs rise. New capital is forthcoming only at increased interest rates. Rentals rise as new leases are made. Raw materials rise. Most important of all, labor costs per unit of output rise, and rise rapidly: (a) Wage rates per hour rise; (b) additions to the labor force are of the least efficient workers; (c) shop discipline is less effective as laborers know that a job across the street, or in a nearby establishment, is easy to get if they don't like the foreman or the boss; (d) overtime increases and with it very sharp increases in money cost per hour of work; (e) much more important 20 years ago than today, with our generally shorter working hours, overtime work brings weariness to the labor force. Another important factor in rising costs is in those establishments where plant capacity has been fully utilized and where new construction at high costs has to be rushed if demand is to be met. And a final important factor is a loss of managerial efficiency, as the businessman, harassed with rush orders, finds it no longer easy to watch as closely as he formerly did the details of his business, and finds the incentive for rigid economies reduced, as things seem to have been going on very well without them. New methods, moreover, are not easy to introduce when they involve interruption of activity in a time of active demand.

THE IMPORTANCE OF LABOR COSTS

Now, of all the costs which I have been considering, insofar as they are measurable in money, I think it is perfectly clear that the labor factor is of overwhelming importance for business as a whole.

Labor costs vary greatly with different industries. It would be difficult to arrive at a total labor cost figure for all industries since the price of raw materials for one industry often represents a large labor cost factor for the industry that supplies the raw materials. However, we do have figures published by the Department of Commerce on national income which give us a basis for estimating the share of the national income which is paid out to labor. The following figures are taken from the studies made of national income by the United States Bureau of Foreign and Domestic Commerce:

National income paid out,[1] by types of payment

	Amount (millions of dollars)			Percent distribution		
	1929	1936	1937	1929	1936	1937
Income paid out, total	78,174	62,056	69,330	100.0	100.0	100.0
Compensation of employees, total	51,204	41,250	46,728	65.5	66.5	67.4
Entrepreneurial withdrawals	12,342	9,783	10,441	15.8	15.8	15.1
Dividends	5,969	4,573	5,010	7.6	7.4	7.2
Interest	5,089	4,378	4,656	6.5	7.1	6.7
Net rents and royalties	3,419	2,131	2,599	4.4	3.4	3.7

[1] Sources: U. S. Department of Commerce, Bureau of Foreign and Domestic Commerce, Statistical Abstract of the United States, 1937, U. S. Government Printing Office, 1938, p. 297. Survey of Current Business, June 1938, p. 13.

This table does not tell us directly and simply what percentage of national income goes to labor, or what percentage of total cost of production is made up of labor costs. Compensation of employees includes compensation of officials as well as of laborers in the narrow sense. We have data, however, from the same authority with respect to salaries of officials of corporations. In the year 1929 the total compensation of corporate officers was $3,337,000,000, and for the year 1934 it was $2,171,000,000. (Source: National income 1929–36, U. S. Department of Commerce, Government Printing Office, 1937, p. 29.)

A very large part of the total salaries of officials of corporations is essentially labor income. There are over 475,000 corporations and most official salaries are small. The salary of the president of a small mercantile corporation who is himself behind the counter and who does part of the bookkeeping, and of the numerous minor executives, even in great corporations, are a true part of labor cost. A minor deduction, very much less, indeed, than that for total executives' salaries, may be made from our percentage for total compensation of employees.

On the other hand, a big addition must be made to this percentage if we are to get the total labor income. Entrepreneurial withdrawals, amounting to 15.8 percent for the year 1936, represent the sums taken out of the business as individual income by the owners of unincorporated businesses. The largest single item in this is what the farmer takes. He is an owner and a businessman, and he has profits and losses. But he is also a workingman, and a very big part of his income is compensation for his work rather than compensation for his business activity and return on his capital. Another large element in the entrepreneurial withdrawals is such things as the income of the boss barber who owns his own establishment, or the master mechanic who is the owner of an automobile repair shop, or the multitudinous small retail mercantile establishments too small and too thinly capitalized to make incorporation worth while. The classification of entrepreneurial withdrawals for the year 1935 is as follows:

Total entrepreneurial withdrawals in 1935[1]

[In millions of dollars]

Total	8,701
Agriculture	2,950
Mining, manufacturing, and construction	403
Transportation	367
Trade	1,597
Service	2,315
Miscellaneous	1,069

[1] U. S. Department of Commerce, National Income in the United States, 1929–35, U. S. Government Printing Office, 1936, p. 52.

Apart from agriculture and trade and service industries, there are no big items in this table. There are important unincorporated financial institutions, such as stock-brokerage houses, but they do not compare in importance with those I have named and are reported under the general head of "Miscellaneous" in the figures of the foregoing table.

It is safe, I think, to assume that a good half of the figures of entrepreneurial withdrawals represent labor income rather than business profits, and that the total of labor income, therefore, will run high over 70 percent of the national income. As against this, we would have, in the form of clear property income, the following items: For the year 1936, net rents and royalties, 3.4 percent; interest, 7.1 percent; dividends, 7.4 percent, totaling 17.9 percent. And if to this we add the other half of entrepreneurial withdrawals, we have a maximum of 25.8 percent of income of all kinds that can be attributed to property ownership and to business enterprise.

THE ADVANCE IN LABOR'S SHARE

I may add that the tendency has been for the percentage of labor income to grow. The following figures are taken from a study made by the Brookings Institution: In 1900, compensation of employees was 53.2 percent of national income; in 1909, 54.4 percent; in 1914, 57.4 percent; in 1920, 62.8 percent; in 1924, 63.6 percent; in 1927,

64.6 percent; and in 1929, 65.1 percent. (Leven, Moulton, and Warburton, America's Capacity to Consume, Washington, 1934, p. 158.) The 1929 figure of the Brookings Institution corresponds very closely with the 1929 figure of the Department of Commerce studies, the latter being 65.5 percent, as shown in our table, based on the Department of Commerce figure. The tendency for a rise in the percentage of national income going to labor has continued through 1937.

LABOR RECEIVES OVER 70 PERCENT OF NATIONAL INCOME; PROFITS, 15.3 PERCENT

When we are contrasting wages and profits, the items to be considered are the following: Profit income as represented in our table will be made up of the 7.4-percent dividends plus one-half of entrepreneurial withdrawals, making a total of 15.3 percent. This is the compensation for risk capital and business enterprise. As against this 15.3 percent of national income for profits we have labor exceeding 70 percent of total national income.

Contrasting these two figures, over 70 percent for labor and 15.3 percent for profits, permits us to draw some very significant conclusions with respect to policy both on the part of Government and on the part of organized labor. It is eminently desirable from every point of view—humanitarian, social, and political—that the income of labor should grow, that wages should rise, that the children of the working people should be better fed, better clothed, better educated, that the workingman should feel that he is receiving a square deal in our economic system, that he has a stake in it, and that law and order are important to him and to his family. It is important that he should have a margin for luxuries and a further margin for savings. It is important that he should accumulate property. All this we may take as a major premise, and we may add that those who live by work are far more numerous than those who draw their income from property, and that their welfare must clearly be a paramount consideration in any democratic country. But insisting on this and emphasizing this, we must still, in determining what our policy should be, consider what is technically possible and what is technically effective in promoting the objective of larger income for those who work.

HOW MUCH MORE CAN GO TO LABOR?

Shall we adopt a policy which will make it possible for profits and wages to grow together, or shall we seek to increase wages by union policies and governmental policies which subtract from profits to add to wages? If we try to add 10 percent to the income of the working people at the expense of profits on the basis of the figures before us, we should find that 10 percent of wages is over 7 percent of total national income, and we should find that this is very nearly 50 percent of total profits. If we try to add 20 percent to the income of labor by encroaching upon profits, we should virtually wipe out profits. But long before we had made any such addition to the income of labor at the expense of profits we should have wrecked the incentive for business enterprise to go ahead with production. We should see production stagnating, terrific unemployment, and an immense curtailment of the income of labor. We might, by methods of this sort, increase the percentage which labor has in the total national income, but we should certainly so diminish national income that the actual return to labor would be very greatly reduced.

And we should, of course, in the process greatly reduce income of other forms, rents, royalties, and interest. They would not bear the first impact of forced measures to raise wages; but with vanishing profits and growing deficits in the business field, defaults on interest, defaults on rents and royalties on a great scale would be inevitable.

I believe it is very clear that we have pushed measures for artificially increasing the percentage of labor income dangerously far and that we must throw the heavy emphasis for the future upon policies which make possible a great increase in the production of wealth so that there may be more for all of us to share.

TAX BURDEN FURTHER REDUCES NONLABOR INCOME

I may note parenthetically that not only has the share of labor in the total national income been increased, but also the share which government takes through taxes on nonlabor income has been enormously increased. There is not much left of interest income, dividend income, and true entrepreneurial income for wages and taxes to take.

PROFITS FOR PROFIT SHARING ARE SMALL

A second important conclusion is suggested by these figures with respect to profit sharing between labor and enterprise. The total of profits for sharing in relation to the existing total of labor income is pretty small. In individual industries, special circumstances may indicate the desirability of such a system, particularly if accompanied by an agreement under which wages are flexible and recede in times of receding business and low profits or deficits. But it is not easy to see how there could be a widespread adoption of this system at the expense of profits without a slowing down of industrial activity.

LABOR—THE MAJORITY SHAREHOLDER

A third major conclusion is that it is impossible to devise a system whereby a fixed income for labor can be guaranteed at the expense of other forms of income. The total to be guaranteed is too large and the available guaranty funds would be far too small. Nor is it possible with the resources at hand for business in general to guarantee employment in general, even though in individual cases this may be feasible. Labor is overwhelmingly the majority shareholder in the national income and is far more interested in a healthy, steady growth of this national income than in policies which, at the expense of stability and growth, seek to increase its percentage share. There is no safety for the more than 70 percent unless the general 100 percent is made safe.

THE PAY-ROLL TAX—A TAX ON EMPLOYMENT

With this background I come to the discussion of two recent Federal laws regarding labor which give me a great deal of concern, not only with respect to their present workings but also with respect to their future implications. I refer to the Wage and Hour Act and to the pay-roll taxes under the Social Security Act.

We have at present in force a 4-percent tax on pay rolls, 3 percent for unemployment insurance, and 1 percent for old-age insurance. This 1 percent, however, is to be increased by stages of one-half of 1 percent until it reaches 3 percent, so that the total Federal tax on pay rolls is ultimately to be 6 percent. A tax on pay rolls is a tax on employment. Every time an additional worker is hired for $100 the employer must pay $104 because a tax of $4 goes to the Government. If he is released, both the $100 wage and the $4 tax are saved. Every time the compensation of labor is increased 4 percent of the increase goes in tax to the Government, and whenever wages are reduced the tax is reduced correspondingly. The tax as an element in business calculations, in other words, comes into play when men are hired and fired and when pay is increased or decreased. Such a tax, under the general laws of the shifting and incidence of taxation, will be shifted to labor in the long run. This can be a relatively painless thing in a period of advancing wages. Wages will simply not advance so rapidly in a period when market forces would otherwise bring about an advance of wages. In a period of receding wages labor's resistance to wage reductions may mean that the main effect of the tax is shown in a greater reduction of employment than otherwise would have taken place. When wages are fixed by law or by union activity without reference to market standards the whole of the impact of this tax may be on employment rather than on wages.

The type of taxation is itself a bad type. It is a tax on employment. Four percent is already dangerously high, and the 6 percent which we ultimately face is not to be contemplated with equanimity. When to this, however, we add the recent wage and hour legislation very grave questions arise, indeed, and the probable necessity for reversing at least a part of what we have done with respect to impediments to employment and production seems pretty clearly indicated.

THE REAL BASIS FOR HIGHER WAGES AND SHORTER HOURS

The way to get better wages and fewer hours of work is not by legislation striking directly at wage rates and hours but, rather, by freeing and encouraging the great, impersonal forces which have historically increased wages and shortened hours. These great forces in the United States have been (1) our abundant land and other natural resources, (2) the growth of capital, (3) technological progress (see the Chase Economic Bulletin, vol. XVII, No. 2), (4) the intelligence and enterprise of our people, and (5) the retardation of the growth of population by voluntary restriction of the size of families and by immigration restriction. A country where land and natural resources are abundant, where capital is abundant and growing, where technological progress is rapid and where population grows slowly is a country where opportunities are abundant and men are relatively scarce, and is a country where wages will be high. With earnings of labor high enough so that the necessities of life are earned with part of a day's work and the product of the rest of the day's work can be used for the workingman's comforts and luxuries, hours of labor tend to be shortened, because the workingman values leisure among the other comforts and luxuries, and bargains successfully for shorter hours. We saw these forces operate to reduce average hours of labor from 58.4 hours a week to 49.8 hours a week between 1890 and 1926, while during the same period hourly earnings increased from 21 cents to 71 cents (Douglas, Paul H., Real Wages in the United States, New York, 1930, pp. 205–208).

Now, this is the way in which the thing has historically come, and the causation here is definite and immediate. We had help in these matters from legislation during these years, particularly respecting the hours of women's labor. But the great force raising wages and shortening hours has been competition among increasingly well financed employers seeking relatively scarce labor. In this connection, the competition of expanding industries and rapidly growing industries, pulling labor away from more static industries or from dwindling industries, has been of very special importance.

When the normal forces of supply and demand are working in open markets, and when wage rates are flexible, wages are very closely adjusted to the productivity of labor, or, in the more technical phrase of the economist, to the marginal productivity of labor or the specific productivity of labor. If wages are above the level which this standard would set, part of the workers will be unemployed, since the wages which would be paid to them would be more than the product which they would create, and competition among laborers would bring the rate down to this standard of marginal productivity. If, on the other hand, wages should be below this standard, competition among employers would bring the rate up again to the standard.

If, however, wages are set arbitrarily, whether by government action or by powerful labor combinations, at figures above the

standard, then part of the labor force will go without work, or, if there be a general spread the work arrangement, the labor force as a whole will be employed only part time.

WAGE RATES AND EMPLOYMENT—ENGLAND AND THE UNITED STATES, 1920–29

I think that the contrast between the labor situation in post-war England and that in the United States in the post-war period is very interesting and significant here. Both in England and in the United States the post-war level of wages remained high above the pre-war level after the crisis of 1920–21. This was due in England primarily to the power of labor organizations which successfully resisted the economic tendency to lower wage rates. In the United States it was due to a very different set of causes.

In pre-war days, we had been accustomed to receiving a large body of immigrants every year, running well above a million in many years, and including a very high percentage of young men and women ready for work. This influx of new workers had not prevented a gradual rise in wages in the United States, with our growing capital and our expanding industries, but it had very greatly retarded the advance in wages that would otherwise have taken place. The war cut off immigration almost entirely, and after the war we restricted immigration sharply by law. The result was a radical change in the ratio between labor on the one hand and capital and resources on the other. Consequently the reduction of wages in the crisis of 1920–21 was far less than would have been expected. While commodity prices were dropping from 248 percent of the pre-war level to 138 percent of the pre-war level, hourly wages dropped only from 246 percent of the pre-war level to 197 percent. And then, following this, wage rates rose, under the pressure of demand for labor, from 197 percent to 238 percent by 1929, although commodity prices at wholesale remained little changed.

Our expanding industries, unable to get the accustomed stream of labor from Europe, installed labor-saving machinery and drew in labor from the farms, or from static or dwindling domestic industries, in great volume. Supply and demand raised wages. The rise was not due in the United States either to governmental action regarding wages or to a growing power of labor organization. Membership of labor unions diminished (Leo Wolman, Ebb and Flow in Trade Unionism, New York, 1936, p. 16) during this period from 5,048,000 in 1920 to 3,443,000 in 1929. At the higher levels of wages we had no greater problem of unemployment than we had had before the war (see the Chase Economic Bulletin, vol. XVII, No. 2).

In England, on the other hand, there were no such fundamental changes in the supply and demand situation with respect to labor. The high post-war level of wages was a forced level, and the result was a heavy and chronic unemployment in England through the whole period 1921–29. The wage rate was held above what the marginal product of labor would have been if all had been employed, and employment was reduced to a level such that the marginal product per individual of the smaller number of the employed would approximate the wage rate paid. Unemployment was especially heavy in those industries in England, notably iron and steel and cotton textiles, where unionism was strongest. The greatest activity was in new industries in the south of England, where a great deal of nonunion labor was employed at supply and demand wage rates.

With this inflexibility of wage rates, moreover, when the business reaction that followed the stock-market break in 1929 came, England found herself one of the earliest and heaviest sufferers. This was particularly true in connection with her export trade. Other nations, where wages and prices were more flexible, easily took a substantial part of her export business away from her. I do not think that we wish to allow ourselves in this country to become entangled in the inflexibilities and rigidities which have made England so much grave trouble.

Labor unions can be very helpful to labor and to the country. But if union policy is to fight always for higher hourly wage rates, and always to resist reductions in wage rates, then the spread of unionism will be harmful to labor and to the country. Both prices and wages should be flexible, readily responsive to market conditions. Wages do not need to shift as frequently as prices, or to move as far, but inflexible money wages are a menace to labor itself.

THE ELASTICITY OF DEMAND FOR LABOR—DOUGLAS AND PIGOU

I come now to a point of great significance. The demand for labor is elastic. By that I mean that the relation between amount demanded and price paid per unit is such that there is a sharp falling off in amount demanded if the price is raise artificially, and there is a sharp increase in the amount demanded if the price is lowered. When the rate of wages rises in response to increased demand, we have another story. But when, in a given state of demand for labor, an artificially high rate is set, employment falls off sharply.

There have appeared in the last few years two remarkable studies by two able scholars which undertake to measure the elasticity of the demand for labor. I refer to a book by Paul H. Douglas, professor of economics at the University of Chicago, called The Theory of Wages, which was published in 1934, and to a book called The Theory of Unemployment, by Prof. A. C. Pigou, of Cambridge University in England, published in 1933. Professor Pigou's book is a highly abstract mathematical study in technical economic theory with illustrations drawn from British experience. Professor Douglas' book is also theoretical, but his argument with respect to this point rests primarily upon an elaborate statistical analysis of American experience. (Douglas, Paul H., The Theory of Wages, New York, 1934, pp. 113–158.) Professor Douglas sums up his conclusion in the following proposition:

"The fact that the elasticity of the demand for labor seems to be between −3 and −4 indicates that where unemployment is caused by a wage rate which is higher than marginal productivity, a reduction of 1 percent in the rate of wages should normally lead to an increase of 3 or 4 percent in the volume of employment and hence to an increase in the total income of the workers of from 2 to 3 percent. If wages are pushed up above the point of marginal productivity, the decrease in employment would normally be from three to four times as great as the increase in hourly rates, so that the total income of the working class would be reduced in the ratio indicated above. It should also be noted that Pigou, in his recent Theory of Unemployment, arrives by almost purely deductive methods at an almost identical estimate of the elasticity of demand for labor during periods of depression, namely, that it is 'probably not less than −3.' (Pigou, A. C., Theory of Unemployment, p. 97, London, 1933.)

"It does not follow, however, that the cause of unemployment is uniformly a wage which is in excess of marginal productivity. There are other causes of a seasonal, cyclical, and technological nature, and in these cases a reduction in the wage rate need not invariably bring the greater expansion in employment." (Loc. cit., pp. 501–502.)

I do not suppose that economists would be agreed that Professor Douglas' precise ratio is established. But he does make an impressive case for his contention that a 1-percent change in the wage rate above the marginal product can make at least a 3-percent change in the volume of employment. It is to the interests of all that labor should get its full economic wage, but it is to the interests of no one, labor least of all, that an unduly high hourly rate should breed heavy unemployment.

I may add that those who are disposed to think that a 4- to 6-percent tax on pay rolls is an insignificant factor may do well to reconsider this in the light of Douglas' analysis.

AID TO STRANDED LABOR—A WORTHY OBJECTIVE

There are various theories behind the Wage and Hour Act. There is one purpose with which we must all have great sympathy. Competition among employers does not reach all labor evenly. There are, here and there, pockets in which helpless groups of laborers are caught, who can't easily get out into the main labor markets and get the benefit of employer competition. Or there are, even in industrial centers, certain specialized types of laborers who can't shift occupations easily, and whose wages may be well below prevailing levels, or whose hours may be inordinately long, so that health is taxed by overwork. All of us must welcome the activities of labor unions in such situations, as they try to pull up these wages toward the prevailing levels or to reduce the number of hours in the direction of the prevailing levels. And all of us must welcome, I think, carefully considered action by the governments of the States in dealing with such problems, which are almost always local problems.

But the main objects of the Federal Wage and Hour Act and the main motivation behind the Federal Wage and Hour Act rest on very different ideas.

THE PURCHASING POWER FALLACY

First of all, there is the fallacious notion that arbitrary forcing up of the wages of labor will increase general purchasing power, with the resultant increase in demand for goods and demand for labor. It is thought that this is a revival measure, a measure that will make for increased business activity and increased employment. Connected with this is the notion that, if hours can be shortened, with the same pay for the smaller number of hours as for the larger number of hours, there is an increased number of workers employed with a larger aggregate buying power, and that this still further increases the demand for goods and the demand for labor.

Now, this theory is incredibly naive and utterly fallacious. Increased funds for labor under these conditions must come from somewhere. Where are they to come from? I have already discussed this question in discussing the relation of wages and profits.

THE THEORY TESTED IN FRANCE

It is no longer necessary to discuss the theory of the matter. We have had some very striking practical tests of this theory that a forced increase in the purchasing power of labor will make good business in recent years. The most recent is the case of France, where the introduction of the 40-hour week led to such a violent economic disturbance that the French Government today is perforce undoing much of what it has done. This 40-hour week legislation led in one case to a 30-percent increase in personnel in a building; in a second case, where profits were already low, to a 22½-percent increase in total costs; and in a third case a factory to a 60-percent increase in labor costs, which meant a 30-percent increase in total costs. The results, in this last case especially, were very grave.

THE TEST UNDER N. R. A.

But we have had, in our own country and in our own experience, a very recent demonstration. I refer to our experience under N. R. A. We had a very sharp and dramatic rise in the volume of business in the first half of 1933, before the coming of N. R. A. Various causes contributed to this. First, and most important, was the conviction throughout the country that bottom had been reached, that the worst was over, and, above all, that the banks

were safe. Second was the fact that the March 1933 level of business activity was very low, and that a great many activities were urgently needed just as soon as men could have confidence that it was reasonably safe to proceed. Production had fallen far below consumption and inventories were extraordinarily low. Third, there was a speculative flare-up growing out of the inflation moves. And, fourth, especially manifesting itself in late June and early July, after the plans for N. R. A. and the plans for the processing taxes had come to be understood, there was an increase of activity to "beat the gun," and to get as much production as possible accomplished before the heavy increases in costs which N. R. A. and the processing taxes were expected to bring.

From March 1933 to July 1933 there was an increase in factory employment of 23 percent and an increase of factory pay rolls of 35 percent. N. R. A. came. Hours were shortened. Wages were raised arbitrarily. With what result? There was, between July and December of 1933, a further increase in factory employment of 3 percent and a further increase in factory pay rolls of 6 percent. N. R. A. made this addition to the buying power of factory labor. Did this increase production and business activity? The answer is startlingly clear. From March 1933 to July 1933 there had been an increase in industrial production of 69 percent. But from July 1933 to December 1933 industrial production dropped 25 percent.

The rise in activity from March to July of 1933 meant a sharp decline of 26 percent in labor costs per unit of output. Overhead cost was there anyhow. Hiring additional laborers and adding to pay rolls did not mean that the cost per unit of output was correspondingly increased because overhead was spread thinner. It was still profitable to put on additional laborers. But with the arbitrary imposition of shorter hours and higher rates the situation was radically reversed between July and December. The combination of the drop in industrial production and increased pay rolls meant a 54 percent increase in labor cost per unit of output between July 1933 and December 1933.

N. R. A. and business indices[1]

	Preceding establishment of N. R. A. (March-July 1933)	Following establishment of N. R. A. (July-December 1933)
Industrial production [2] (adjusted)	+69	−25
Factory employment [3] (adjusted)	+23	+3
Factory pay rolls [3]	+35	+6
Wholesale prices [4]	+15	+3
Cost of living [4]	+5	+3
Food	+16	
Clothing	+4	+21
Stocks of manufactured goods [5]	+7	+6
Labor costs per unit of output	−26	+54
Department-store sales [2] (adjusted)	+23	−1
Department-store stocks [2] (adjusted)	+11	+8

[1] This table is taken from The First Phase of the National Industrial Recovery Act, 1933, by Arthur Robert Burns, Political Science Quarterly, June 1934. In cases where later figures have appeared to replace preliminary figures, revision has been made. The cost-of-living figures published by the National Industrial Conference Board have been used in the above table. The figures for "labor costs per unit of output" are estimates by Professor Burns.

The effect of the N. R. A. increases in costs and the processing taxes combined upon the situation in August and September of 1933 was a very dramatic one and a very discouraging one, as a banker, talking with his customers, could see it at that time. Here were some cases: One large industrial organization had had a 300-percent increase in its volume between March and July. Its profits were large, and it absorbed the increased costs of N. R. A. and the processing taxes, both of which affected it, without any difficulty, and went on with a large volume of activity. At the opposite end was a large organization producing capital goods and equipment, which had been running a deficit of $3,000,000 a year. It was not affected by the processing taxes, but was affected by N. R. A. rules as to wages and hours. This industry had its $3,000,000 deficit increased to a $6,000,000 deficit. In between were a great many cases of businesses which reported that for the first time in 2 or 3 years they had had profits between March and July of 1933, but that with the coming of N. R. A. and, in some cases, the processing taxes they found these profits largely wiped out or turned into deficits.

The business reaction as measured by the Federal Reserve Bulletin's index of production, beween July of 1933 and December of 1933 was 25 percent.

N. R. A. was not a revival measure. It was an antirevival measure. The theory that shortening hours and raising wages would increase business activity was dramatically and conclusively exploded in this 6-month period of actual test.

Through the whole of the N. R. A. period industrial production did not rise as high as it had been in July of 1933 before N. R. A. came in. Following the disappearance of N. R. A., after the Supreme Court decision in late May 1935, came the first real recovery to anything like normal levels. We passed the July 1933 peak in the autumn of 1935, and then, with rapidly growing volume of production and with decreasing unemployment, had approximately 2 years of growing business activity.

THE FALLACY OF SECTIONAL PROTECTIONISM

There is yet another very powerful motive behind this Wage and Hour Act in the desire on the part of certain northern and western industries to avoid the competition of southern industries, which can employ labor at lower wage rates than those prevailing in the North and West. It is a manifestation of the same spirit that has called for high protective tariffs throughout the world and that has sought to have tariffs which would equalize wage rates. It rests on a very false economic philosophy, the application of which can do us incredible harm. Carried to the limit, it would mean that the country where wage rates were highest could not safely trade with any other country in the world.

It has been carried desperately far in Europe. First, following the war, we had newly created states, the successor states of the Austro-Hungarian Empire, cutting off trade with one another by high and rising tariffs with an appalling paralysis for each as accustomed trade lines were stopped. And in more recent years we have seen an intensification of trade restrictions affecting the great countries of Europe, until today most of the European Continent is half strangled by a network of complicated trade barriers—tariffs, quotas, foreign exchange controls, etc.

Our own high protective tariffs in this country have made us great difficulties, particularly by spoiling our foreign market for agricultural exports, notably cotton, wheat, lard, and tobacco. But we have had an immunity from the worst of these troubles by virtue of the great free trade area among our 48 States.

The lower wages of the South have not prevented wage increases in the North, either in the remote past or in the recent past. Rather, with the general growth of capital in the country, all sections have seen wages rise. In the post-N. R. A. period down to the fourth quarter of 1937 wages in the country generally rose, both absolutely and in relation to commodity prices at wholesale and cost of living. This was true even apart from the increases which came in the first half of 1937 through the sudden intensification of union activity in connection with the work of the Labor Board under the Wagner Act.

Wage rates are much lower in the South than in the North or in the West. Figures for industrial wages for some 20 industries indicate that the average hourly entrance rate of pay for adult male common laborers in the North is 46 cents and the average in the South is 33 cents. This is partly due to the fact that there is less capital in the South in proportion to the population than there is in the North. It is partly due to the presence of a large body of Negroes in the South.

HOURLY RATES VS. LABOR COST PER UNIT OF OUTPUT

The notion that wage rates per hour are the one determining factor in cost of production and in competition is an absurd notion. There is a multitude of other factors in costs. Labor cost per unit of output is the significant labor cost and this is a very different thing from wage rates per hour. Europe, with low wage rates, is very much afraid of the competition of products of our mass production industries, where high wage rates are paid. The question of wage rate per hour is most significant in connection with specialties where a great deal of hand work has to be done.

Labor cost per unit of output is reduced in high wage districts by the use of labor-saving devices which it is not economical to use where wage rates are lower, and which, moreover, countries and regions with limited capital cannot afford to use. Variations in taxes between countries and localities, make important differences in costs, as do variations in the quality of labor, variations in industrial skill and variations in managerial efficiency.

By what means shall the South compete, and how shall the South increase its purchasing power except by using its labor for the best wages it can get and engaging in full production? Why should not substantial volumes of capital go from other parts of the country to the South, attracted by the cheaper labor, and build up new industries there, bringing workers and machines together? And as this goes on will not wages rise in the South?

There is a problem of southern labor recently created. The impairment of the South's foreign market for agricultural products has released a great deal of labor. The retirement of land means the retirement of labor. There is a great deal of idle labor in the South which would not now be idle if we had a large two-sided trade between this country and the rest of the world. Is it right that we should undertake by wage and hour legislation to perpetuate this unemployment in the South?

N. R. A. created a great deal of unemployment in the South. Despite the differentials, the greatest increase in wages, the greatest shortening of hours, and the greatest increase in labor costs under N. R. A. were in the South. In the lumber trade, for example, very little increase was made in western wages, while a very great increase was made in southern wages, even though they remained well below those of the West. This illustration, by the way, strikingly reveals how absurd the contention is that cost of production in a given industry is wholly a question of wage rates. Far more depends upon the quality of the stumpage, its accessibility to transportation, the degree of mechanization in the methods of getting out the timber, and a wide variety of other factors. An interesting book by Charles Frederick Roos, who was formerly director of research of the N. R. A. (Roos, Charles, N. R. A. Economic Planning, The Principia Press, Bloomington, Ind., 1937), gives significant figures in connection with

this point (loc. cit., p. 166) and says: "In view of these data, it is not surprising that lumber business was diverted from the South to the Pacific Northwest." Roos estimates that, by reason of the minimum-wage provisions of the codes, about 500,000 Negro workers were on relief in 1934 (loc. cit., p. 173).

Roos adds that a minimum wage definitely causes the displacement of the young, inexperienced worker and the old worker (loc. cit., p. 193). He adds that the N. R. A. favored the highly mechanized units of industry (loc. cit., p. 416), that insuperable difficulties arose in fixing fair differentials not only as between sections but also as between large and small places (loc. cit., p. 162), that small firms survived frequently by disregarding the provisions of the code (loc. cit., p. 143), and that had the codes been rigorously enforced, employment at the expiration of the N. R. A. would have been considerably less than it was. He adds that rising wage rates and increasing prices delayed recovery, especially in residential building and replacement machinery (loc. cit., p. 150), and, in general, it is his view that the N. R. A. struck especially at the capital goods industries (loc. cit., p. 124).

The idea that we must have equal wage rates in different parts of the country, and equal wage rates in large and small places regardless of efficiency, regardless of the degree of mechanization, regardless of the volume of capital, regardless of transportation facilities and transportation costs, regardless of the quality of labor, regardless of differences in climate and natural resources, in a country as great and as diverse as this, is a fantastic notion. Regional differences in wages are, in fact, enormous, and our ups and downs of business go on largely uninfluenced by them. (For example, the study made by the Department of Labor on average hourly entrance rates of pay of adult male common laborers in 20 selected industries indicates that in the manufacture of bricks and tiles the average rate in the North is 41 cents, while in the South it is 28 cents; in sawmills, workers in the North receive 46 cents an hour, and those in the South 22 cents; in the chemicals industry the average for the North is 49 cents, and that for the South 34 cents; and in the manufacture of cement the northern average is 48 cents, while the southern is 35 cents. These variations are found not only between industry and industry but also between city and city. The average entrance rates for all the 20 industries studied in Akron, Ohio, for example, is 48 cents, while in Atlanta, Ga., it is 29 cents; in Albany, N. Y., the average is 40 cents; in Charleston, S. C., 22 cents; in Seattle, Wash., the average is 58 cents; in New Orleans, La., it is 29 cents; in Boston, Mass., the average is 47 cents; in Jacksonville, Fla., 22 cents. (Monthly Labor Review, April, 1937, p. 938.)

WAGES AND HOURS UNDER THE FAIR LABOR STANDARDS ACT

In what has gone before, I have been discussing the general philosophy of the wage and hour legislation, rather than the detailed provisions of the new law, or the effect of its provisions as they have been applied. The legislation has only recently come into effect. A great many of our industries were already working less than 44 hours a week.

The law provides that hours shall be limited to 44 hours a week for the first year, 42 hours a week for the second year, and 40 hours after 2 years. Work in excess of these hours shall be paid for at not less than one and a half times the regular wage rate. Minimum wages are set at 25 cents an hour for the first year, 30 cents an hour for the following 6 years, and 40 cents after 7 years. The minimum wage, however, is subject to further adjustment at any time through the action of "industry committees." These industry committees are to be chosen by the administrator and their membership is to be composed in equal number of three types of members—first, "disinterested persons representing the public," one of whom shall be chairman; second, an equal number of persons representing employees in the industry; and, third, an equal number of persons representing employers in the industry. In making the appointments the Administrator shall "give due regard to the geographical regions in which the industry is carried on."

These committees, hearing evidence, are to recommend minimum wages within the limits of 25 and 40 cents for the first year, and thereafter within the limits of 30 and 40 cents, which, if approved by the Administrator, shall become the effective minima for the particular industries. The industry committees are to recommend to the Administrator "the highest minimum wage rates for the industry which it determines, having due regard to economic and competitive conditions, will not substantially curtail employment in the industry." (Sec. 8 (b).) The law apparently contemplates a great deal of activity by these committees in raising minimum wages above the 25-cent minimum of the first year and the 30-cent minimum of the next 6 years during the first 7 years of the existence of the law, and apparently contemplates that their activity in reducing rates below 40 cents after the first 7 years shall be exceptional. It provides (sec. 8 (e)) that no wage-fixing order issued prior to the expiration of 7 years shall remain in effect after such expiration, and that no order shall be issued (reducing minimum wages below 40 cents) with respect to any industry after the 7 years unless the industry committee by the preponderance of the evidence before it recommends, and the Administrator by the preponderance of the evidence adduced at the hearings finds, that this is necessary in order to prevent substantial curtailment of employment in the industry.

It was thought by many that in the first year the provisions would not affect many industries outside of the South, though the framers of the law apparently forgot about Puerto Rico, and very grave disturbances have already been met in the island where capital is scarce and population dense, and where immense unemployment is resulting from sheer inability of industries to pay the 25 cents an hour. Wages are high when men are scarce and capital resources abundant, and wages are low when men are abundant and capital resources are scarce. As we look forward to the 40-cent minimum and the 40-hour maximum, however, for a large body of our industries, particularly in the South, the effect may be very grave. Two-thirds of the textile workers in the South today receive less than 40 cents an hour. Newspaper reports indicate some unemployment in the South even as a result of the 25-cent minimum wage.

SEASONAL INDUSTRIES

In the application of the law, however, some unexpected things have come up. A case in point is the following: I have in mind one company whose business is one of great variation due to the Christmas trade, though it is in production all the year around. This company employs an average of perhaps 1,250 people. Most of its common laborers are on an hourly wage rate with a bonus system, and for the most part a 40–44-hour week has been common. The week is usually 40 hours, but during the seasonal period of great activity the company has been accustomed to working 44 hours. The company finds, however, that it is expected now to begin overtime pay at time and a half when it exceeds 40 hours, even though the law does not in terms require this. This means so sharp an increase in the cost of production that the company is reducing its production schedule and will produce and sell less goods this season than would otherwise have been the case.

COMPENSATION FOR "OVERTIME" WORK

When men are working 48 or 50 hours a week, overtime is a serious burden. And, under these conditions, the trade union rule of time and a half for overtime is a good rule as limiting overtime and protecting the health of the workers. But when Congress enacts time and a half for overtime in conjunction with a 44- or 42- or 40-hour week, it is creating an inelasticity which can very easily bring the next strong upward move in business into a needlessly violent and premature crisis. I recur to the analysis at the beginning of this address of the way in which rising costs, and particularly rising labor costs, operate toward the end of a prosperity period to cut into profits and bring about business reaction. If, when labor is well employed, there is demand for further production, and in order to get it the business community generally is obliged to pay time and a half for labor for over 40 hours, the shock can be very violent indeed.

One of the modifications which France has been making in connection with the 40-hour week has been to permit additional hours of work at a 10-percent overtime charge. There is elasticity in an arrangement of that sort. And if the Congress had chosen to provide a graduated scale of 10-percent increase for overtime between 40 and 44 hours, 15 percent between 44 and 48, and 50 percent after 48, the shock would be much less violent. But I do not think we can contemplate with equanimity a 40-hour working week and a 50-percent increase in wages for all overtime beyond 40 hours for the great body of American industry, coming within 2 years. I believe that the whole of this legislation is unfortunate, but I think that the crucial point may come in the statutorial enactment of the 50-percent increase in wages for overtime.

ADMINISTRATION OF THE ACT

In the administration of the act there is considerable discretion which, if used to recognize true seasonality of employment where it occurs and to mitigate the rigors of the act wherever it is found to create real difficulties, might soften it in important particulars. There seems to be a tendency, however, on the part of those charged with the administration of the act to go beyond the law in interpretation.

The Administrator is quoted in the press as holding that any employer who reduced hourly rates in anticipation of a sudden rush of business would be responsible for overtime at the original rate, because the new rate would be an obvious subterfuge to avoid the effects of the maximum hours provision even though the rate paid should be above the minimum set by law. There is nothing in the act that says this. Section 18 does say that no provision "of this act shall justify any employer in reducing a wage paid by him which is in excess of the applicable minimum wage under this act, or justify any employer in increasing hours of employment maintained by him which are shorter than the maximum hours applicable under this act." But this provision can hardly be construed as a prohibition of reduction of wages or increase of hours within the minima and maxima set by the act. It is rather an expression of a pious hope. It provides no penalties.

And if, in the interpretation and the application of this act, this provision should be used to freeze existing hours and existing wages, an incredible, dangerous, and appalling inflexibility would be introduced into our labor situation which could intensify evils of any periods of business recession to a very great degree, and which could prevent the necessary readjustments which are needed in a continual changing economic life. The theory of the law is that it sets minima for wages and that it sets maxima for hours, but the law says nothing with reference to what wages shall be or what hours shall be above the minimum wages and below the maximum hours. If, in the administration of the act, the Government undertakes to destroy flexibility above the minima and below the maxima, we face a very dangerous situation indeed.

It is too early to say that there is a settled policy of the administration of the wage and hour law. What has just been said has been said tentatively and in a friendly spirit. At best the law is going to do harm, and probably a great deal of harm. But if the administration goes beyond the law, the harm will be intensified very greatly. And if the industrial committees are dominated by the North and the West they can do great damage to the South. On the other hand, these committees can be so used as to mitigate very greatly the evil effects of the law. Believers in the new act would do well to urge a policy of moderation in its application.

SHALL WE FREEZE THE LABOR SITUATION?

I have pointed out how the natural forces of technological progress, accumulation of capital, and retardation of growth of population put labor in a position to bargain for leisure among other luxuries of life and led to the progressive shortening of average hours of labor from 58.4 hours in 1890 to 49.8 hours in 1926. But new forces have come in since the twenties, and the shortening of hours has been on a much more arbitrary basis since that time, with a drastic drop to 42 hours in 1937. This shortening has been in a period of economic distress rather than in a period of expanding production and growing wealth. It has reduced American working hours far below those of any other country, except France, where the situation is being rapidly reversed. The workweek in Great Britain is over 47 hours, and the workweek in Sweden is approximately 48 hours. I do not think we can afford to freeze our situation by law.

The shortening of hours, which the free play of economic forces brought about prior to 1929, almost invariably meant increased industrial costs, because labor has rarely been willing to have weekly earnings reduced for the sake of shorter hours. Consequently, shorter working hours have usually meant increased hourly rates. It has been necessary, therefore, that industry should, in some way, offset shorter working hours. This has been accomplished in the past by increased managerial efficiency, by "scientific management," which has increased the efficiency of the worker, by increasing application of capital to industry, by the increasing application of new technology, and, finally, by an increased efficiency of labor itself through less weariness and better health. This last factor was particularly important when reduction in hours per week was from 60 to 50, but the same results can hardly be expected to follow the reduction of working hours from 49 to 40. For most industries and for most labor a 48-hour week is consistent with health and full efficiency, and the other factors, particularly the application of new capital to industry, have not been working over the industrial field as widely or as effectively in recent years as they did prior to 1929. A grave question is suggested by these considerations. (See the recent discussion of Prof. Leo Wolman, Hours of Work in American Industry, November 27, 1938, National Bureau of Economic Research.)

I believe that, with a return of normal economic activity in the United States, we shall need to work more hours, and it is to the interest of labor to work more hours. Restrictions of this sort cannot be justified on the grounds of health or efficiency for industry in general. They are based rather on the theory that there is not enough work to go around, and that, therefore, each man should do less. When the time comes when there is more work to go around, and when the full utilization of the labor force is needed, I believe that we shall regret very much this drastic legislation.

But, long before we reach the full utilization of the labor force, we shall, in a period of expanding industrial activity, find shortages of particular kinds of labor in a good many places. The statutory 40-hour week with the statutory provision for 50 percent increase in wages for overtime, can easily create dangerous strangling bottlenecks in strategically important parts of the industrial field, which may bring an upswing in business to a premature close long before general unemployment disappears.

CONCLUSION

Business activity increases when the prospects of profits are good. Business activity recedes as profits are cut under by rising costs. Pay rolls rise as profits rise. Pay rolls decline as profits fall off. The largest element in costs is labor cost. Over 70 percent of the national income goes to labor. Fifteen and three-tenths percent goes to profits. It is not to the interests of labor to seek by direct action further to increase its share of the national income at the expense of profits. The effort to add 10 percent to the income of labor in this way would cut profits in half and lead to violent reduction in pay rolls. Labor and business enterprises have, however, a common interest in policies which will increase the total to be shared. Our wage and hour legislation, increasing industrial costs, can easily bring a period of improving business to a premature close. The most dangerous feature of it may well be the statutory enactment of the time-and-a-half rule for overtime after 40 hours. The theory that arbitrarily reducing hours and shortening wages will increase the purchasing power of labor and thereby increase business activity has been conclusively disproved, both by the 40-hour week experiment in France and by our own N. R. A. The sound way to raise wages and to reduce hours is the way in which we have historically accomplished these altogether desirable objectives in the United States, namely, through the growth of capital and technological progress, rapidly outrunning the growth of population. When men are relatively scarce and capital is relatively abundant, hours of work are reasonable and wages are high.

What Does Free Speech Mean Today?

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK, ON NOVEMBER 24, 1938

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following speech delivered by me over the National Broadcasting Co.'s blue network on November 24, 1938, at America's Town Meeting of the Air:

Freedom of speech in our country means a free America under free institutions and a free ballot by a free people. Freedom of speech is a symbol of our free institutions and our republican form of government. We have much to be grateful for on this Thanksgiving Day in America; but nothing is of more importance than the preservation of our free speech, free press, and freedom of worship.

I know of no more vital and important issue in the world today than the preservation of free speech. Never before during the past 100 years has the right of freedom of speech been so challenged, impaired, or restricted as in the totalitarian states that have come into being since the World War. The American people look with dismay and abhorrence on the tragic acts of repression in Nazi Germany, where a ruthless dictatorship is bent on destroying free speech, a free press, and free institutions and substituting for them a government by the bullet, racial and religious persecution, robbery, and armed violence.

Article I of the Constitution of the United States reads as follows: "The Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

This article, part of the first 10 amendments known as the Bill of Rights, is the palladium of the rights and liberties of the American people regardless of race, color, or creed or whether in the majority or minority. The fundamental rights of free sovereign American citizens to freedom of speech are guaranteed in the Federal Constitution, and as long as the Constitution stands and an impartial and independent judiciary is its living voice, these sacred rights and guaranties of protection will continue to be the birthright of every American citizen.

Freedom of speech is rapidly becoming a lost art in the autocratic and dictatorial nations, such as Germany, Italy, Rumania, Hungary, and Soviet Russia, covering the greater part of Europe. In these nations even the courts are used to liquidate those who have the temerity to attempt to practice free speech. Twenty years ago our youth, including myself, went forth to war on European battlefields to make the world safe for democracy. What a travesty, what a mockery, and what a farce. The old nations of Europe have since then discarded their free institutions and parliaments for dictatorships of the right or the left, for fascism, nazi-ism, or communism. Democratic institutions have been supplanted by ancient absolutism in a new guise. We merely shrug our shoulders and say it cannot happen here as we watch the hands of progress and human liberty set back a thousand years in some European nations. Condemn this manifestation of despotism as we should, yet nevertheless we are powerless to prevent the undermining and destruction of the fundamental principles of civil and religious freedom that is taking place all over the world. The fact is that there are few nations in the world where freedom of the press, of the platform, of the pulpit, and of the radio is still maintained.

I state without fear of contradiction that there is more freedom of speech in America than in any other nation on earth.

We meet here tonight as representatives of different political parties and of opposite social and economic views in open forum, connected by the National Broadcasting Co. with every State in the Union and into the homes of countless free American citizens. Why, even Mr. Norman Thomas, who I have heard has had some difficulties in speaking in Jersey City, can tonight freely and safely direct his oratorical shafts at Mayor Hague and appeal over his head to the people of Jersey City listening in over the radio.

I confess that I had no sympathy with the misguided and unwarranted attempts of the police of Jersey City to keep Norman Thomas from speaking in that city or elsewhere in the United States. I believe in and uphold the constitutional rights of American citizens to freedom of speech. I agree with the famous French writer and philosopher Voltaire who is quoted as saying, "I do not agree with a word that you say, but I will defend to the death your right to say it."

We are too prone in the United States to point out the defects and limitations on freedom of speech in our own country, and to laud the alleged freedom of speech in other nations, particularly Great Britain. We have done it so consistently and successfully that we have built up a gigantic myth about the freedom of speech at Hyde Park, London (not Dutchess County, N. Y.). I have taken the trouble to investigate this myth and am glad of this opportunity to explode it. It is true that the "bobbies," or police, permit the speakers to blow off steam and to rant and rave, but if attacks are made on the King or Queen, or to incite to riot or endanger the peace and tranquillity of the British Empire, they are stopped at once. There is no such freedom of speech in England as there is here. When Winston Churchill wanted to radio his reply to Hitler he was shut off the air in his own country and could only speak to us in an effort to rope us in to do the fighting for the British Empire. Even the King of England cannot, as we recently learned, speak to his people over the radio without the consent of his Prime Minister and cabinet. I have never heard of any such restriction on President Roosevelt or even on the humblest Member of Congress. Here in New York City there is published every day the Daily Worker, a Communist newspaper filled with radical and revolutionary propaganda. A similar newspaper issued by the Communist Party in London was suppressed by the Government there many years ago.

Let us stop throwing stones at ourselves and besmirching our own free institutions. I repeat: We have the greatest, the fullest, the most complete freedom of speech in the United States of any nation in the world. The best answer that the American people can give to the growth of foreign dictatorships is to reaffirm their faith in our free institutions and constitutional government. The greatest and most important civil right is the right of every citizen of voting age to cast his or her ballot without fear or favor on election day, and to express his or her views openly on governmental issues. From this civil right to vote a free ballot all other rights depend, freedom of speech, freedom of the press, freedom of worship, trial by jury, and all the liberties of the American people under the Constitution.

The first thing dictators do, when they get into power, is to end freedom of speech, of the press, and of the radio. There is no freedom of speech, press, or radio in Soviet Russia, Fascist Italy, or Nazi Germany. Dictators whether of the left or the right are afraid of the truth.

There is one group of people whom I do not believe should be granted the same constitutional right of freedom of speech as American citizens, and that is the alien who comes over here of his own accord, and then proceeds to attack our free institutions and urge their overthrow by force and violence. If these alien Nazi, Fascists, and Communists do not like our free institutions, our laws, and our country, let them go back to their native lands, where they can enjoy the lack of freedom of speech, deplorable wage scales, and oppressive laws they have been accustomed to in the past. But if they insist on remaining here and spreading class and racial hatred and revolutionary poison against our free American institutions, then it is the duty of the Congress to enact drastic deportation laws to deport these alien Nazi, Fascist, and Communist agitators and give their jobs to loyal American citizens now walking the streets looking for employment.

It Is Time to Call a Halt on Sugar Tariff Reductions

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1939

STATEMENT OF HON. FRED L. CRAWFORD, OF MICHIGAN, BEFORE THE COMMITTEE FOR RECIPROCITY INFORMATION AT HEARINGS ON REVISION OF CUBAN TRADE AGREEMENT, TUESDAY, JANUARY 3, 1939

Mr. CRAWFORD. Mr. Speaker, less than 30 percent of the sugar consumed by the citizens of the United States is produced on our own soil notwithstanding the fact that sugar land is untilled, sugar factories are idle, and thousands of men who could have jobs in the sugar mills are on relief or unemployed.

In the face of this, it is proposed to further reduce the duty on Cuban sugar coming into the United States in competition with our own beet and cane sugar.

Protesting against this proposal I appeared before the Committee for Reciprocity Information at its hearing this week, and under leave to extend my remarks I include here my testimony before that committee:

Mr. Chairman and gentlemen of the committee, I hope you will bear with me just for a moment while I call attention to three or four lines of excerpts from the President's message of March 4, 1933, which I think touches directly on this question as well as his statement on price levels as of February 18, 1938.

On March 4, 1933, the President said, in part: "Taxes have risen; our ability to pay has fallen; government of all kinds is faced by serious curtailment of income; the means of exchange are frozen in the currents of trade; the withered leaves of industrial enterprise lie on every side; farmers find no markets for their produce; the savings of many years in thousands of families are gone. More important, a host of unemployed citizens face the grim problem of existence, and an equally great number toil with little return. Only a foolish optimist can deny the dark realities of the moment. Yet our distress comes from no failure of substance. We are stricken by no plague of locusts. Nature still offers her bounty and human efforts have multiplied it. Plenty is at our doorstep but a generous use of it languishes in the very sight of the supply. Primarily, this is because the rulers of the exchange of mankind's goods have failed through their own stubbornness and their own incompetence; have admitted their failure and abdicated. Practices of the unscrupulous money changers stand indicted in the court of public opinion, rejected by the hearts and minds of men; * * * faced by failure of credit, they have proposed only the lending of more money."

On February 18, 1938, in a conference with newspapermen dealing with the behavior of prices and the price level, the President said:

"An important factor that determines whether we shall succeed or be blocked in our endeavor to obtain full employment and a high level of income is the behavior of prices. In this connection careful attention must be given to (1) the relation of prices to the various groups of commodities to each other; (2) the relations between commodity price levels and the levels of debt burden and cost; (3) the direction and rate of movement of the general price level. To further this broad objective, the administration has, therefore, in its agricultural, industrial, and monetary programs, necessarily been concerned both with the relation of prices of groups of specified commodities to each other and with the movement of the general price level."

At New Orleans the other day the American Farm Bureau Federation gave most unusual attention to this particular question of price levels. The convention was addressed by Governor Davis, of the Federal Reserve Board, in which he again dealt with the question of the relationship of monetary policies to price levels.

In March 1937—I believe I have the date correct—at which time the President dealt with the question of sugar, subsequent to which the sugar act, signed September 1, 1937, came into effect, the price on sugar to the retail consumer in the United state was 5.7 cents per pound, or, let us say, $5.70 per hundred. Yesterday raw sugar sold on the New York market, I am informed, duty paid, at $2.80 per hundred pounds. The latest figures I have been able to obtain with reference to the cost of sugar to the retail consumer, compiled for the month of November last, was 5.2 or $5.20 per hundred, or 50 cents per hundred pounds under the price being paid by the consumers at the time of the President's message in 1937 in March.

Since that time, as you know, there has been added to the price structure—in other words, there is an element which enters into the price structure today—53 cents excise tax. So the prices of today which the consumer is paying includes 53 cents.

Saying it in another way, we can build our price structure in this manner: Assuming a $2.80 price on raws yesterday for cane sugar and $1 refiner's margin, or $3.80 plus 53 cents excise tax, less 2 percent usual trade discount, gives roughly $4.21 per hundred pounds price to the refiner, which, mind you, carries the 53 cents excise tax.

Now, bringing that down to beet sugar and the price level, and applying it to the market conditions which would exist under such a price structure, we have $4.10 per hundred pounds on refined beet sugar. Deducting from that the tax of 53 cents plus the 2-percent discount, it leaves $3.49 per hundred pounds going to the American grower of sugar beets and the American processor of refined beet sugar.

Now, when we go back and study the relation of those prices, which are in effect, you might say, at this very hour, and which, mind you, are 50 cents per hundred pounds less to the consumer than the date the message was delivered by the President in March 1937, we find that at no time since 1900 has the net price received by the grower and processor been as low, and I am sure when you verify that statement you will find that it is correct.

So it is very evident that here we are dealing with the problems presented in the President's message on prices and in his inaugural address in March 1933. This question which is now before us, which has to do with the reduction of duty on sugar coming into this country from Cuba, has to do with price levels on this farm product; it has to do with the employment, as you gentlemen know, of men in factories and in fields, in and out of the sugar business, on highways, and in the transportation walks of life.

The net effect of the reduction will be to further enrich the growers and processors of sugar in Cuba at the cost of the American farmer and the American labore. operating in American beet sugar mills and the refineries in this country located on the seacoast. We cannot escape that fact. We are proposing in this reduction of the duty to benefit the purse of those engaged in the sugar industry in Cuba.

In addition to that, in connection with our loans to be made to the Latin-American countries in the promotion of trade, it ties directly in to the President's message of March 1933 when he referred to those who would propose to lend money. We are adding to the lending of money a proposition now to put the money into their pockets by increasing their price at the cost

of the American worker, whether in the factory or on the farm, and to that I object as a private citizen, as a Member of the Congress representing the Eighth District of Michigan; I object to it in the name of the people of this country; I object to it in the name of the industry located in my State, the western beet growers, the southern cane growers, the sugar growers and processors in Hawaii and Puerto Rico and the Philippine Islands because I have in mind that we have before us a joint trade committee report which will deal with the Philippine situation in due course, and I do not think that it is fair or good sportsmanship or good business or good statesmanship for us to go ahead with such a program. I want to emphasize my objection to it in the strongest manner possible.

Now, when this sugar question was up it had to do with the enactment of the 1937 sugar bill, at which time the prices to the growers, the fellows working in the factory, and those who had their money invested in the business was much greater than at the present time, much greater than it has been since the act became effective following its approval September 1, 1937. I repeat that when the act was under consideration there was no indication whatsoever that it was to be used in a manner separately or jointly with the Reciprocal Trade Agreement Act that would resolve itself into a much lower price for this product to the growers, the factory operators, factory workers, and those engaged in the processing, growing, and the distribution of the product.

That philosophy was not preached in Congress, it was not the intent of Congress that such should be the case, but nevertheless that is the net result today, and all of those who are students of this question know it.

If we study what has happened in the channels of trade, and that which is recorded on the daily and hourly market reports which flow to those engaged in the industry from the centers of trade and commerce, and study that only, we must come to the conclusion that insofar as managed money is concerned, in this respect it has utterly failed to do what the law intended or what the people expected. Whether it has succeeded in accomplishing what the plan was designed to do, with mental reservations, I do not know; but we are speaking today from the standpoint of balance sheets and operating statements, and the money in the bank, and the ability to employ.

Now, then, let us go back to 1932, which was the dark year that has been correctly referred to by the President. What happened in 1932? We find here that the net price on cane sugar at that time, the lowest price since 1900 I believe it is, amounted to $3.99, which did not include the tax. Now, you gentlemen of the committee know, as well as others, what happened to the sugar industry of this country during that period. You know the financial failures that resulted. You know the foreclosures, the losses on the part of the investors—East, West, North, and South—and yet the situation is managed in a way that today the financial stress on these capital structures, on the industry as a whole, is much greater than it was in 1932.

Now, I shall protest against adding to that stress a reduction in the duty on sugar coming into this country from Cuba, as is proposed by announcements that have been made pertaining to this hearing.

Now, other representatives of the industry from my State will appear in connection with this proposition, and they will have more detailed factual matter to present; but if we are to further the interests of Cuba in the name of reciprocal trade and the good-neighbor policy—and my contention is that at the present time we are paying Cuba in excess of $1.50 for each dollar's worth of business we get out of there—if we are to continue that kind of a program at the cost of the American farmer and factory worker, then we have no reason to complain about such conditions as exist now, with the channels of trade clogged, with surpluses piled up on every hand, with consumers not eating the stuff, shelving it every day as it develops from fields and factories, with our over ten and a half million unemployed, with our national income below seventy billion, and with our tax burden reaching almost 20 percent of the total income, we have no reason to complain against a situation—against a situation of that kind—if we are to continue "ditching" the American people and "ditching" our markets in the interests of those people in other lands under the name of the good-neighbor policy or the reciprocal trade agreement program.

As horse traders anyone who is trained in the practical process of horse trading, whether it be in the form of horses or in goods crossing international boundaries, we know that we are playing a losing game. Just ordinary common horse sense will teach any man that, if he wants to get down and analyze the figures. If he desires to live in a realm of philosophy and good neighborliness and be a good sport and look to far-away fields and "forget his own people," that is a different proposition; but while my people are involved, I believe in protecting them first. I thank the committee for the privilege of appearing before you.

Mr. Speaker, may I also make the observation that it is my frank opinion that the State Department rendered our people a disservice in arranging for these hearings to be held the opening week of the Congress. Members of Congress who represent the sugar-growing areas have not had a fair chance to properly prepare themselves to appear before the committee. We have had to "catch-as-catch-can" and be on the run between moving our families and locating in Washington, participating in the necessary routine involved in organizing our offices and the House for business and in appearing before the committee.

The sugar industry of our States and insular possessions is a great industry. It is a grave matter for the State Department and the administration to deal so lightly with the rights of the millions of people who depend so directly upon this industry for their daily substance. On the very day the President addresses the two Houses of Congress on the question of proper preparedness for defense and offense, the State Department conducts hearings looking forward to making our people more and more dependent upon a totally foreign country for our supply of this great and essential food—and war material, if you please—and to this I object.

We know what happened in prior years when we were so dependent upon Cuba for our sugar. At that time our people had to pay as high as $35 per 100 pounds for refined sugar. The price of raw sugar to Cuban producers reached a price of more than $22.50 per 100 pounds. When our people are so burdened with "tribute" to a foreign country, it takes only a very few months for us to pile up the "dance of the millions" all to the benefit of the foreign producer. If we could instantly make ourselves independent of this food item, that would be a different proposition. We could, under those circumstances, deny tribute to a foreign country. But organized as we are and with a food economy such as we have developed, I contend that wise statesmen will give to our people the necessary protection required to keep our people supplied with sugar from our own fields. This is a nonsurplus crop. We produce less than 30 percent of what we consume and our people are entitled to have the industry protected.

Mr. Speaker, when the present administration came into office, we were imposing a duty against Cuba of $2 per 100 pounds, raw value or 96 degree sugar. Since March 1933, President Roosevelt has influenced the Congress to reduce that duty from $2 to 90 cents per 100 pounds. Now the proposal is to further reduce—in favor of Cuba and for Cuba's specific benefit—the duty 15 cents per 100 pounds. This will leave the situation with Cuba paying only 75 cents per 100 pounds as against $2 per 100 pounds under the Tariff Act of 1930. I think Cuba has had her share. It is not in keeping with American tradition to give the foreign producer $1.25 and the American sugar grower only 75 cents out of a $2 proposition. It is now time to call a halt. I protest against the further reduction. The American people have no complaint against paying around five or five and one-half cents per pound for their sugar and this is particularly true if they are given the right to grow it. This is particularly true if the cost here mentioned accomplishes two things—places the sugar on the consumer's table and guarantees him against exploitation by a foreign country by having a large share of his sugar produced on his own farm and in the factories where he and his sons are employed.

America's Answer to Religious and Racial Persecution

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1939

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, ON NOVEMBER 25, 1938

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio address delivered by me over the Columbia Broadcasting System on Friday evening, November 25, 1938:

I speak tonight not as a Jew or a German but as an American who loathes and abhors all forms of political, economic, racial, and

religious repression and persecution, whether in this country or elsewhere.

I believe the oppression and persecution of the Jews in Germany is "so enormous as to impart to them an international character in redress of which all countries, governments, and creeds are alike interested." These are the identical words used by my grandfather, Hamilton Fish, in 1872, when as Secretary of State in President Grant's administration he protested the outrages and persecution of the Jews in Rumania at that time.

I propose to discuss the American viewpoint rather than to detail the autocratic and despotic actions of Hitler, the Nazi dictator, who has set the hands of progress back 1,000 years by his attacks on race and religion. Whom the gods would destroy they first make mad. To all appearances Hitler has become stark, raving mad on the Jewish issue, and he, Goebbels, and his Nazi storm troopers are engaged in an orgy of racial and religious persecution not only of Jews but of Catholics and Protestants as well. The people of America, regardless of party affiliations, join with all other civilized people in denouncing this retreat to darkest barbarism in Germany.

My ancestors came over to America 300 years ago to escape religious persecution in England and to find a homeland where they could worship according to their own conscience and be afforded protection of their civil liberties. God forbid in our day and generation that any of the rights or liberties guaranteed by the Constitution of the United States should be restricted or endangered.

The American viewpoint is best expressed in the following extract from a well-known letter of George Washington written in 1789 to a Jewish congregation in Newport, R. I., which applies equally well to the present time. Our first President wrote:

"The citizens of the United States have a right to applaud themselves for having given to mankind examples of an enlarged and a liberal policy, a policy worthy of imitation. All possess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of as if it was by the indulgence of one class of people that another enjoy the exercise of their inherent natural rights. For, happily, the Government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens in giving it on all occasions their effectual support.

"It would be inconsistent with the frankness of my character not to avow that I am pleased with your favorable opinion of my administration and fervent wishes for my felicity. May the children of the stock of Abraham who dwell in this land continue to merit and enjoy the good will of the other inhabitants, while everyone shall sit in safety unto his own vine and fig tree, and there shall be no one to make him afraid. May the Father of all mercies scatter light and not darkness in our paths and make us all in our several locations useful here and in his own due time and way everlastingly happy."

There can be no compromise with the Nazi groups in America who are trying to sow the seeds of racial and religious persecution and to tear down our own free institutions and republican form of government. The American people look with sorrow and abhorrence on the disgraceful and tragic events in Nazi Germany, where a ruthless dictatorship is bent on destroying free speech, free press, and free institutions and substituting for them a government by the bullet, racial and religious persecution, confiscation, terrorism, and armed violence.

American citizens have not only a right but a duty to protest and remonstrate against racial and religious persecution of Jew and Gentile in Nazi Germany. Some Americans applaud Hitler's success in throwing off the intolerable yoke of the Versailles Treaty and uniting the German people into a mighty force in central Europe, but they will not and cannot compromise with the spread of intolerance, bigotry, and persecution that dishonors Germany and the German people. The inhuman acts of the Nazi Government put it outside of the limits of decency and fair dealing. Hitler, Goebbels, and other fanatical Nazis are undermining the fundamentals of civilization. They alone are responsible and not the German people, whose liberties they have destroyed. We must profit by the events in Nazi Germany and make sure that they shall not happen in America.

The Nazi Government's own press is warning the United States to muzzle our newspapers. Evidently the Nazi Government is unaware of the fact that we are still a free people in America under a republican form of government and that the Constitution of the United States guarantees to our citizens free speech and freedom of the press and that the American people themselves are opposed to racial and religious persecution.

The refugee problem before the world is to find a new America where the oppressed of all nations, all races, and all creeds can find civil and religious freedom and those other ideals which our ancestors sought to establish in America. Our ancestors wrote the Declaration of Independence and the Constitution and set up safeguards to make sure that our spiritual union could not easily be torn asunder. Today our population is greater than that of Germany, France, and Belgium combined. All of Germany would be lost in the State of Texas. If any country is worth living in today it is the United States of America. The American flag is the flag of tolerance, not bigotry, class, or racial hatred; of freedom, not compulsion or dictatorship; of a free ballot under free institutions, and not a government by the bullet and persecution.

I approve, as the ranking Republican member of the Committee on Foreign Affairs in the House of Representatives, of President Roosevelt's recall of Ambassador Hugh Wilson from Germany as a high moral protest against the inhuman persecution of the Jews in that country. All American citizens who hate injustice, persecution, and inhumanity will likewise approve. This does not mean, however, that we should become hysterical and talk of war or clamp down embargoes. Rather the time has come to remain cool and collected and keep our feet on the ground and ponder well before we act. There is a dangerous wave of war hysteria throughout the land, and fear and dread of war was recently demonstrated in New Jersey by the actual belief in an invasion by warriors from Mars. There is no more chance of Nazi soldiers attacking America or of ours invading Germany than there is from an attack from Mars.

Let us unite in putting out the flames of war by hysteria and consider the refugee problem on a constructive practical basis. As the sponsor for the resolution providing for a homeland for the Jewish people in Palestine that passed the Congress in 1922, I urge the British Government to permit several hundred thousand German and Austrian Jews to find a place of refuge and home in Palestine, that ancient land of their fathers.

I would be glad to vote for an appropriation of ten million or even twenty millions of dollars to transport and provide them with a new start in life. We appropriated twenty millions for famine relief in Soviet Russia and Austria, and I introduced a bill providing for $10,000,000 to buy foodstuffs for starving women and children in Germany in 1923, which passed the House by a 2-to-1 vote.

We have plenty of precedents for helping destitute and starving people, and in view of our moral indignation and protest we can well afford to back up our words with a more concrete and constructive act. I look with suspicion on the proposal of the British Government to open up the former German colonies in Africa to the Jewish refugees, as these colonies will, in all probability, be restored to Germany within the next 10 years. The proposition to colonize British Guiana with Jewish exiles is the height of generosity, as few white men or women can survive that climate for more than a year. Secretary Harold Ickes' suggestion of a haven for Jewish refugees in Alaska along with the polar bears is on a par with the utterly fantastic and costly failure of transplanting several hundred American farmers to the Matanuska Valley in Alaska.

The cost of that experiment per family will put all other New Deal experiments to shame. I know that the American Federation of Labor and other labor and loyal American organizations favor a boycott against German goods. I do not favor it in principle. I do not favor any boycott or trade embargo against any foreign nation except for arms, ammunition, and implements of war. Boycotts and embargoes are unneutral acts; they create and perpetuate enmity and hatred and eventuate in war. In the case of Germany we would be biting off our nose to spite our face. For the first 9 months of 1938 we exported to Germany $78,556,857 worth of American products, and we bought only $44,061,902 worth from her. It is all very well for us in New York City to talk of embargoes, but what about the Cotton States of the South, which furnish large quantities of cotton to Germany? How do you think they will react to any embargoes on cotton? There is no chance whatever of Congress under the present circumstances adopting an embargo policy. Any attempt to do so will alienate the support of large sections of the country from the high moral and humanitarian stand we have taken in recalling our Ambassador in protest against racial and religious persecution.

In conclusion I urge all loyal American citizens not to compromise in any way with the spread of nazi-ism or Nazi bunds or Nazi ideals in free America. There can be no compromise with either nazi-ism on the right or communism on the left.

I propose to introduce in Congress and seek favorable action on a bill to prohibit the arming and drilling of armed groups such as the Nazis, Fascists, or Communists. There is no room in free America for private armies to spread terrorism and to substitute the bullet for the ballot. We Americans, regardless of party or whence our origin, propose to defend and maintain against all our foes from within and without our free institutions and our representative and constitutional government, which has made this country a nation of free men and free women who love liberty and democracy and hate all forms of oppression and religious and racial persecution.

The Late Michael J. Brennan

EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1939

Mr. O'NEAL. Mr. Speaker, very recently the city of Louisville and the State of Kentucky were shocked to learn of the sudden death of Michael J. Brennan, of Louisville, Ky. He was stricken while at Hot Springs, Ark., in the prime of life, and his passing brought great sorrow and sadness to my city and State. I wish to make this permanent record, not because of his great influence, his recognized leadership, nor his

executive ability, but because of his deep devotion to his fellow man.

To his own family he was a devoted protector, to his legion of friends his loyalty was proverbial, and to anyone in distress or need he was a self-sacrificing benefactor. Not tens, not hundreds, but thousands in my city and State knew Michael J. Brennan as one who would not harden his heart to any appeal, and his generosity amounted to a public benefaction. As a political leader he was a worthy foeman crowned with continuous success, yet his opponents respected him and were personally devoted to him. His interest in good government marked his selection of candidates, and his determination to see that his city was governed well caused him to throw his backing to men of character and ability. His own ability and gentleness were merged with a geniality and humor that made him beloved and welcome wherever he went. Words are inadequate to tell the loss that our city and State have suffered, but the influence of his life will last for many years to come.

Hospital Facilities for Veterans

EXTENSION OF REMARKS

OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1939

REPORT OF HON. MICHAEL J. BRADLEY OF PENNSYLVANIA, MEMBER OF CONGRESS, TO THE HONORABLE JOHN E. RANKIN, CHAIRMAN OF THE WORLD WAR VETERANS' LEGISLATION COMMITTEE, HOUSE OF REPRESENTATIVES

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under the unanimous consent which I have received, I am incorporating in the RECORD the following report:

PHILADELPHIA, PA., *December 20, 1938.*

HON. JOHN E. RANKIN,
Chairman of the World War Veterans' Legislation Committee, House of Representatives, Washington, D. C.

DEAR MR. RANKIN: In conformity with House Resolutions 325 and 408 and subsequent instructions from you, I have made a survey of veterans' facilities at the United States Naval Hospital in Philadelphia and am forwarding you herewith my report:

While the number of veteran patients at the hospital far exceed those active-service cases of the Navy and Army, the management of the hospital is under the United States Navy, with Capt. Frank E. Sellers, commanding. Personnel of the hospital consists of 43 doctors, of whom 7 are surgeons, 4 dental surgeons, and 4 eye, nose, and throat specialists; 8 internes, 220 Navy Hospital Corps men, 53 female Navy nurses, 108 civilian employees. The management operates its own power plant and the hospital on the whole appears to be very well equipped; sanitary conditions are good. Detail inspection was made of kitchens as to the manner of preparing food, method of distribution to the patients throughout the wards, and it is apparent that the standard of efficiency is very good; quality of food was excellent.

As of December 8, the total number of patients numbered 713; of these, 567 were veteran cases. According to figures recently submitted to the American Medical Association by naval authorities, the capacity of the hospital is 650 beds. This would indicate that even at the present time the hospital is faced with applications which are in excess of its facilities. The Veterans' Administration pays to the Navy Department $3.75 per day per patient. All examinations in connection with claims of veterans for service-connected disability compensation are made at this hospital, for which a charge is made to the Veterans' Administration of $3.75 for each examination.

It should be borne in mind that the resolutions of Congress were primarily to ascertain the adequacy of hospital facilities for veterans throughout the country, together with a survey of such institutions to determine the efficiency thereof, and that consequently, in surveying the United States Naval Hospital at Philadelphia it was necessary to examine the whole veteran situation in the Philadelphia area, from the standpoint of determining whether adequate facilities are available now and for the near future, to furnish proper hospitalization for the ex-service men. The Philadelphia area comprises eastern Pennsylvania, all of the State of Delaware, and insofar as hospitalization is concerned, the State of New Jersey as far north as Trenton. The demand for hospitalization from veterans has increased by leaps and bounds in this area during the past 3 or 4 years, and the present indications are that this situation will be aggravated rather than otherwise, so much so, in view of the already overcrowded condition at the United States Naval Hospital, it is apparent that additional facilities must soon be provided for this area. There has been a constant waiting list of applicants for the past few years of those cases which do not require immediate or emergency treatment. It is pertinent to remember that the official figures of the Navy give the bed capacity of the hospital as 650 beds, while at the present time there are 713 patients. A study of statistics in this area as compared to other sections of the United States would seem to indicate that this area has been neglected with respect to providing adequate general medical hospital facilities, which would be able to take care of the load which has been consistently increasing, and that this area is far behind other sections of the country with regard to veterans' hospital facilities for general medical patients. For instance, the State of New York, which had 493,892 men who served in the World War, has a total of 7,209 beds with facilities for 800 additional beds to be built. Illinois, with 320,228 men, has a total of 4,760 beds with construction contemplated for an additional 330 beds. California, with 154,930 men in the service, has a total of 7,581 beds with an additional 544 beds contemplated. Ohio, with 243,540 men in the service, has a total of 4,571 beds with construction contemplated for an additional 602 beds. Compared to these figures Pennsylvania, with 370,961 men in the service, has a total of only 1,964 beds with an additional 250 authorized. From these figures it is evident that construction for the State of Pennsylvania lags far behind that of other States. The 250 additional beds, which are at present authorized for Pennsylvania, are for a unit in the western part of the State at Aspinwall, Pa., which in no way would furnish relief for the Philadelphia area. In this connection the break-down of the statistics for Pennsylvania points to the conclusion that the Philadelphia area, comprising the territory as stated above, is the section which is affected by the lack of adequate construction to provide for the near future as well as to take care of the immediate problem.

Recently a map of the United States, prepared by the Veterans' Administration in Washington, showing the ratio of available and authorized beds for general patients in proportion to population, which showed a scale of from 1 bed for under 2,000 population to 1 for every unit of 15,000 population or over, develops the fact that general medical hospital facilities for veterans in Pennsylvania are the poorest of any section in the United States, for, according to these figures, some sections of Pennsylvania have 1 bed for every 10,000 to 15,000 of population, and other sections 1 bed for every 15,000 or over of population.

While there is no intention to criticize the management of the naval hospital, which, I am glad to state, has developed a high degree of efficiency at the Philadelphia Naval Hospital, nevertheless, due to naval regulations, veterans in this area are deprived of certain medical benefits which would otherwise be available to them if they were hospitalized in an institution under control of the Veterans' Administration. I am informed that due to naval regulations outside consultants are not permitted to tender their services to the hospitalized veterans, even though this would be done without cost to the Government. Philadelphia has a reputation as a medical center which is generally recognized throughout the United States. Numerous specialists have indicated their willingness to place their services at the disposal of the Veterans' Administration gratis for purposes of diagnoses and other consultation, but these services have not been available due to the rigid naval regulations. Veterans are, consequently, deprived of the professional skill of men who are outstanding in the profession and whose names are household words throughout the United States. In justice to the veterans of this area, this condition should not be permitted to exist. There are no facilities at the naval hospital for the treatment of incurable cancer cases. While operative cancer cases are operated upon at the hospital, it is necessary to transfer cancer incurables and cases requiring radium treatment to the Bronx, New York. Tubercular patients are only hospitalized temporarily as transients until beds are available in a veterans' tubercular hospital.

As a further indication of the inadequacy of the present facilities at the United States Naval Hospital to take care of all applicants in the not too distant future, when it is considered that these applications are increasing about 20 percent each year (in 1937 there was a 17.6 percent increase over 1936), it is interesting to note that in the early winter months of this year there were 604 veteran patients at the naval hospital and the Veterans' Administration regional office in Philadelphia was compelled to discontinue sending them patients because no beds were available, even though there was a considerable number of applicants on the waiting list. The percentage of increase of 17.6 in the year 1937 over 1936 is the official figure given by the Administrator of Veterans' Affairs in his report for the year 1937, and with the increase in age of veterans, it is reasonable to suppose that the number requiring hospitalization can be expected to show a great increase rather than a decrease for many years to come.

The question might arise as to what disposition would be made of facilities in the naval hospital were a veterans' hospital erected exclusively for veterans in the Philadelphia area. In this connection, I would like to point out that undoubtedly the facilities which the naval hospital has been able to furnish for the use of veterans up to the present time have been possible because of the fact that the fleet has been almost wholly concentrated in the

Pacific. Were a sizable fleet placed in Atlantic waters, there is no doubt that the Navy would have an increased demand for use of its own facilities by naval men. With the prospects being that in the future a greater proportion of the fleet will be placed in Atlantic waters, it simply means that the naval hospital in Philadelphia will be unable to provide facilities for veterans even in the degree which now exists in an already overcrowded hospital.

It is therefore recommended that a United States veterans' hospital be constructed for use of veterans in the Philadelphia area. It is my opinion that this hospital should be in Philadelphia, or in the near vicinity of Philadelphia, that city being not only the center of population but also approximately geographically centered for the territory served. In addition to this, a hospital that would be either located in the Philadelphia metropolitan area or adjacent thereto would enable veterans to have the advantage of the eminent consultants who reside in Philadelphia or are on the staff of hospitals in that city. This is an important item to be taken into consideration, as it means so much to the health of the veteran and the possible recovery of many patients if they had the advantage of treatment from men who are preeminent in all branches of medicine. In this connection it is interesting to note that in the list of approved hospitals in the United States, made public on October 17 of this year by Dr. George Crile, of Cleveland, chairman of the College's Board of Regents, American College of Surgeons, approval has been given to 45 hospitals in the city of Philadelphia alone.

In view of the statistics quoted, which are from the Veterans' Administration itself, and also because of the present overcrowded conditions at the Naval Hospital, with a waiting list already existent and the prospects for the future being that this list will increase rather than decrease, I feel that this recommendation is justified and I also feel that in order that the veterans of this area should be accorded the same facilities which exist in other sections of the country, that this construction should not long be delayed.

Respectfully yours,

MICHAEL J. BRADLEY.

Un-American Activities—Nazi-ism and American Youth Exchange Students

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1939

Mr. DICKSTEIN. Mr. Speaker, it stands to reason that the interchange of graduate students and professors between nations is altogether desirable. Manifestly, the exchange of scholars, of those who mold the minds of tomorrow, can help immeasurably in advancing international amity and culture.

But it stands equally to reason that neither international amity nor culture can be advanced an iota—that, on the contrary, they can only be hampered—if a government deliberately and dishonestly uses the exchange of students and professors as a means of disseminating propaganda utterly opposed to international amity and culture. Nazi Germany is open to that charge.

All German students desiring to study in a foreign country must obtain Nazi Party certificates of "political responsibility" attesting to their enthusiasm for national socialism and their loyalty to the Fuehrer and must submit these to the Reich Ministry of Education.

Moreover, all exchange students are required to undergo, in accordance with ministerial decree, special training in national socialist propaganda so that they may know the varied techniques of spreading the Nazi gospel on foreign campuses. This training is given chiefly by the National Socialist Students League through groups specially formed for the study of "immediate foreign questions and of Germany's border problems." Directed by orthodox faculty members and young Nazis well versed in foreign agitation, these groups concentrate their attention on particular countries, one of which, for example, is known as a "study group for the United States." The object is so plain that a Berlin correspondent of the New York Times states in this connection that: "There can be no doubt that the exchange or other German students who appear on American and other foreign campuses in the future will be expected to devote some of their time to propaganda for the Nazi regime," and that for this reason "the Government is giving its warmest cooperation to all the various agencies, such as the Institute of International Education of New York, which are engaged in the exchange of students."

Just before leaving for universities and colleges in the various countries, exchange students are gathered together at special camps and given intensive last-minute propaganda instruction, as is revealed by the following dispatch from Neustrelitz, Germany, of August 26, 1937:

German exchange students, who will leave early next month for universities and colleges in various foreign countries, including the United States, were mobilized here yesterday for a week of final intensive training in national socialism. They are now regarded as an important element in Germany's foreign propaganda and were told so by Dr. Burmeister, director of the German student exchange service.

The students' camp is a typical semimilitary national socialist training institution. Instruction will be given throughout the week in the manner in which German students abroad are to behave, particularly how they are to present the national socialist ideology.

In his address to this "important element in Germany's foreign propaganda," Dr. Burmeister explained that "it is necessary to learn about our opponent's ideology and point of view so as to be able to oppose him," and that the Nazi spirit "must remain mobilized to hold its ground in the world warfare or ideology."

In order to assure the strategic distribution of Nazi exchange students, the Government all but compels the students to attend those universities where Nazi propaganda is most necessary. A notice displayed on the boards of the University of Berlin, for example, informs persons of "political responsibility" that enrollment in the universities of Lausanne and Geneva is recommended "in the interests of German cultural policy." A similar bulletin concerning the University of Vienna ends with a statement calling "attention to the fact that study in Austria is not only possible but particularly recommended and suggested."

While they are abroad German exchange students, and especially exchange and visiting professors, must report to local National Socialist officials, a requirement stringently enforced in countries where Nazi propaganda is vital. Neglect to do so must be explained direct to Reich Minister of Education Rust and is punishable by refusal of permission to leave Germany again. The reasons offered by Herr Rust himself in an official document are quite revealing:

It has frequently been observed of late that Germans, especially professors and students, when traveling abroad for cultural or scientific purposes, have failed to establish contact with their local national official representatives. Such contact is especially important in countries where Jewry occupies a predominant influence in cultural affairs, and where emigrants seek to press into the foreground questions concerning German cultural life. In these countries it is particularly necessary that German national guests, local or official, shall be informed of these local relationships by the official national representatives abroad.

I therefore order that all under control of my ministry who travel abroad for study, research, or lectures, or for congresses or similar purposes, shall on their arrival in a foreign country forthwith establish contact with the competent local representative of Germany, with the foreign organization of the Nazi Party, and with the branch office of the German Academic Exchange, whenever possible. If this is not done, a report of the reason must be furnished to me.

I take this opportunity to point out that previous decrees regarding foreign journeys are still not always obeyed by all concerned. I therefore hereby order all controlled by my office to obey in every detail the decrees on foreign travel and lay before me, through the official channels, any applications for permission to travel abroad.

Moreover, according to a recent ruling, German students studying in foreign countries must become members of student clubs and take an active part in the extracurricular life of the universities to which they have been assigned.

What has all this to do with the United States? Plenty. The largest number of exchange students and professors in the country come from Germany, a circumstance especially marked since Hitler's advent to power 5 years ago. It follows that if, as the above facts reveal, German exchange students are trained as propagandists and visiting professors are used as propagandists, then those who come to America must be doing that which they are required to do. Yet, somehow, the Institute of International Education, through which German students and professors are placed in American uni-

versities, refuses to believe this. Its well-meaning director, Dr. Stephen P. Duggan, points out that "foreign students must not engage in propaganda of any kind in the United States" and insists that he has "every reason to believe that this principle has been honorably observed" by Nazi Germany. But careful investigation indicated that there is no reason to believe that Hitler is, or has been, any more honorable in his observance of democratic principles in the United States than he has been in Germany.

Take the case of Dr. Dietrich Zwicker, a German exchange student at the University of Kansas in 1936. In between lessons he managed to find an extraordinary amount of time for Nazi propaganda on and off the campus. Wearing a Nazi emblem in his lapel, he took occasion to mark an extra-curricular visit to St. Joseph, Kans., with a barbed warning that "if the Jewish question continues to be raised in American newspapers, there will be real barbarism toward the race in Germany." Nazi atrocities he shrugged off as "an inevitable occurrence in transitions," Aryanism he endorsed emphatically. All these statements were made for the special benefit of the St. Joseph's Gazette. Previously he told several hundred German-Americans that "66,000,000 Germans are more important than 400,000 Jews" and that true Germans "do not care about foreign opinion in regard to the Olympic games, despite the withdrawal of some athletes and the campaign against the Berlin games." As if to make amends to American opinion, he concluded his speech by comparing Hitler the house painter to Lincoln the rail splitter.

While attending Columbia University as an exchange student, Dellef Sahm, son of the Berlin mayor of that name, delivered speeches in behalf of the Nazi regime quite frequently and spoke at least once over the radio. Invariably he disposed of Jewish persecutions by insisting that Jews deserved no more than 1 percent of his time because they comprised that proportion of the German population. While living at Columbia's International House, he is said to have a Nazi cell among German students residing there.

Heinrich Sahm, evidently a relation of Dellef, was engaged in propaganda while an exchange student at the University of Cincinnati, assisted by Sigismund von Braun, another exchange student who is now an attaché in the German embassy at Paris.

More carefully chosen, more expert at propaganda, and more learned in Nazi doctrines, German exchange professors and visiting lecturers—almost all of whom have been under the sponsorship of the Institute of International Education—have been more effective and more dangerous Nazi agents than exchange students. The story of Dr. Klaus Mehnert is proof of that.

Through arrangements made by Major General Barrows of the California National Guard, whom he accompanied through Germany in 1934, and the Institute of International Education, he became a visiting professor at the 1936 summer sessions of the University of California. His class was composed of 200 graduate students, mostly school teachers intent upon advancement.

Suave and able, he had none of the outward crudenesses popularly associated with Nazi propagandists. Though his students were undoubtedly unaware of it he was—and is—a Nazi agent of considerable talent and versatility, his offices including general secretary to the German Society for the Study of Eastern Europe, an editor of Osturopa, and manager of the Berlin office of the German Economic Institute for Russia and Eastern Europe. Previous to his rise to these heights within the short duration of nazi-ism, he had been an eminent journalist who had written, among other things, a somewhat sympathetic book about youth in Russia which serves him in good stead outside of Germany.

Originally his course at the University of California was called "Fascism Versus Communism" but was hastily and discreetly changed to "Contemporary European Political Thought." Actually, the change made little difference; the latter title served Mehnert's purposes as well, if not better, than the former. By and large, his lectures were subtle harangues for fascism and against communism. As a student at the university put it in the Pacific Weekly, he "gave the intellectual rationale of fascism and created a feeling of hostility to communism by the use of carefully weighted and selected facts—and all with intelligence, grace, and charm." His essential thesis with regard to nazi-ism was that it expresses Germany's "inner soul," the temperament of the German people; that it was advocated by Germans such as Moeller van den Bruck as far back as 1800; that it was as indigenous to Germany as democracy to the United States.

The books Mehnert assigned as the basis for his course seemed to represent both communism and fascism rather fairly. There were an equal number of books by Marx, Lenin, and Stalin as by Hitler, Alfred Rosenberg, Walter Starre. But among the books which were designated as impartial were the works of Houston Stewart Chamberlain, than whom there is no more blatant British proponent of Aryanism, as is evidenced by such statements as these:

> It frequently happens that children who have no conception of what "Jew" means or that there is any such thing in the world, begin to cry as soon as a genuine Jew or Jewess comes near them. The learned frequently cannot tell a Jew from a non-Jew; the child that scarcely knows how to speak notices the difference. Is that not something? To me it seems worth as much as a whole anthropological congress.
>
> One does not need to have the authentic Hittite nose to be a Jew; the term rather denotes a special way of thinking and feeling. A man can very soon become a Jew without being an Israelite; often it needs only to have frequent intercourse with Jews, to read Jewish newspapers, to accustom himself to Jewish philosophy, literature, and art.

At public lectures at the university during the evenings, Mehnert was able to present his message to audiences of 800 or more and on other occasions, as a result of his university connections, was invited to speak at Berkeley's Commons Club, Lions Club, Women's City Club, and Rotary Club.

Should Prof. Camillo von Klenze ever write the story of his propaganda exploits on American campuses, he will, if he is not ungrateful by nature, acknowledge that his success could not have been possible were it not for the Institute of International Education. Professor of German-American cultural relations—read German-American propaganda—at the University of Munich, he has lectured in the United States under the sponsorship of the Institute of International Education and has been visiting professor of German at Stanford University. In an interview in the latter's campus daily he took occasion to denounce American correspondents in Germany as nothing short of liars, asserting that the Nazi Government was far more restrained than they were willing to acknowledge. As proof of this he claimed that during the first 18 months of Nazi power there had been no more than 200 deaths of violence—a number which he considered infinitesimal, when compared to the death tolls of civil strife of countries which he left unnamed.

Either ignorant of or unconcerned about Professor von Klenze's role as a propaganist, the Institute of International Education has assisted him in assembling American students for the so-called junior year in Munich, a propaganda project under the direction of Gen. E. von Massow, head of the German Academic Exchange Service. It is significant to note that in his activities in this connection, Professor von Klenze has taken great care to assure America that he has no bias for or against Nazi Germany. "You must not become pro-German or anti-German," he advised a group of American students just before they sailed for Munich. Though none could see it, Professor von Klenze must have had his tongue deep in his cheek when he made that statement. And he must have felt the thrill of the successful propagandists when he read the following headline in the New York Times the next morning: "Thirty-three Students Sail; Warned on Bias."

Equally indebted to the Institute of International Education, under whose auspices he has lectured frequently in the United States, is Prof. Friedrich Schoeneman, head of the American seminars at the University of Berlin, author of an article entitled "America Under a National Socialist Regime" and of "The Art of Mass Propaganda"—which Charles Beard describes as being full of contempt for the

American people. He was eminently fitted for the propaganda tasks in America to which he was assigned.

His first lecture in America, delivered in Boston, was so blatant that it provoked a riot in which several people were injured. Similar outbursts on the part of his audiences occurred in Chicago and Cincinnati.

Keeping Out of War

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1939

ARTICLE BY HON. BENNETT CHAMP CLARK, OF MISSOURI

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the senior Senator from Missouri [Mr. CLARK] entitled "How We Can Keep Out of War" which was published in the Country Gentleman of January 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Country Gentleman of January 1939]

HOW WE CAN KEEP OUT OF WAR

(By BENNETT CHAMP CLARK, United States Senator from Missouri)

On a day late in March 1917 I sat in the office of Senator William J. Stone, of Missouri, chairman of the great Senate Committee on Foreign Relations. It was during the short recess of the Congress between the second inauguration of President Woodrow Wilson and the beginning of the special session called a few weeks later to declare war on Germany.

Those were times to try men's souls, times when to cling to the dictates of sanity and patriotism, to resist the hysteria and the propaganda which were hurrying this Nation into the shambles of war, was to incur ostracism and abuse and cries of treason from those who sought to profit by plunging this country into war, echoed by the deluded many who mistook hysteria for patriotism and propaganda for reason.

After years of threats and the brandishing of arms among the nations of Europe, the world had been plunged into the bloody chaos of the greatest conflict in history by the crime of an obscure fanatic.

From the beginning of the war in Europe there had been put forth in this country the most insidious and persistent efforts upon the part of both groups of belligerents to involve us in the struggle. Both flagrantly violated the neutral rights which we asserted. A great mass of propaganda was put forth upon each side. International bankers engaged in floating loans in the United States for one group of belligerents exerted all of the vast resources of their powerful financial connections to bring our Nation to the support of their clients' interests. Munition makers able to sell their wares only to the same group by reason of its control of the seas spent vast sums for propaganda to stir our people to the same purpose. An American ambassador actively aided the government to which he was accredited in the violation of the rights being asserted by our Government to the free navigation of the seas. An unofficial ambassador, holding no office whatever under our Constitution, roamed around Europe promising to commit our Nation to war in certain contingencies. Many men seemed to lose their reason in the madness of the hour.

President Wilson had made great efforts to maintain the position of the United States as a neutral; he had pleaded with our people to be neutral "in thought as well as deed." But the aggressions of the belligerent powers, the machinations of the propagandists in this country, and the increasing bitterness of public feeling due to these factors made his task increasingly difficult.

Yet despite all the efforts to inflame our people, the overwhelming sentiment of the Nation was against war. As late as November 1916 President Wilson was reelected upon the issue: "He kept us out of war." Six months later we were engaged in the "war to end war" and to "make the world safe for democracy."

In the early winter of 1917, during the short session of the expiring Congress, President Wilson suddenly sent to Congress a demand for legislation authorizing what was called "armed-ship neutrality," which, in effect, meant that we were to allow the arming of our merchant vessels and actually to go to war without declaring war.

That measure was defeated in the closing hours of the session by the determined fight—some called it a filibuster—of a small group of Senators, among whom the most prominent, by reason of his chairmanship of the Foreign Relations Committee, was Senator Stone.

President Wilson was at the very height of his popularity. Washington was filled with his vociferous followers eager to do him honor on the occasion of his second inaugural. The adulation and sycophancy which always surrounds such occasions was on every hand. Upon the heads of that devoted little band of Senators was loosed a storm the like of which the country has seldom seen. The President promptly denounced them as "that little group of willful men." Newspapers which had been abusing the President a few weeks before for his efforts to "keep us out of war" now lauded him extravagantly and virulently abused Stone and his associates. Epithets and abuse of the most vicious kind were heaped upon them.

The President obtained from the Attorney General an opinion to the effect that the sanction of congressional legislation was not necessary to put the armed-ship bill into effect, and he proceeded to do so. It proved an utter and disastrous failure. It has always seemed to be one of the most remarkable of the phenomena of the war madness which gripped the country in 1917 that no considerable public comment was ever aroused by the public confession of President Wilson, in his dramatic appearance before the Congress less than a month later to ask for a declaration of war, that that policy had led to a ghastly condition vastly more intolerable than war.

It was at the top of the hurricane of abuse and shortly after the defeat of the armed-ship bill that I was in the office of Senator Stone, with whom I had been on terms of confidential intimacy for many years. He made it plain that he was not insensible to the pain which the storm of abuse to which he was being subjected would cause to his family and friends, but that he had done what he thought was right and had no regrets or apologies for the course he had pursued.

And then, walking across the room, he looked out the window and said: "Bennett, we are going to have a war. I am going to vote against it, but I am not foolish enought to think that I can stop it. And it will be the worst thing that ever happened to this country. It is not the lives it will cost—although God knows that it is enough to break a man's heart to think of the flower of our youth being killed and maimed and blinded. Some of you won't come back and some of you who do will wish you had not. And it is not the money it will cost, although your great-grandchildren, if you get back and have any, will not live long enough to see the payment of that debt. The worst of it is that after we win the war—and we will win it because we are too big and powerful a nation not to win the struggle in the exhaustion of all the adversaries—after we win the war, we will never have the same sort of country again that we have always had."

In the years which have passed I have thought of that conversation many times. It comes back to me as the voice of prophecy—prophecy which has been fulfilled.

We had our war. We had our war with all of the fanfare of trumpets, with all the blood and agony and misery and suffering. We had our war which left a debt which our great-grandchildren will not be able to extinguish. The whole world has been passing through the fiery furnace of the aftermath of war—paying the price in innocent suffering for the madness which then engulfed the world. Brutal dictatorships are in the ascendant in nearly every land as a result of that war.

Time has abundantly proved the soundness of Senator Stone's views. We have never had the same sort of country again that we had always had before. Unfortunately, the war did not end with the signing of the armistice in 1918. Our own terrific economic depression is as completely a part of the war as the shells which were fired on the western front. In our whole economic structure and, far more important, in our whole governmental structure the disastrous effects of our participation are still manifest.

In industry, factory production was speeded up during the war; vast additions to plant equipment, not usually necessary or productive, were made; vast debts were incurred; a whole industrial situation was created which had no relationship to the normal necessities of the country. The Government seized the transportation system of the country and then tossed it back into the hands of its owners, a proceeding which contributed greatly to our vital transportation difficulties of today.

Farmers were encouraged by promises of fabulous war prices and the urgings of the war exhorters to increase greatly their production of agricultural products. Land was put into production which should never have felt the plow. Debts were undertaken which should never have been incurred. And then with the inevitable reaction and contraction which follows war, American agriculture was cast to the lowest level in its history.

WAR—THE ENEMY OF DEMOCRACY

More vital and important were the changes in our governmental tendencies. War is the great enemy of democracy and constitutional processes, the great promoter of dictatorship and centralization with their inevitable attendant bureaucracy.

During the World War there was more actual increase of centralization of power in Washington than in all the previous years of our Government combined. Troops were levied, not through the States as in previous wars but by the direct action and authority of the Federal Government. Control of production, distribution

and price of commodities was undertaken from Washington on a basis and scale never dreamt of before. Not only local officials but governors of States as well were called on the telephone from the Nation's Capital and brusquely informed what they could and could not do. For the first time in American history the people were ordered from Washington when to sow and when to reap—a situation which Thomas Jefferson had cannily predicted long before its existence would cause the people to "soon want bread."

The cry of "Stand by the President," dangerous at any time as a modern variation of the old cry of absolutism, "The King can do no wrong," is especially to be feared during wartime when patriotic fervor frequently reaches frenzy. At such times any insistence on adherence to constitutional processes of government will be mistaken for lack of desire to win the war and opposition to grants to the executive of absolute power will be denounced as treason.

Unhappily the uniform experience of mankind has proved that no matter how high minded an executive or series of executives may be, encroachments against the constitutional processes in the shape of extraordinary grants of power for the period of an emergency are never returned in full when the emergency is over. They form a precedent not only for a renewal and extension of the grants in other wars but for the use of the principle in time of peace.

It was the custom of the old Roman Republic in times of emergency to appoint a dictator with arbitrary power for the period of the crisis. But since the dictator has complete power it is for him to determine when the crisis is ended. So one dark day there came a dictator who did not turn back his power and the Roman Republic was no more.

No one questions that war can, at least at the outset of a war, be more efficiently waged by one central authority with absolute authority to make decisions which cannot be debated or overruled than by a government in which there is a constitutional balance of authority and functions and in which individual citizens have rights guaranteed to them under the Bill of Rights which cannot be taken away from them by any authority. The very characteristics which make for authoritative efficiency in a military sense are precisely those which will with the utmost certainty destroy democracy and liberty.

There is in existence the draft of a complete set of laws prepared by the War Plans Division of the War and Navy Departments for the most sweeping grant of powers to the President. They provide the foundation work for powers comparable to those of Hitler, Mussolini, or Stalin. They range from a veiled authority for a press censorship to a veiled authority of a general draft of labor, but with no suggestion of a draft of capital.

They have not been publicized except to the extent that I was able to do so by introducing them myself and then reporting them adversely from the Senate Committee on Munitions, all purely as an attempt at information of the public. It was never the intention of the bureaucrats who prepared them that they should be forwarded to the Congress for consideration and action. It was their hope that the proposed measures should lie moldering in the archives of the two departments until a state of war was declared. Then they would be sent in haste to the Congress to be passed under whip and spur with hysteria ready to shout "Traitor" at any Senator or Representative who dared oppose them or even ask that they be carefully examined. I wish that every American man and woman could be familiarized with the provisions of this modest beginning for a totalitarian government in America when we are once again committed to the shambles.

Whatever slogans may be devised about "making the world safe for democracy" by war, it is well for all of us to pause and ponder on the somber fact that the very process of war is itself the greatest enemy of democracy and that a nation may win in a war against a particular autocrat or combination of autocrats and yet so undermine its own constitutional structure as to emerge from the war as a totalitarian state or in the process of becoming one.

Much as we suffered from our participation in the World War, both in our economic and governmental structure, we were fortunate in comparison with the other belligerents because the lateness of our entry into the struggle and, more particularly, our geographical separation from the scene of greatest rivalry gave us the opportunity of at least attempting to restore our normal governmental and economic processes. The powers of the Constitution, as exercised by the United States Senate, and the overwhelming will of the American people saved us from the obligation of active participation in all the quarrels and jealous rivalries which were the inevitable result of the war and of the Treaty of Versailles.

A TRAGIC REPETITION

We are again faced with the responsibility for making a choice as to our own policy. Through the favor of the Almighty, we still have the opportunity.

The world is again in a turmoil. Forces of aggression are again in the ascendant. Old European boundaries, which have been fought over for centuries are again being disputed. Japan is seizing Chinese territory with the same ruthlessness that Great Britain did in the middle part of the last century but on a somewhat larger scale. Nothing in the years preceding the advent of the World War approached in importance or barbarity the so-called civil war in Spain—a savage internecine guerrilla warfare made more awful by the more or less clandestine supplies of troops and the modern implements of war by the great powers. The undertaking of none of the great powers which have repeatedly negotiated in the premises has been worth the paper upon which it was written.

In this situation every American must be startled and heartsick at the tragic similarity to the fabric of events which led up to our participation in the last war. Already the propaganda is in the making to involve us in the next. We may be very certain that every energy and every resource of a tremendous and far-flung influence will be thrown into the struggle to involve us. If we should engage in another major war at the present time, it seems certain that the United States would emerge to all intents and purposes a totalitarian government.

THE ISSUE WE FACE

It is time that the great body of our people give some thought to the hard, practical questions of whether we desire to keep out of war, and if we do desire to keep out just how we shall avoid it, if war comes again. No one who has made an honest attempt to face the issue will assert that there is any easy answer. No one who has studied the history of our participation in the World War will say that there is a simple way out. There is none—no simple panacea, no magic formula.

But we found, after the World War developed, that it was too late then to formulate and put into effect an effective neutrality policy. Any variation from the policy in force at the outbreak of the war is in itself an act of war. Therefore our policy must be worked out in advance, before it is too late to appeal to reason.

We are already far advanced in the situation. We have the threat of war, far more imminent than it was in 1914. We have the competitive armament race, which did so much to bring about the World War, already far advanced. We have the shout for great "preparedness" at a far earlier stage of the situation than it occurred in connection with the last war. We have it complicated by the desire of some high in authority to use a vast armament program as a cloak for further pump-priming with regard to the so-called "heavy industries," without the necessity of openly declaring it to be so.

DANGEROUS THEORIES

We have the certainty that every declaration from such people as our late Ambassador to the Court of St. James that if England should ever again have a war, the United States would be with them "man for man, ship for ship, gun for gun," if unrepudiated, backed up by enormous increase in armament on our part, can only be calculated to lead us into war if one should develop elsewhere.

There is a section of American public opinion, and an astonishingly influential section—considering its small numerical strength when once the issue is baldly stated—who consider that it is the manifest duty of the United States to be the assistant and the burden bearer of Anglo-French international policy. As John Quincy Adams so pungently put it, they conceive that we should "come in as a cockboat in the wake of the British man-of-war."

I have myself heard the theory expounded by one of our leading diplomats that our international policy should contemplate a situation where we should protect the interests of Great Britain and France in the Orient, leaving them to deal with Germany in Europe. In other words, we should be prepared to fight a war with Japan, 7,000 miles from home, in order to allow Great Britain and France entire freedom of action for attending conferences for the partition of other peoples' territory, without the formality of the attendance of the representative of the nation to be partitioned.

WARLIKE PREACHMENTS

I have heard one of the highest ranking officers in the United States Army harangue the guests in his official residence to the effect that it was our duty to retain the Philippines—violating our national pledge—in order to maintain a part in a general defense scheme of French Indochina, British Hong Kong and Singapore, Dutch West Indies, and Australia against "a northern power," which I naturally assumed to be Japan. I have heard leading members of the "Cliveden set" in England—possibly the leading couple—preach to a group of United States Senators the theory that England should make the best terms possible with Nazi Germany to work out world affairs, but with the additional pregnant demand that our Nation must go along with Great Britain "ship for ship, gun for gun, and man for man."

There are Americans who conceive it to be the duty of the United States to act as a sort of policeman for the world and to squander billions upon billions of dollars upon huge naval and military establishments—not for the defense of the United States but to be ready at the drop of a hat to conduct a war half around the world and to send American boys to fight 7,000 miles from home to protect a handful of American investments in the Orient.

Currently the general international situation is being taken advantage of by propagandists from every angle to build up sentiment in favor of huge increases in armament and in our Military and Naval Establishments. Exactly as was the procedure in the years immediately preceding our entry into the World War, we are assured that the vast armaments urged upon us would not and could not be used for purposes of aggression or for participation in foreign quarrels but only for the defense of our own shores. All history proves the tragic fallacy of such a proposition.

EXTRAVAGANT DEMANDS

Every patriotic American is not only willing but determined to vote and to pay for every bit of preparation for national defense reasonably necessary, and even to go considerably beyond that as a matter of precaution. Yet this desire on the part of our people

is no justification for the extravagant demands being made upon the Treasury under the guise of national defense. It is proposed to extend vast Government aid to the "heavy industries," but it is not put upon its economic basis but is represented as being vitally necessary to rescue the country from imminent danger of foreign invasion. Likewise it is suggested that the Government quit fighting the utilities and extend them aid and sustenance as an aid to national defense. Propositions for river and harbor development, flood control, irrigation, mining development, highway construction, railroad subsidies, and a multitude of others are suddenly urged in the interest of national defense. Many of these measures may in themselves be desirable or necessary to our national welfare, but they are now being urged, not upon any basis of economic or social justification, but as the prelude to pre-war hysteria. In short, we are threatened with pre-war armament inflation which is fraught with peril from every standpoint but particularly from the danger that it may itself lead us into war as it did in 1917.

Economically there is no difference between the pre-war armament inflation and the inflation which comes through war itself. Both are like dope. Like dope, they have exhilaration, spurious buoyancy, contentment, and vast dreams of glories to come. Like dope they offer to the economic system temporary stimulation, brief periods of false and feverish activity, soaring prices, spurious flights of industry. Like dope, war has its awful "morning after."

We awake to find the horrible reaction of our horrible "sleigh ride"—our financial nervous system painfully disarranged, our currencies trodden under heel, our soaring prices crashed, and our fictitious markets collapsed. Nations are left clogged with unemployment and dislocated labor, clogged with overproduction from the fake stimulation of war, from the maldistribution of gold, and from the frantic and hopeless post-war efforts to keep oversized plants running to capacity to pay interest upon unproductive war expansions.

A DEADLY COURSE

Politically this armament inflation is dangerous, because experience proves that it is almost certain to be a provocation for war itself. Governments which have based their economic policies upon the spurious prosperity of armament manufacture and upon vast expenditures upon armies and navies have sooner or later been forced into war, if for no other reason than to justify this waste of money to their own people. And in doing this they have taken new steps in totalitarianism.

Already the demand is heard in many quarters for the repeal of the Neutrality Act now upon our statute books. Already the agitation has started to again allow our people to embark on a course of selling munitions, extending credits, and making loans to belligerents—a course almost certain eventually to lead to war. It is speciously argued in some quarters that we should embark upon the policy of choosing the aggressor nations and withholding munitions, loans, and credits from them while affording them to their adversaries. This would be in itself an act of war, a short cut to the heart of the conflict.

The American people should decide now what their foreign policy is to be. If we are to embark upon a policy of trying to act as policeman for the world and be prepared to fight in Asiatic and European waters at the same time, then our armament, both naval and military, should necessarily be vastly greater than has ever been openly proposed. If it is our intention to defend the United States—even including South America—then our preparations should be confined to such as are suitable for that purpose.

The desire on the part of the American people to keep the United States from involvement in any war between foreign nations is very strong today—almost universal. But there was an almost equally strong demand to keep out of the last war. In August 1914 no one could have conceived that we would be dragged into a European conflict in which we had no part. Have we learned anything from our bitter experience in that struggle?

THE PRICE OF PEACE

For us to keep out of the next war, if one develops, it means that we must adhere to the policy of attending strictly to our own business—of refusing to play the game of any other nation in its selfish pursuit of power.

It means that our people must decide whether they are willing to pay the price—or to make the investment—to keep us out of the war. To accomplish this we must cheerfully sacrifice the chance for great and speedy profits, the possible temporary expansion of our exports and resulting employment at good wages for persons who might otherwise engage in making war exports. We must deprive American ships of cargoes at excellent freight rates. We must deprive American bankers and investors of profitable commissions and investments. We must not permit American insurance companies to underwrite war risks, no matter how attractive the rates.

I am sure that the loss of these transitory profits will be far, far cheaper in the long run—that everyone concerned in America will be much better off, even as a mere matter of dollars and cents, to say nothing about human suffering, loss of life, and the other horrible consequences of our being dragged into another war. Even more important, we should all be prepared to make great sacrifices to avoid the dangers of authoritarian government which are the almost inevitable accompaniment of participation in war.

OUR BEST HOPE

The present Neutrality Act is admittedly imperfect. It should be amended and strengthened and made more mandatory at the next session of Congress. But, imperfect as it is, it does take the American flag off munition ships; it does prevent the extension of loans and credits to belligerents; it does restrict travel of our citizens upon belligerent vessels in time of war; it does prevent the sale of munitions to belligerents. The loopholes of that act must be filled and the framework maintained.

It affords our best hope of avoiding war, and to the realization of that hope our every energy should be directed.

Again I hear the voice of Senator Stone with his dread prophecy which proved so true. And again I think that it is of supreme importance to the Nation and to our children's children that there be no occasion for it to come true in more dreadful degree: "After we win the war, we will never have the same sort of country again that we have always had."

Control of Floods in the Mississippi River Valley

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 5, 1939

RESOLUTIONS BY THE MISSISSIPPI VALLEY FLOOD CONTROL ASSOCIATION AT NEW ORLEANS, LA., DECEMBER 16, 1938

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix certain resolutions unanimously adopted by the Mississippi Valley Flood Control Association, at New Orleans, La., December 16, 1938.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

The Mississippi Valley Flood Control Association, representing 33 levee and drainage districts in the States of Missouri, Kentucky, Tennessee, Arkansas, Mississippi, and Louisiana, adopted the following resolutions while assembled in annual convention in New Orleans, La., December 16, 1938:

Whereas the Congress of the United States, by the act of May 15, 1928, recognized and declared the control of floods in the alluvial valley of the Mississippi River to be a national responsibility and authorized a comprehensive engineering plan of flood control of the lower Mississippi River, which act was subsequently amended by the acts of June 15, 1936, and June 28, 1938; and

Whereas the plan and project as modified and authorized and the existing law relating to the same are now satisfactory to the people of the lower Mississippi Valley, and there should be no further delay in the prompt prosecution and completion of the entire project: Now, therefore, be it

Resolved by the Mississippi Valley Flood Control Association, That both the existing law and the project authorized thereby are approved without qualification; and be it further

Resolved, That the Congress of the United States be urged to appropriate annually $50,000,000 of regular and unrestricted funds in order that the adopted project for the control of floods in the lower Mississippi Valley may be progressively executed without further delay; and be it further

Resolved, That the Congress of the United States be urged to appropriate annually sufficient sums of regular and unrestricted funds to construct authorized flood-control projects on the principal tributaries of the Mississippi River.

Resolved by the Mississippi Valley Flood Control Association, That in any plan of Government reorganization considered by the Congress of the United States we favor unrestricted retention of the Mississippi River Commission as the administrative agency for Mississippi River flood control, under the supervision of the Chief of Engineers.

As the pioneers in flood control in the United States we have learned through long experience that the water resources of the Nation are being carefully safeguarded by the several existing departments of the Government and that their cooperation one with the other is all that could be desired. Therefore we believe:

All Federal planning, execution, operation, and maintenance of public improvements of the navigable waterways of the United States and their tributaries for the purpose of navigation and the control of floods, including the most efficient development in combination therewith of potential waterpower and the needs of irrigation, and, in such waterways or portions of waterways where the need is urgent, the prevention of injuries to the waterways by reason of commercial waste and pollution, should be under the jurisdiction of the War Department.

All Federal planning, execution, operation, and maintenance of public improvements relating to the prevention of soil erosion and to reforestation (including such estimates of run-off and waterflow retardation in the various watersheds concerned as are considered to have useful or practical values) should be under the jurisdiction of the Department of Agriculture. Be it

Resolved by the members of the Mississippi Valley Flood Control Association, in annual session assembled in New Orleans, La., on December 16, 1938, That the death of Senator Royal S. Copeland at the close of the last session of our National Congress has caused the Nation to suffer the loss of one of its ablest and most industrious statesmen, and the cause of flood control in the lower Mississippi Valley one of its most constant and helpful friends; be it further.

Resolved, That a copy of this resolution be sent to Mrs. Royal S. Copeland and that proper request be made for publication hereof in the CONGRESSIONAL RECORD.

Unspeakable Horrors of a Nazi Concentration Camp

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1939

Mr. CELLER. Mr. Speaker, near the lovely city of Weimar is Buchenwald, the newest Nazi concentration camp, fenced in by barbed wire and policed by SS guards and encircled by machine guns. Strangely enough, this acme of horribleness and torture is but a few kilometers from Weimar, where German bards and musicians wrote immortal verse and composed immortal music.

Thousands of important people are there—artists, writers, businessmen, inventors, authors. Their offense is that they are of the race of Abraham, Isaac, and Jacob. Many of them are old and feeble; hundreds were taken from homes of the aged. All were ripped out of their homes and forcibly taken to this camp—this living hell.

I know of no greater indictment against Nazi-ism than the mere recital of what happens at this camp at Buchenwald. And what occurs here is no different from what goes on at Sachsenhausen and Dachau.

I herewith set forth extracts from a statement written in German which appeared in one of the Swiss newspapers. This statement was translated for me by the Legislative Reference Service of the Library of Congress.

I herewith quote from this article, in part:

Train after train with human freight rolls in these days to Buchenwald. Buchenwald, the latest and most perfect attainment of national socialistic ingenuity. Buchenwald, which in public love has outrun both Dachau and Oranienburg, and which stupefies merely by the mention of the name; Buchenwald is now the special quarter for the care of Jews, namely, of people from Berlin who were chosen, who were not committed or not let out of its clutches, even after plundering and burning.

There is in Germany nothing at the present time which creates such a revulsion as this name. Only a few kilometers distant from the place, from which at one time the greatest poets wrote immortal words, it rises up in the middle of a wonderful beech forest, fenced in by barbed wire, watched over by SS guards with machine guns. This location of horribleness, the concentration camp near Weimar, is Buchenwald.

On the morning of the 13th of June 1938, about 5 o'clock, I was arrested by the police in my home, brought over to the police station, and it was revealed to me that I was taken in as a Jew most worthy of punishment, and would be taught how to humble myself, and taken to a concentration camp. I met a good many of my friends in the overfilled local jail, to which I was brought. Among these there were well-known people, businessmen, and learned people. Their punishment was based upon offenses which sometimes were committed decades ago. Some of them, for example, were now being punished because of having been in a street fight, others because of traffic regulation violations, or because of an offense against some local ordinance and similar unimportant matters.

The prison filled up more and more, and soon the police officials didn't know where they should put all their charges. On these days, the 13th and 14th of June 1938, all the male Jews who had any sort of a police record were arrested in Berlin and in Germany at the same time. There were among them men who were more than 70 years old, and who were taken from homes for the aged.

In Berlin the number of arrests was about 4,000, while in the whole of Germany they amounted to between 10,000 and 15,000. They were brought over to the concentration camps at Sachsenhausen, Dachau, and Buchenwald. They were told right away by the criminal police that they would be released from the concentration camp only when there was a possibility that they might get some sort of papers permitting them to emigrate from the country. It was therefore purely a political act, to hurry along the emigration of the Jews which was taking place up to this time much too slowly. In spite of this, the action was in the hands of the criminal police and not under the direction of the secret police, which would have seemed to be the body to handle cases like that. It also is written in the local Jewish papers that a number of Jewish criminals had been called up.

During the night of June 14–15, 1938, I was brought from the police station with about 2,000 others to the concentration camp at Buchenwald. Before that time we were examined by a doctor in regard to our health and being able to bear the life of the concentration camp. He declared all of those arrested to be able to stand the treatment, although there were tubercular people among us who had bloody sputum, as well as 70-year-old people.

The Anhalt railroad station which took us away was barred to the general public when we came there at 2 o'clock at night. On June 15, about 6 o'clock in the morning, bands of the SS death-head squadron met us at the railroad station in Weimar. We were hardly out of the train when the first blows fell upon us. With kicks, poking of the feet, and blows of the fists, we were driven from the railroad platform into a gangway. At this place we were greeted by the head of this camp, named Rödl, with the following speech: "Among you are people who were already in prison; that, however, was nothing to what you will have to endure here. You are in a concentration camp—that is, you are in hell. If you make the slightest resistance to any command from an SS man, you will be shot on the spot. We only know two punishments here—death and beating."

Our arrival in the concentration camp of Buchenwald was the occasion for a running of the gantlet of the worst kind. The SS again kicked us and hit at us. In front of this camp the entrance had the motto upon it, next to the machine gun, "Justice or Injustice, My Fatherland."

Immediately after this usual welcome into all concentration camps our heads were all shaved down, just as if we were criminals. Then we had to give up our regular clothes and receive prison clothes. The prisoners had a special mark on their clothing. Political prisoners carried red stripes; theologians, rose-colored; and lazy people, black ones.

We had a Star of David sewed upon a black and yellow background, which meant lazy Jew. This is to show that the greater part of us were independent business people, as well as workers, who been taken away from their occupations, a dentist, and a number of lawyers. Numbers were sewed upon the coats of each of us and we were called up only according to our number. Then we were put in quarters.

The other gentile prisoners, 6,000 altogether, were put up in wood barracks, always 140 men to a barrack while 500 of us were literally driven together into a sheep stall. We had no space whatever, no table, no chair, and no bed. We had to lie upon the floor at night; we couldn't stretch out because it was much too small. We received two covers, which were thin and full of holes. The other 1,500 Jews were also taken care of in the same manner. There was no opportunity to wash. We couldn't wash at all for the first 8 days, then got eight wash basins for 500 men. We had to fetch the water from a pump, which was 10 minutes away. The worst of all were the attendants who were to take care of things in this sheep stall. These were six people who had been chosen out of the criminals who were also in prison in Buchenwald. These, especially the leader of them, who was a very raw person, mistreated the prisoners in the most shameful manner, after he had received permission for punishment from the SS.

Nobody dared protect himself against these monsters, because that would be looked on as mutiny, which would call for the death punishment. I remember especially one horrible occasion. An elderly man was so mistreated one day by the SS that he groaned in the evening in the sheep stalls. He was, therefore, hit in the face with the fists so that he would stop groaning. The next morning the man was dead.

The first 2 days that we were there we didn't receive anything at all to eat. However, we had to exercise strongly. We were not given our work until 8 days afterward, because the formalities of entry had to be taken care of first. In one part of the camp we had to sign a declaration that we had been taken into the camp as work-dodging Jews. It was noted on the paper that we were filling out this declaration of our own free will. A Breslau lawyer delayed in signing this, and this unlucky man had to go through all the camp punishments which existed. He kept on delaying, and after 4 days he had to sign anyway—a dying man on whose body there wasn't a single unwounded spot.

The inmates of this camp were put through excruciating punishment for the slightest offense, such as drinking water during work time. The food of these unfortunates was taken away by the Nazi officials at noon; and on Sundays the prisoners were forced to stand up at attention, during the so-called short free time, for 4 hours, under SS direction. If they were unable to bear this torture, they were punished by severe beatings. These whippings took place, for example, if one of the prisoners was discovered smoking during working hours. In the afternoon, at the time of the roll call, the number of the one who was to be punished was called out, and he was then tied over a sawhorse. Two very tall SS Nazi guards alternated in beating him with a

whip upon his seat. Twenty-five strokes were given the prisoner. A third SS man held the person's mouth shut at this time so as to stop him from crying out. Even old people who could not work fast were punished in this inhuman fashion, because of "laziness while at work."

After a complete beating, the punished one had to lower his pants and the SS man looked at the bloody stripes to see if he had been beaten enough. These 25 strokes were the most popular punishment. But in addition thereto, there was the "bunker," the solitary cell, from which many a person was taken out dead. Every day there was heard the horrible cries of the mistreated prisoners crying out from the shuttered windows.

Still another form of torture in the camp is the so-called tree-tying "experiment." For slight offenses, the person was bound to the tree so that the arms were around the tree and tied down so that he could still move, then he had to twist himself continually around the tree. If he did not do that quickly enough, the SS guard helped by kicking him in the shins.

But that was only a lighter sort of tree-tying. Another sort ofttimes resulted in death. The sacrifice was tied to the tree and his arms bound upward and backward; then his thigh bone and his legs with which he still touched the ground were shoved together so tightly that it stopped the blood. This position the unhappy person had to keep for hours. These martyrs to bestial barbarism were not rare cases in Buchenwald.

I now continue with verbatim extracts from the article which appeared in the Swiss Journal:

Eight days after our arrival we were given our work. The work day in the concentration camp at Buchenwald was about as follows: Waked up 3:30 in the morning; 4:30 to 5:30 roll call. Then to work. Beginning at work shortly after 6 o'clock without a pause up until 12 o'clock. At 12:00 a half-hour pause, at which time there was oak coffee to be drunk. Then work again until 3:45. Four o'clock roll call, which lasted until 5:30. At this time, too, there were the public whippings. From 5:30 to 6:00, midday meal, and then until 8:00 work again. At 8:00 p. m., evening meal. At 9 o'clock locked up. On Sunday they work from 6:00 in the morning until 4:00 in the afternoon. There was no day of rest, not even Christmas (as some old camp inmates told me). We weren't ever on our feet less than 17½ hours a day. Healthy people, sick people, as long as they could still keep on their legs, young and old. They paid no attention to the weather. We had to work just as hard in our thin substitute clothes during storms and cloudbursts as when it was glowing hot.

Now, about my first working day. I shall never forget it in my life, no matter how old I become. Many people of different ages died on this glowing hot June day breaking stones.

We were divided up in groups of 100 people each at the roll call. Each group had a straw boss who generally was one of those criminals. He had the right to beat us as much as he wished. We had an 18-year-old SS guard to accompany us. None of these SS guards who accompanied us to work looked after us, mistreated us, and beat us, was more than 18 years old. When we marched to our work there were among us men 65 years old. The SS man with a whip in his hand drove us, or literally beat us, to our new working position in the business of breaking up stones. Here we were given such stone blocks of such a weight that qualified workers had had a hard time breaking them up, and 80 percent of us had never done any physical labor before. Many of the stones were so heavy that it took many people to lift them and then we had to pass them along from shoulder to shoulder. Then we had to bring the stones to a highway about 1,500 meters away, which was being built by prisoners at the same time. The road went up a steep hill and we were forced to dogtrot up, being kicked and hit by SS guards on the way. The old people who couldn't do that any more suffered the most, then they had to run back again to the place where they broke up stones, and then the hunt began again. Of course, the sun went higher and higher and the day became very hot. The way to the stone pit was continually filled with dust because of the passing of all sorts of SS autos (the road was closed to ordinary civilians). Right near the quarry there was a spring which poured out fresh, clear drinking water. The watching SS guard kicked away everyone who tried to get near the water. In the afternoon 30 men were lying down in our group of 100, partly with sun stroke, all of whom could not be moved either with beatings or with kicks. We had to bring them to the hospital. In the evening there were two dead out of our group alone.

Besides our work in the quarry we had to carry trees, too. And not more than eight men were allowed to take care of a tree no matter how many tons it weighed. There were SS men along the whole kilometer-long route, so that we couldn't have a moment of peace. Even today I think of the horrible "will you run, will you run" in my ears, accompanied by kicks and blows upon our shoulders and heads. Every once in a while an especially clever SS man made us bow under the tree, which was, of course, dangerous to our lives since if only a couple let the heavy tree fall then there would be the danger that the others would be smashed.

It was reported that the prisoners in Buchenwald had the right to receive money from home, but that the sending of food was forbidden because "it was possible to buy anything in the camp." Of course, this statement was but a cruel, inhuman jest. In the first place, the sending of money was only possible under the greatest sacrifices. The breadwinner in many cases was confined in this concentration camp, and consequently his family was without the support he had heretofore rendered. These unfortunate members of his family were not only without means to send money to him but also unable to support themselves. In not a few instances the German charitable institutions declined to support the stricken families. Even in those cases where the imprisoned one did receive money from his family, he was not able to use it to nourish himself. In the first place, the SS guards took away part of the money to pay for the railroad ticket which brought the victim to the camp. Also, only 5 marks a week at the most was given out to any one prisoner. With this sum he was permitted to buy articles in the canteen at ridiculously high prices, but the canteen never had enough food at its disposal. There was never any bread in the canteen and frequently all that one could purchase was seidlitz powder—a laxative.

The death rate for both Gentiles and Jews at this camp is dreadfully high. Both—Jews and Gentiles—were daily sacrificed to these cruel dispensers of death and hate. Of an approximate total of 2,000 Jewish prisoners, 80 were dead within the first 4 weeks, and in another week 30 more escaped further punishment through death. Thus within a period of 5 weeks there was a total of 110 deaths amongst the Jewish prisoners in Buchenwald, but the official reports stated that only 39 died during this period of time.

We will continue once again with the first-hand graphic report of the goings on at Buchenwald:

How did it happen that these prisoners lost their lives?

First of all, there was the famous "shot while attempting to flee." The camp is surrounded by wire which is charged at night. Outside of that, right near the fence there are also watch towers with SS armed guards with machine guns. It is forbidden for the prisoners to go over to the prison fence, as the guard then has the right to shoot. This was not made known to the new prisoners, however. The SS guards who were rather bored there upon their towers liked to play the following joke: They commanded a new prisoner to go over to the fence; when he came over and reached the fence the guard looked up and shot. These cases happened quite often. Oftentimes the prisoner would become half-crazy and would run over to the fence, not knowing where he was going in his despair. The guard then shot immediately, although he knew very well that it was a matter of a crazed person and not a matter of a fugitive.

In most cases death took place in the stone quarry. Here also there was a chain of guards, and one couldn't come near them on peril of losing his life. Oftentimes an older or a weaker man was burdened with a stone which he couldn't carry, even by using all his energy. The SS man drove him to lift up the pile of stone. Of course, the man fell behind the rest of the prisoners, and then after a while these could hear a shot. The guard had driven his sacrifice through the chain of guards who were only a few steps away, and these had shot the man in flight. This type of killing took place also almost every day. There was an especially tragic case of death, among many others, which I shall refer to here. Among us there was a very fine young fellow, Erich Löwenberg, hardly 22 years old. He was the cantor in a synagogue. He had married very young, and his wife was expecting a child two months later. This Erich Löwenberg—it was around the 15th of July—was driven, by an SS man at the quarry, under a truck which was steered by another SS man. An hour and a half later the young man was a corpse. One example of a good many. Others by this torture got a heart attack, and then the doctor attested that he died because he had a weak heart. The coffins were built by the prisoners themselves in the carpenter shop. The corpses were brought into the Weimar crematory and rendered to ashes. The relatives received the death notice on an open postcard, postage due.

Many prisoners died in Buchenwald because there was no way of taking care of the sick. Firstly, the hospital attendants were strictly forbidden to give medicine to Jews. Furthermore, the Jewish sick people were refused admittance into the hospital barracks. One case is reported in which

the doctor sent a sick Jew out in the cold for "feigning" illness, and he was dead 2 hours later. No water was at the disposal of the sick prisoners, let alone medicine. The sick Jewish prisoners who were kept in the sheep-stall were not permitted to fetch help. If they did dare walk out, the SS watchmen shot them at sight with machine guns. After 4 weeks, a special hospital barracks was erected for the Jewish prisoners, who were forced to pay for it out of their own money. However, even the most primitive aids were not supplied. In this so-called hospital, there were no fever thermometers, and no toilets.

There were some human beings in this hell. There were SS people who did not beat the prisoners. However, they were very much in the minority and they explained that they could not do anything about the horrible goings-on, because they had their orders from "above." This "above" was the fiend Koch, who had already become notorious because of his rages in the Kolombia Haus in Berlin, and then in the camps at Esterwege, and Sachsenhausen near Berlin. He directed Buchenwald, too.

Some of the few supervisors who tried, at peril to their own lives, to help the prisoners, were denounced as friends of Jews, and publicly whipped.

At Buchenwald there are, all told, 8,000 prisoners—2,000 Jews and 6,000 Christians. It is reported that the camp is to be built up and to become the greatest concentration camp of Germany, capable of holding 25,000 inmates.

Among the prisoners at Buchenwald are politicians, such as, for example, the communistic Reichstag representatives, Neubauer, Saefkow, Geschke, and Woitinski, who had been taken around for 5 years from one camp to the other. The well-known Hans Litten is also in this prison, his leg broken twice in the quarry. There, too, in that hellhole can be found those unfortunates who had dared curse the holy person of the Füehrer. They had to atone for this grave sin by remaining in protective-custody for an indefinite period of time; such protective custody could last 3 months, but more frequently will last 3 years, for the holy guardians of Germany respect neither the laws of God nor man.

I now continue with the first-hand statement of the Swiss correspondent who was fortunate enough to escape from this Gehenna:

Besides the political prisoners there were the so-called lazy people. I'll give you an example. A merchant's clerk was without work. He got charity support. One day the Government employment agency explained to him that he could find work on the German highways as a shoveler. This man, who was looking for some sort of position as a merchant, declined. The employment office reported him to the secret police as lazy, and so he came into the concentration camp. The same thing is true of experts who had given up their positions because of their low pay and were looking for better-paying positions.

Besides these there are the "Bibelforscher," the religious researchers—a religious sect quite common in Germany but forbidden by the secret police because they refused to serve in the Army. These people were treated almost as badly as the Jews.

The fourth group were the homosexuals, or those who had been reported by the secret police as homosexuals, for this accusation is the best means of getting rid of people and destroying those who are not wanted.

The last group were real criminals. These people were the leaders in the concentration camp and could beat us as much as they wished. As a matter of fact, they made themselves popular with the SS when they mistreated us.

That is the way things went on day after day at Buchenwald; we always had the same picture—dead and dying comrades brought past us. Even if orders actually came that a prisoner was to be released, he was not released at once. He was examined first of all by the doctors to see whether he had any black and blue spots. If there was a trace on his body of being mistreated, he was not released. He then was treated by the doctor, and could leave only when all his wounds were healed. Thus the fiends endeavored to avoid these horrible things from coming out into the open.

At the time of my release I was among the few who were allowed to leave the camp without any visa for an overseas foreign country. We were threatened by a high SS leader that we would be punished with death if we made even the slightest remark about the camp. The SS leader said that national socialism does not have to avoid the truth. It wants merely to stop atrocity stories from coming out into the world.

After my release I received a command that I must leave Germany forever within 5 weeks. I had to report every day at a Berlin police station. The first time that I reported there, something happened which is really characteristic of the present-day circumstances in Germany. I was surrounded by a group of officials who wanted to know from me how conditions were in Buchenwald. I refused to give any information, saying that I was under a threat of death if I related anything. Then the officials showed me their cards and said that I should just go ahead, as nothing would happen to me. I told them then some of the happenings related above. The officials were so disturbed that they interrupted me continually. They said that that was a horrible circumstance and a shame for Germany, that Frick and Himmler were responsible for everything, and that the police had to carry out their orders. The SS had full power over the concentration camp.

What I related here about the concentration camp, Buchenwald, I've gone through myself. Of course, since I was only in the camp for 6 weeks, this information is not complete. I know from a trustworthy source that most of the things that happened in June with me are still taking place. The number of sacrifices has climbed further.

Jackson Day Address of the President of the United States

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1939

ADDRESS OF PRESIDENT FRANKLIN D. ROOSEVELT AT THE JACKSON DAY DINNER, WASHINGTON, D. C., JANUARY 7, 1939

Mr. SABATH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by President Roosevelt at the Jackson Day dinner on January 7, 1939:

Last night I was thinking about this gathering, about our Democratic Party, and what we ought to do to help it. I decided to go right to headquarters. So I put in a radio call for Gen. Andrew Jackson.

"Young fellow," he said to me, "I don't know what's bothering you."

"General," said I, "you see, it's about the Democratic Party. I'm very fond of it myself, but the Republicans are saying it's rotting away like a pollywog's tail, and some of our fellows are worried. Is there anything we ought to do?"

"Son," replied the General, "my eyes are getting old, and I'm some distance away, but from what I can see from here the only trouble with your fellows is that they've been feeding too well and they scare easily.

"Young fellow, do you realize that if you live out the term you now have you'll be the only President of any party who's had two full terms with a majority of his own party in both the House and the Senate all the time since—why, son, since James Monroe—and he left the White House nearly 114 years ago!

"Woodrow Wilson didn't have majorities as safe as you have now when he first came into office.

"And as for me, son, my Democrats licked old Nick Biddle when we didn't have a majority in the Senate and had few votes to spare in the House. Tell your fellows to learn to count. You Democrats today get scared and let the other fellows tell you you've lost an election just because you don't have majorities so big that you can go to sleep without sentries."

I am passing on the advice of Old Hickory.

But despite the general's optimism, I think this is a good time for the Democratic Party to "examine its conscience," to think over most seriously what we have done that we should not have done, what we have left undone that we should have done.

Let us start by being realistic.

From 1920 on the Republican Party fed too well and got fat and lazy. It gave the American people a "do nothing" government, for which they suffered through the terrible days. That was one reason why in 1932 they turned to the Democratic Party. The other reason was that the Democratic Party, during that summer and autumn, had a program of action and sounded sincere.

In the election of 1936 the Republican Party looked like a straddle-bug. The Democratic Party, however, was carrying out its pledges of 1932 and was still fighting. Hence the overwhelming victory of 1936.

Millions who had never been Democrats gave us the power in 1932, and again in 1936, to get certain things done. And our party can continue in power only so long as it can, as a party, get done those things which non-Democrats, as well as Democrats, put it in power to do.

In 1834, when Jackson was President, a shrewd observer wrote a letter which we ought to read and take to heart today. He said in it:

"There are two parties here—one which would do anything to put down Jackson and the other anything to sustain him. But there is a third party—and a very large one—which cares not a straw about who is President but who anxiously desire to see some measure of relief for the country, let it operate against or in favor of whom it may."

Today, as in Jackson's day, a majority of the people want only a President who honestly cares for them and a party anxiously and unitedly seeking a way to serve them without regard to personal or political fortunes.

Less than half of the voters of America are Democrats. Less than half are Republicans. But more than half of the voters are for the Democratic Party whenever the Democratic Party is for the majority of the people.

I welcome the return of the Republican Party to a position where it can no longer excuse itself for not having a program on the ground that it has too few votes.

During recent years Republican impotence has caused powerful interests opposed to genuine democracy to push their way into the Democratic Party hoping to paralyze it by dividing its councils.

The first effect of the gains made by the Republican Party in the recent elections should be to restore to it the open allegiance of those who entered our primaries and party councils with deliberate intent to destroy our party's unity and effectiveness.

The second effect of these gains should be to bring us real Democrats together and to line up with us those from other parties, those who belong to no party at all, who also preach the liberal gospel, so that, firmly allied, we may continue a common constructive service to the people of the country.

For if these independent voters have the conviction that the Democratic Party will remain a liberal party they will be the first to perceive what I here and now phophesy—that the Republican leadership, conservative at heart, will still seek to run with the hare and hunt with the hounds, talking for balanced budgets out of one side of its mouth and for opportunist raids on the Treasury out of the other.

Opportunists they have been—opportunists they still are; see how they have tried to shuffle New Deal cards.

The Republican first New Deal joyfully went along with our New Deal—while we were getting them off the spot and keeping them out of bankruptcy—or worse.

The Republican second New Deal said, "Support New Deal objectives, but oppose legislation to put them into effect."

The Republican third New Deal—1938 model—issued this order: "Get for the voters of your district all the New Deal benefits, promise them bigger and better benefits—any old kind that any old group asks for—but never mention how those benefits will be paid for."

Those tactics are wrong even for a party out of power, and if continued for another 2 years, they can hardly give our voters any real confidence in the Republican Party.

We Democrats, however, have to act as a party in power; and we cannot hold the confidence of the people if we cannot avoid wrangling except by agreeing to sit still and do nothing.

If there are nominal Democrats who as a matter of principle are convinced that our party should be a conservative party—a Democratic tweedledum to a Republican tweedledee—it is on the whole better that the issue be drawn within the party, that the fight be fought out, and that if the tweedledums are defeated they join the tweedledees. But the prospect of such a fight are far more remote than members of the opposition would have you believe. The people of the country are not deceived when honest debate and an honest effort to work things out for the good of the country are labeled dissension and bad blood by those outside of the party whose wish is father to the thought. They hate to admit it, but the fact remains that such debate over the past 6 years has borne six crops of good fruit.

If we deliver in full on our contract to the American people we need never fear the Republican Party so long as it commands the support of—in fact is down underneath actually directed by—the same people who have owned it for several generations. For the American Liberty League—unless I am incorrectly informed—still functions as a vehicle for political contributions and the spreading of shop-worn propaganda.

Jackson and the party as he led it, delivered on the barrel head.

Up to the very last he delivered for the common people he believed in, and for the national unity which he did so much to create.

On his very last day in the White House he vetoed a bill supported by many of his own party—a bill which surrendered to the States and to a thousand warring, petty local interests, the Federal Government's responsibility for husbanding the surplus funds in the Federal Treasury for the benefit of the whole Nation.

Alongside this statement in my manuscript I note the letters "N. B."—which in dead Latin stand for "nota bene," or in live English, "take good notice."

Jackson's successor, reputedly a smart politician, could not keep the Democratic Party in power because he and they drifted from principles to politics. He and they were turned out at the next national election in 1840 because they failed to keep the pork barrel locked up in the cellar and because they failed to deliver what they had promised to anyone except themselves.

And again my manuscript bids me say "N. B.—take good notice."

Let this be another thought for 1940. In 1840 the new Whig President, William Henry Harrison, elected on a red-fire, hard-cider, sky-is-the-limit campaign, backed by the descendants of Hamiltonian aristocrats and by disgruntled Democrats, made his first tender of the Secretaryship of the Treasury in his Cabinet—to whom do you suppose? To old Nicholas Biddle himself, the money changer whom Andrew Jackson had so soundly trounced and driven from the temple.

From Andrew Jackson to Nicholas Biddle—4 short years. And again I say, "N. B.—take good notice."

A full generation—20 years—passed by before the principle of Andrew Jackson's true democracy came back to life with the next real Democrat, Abraham Lincoln. He, incidentally, was chosen President only by the founding of a new party.

Let me ask two obvious questions. Does anyone maintain that the Democratic Party from 1840 to 1876 was by any wild stretch of the imagination the party of Jefferson or Jackson? To claim that is absurd.

Does anyone maintain that the Republican Party from 1868 to 1938—with the possible exception of a few years under Theodore Roosevelt—was the party of Abraham Lincoln? To claim that is equally absurd.

My casual acquaintance with political life for 25 years, and a more serious reading of prior history, leads me to observe that the American people have greatly changed in their attitude toward government in this our generation.

We take our politics less seriously. We take our Government more seriously.

In the old days the ideal candidate, whom smart managers always looked for, was, as someone has described a former President, a man with "a protective reputation, an obvious but unalert integrity * * * a complete absence of plan or even of thought." It might be well for both parties in considering their candidates for President and Vice President to apply that formula to the dozens who, like Barkis, seem, even at this moment, to be very, very willing.

In the old days, for the bulk of the population, the elections were only a seasonal diversion, a circus with an oratorical sideshow, with the real job done by quiet economic and social—perhaps I should say back-room—pressures behind the scenes.

Today there is emerging a real and forceful belief on the part of the great mass of the people that honest, intelligent, and courageous government can solve many problems which the average individual cannot face alone in a world where there are no longer 120 acres of good land free for everybody.

Today the voting public watches and analyzes every move made by those who govern them, whether in the executive or the legislative or the judicial branches of the Government, with clearer perception and greater insistence on efficiency and honesty.

Today in that analyzing they are less and less influenced by the red-fire and the hard-cider ballyhoo of newspaper owners or political orators who adhere to the practices of a century ago.

Yes; we have learned to go behind the headlines and behind the leads and behind the glittering generalities in order to analyze and reanalyze, using our own thinking processes and not somebody else's to make up our own minds.

You remember what Abraham Lincoln said about fooling the people. That was in the 1860's. I should say that no wise political leader in 1939 will take it as a safe working rule that you can fool many of the people any of the time.

This new generation, since the war, believes more than did its fathers in the precept, "I am my brother's keeper." It believes in realities, economic and spiritual realities, where its fathers did not bother much to go beneath catchwords.

And it is national in its outlook. Youth today will not listen to a sectional conception of party politics—to a combination of two or three parts of the country against another part, or farmers against labor or business against the State.

The younger generation of Americans, by a very large majority, intend to keep on "going places" with the New Deal. Do not overlook this rising generation. Its vote rises proportionately every year.

On Jackson Day every true follower of Jackson asks that the Democratic Party continue to make democracy work.

In answer to the demands of the American people we have expanded the functions of the Government of the United States. We are handling complicated problems of administration with which no other party has ever had to wrestle. To do that, we are constantly recruiting lieutenants who will give intense and genuine devotion to the cause of liberal governing. We have brought to the Government men and women whose first thought is to be of service to their country through their Government—men and women with fewer attributes of selfishness and more objectives of clean service than any group I have ever come in contact with in a somewhat long career.

Almost without exception, they are more intent on doing a good job than in keeping themselves on the pay rolls. Almost without exception they possess that quality of cooperative effort which distinguishes them from the old-time political officeholder.

We seek and welcome cooperation, not only from those who are with us now but from others who see the light. We are even willing to accept temporary help.

But we always bear in mind the story of the Orangemen's parade in North Ireland on the anniversary of the Battle of the Boyne.

The parade was set, but the Orangemen had no bass drum. And what is a parade without a bass drum!

But the captain of the Orangemen had a good personal friend in the captain of the Fenians in the same town.

So he explained his problem to his friend the captain of the Fenians and asked him to cooperate by lending the Fenian drum for the Orangemen's parade.

"Sure," said the captain of the Fenians, "I'll give you my fullest cooperation. I will lend you the drum; you couldn't have a decent parade without it."

"But," he added, with a twinkle in his eye, "since I'm personally responsible for the safety of the drum, you'll understand if I have to make one personal condition. You'll have to agree to take the drum out of the parade when you get to Queen Street.

"For that's the corner where we Fenians are going to be laying for you."

If we Democrats lay for each other now, we can be sure that 1940 is the corner where the American people will be laying for us.

The way to avoid fighting among ourselves is to fight together against the enemies of the American people—inertia, greed, ignorance, shortsightedness, vanity, opportunism—all the evils that turn man against man.

It is my belief, and the belief of the great majority of those who hear me tonight, that not just for 2 years to come but for a generation to come we will maintain a united front against those enemies of America.

Let us remember the example of Andrew Jackson, who fought to the last for a united democratic nation.

If we do that, by the Eternal, we shall never have to strike our colors.

Jackson Day Address of the Speaker of the House of Representatives

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1939

ADDRESS OF HON. WILLIAM B. BANKHEAD, SPEAKER OF THE HOUSE OF REPRESENTATIVES, AT THE JACKSON DAY DINNER, JANUARY 7, 1939

Mr. RAYBURN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

On a similar occasion to this, 1 year ago in this place, I had the honor of submitting a few observations which I thought might be pertinent at that time to a celebration in honor of the victory of Gen. Andrew Jackson at New Orleans, and his participation in establishing more securely in the esteem of the people the fighting principles of the Democratic Party. At that time, if you will kindly pardon the repetition, I expressed this sentiment:

"There are those among us who feel most deeply that our party has endured so persistently as an instrumentality of public policy because it has deserved to live. For nearly a century and a half its basic principles have been enshrined in the hearts of generation after generation of our citizens. Powerful and dominant in the earlier decades of our progress as a people, it thereafter for a long period of time suffered reverses and disaster. Nevertheless, there always survived a sufficient number of the faithful to keep the fires of democracy burning on the altars of the public conscience until either the sterility of the statesmanship or the ineptitude of the leadership of the opposition again called to power and responsibility the party of Thomas Jefferson, its founder."

Under such repercussion of public opinion our party came into full power in the Government on March 4, 1933, and we still hold it, and we propose to hold it after 1940.

In looking back upon that bleak and bitter day when the American people entrusted our party with a mandate of confidence, and summarizing the honest and courageous efforts we have made to meet and to master the emergencies of this new age, I assert in no boastful spirit of party pride that we have done a reasonably good job of repairing the totally wrecked national edifice we inherited from the administrations of Harding, Coolidge, and Hoover when our party came into power.

I wish to reiterate here what I have often taken occasion to assert in other places, that we are not justified in claiming as a party that we have committed no errors and made no mistakes. Our leadership, from the President on down the line, has frequently disclaimed any such pretense of infallibility. From our President on down the line we have been content to say that we knew the American people expected and had commissioned us to take legislative and executive steps to redeem our country from intolerable social and economic chaos and misery; that they expected us to realize that we were not living under conditions that existed 50 years ago; that if we expected American democracy to survive we must invoke the spirit and essence and sacrament of democratic processes in government. And in that objective I make bold tonight to assert we have not failed.

I always feel justified in defense of my party's program under this administration in referring to the plight of our people everywhere on March 4, 1933. It was not only a pathetic and tragic but moreover a most desperate national emergency. It was unparalleled in its implications of disaster since the riotous days of the War between the States. Our memories are not too short to remember that the farmers of America, that stalwart but always patient group of our Nation, the always and forever basic industry of our country, were receiving 12 cents for corn, 30 cents for wheat, 5 and 6 cents for cotton, 3 cents for hogs and cattle on the hoof; when there were 10,000,000 or more unemployed men and women walking the streets and dusty highways, with no promise of succor or hope of relief; when the total collapse of our entire banking system seemed only a matter of days; when the millions of men who toil in the productive industries of the country, after years of appeal for the recognition of their rights, still occupied the menial status of a human commodity; when the investing public were the innocent victims of unsecured and recklessly exploited stocks and bonds; when the sick, the aged, the unemployed, were staggering along the hopeless and helpless thoroughfares of a miserable existence; when the depositors in our State and national banks had no definite assurance or insurance of the safety of their life's savings; when hundreds of thousands of the youth of the country, out of work and bereft of hope, were looking vainly into a desperate future for themselves and their dependent parents; when the American flag was disappearing from the high seas; when "unmerciful disaster followed fast and followed faster"; then, then, please God, came into power the present Democratic administration.

The manner in which this administration has dealt with these accumulated problems is now a matter of legislative history, and this is not the time or occasion in which to undertake to review them in detail. The laws that we have enacted up to this time, as far as their wisdom and justice and humanity are concerned, must be judged by the verdict of our people and the appraisal of posterity.

Looking back in retrospect upon the legislative and executive efforts that have been made to meet the terrific situations with which we have been confronted, I take great comfort in reflecting that through them all has run a consistent effort, not only to stabilize and redeem our economic conditions but also a constant course has been pursued looking toward the encouragement and stimulation of intangible human values. Henry W. Grady, in one of his great orations, pointed out with magnetic philosophy that the strength and glory of our Republic did not consist of the Capitol Building here in Washington, or the Executive Mansion, or the Army and Navy, or the courts, or the glittering functions of the National Capital, but that the real sanctuary of an enduring government reposed in the hearts and homes of our people, and it should be a source of intense gratification to us that every reliable poll of public opinion in the country reflects the consistent affection and trust of the masses of our people in the leader of our party, the President of the United States, who has suggested in large measure the institution of these reforms.

It is now apparent that the major objectives of the social and economic program advocated by this administration have been practically completed. The record has been made. That record and those achievements are being bitterly assailed and criticized by the opposition party and a hostile press. The time has come and I accept this opportunity to throw down a fighting challenge to all of the combined forces of opposition to this administration to tell us in plain and unvarnished language which of the major reform measures of this administration they would nullify in effect or repeal in substance. Will they assert that it was bad government for us to provide ample revenues to feed and clothe and house the millions of unemployed that we inherited from the former administration? Will they undertake to assert to the American people that we should revert to the former unbridled period of wildcat securities and dishonest and unrestrained speculation? Do they contend now that the employment in useful service and in the conservation of our resources by 2,000,000 boys in the Civilian Conservation Corps was merely a gesture of sloppy sentimentality? Do they feel that they can convince the farmers of America that our consistent and persistent efforts to increase their purchasing power and the price of their products were not fully justified? Will they dare have the temerity to repeal the laws for the protection of depositors in our banks? Would they undo our wisely conceived program for the conservation of our natural resources and for the protection of the people against the ravages of floods and dust storms? Have we been too tender in sympathy with the millions of men and women who toil in the industries of the country when we have by law recognized their rights of collective bargaining in order that they might share somewhat in the profits that they alone make possible for their employers? Will they refuse to acknowledge that the Democratic Party is entitled to the credit for the first time in our history of starting a program for the relief and security of the aged and blind and the crippled? It is utterly beyond the bounds of human credulity to believe that the leadership of the Republican Party will dare to assert that the outstanding major objectives that this administration has enacted into law shall be repealed or that they are bad in conscience and in principle.

Or did I use an improvident term in trying to speak of a nebulous thing called Republican leadership? Where does it reside? Who wears the crown? Upon what individual shall we gaze with awe and wonder as the Moses of the coming deliverance?

There is a certain Senator who is greatly exercised over a third term for the present Executive, whose chief anxiety and solicitude is, no doubt, a first term for himself. A great number of other fugitive shadows flit across the stage of the 1940 Republican convention. But where is the substance? Where are the crystallized

governmental principles upon which they propose to attack our Democratic record?

In the short address I delivered here 1 year ago, I called attention to setting up of a committee of 150 of the best Republican minds to formulate a platform of principles upon which to go to the country. What has become of Dr. Frank and his committee of the very best minds? Is it merely comatose and moribund, or entirely defunct? It has long been in labor—where is the mouse? I will pass that quest on to Mr. Mark Sullivan and other eminent and diligent political biologists.

It has been a most gracious privilege to sit in this company tonight. It is heartening and inspiring to be surrounded by an environment that reflects the spirit and courage of old Andrew Jackson. No man, in all our political history, has done more to announce in life the enduring principles of a really democratic form of government, and no statesman of any era in our history has left a more profound influence upon the political philosophy of succeeding generations than this courageous old warrior of our earlier days.

The Democratic Party has nothing of which to be ashamed in its long, useful, and honorable history. It has fought the people's battles; it has fought to crystallize and preserve the majestic statesmanship of Thomas Jefferson; it has sought to meet every national emergency with courage and sound judgment and is yet entirely worthy of the continued confidence and support of the American people. We must not allow petty differences of opinion along any line to shatter the solidarity of our party. We must, of course, seek to correct any errors that we may have made in judgment as to the details of legislation, but, for one, I am unwilling to depart in principle from the splendid basic achievements of this administration.

Senator Clark of Missouri

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Thursday, January 5), 1939

ARTICLE FROM THE CENSOR OF DECEMBER 22, 1938

Mr. SHIPSTEAD. Mr. President, on December 22 last there appeared in a magazine called the Censor, printed at St. Louis, a very interesting article concerning our colleague the senior Senator from Missouri [Mr. CLARK]. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Censor, December 22, 1938]

SENATOR CLARK—AMERICAN STATESMAN

We will say without a fear of contradiction that there is no man who was ever elected to serve in any public office in this State who has received and merited the utmost respect and admiration of all the people, regardless of political affiliation, more than has Senator BENNETT CHAMP CLARK. This was proven most convincingly in the November 8 election, when the people rose up to show their appreciation to Senator CLARK for the splendid service he had rendered during the 6 years he was in the United States Senate, by sending him back to that legislative body by an overwhelming majority. It is no secret that not only did the Jeffersonian Democrats vote for him, but also thousands of Republicans, who deserted their party standard bearer in order to support a man whose record as a representative of all the people in the Senate was outstanding in its expression of independence and courage. The results of that election therefore did show plainly that the people do appreciate anyone who illustrates by his work that he is a real champion of good government.

To understand and appreciate the important part Senator CLARK has played in good government during his 6 years in the United States Senate one should first become acquainted with the scope of his activity and the general grasp he seemed to have of all important matters, both national and international. It is on the basis of this comprehensive knowledge that we feel fully justified in accrediting him with being an American statesman in every respect. It would be difficult, indeed, to find any important subject which concerns the American people of today upon which Senator CLARK cannot converse intelligently and with a complete understanding of the circumstances and conditions. In saying this we have in mind three important and vital matters upon which Senator CLARK has dwelt within recent weeks which have certainly reflected the intimate knowledge he has of each of them and also definitely revealed just how he felt about them.

It is of no particular surprise to those who have followed Senator CLARK's record in the Senate to note that he was one of the most active proponents of peace and they, too, can remember that he was one of those who bitterly assailed those who would be willing to throw this country into war. He has taken this position because he himself knows the horrors of war, inasmuch as he was in the Army during the World War. He himself witnessed the needless slaughter of human lives and with that sight in his memory has pledged himself to the cause of preventing such horrible human sacrifices in the future. Senator CLARK knows, as all of us should, of the untold grief and anguish that was in every mother's heart who saw her boy go across the seas with but little prospect of his returning alive, and in this knowledge can be depended upon to fight the good fight for peace, intent on seeing to it that no more mothers will have to go through this terrifying experience to satisfy the selfish aims of the few who stand to profit by the war. The American people should be grateful for the firm stand taken by Senator CLARK in this respect.

Then in a speech Senator CLARK delivered a short time after he was reelected, in Oklahoma City, he sharply criticized the wild spending policies of the present administration and issued the warning that this condition could not be carried on indefinitely without financial chaos. He also made it known at that time that he would oppose with all the power and influence at his command the further handing out by Congress of blank checks for relief and other large expenditures. This we have reason to believe is in accord with the wishes of the American people, who already are feeling the heavy burden of taxation and who can hardly be expected to stand the strain of an additional load which must come if excessive spending and governmental waste continues. Senator CLARK, due to the fact that he always keeps in intimate touch with actual conditions in this country, realizes the danger that lies ahead under the present course and, being a man of action, can be expected to see that something is done about it when Congress convenes in January. The American people also should feel the greatest degree of admiration for CLARK's firm stand.

Hitting forth a third time in his characteristic aggressive manner Senator CLARK turned his attention to the present farm program instituted by Secretary Wallace and condemned it as a detriment, rather than a help, to the farmer. In this contention he is supported by practically all the farm experts and economists, inasmuch as they have been crying out for some time for a sensible and practical solution of the farmers' problems which they have not received under the Wallace administration. Senator CLARK, always closely in touch with what is going on, has heard their pleas and has committed himself to advocating a farm program along the lines suggested by these experts which should go a long way toward bringing a solution to the farm problems of today. The farmers of this country have found in Senator CLARK a great friend and we feel sure they respect him as such. Having won the gratitude, admiration, and respect of the American people Senator CLARK deserves the appellation of great statesman and true representative of the people. Such a man would be a distinct credit to his country as President, a position for which he has often been mentioned.

The United States in World Affairs

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Thursday, January 5), 1939

ADDRESS OF HON. ELBERT D. THOMAS, OF UTAH, AT THE INSTITUTE OF WORLD AFFAIRS, RIVERSIDE, CALIF., DECEMBER 16, 1938

Mr. LOGAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah [Mr. THOMAS] at the Institute of World Affairs, Riverside, Calif., on December 16, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President von KleinSmid, Mr. Brown, associates in the institute, and ladies and gentlemen, I find myself when I look at my subject, The United States in World Affairs, in about the position of the fine old preacher who announced to his congregation that he was going to expound at length upon a subject about which the Lord had been able to say only a few words. Serious as the world condition is, one feels loath to be light-minded for fear it might seem that we would talk and not act while the world is burning; and yet it is only from talk that planning can come, and action in times like these should come only after planning. The stage has been set

for you, Dr. von KleinSmid, in a rather interesting way. First of all, we have started out here quite deliberately with what has been termed the "bovine" theory of the State. I have forgotten the story about the cows, but I remember that the United States was placed under the constellation of the "bull." That makes it hard, indeed, to remain the speaker.

But seriously, we have had pronouncement after pronouncement placed before us during the last 2 or 3 days which show that the world has sunk to a new low. I, therefore, start from scratch if I attempt to lift it. I assume, as the last speaker, that it is my duty in some way to end in Pollyanna fashion, waving a flag of hope. We were told last night that not only had collective security failed but that individual national security had failed, also that security based on the balance of power and alliances had failed. What else there is to fail the speaker very nicely forgot to mention.

Tonight we have become a bit more dignified in speaking of our world. We have ceased to name it "cockeyed" and now call it "idiotic." It is not the first time in history that governments and governors have been condemned and found wanting in ability and character. In ancient times, among those who supported idealistic anarchism governments and governors were condemned to such an extent that it was shown that each one of them had come into power as a result of murder or some other dishonorable crime. Many national governments of the earth have in this institute stood condemned indeed.

At times I have thought that one consistent way out would be universal acceptance of the theory of anarchism and definite condemnation of governments as being unfit to be trusted and governors as being incapable of having morality. That, of course, when we analyze it, is an extremely strong condemnation, almost as severe a condemnation as we in America make against the leaders of an opposing political party.

It is serious when we realize the discouragement and the disappointment found in all places where men discuss their problems openly or where men accept their lots with the dumbness of sheep. But, as some of our old Chinese friends used to say, when things are as bad as they can possibly become and still take a turn for the worse, then things are normal in China. On such a hypothesis we have not yet reached normality, and the turn for the worse has not yet come, because our last speaker held out some hope. He put that hope in the United States of America.

I should hate to see our world commit suicide. I should hate to see nations come to an end. I should hate to see more despair and greater pessimism. I should hate to see more suffering in the world. I cannot help but feel that a world dominated by fear cannot work constructively. It has even been suggested that our Union was brought into existence as a result of fear. No, there was something more constructive than fear. The things that made America were planning, courage, downright honest political science, fighting for a cause, and faith in its accomplishment. Those things reflect hope, not fear. If, then, we are to build the hope of the future world upon America, what kind of a hope shall it be and what shall our attitude toward that world be?

First of all, I think we cannot afford to take the step that has been suggested by so many, that we assume the necessity of fighting governmental ideologies and fighting governmental ideas and forget about the existence of nations. Hegel says people tell us that we should read history, but he also says that all we learn from history is that man never gets any lessons from history; and this institute seems to confirm the point. Today we are worked up, and righteously worked up, against certain actions. I do not condone those actions in the least. I condemn them as indignantly as does any man. But those actions have been taken under leaders of nations which have had a finer history than the one they are passing through today and will have a finer history tomorrow. You cannot wipe out in a single generation, no matter how false it is to itself, an age-old civilization and an age-old culture. You may feel harsh toward Hitler. You may feel harsh toward Mussolini. You may feel harsh toward Chamberlain. You may condemn the Japanese rulers. But if you are true to yourself, you cannot help but feel kindly toward the people and the culture for which those leaders act today. Therefore, one thing the United States must do during these troublesome times is to accept the proposal of Woodrow Wilson in the Great War, that we distinguish between the governments and the people of our enemies. We must not forget that we have to live with people in this world.

Twenty-five or twenty-six hundred years before the Darwinian theory gave man a sort of comparative understanding of his position in the animal kingdom there was a great feast held in China. At that feast the elders present were repeating their gratitude for God's greatness and the bounties of Nature. "Isn't God great and isn't Nature grand that they have provided all those fine things to enjoy and fine things to eat," they said: "Isn't God great, that He produces these things for us?" And then a young man, a philosopher, spoke up and said, "It isn't right to assume that God created these animals just for you to eat. That isn't the attitude to have. An ox is not merely created that man may enjoy it, but that each may be mutually helpful to the other." If oxen are made just for men, then men and women must be made for the benefit of mosquitoes, because they live on men and women. So the question today is like the question then. Are we going to live on the nations of the world or with the nations of the earth? We shall get nowhere by hating, except to breed more hate which may lead even to war.

Think through the alternatives that have been suggested. We cannot go back. We have made mistakes. There was a time when much that has been done might have been stopped. But what good is it for us to spend our time saying that America made a mistake in 1917, then again in 1919 and 1920, that England made a mistake in 1931, that all of the world made a mistake in 1933, and that America made another mistake in 1935. That is not very satisfactory except as an explanation of events which we hope may not be repeated.

There are a number of things that we have to do in America if we are going to have a consistent policy toward the rest of the world. In this I am going to do what I have suggested we should not do. I am going to point out one or two of the constructive things we forgot, and then see if we can correct them when we have to act again. I shall start with the Nine Power Pact. I do so deliberately. It is the agreement for which the United States is wholly responsible. It was not the product of the so-called scheming Europeans. The Washington Conference held the center of the world in February 1922. Before then, it must be remembered, certain countries became very energetic in the League of Nations, and later when the Washington Conference met we were energetic for the same reason. That reason was the threat of Russia, the great unknown, to the capitalistic nations of the world. There was a world-wide fear of Russia. Russia is an eastern state, but she was not invited to attend the Washington Conference. The Nine Power Pact was theoretically made up of all states interested in the Far East, but one was not present. Now, the Japanese contention and interpretation of a contract made by treaty is that when conditions are changed, the changing of those conditions modifies the treaty, even to the extent of making it obsolete. We knew as well in 1922 as today, that is the Japanese way of interpreting treaties. Treaties are made, they say, on the basis of the status quo, and when the status quo is changed the treaty is changed. With the exception of the United States, all signers of the Nine Power Pact were League members with League ideals of unity against Russia. So long as Russia was outside of the League, the pact was understandable; but when she came into the League, the pact should have been modified immediately. There was one voice in America that shouted and tried to exclaim that the structure which the United States had helped to build up should be changed because of changed conditions. He asked that a conference be called at once to bring the Nine Power Pact up to date. Was there a response? No.

We must maintain the sanctity of treaties. Democracies fail if the sacredness of contracts is abused because democracy rests on understanding. Contracts and treaties are merely understandings. We must accept and adjust those theories of other countries so that there will be a common meeting ground about the sanctity of a treaty and make it so that it is understood perfectly by all and with all concerned.

Thus, with respect to the Far East we have acted twice when we were not thoughtful. We forgot Russia in one case. We forgot Siam in another—Siam, a little land which is independent, a member of the League, a land which later renounced its treaties with us. We have now concluded a new treaty with that country. This treaty is constructive and important, extremely so, because we have built for the first time a treaty wherein our Federal organization contributes to our advantage in the treaty. We make many gains because we make a dignity of federalism and completely satisfy Siam. In this we have made progress.

The ratification of the sugar treaty is a forward step. Even Germany has become a party. The ratification of the marine labor treaties is another step forward and proves that we are moving not entirely backward. The world goes forward ultimately quite as steadily by short steps as by great strides.

A glance toward the south at the great Lima Conference brings satisfaction, too. In the development of the Monroe Doctrine, in the last 4 or 5 days we have accomplished much. It matters not whether we think of the Monroe Doctrine as a simple instrument giving the United States leadership over the Western Hemisphere or as a regional understanding; it matters not whether we consider it on the basis of the big brother and little brother idea or as a united western answ r to a European union against democracy. It has always been unilateral in its nature; it was of our making, and it depended upon us and us only for its support. Now, the Monroe Doctrine, as a result of these treaties, is a multilateral instrument, and the responsibility for continuing that doctrine rests not only on the United States of America but on 21 other states. That is a tremendous advance. The aspect of turning the South American attitude away from that of considering us an aggressive Government of the north imposing upon governments of the south is a constructive change. If the time will come when the British Commonwealth nations will go further and do their part in our Western Hemisphere by Canada's taking her place in the Pan American Union we shall have accomplished what we have dreamed for many years.

Now, since we have been left so low, and since the props of national defense, the balance of power, international alliance, and collective security have all been knocked from under us, and since we have acknowledged responsibility for some of this destruction, we have some responsibilities to the world. These, at least, we should acknowledge:

First, constructive action in regard to the neutrality law. We have reached the place in our neutrality laws where a certain policy has been followed, and under most of the rules of neutrality a change of policy in the midst of trouble or war may be deemed and may actually be an unneutral act. Care, therefore, is essential. But this change must come. The present law reflects a distrust of our Executive and ties the hands of our President in dealing effectively in international matters when there is war

in the world. That is simply bad government. It hinders America's effectiveness for good in the world, and it causes the advantage taker among the nations to be doubly reassured. To reassure an advantage taker is not standing aloof; it is not remaining neutral; it is not even being isolationistic. It is throwing one's whole moral influence and support to the least worthy of all national forces now being exerted in the world.

The three neutrality acts which we have passed since 1935 are not satisfactory, but they have not been wholly bad. First of all, the sentiment against war reached a pitch which it has never reached before in the history of our country, and in the discussion of the 1935 neutrality we heard the sentiment, "We want no war, and we want no profits from war." That is very different from the old neutrality where we stressed neutral rights to the extent that it was necessary to fight for them. All three of these acts, as they are domestic acts referring only to the United States, are acts that condemn war as such, condemn trading in war materials in theory, but best of all they emphasize the duty of a neutral; and it is fine for us to discover that even if we do not take part in war we have some obligation as well as rights of our own.

The neutrality acts were acts of retreat. They came in response to the urge of certain people who thought we were going to be dragged into war, and the enactments were in response to the desire on the part of the American people to have nothing to do with war. It was domestic law—a restraint upon our own people. As a result, the first neutrality act was interpreted by Italians as a friendly act toward Italy. Japan, too, felt secure as a result of it and interpreted it as a friendly act toward Japan. No one, especially the sponsors of the laws, expected those interpretations. The irony of the acts was that in the administration of the third act the United States actually reversed, and thereby did damage to previous arrangement and previous treaties, a policy regulating sales of munitions to Germany. The Germans in the last year were able to buy from us about $1,600,000 of munitions under the law. That, I am sure, no sponsor of the law expected.

As we are to start from the beginning, and since this is a talk on America's position in world affairs, why not, in building our new step forward, go back to something about which the American people already have made their policy and start again to catch up with ideals subsequently given expression by Woodrow Wilson and brought into existence by world organization? On June 4, 1910, the House of Representatives passed a resolution, which became a law, calling upon the President of the United States to appoint a commission of five men to meet with like representatives of other governments to bring forth plans not only for a reduction of armaments but for the use of the navies of the world as an international police force to be used for maintenance of peace throughout the world.

That resolution passed the Senate on the 20th day of June the same year and was signed by the President. The following year when President Taft delivered his message, he called the attention of the people to the fact that that law had become the law of the land and that he had been called upon to name the commission and had done nothing about it because adverse replies came from Great Britain, France, Germany, and Austria, all of them stating that while they liked the motives of the Americans, they thought that it was untimely and unwise to proceed then in accordance with the plan. Already the London Conference had been held in 1909. Four years before the war of 1914, and the world felt it was untimely to do anything about it. President Taft was prohibited because he got no response. That sentiment became the forerunner of the ideals which became part of a world system. That was the American policy. I am not going to call attention to the names of the men who voted for that most remarkable resolution, because nothing is gained by emphasizing how certain men lost their forward-looking ideas and hopeful motions. The record, though, is there for those who will read.

That brings me back to the proposition that national ideas do change and that men may come and go and in that there is great hope. I have looked toward Europe in part of my discussion. I have looked toward Latin America in part and I have looked toward Asia in part. Now, let us look at home. The American foreign policy must be kept consistent with the American national policy; and America, founded as she was, not on a little isolated spot in the world nor upon local ideas far removed from world thought, but upon a theory that has become world-wide in experience, still has a task in maintaining her position in the earth in the defense of that kind of government which accepts the theory of the good life for the individual man, the perfectability of the individual citizen, and the right of these individuals to buy, sell, own, come, go, and live on the highest plane of the good life.

This, therefore, is a time, as such periods have occurred often before, when the American people find themselves in a position which calls for action. That day, in the immediate past, when men, nations, and history had but one interpretation—the economic one—has passed. We have discovered that there is something to men besides their economic welfare and something in the actions of nations besides economic well-being, economic urge, and economic advantage. Ever since this economic interpretation became so much of us, we have all had to live constantly in suspicion. That holds for nations as well as men. During this desperate period of the economic vogue I had to avoid coming within eye or ear shot of my economist colleagues toward the end of the week; or when I handed the pot roast to my wife on Saturday and she smiled a "Thank you, dearie," I would spend all day Sunday cogitating whether the smile was one of love, one of happiness that we could get another roast, or just a deceitful, wicked, rationalized reaction from some satisfied pang from her inward anatomy.

There are bigger things in the world, but the one I am going to call attention to is still a phase of our economic life. We cannot have political democracy without economic democracy. That is, if the individual is going to grow within the state, he must in some way or other have an ability to acquire, to develop, and to improve his lot in the world. The economic phases of the mass barter and block trading systems of the single-willed states of Europe and Asia are very much more hazardous to the world than the political phases. Conquests can be overcome, armies can be defeated, and leaders of governments can be stricken down, but if a whole state is made an economic unit and the mass of that economic unity is hurled against another state whose economic system operates on the basis of free buying and selling and owning among individuals, the force of the block or mass system is so hazardous that a democratic economy cannot survive. Some thoughtless persons in America might suggest the same sort of mass or block economic system for us. By such action on the part of America, we should destroy America and the best fact of life here, which is the ability to call property our own.

There is the real threat to the world and we have a key to overcoming that threat. As a result of good planning and as a result of circumstances and necessity, the United States has gathered together more than half the gold supply of the world and very much of the silver of the world. We cannot have democratic economy in any place in the world if managed currency is made to work to such an extent that the individual cannot keep within himself a source of wealth or a sure source of credit. The right to hoard, the maintenance of something worth hoarding, is essential to free economic individualism. The greatest democracy in history, China, has been able to maintain economic individual freedom because no matter what the loss to each individual Chinaman—if his home burned down or personal property was destroyed—he might always go back and dig out of the ruins the little lumps of silver that he had hidden in the adobes or mud plaster of his buildings. Thus he always had something to start with again.

Where do the people start? The invention of money marked the beginning of democratic economy. The continued free use of metallic money is democratic economy's surest guaranty of continuance. Therefore, if democracy is to be maintained in the world, it is necessary that we restore to the world a free flow of gold and silver among men and nations of the earth. We can start now trading in specie and the same sort of prosperity would come as that which came after the Civil War, and the gold and silver would flow to and from us.

The only safeguard we need to see that nations and individuals in the world do not take advantage of this new free economy is that the right must be left to the Treasury Department to pay when the demand is made in either gold or silver. We have all the safeguard that we need by making that offer. "You can come and get our materials with our promises to pay, but we shall redeem those promises to pay on your demand in either gold or silver, or both, as we see fit." We have the reserve. And incidentally never before in the history of American money at home or in the whole world has American money taken the place in which it stands today. We must never lose sight of that fact. Tourist after tourist does not bother with credit any more, but takes American silver certificates and he finds that they are acceptable to better advantage in all countries. And as he passes from nation to nation he avoids exchange evils. That is one thing that we can do and by doing we create a simple faith and trust in the world in our ability to compete man for man and nation for nation without blocing, massing, or force; without making all property and labor of the United States a single unit to hurl against some other state's massed economy.

And now what about our attitude? I promised you that I would leave this conference with a word of hope and I am going to leave it not only with a word of hope but an absolute trust in the future. It is only through our faith to bring about a better world that we will have a better world. I have seen those fine old people in the East who were so sure that the Lord was coming the day after tomorrow that they did not even fix the doors that were hanging from their houses. That is faith gone wrong. If you can change such an attitude and say, "Would it not be fine to meet the Lord with a repaired door?" you have not put off the day of His coming one minute and you have made waiting for it more endurable. A changed attitude in their philosophy has worked tremendously for people who have become dulled by fatalism.

Thank goodness that the Americans are not caught with the spirit that most of us know exists among people who have had that fatalism with its self-helplessness for generations. Until that comes there is some help and some hope for the situation. What bothers this country and the people of the world is the same thing that bothered the father of all cynics. We have a record of it in the fourth chapter of Genesis, when a man stood in front of God and asked God if he was his brother's keeper. That was a cynical question delivered by the man worthy of being called the father of cynics. And the only one in the history of mankind who has been willing to answer that question in the affirmative, the Master of men, answered in the affirmative and lost His life by doing so. But who is there on earth who will say that that sacrifice was not worth while? When will a group of men accept the theory of the necessity of accepting the responsibility for his brother's keeping? If you can answer me that question, I will tell you when the new world will begin.

Case of Erby Harrison, of Tennessee

EXTENSION OF REMARKS
OF
HON. KENNETH McKELLAR
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Thursday, January 5), 1939

EXTRACT FROM REPORT OF THE SPECIAL COMMITTEE TO INVESTIGATE SENATORIAL CAMPAIGN EXPENDITURES AND USE OF GOVERNMENTAL FUNDS

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD an extract from the report of the Special Committee to Investigate Senatorial Campaign Expenditures and Use of Governmental Funds in 1938, the extract having to do with the case of Erby Harrison, of Tennessee. It is printed on pages 345, 349, 350, and 351 of the committee's report. I also ask to have printed in connection therewith certain telegrams and a letter.

There being no objection, the excerpt, the letter, and telegrams were ordered to be printed in the RECORD, as follows:

CASE OF ERBY HARRISON

Docket No. 726

On September 8, 1938, Senator WALSH laid before the committee the following affidavit and enclosure, which had been brought to his attention:

AFFIDAVIT OF ERBY HARRISON

STATE OF TENNESSEE,
County of Washington:

Affiant being first duly sworn according to law, states as follows: My name is Erby Harrison. I have been employed by the Veterans' Administration Facility at Johnson City for the last 7½ years as meat cook in the general mess. On Saturday, July 30, 1938, while on duty at my place of work, the attached sample election ballot was handed to me by Claude Duncan, another employee of said facility, who stated to me that he received it from Jim Dempsey and that all employees of said facility were being instructed to vote according to this marked guide ballot.

Immediately after I received this ballot and expressed my opinion as to what I thought of my right to vote as I pleased, my resignation was demanded, and I therefore resigned.

This is the 3d day of August 1938.

ERBY HARRISON.

Sworn to and subscribed before me this the 3d day of August 1938.

[SEAL] L. W. OAKES, *Notary Public.*

My commission expires October 23, 1938.

SAMPLE BALLOT

Candidates for Governor
(Vote for 1)

Gordon Browning ( )
Prentice Cooper (X)
Roy C. Wallace ( )
J. Bailey Wray ( )

Candidates for United States Senator
(Vote for 1)

George L. Berry ( )
E. W. Carmack ( )
J. Ridley Mitchell ( )
John Randolph Neal ( )
C. L. Powell ( )
A. T. (Tom) Stewart (X)

Candidates for railroad and public utilities commissioner
(Vote for 1)

Worth Crowley ( )
W. D. (Pete) Hudson (X)
J. Bradley Lea ( )
Joe E. Scott ( )
W. H. Turner ( )

Candidate for Congress

John A. Armstrong ( )

Candidates for State committeewomen
(Vote for 2)

Blanche Mitchell Bellaire ( )
Elizabeth Starnes Fuller ( )
Mrs. Ferdinand Powell (X)
Edith O'Keefe Susong (X)

Candidates for State committeemen
(Vote for 2)

John Bernard ( )
Murrell W. Snell ( )
Herbert S. Walters (X)
Charles E. Worley (X)

Candidate for State Representative
(Vote for 1)

I. N. Humphreys ( )
William M. Watkins ( )

This is the ballot was give to me.

ERBY HARRISON.

Sworn to and subscribed before me this 3d day of August 1938.

[SEAL] (Signed) L. W. OAKES, *N. P.*

My commission expires October 23, 1938.

Referred to Veterans' Administration: The committee's decision was to refer this affidavit, with its enclosure, to the Veterans' Administration requesting that an investigation be made and that the committee be advised as to the outcome. Pursuant to this action taken by the committee, this case on September 8, 1938, was referred to the Veterans' Administration for investigation.

Letter from Veterans' Administration: On November 3, 1938, the chairman laid before the committee a letter of October 21, 1938, in further reference to the case of Erby O. Harrison.

OCTOBER 21, 1938.

Hon. MORRIS SHEPPARD,
United States Senate, Washington, D. C.

MY DEAR SENATOR SHEPPARD: Further reference is made to your letter of September 8, 1938, concerning Mr. Erby O. Harrison, which was acknowledged by Mr. A. D. Hiller, executive assistant to the Administrator on September 15, 1938.

I have caused further inquiry to be made in this matter, and from the information obtained it appears that this former employee voluntarily submitted his resignation as an employee of this Administration because of his resentment of instructions given him with reference to the performance of his duties, and that he was not compelled or requested to resign for political reasons, as alleged by him.

Your interest in this matter is appreciated, and any information obtained by your special committee indicating that this or any other employee of this Administration has been discriminated against or persecuted for political reasons will be appreciated.

Yours very truly,

FRANK T. HINES, *Administrator.*

Decision on Harrison case: After further considering the record of this case, the committee decision was that the charge was not sustained by the evidence.

VETERANS' ADMINISTRATION,
Mountain Home, Tenn., January 7, 1939.

Senator KENNETH D. MCKELLAR,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: Copy of the report of the Special Committee to Investigate Senatorial Campaign Expenditures and Use of Governmental Funds in 1938 received, and in view of the wide publicity given to this report, said publicity leaving the inference that the management of this facility was guilty of political coercion and political activity, I am writing you to protest such unfair accusations.

Only one affidavit was secured as to sample ballots being distributed, that being the affidavit of Erby Harrison, this case being reported as docket No. 726 and found on page 349 of the committee's report. It was referred to Gen. Frank T. Hines, Administrator, who in turn made an investigation and who wrote Senator SHEPPARD under date of October 21, 1938, stating the true facts in connection with the Erby Harrison case. The decision, as found on page 351, states as follows: "After further considering the record of this case, the committee decision was that the charge was not sustained by the evidence."

There are some 600 employees working at this facility, and every effort was made to prevent political activity during the last August primary. Every department head was instructed specifically to prevent distribution of political literature, circulars, stickers, etc., and the rules as laid down by the Veterans' Administration and the United States Civil Service Commission were rigidly enforced in connection with political activity.

Approximately 15 of the 600 employees testified before the Sheppard committee and all 15 stated under oath that there was not any political activity on the station and that sample ballots were not distributed. Approximately 585 employees were never even interviewed and yet this facility has been branded unfaily by the committee when it states on page 333 that the weight of the evidence indicated that sample ballots were distributed and employees were forced to vote for the coalition ticket. This conclusion of the committee was made in spite of the fact that a number of employees denied that activities of this kind had taken place.

I respectfully request that we be confronted with any testimony given by outside sources as to political activity at this station and that the 600 employees who are attempting to obey the rules of the Veterans' Administration and the United States Civil Service Commission be given an opportunity under oath to testify if we are to be condemned on an ex parte hearing of unknown witnesses.

With kindest personal regards, I am

Sincerely yours,

LEE B. HARR, *Manager.*

JOHNSON CITY, TENN., *January 4, 1939.*

Senator KENNETH D. MCKELLAR,
Senate Office Building:

Report of investigating committee published Johnson City Press January 3 accuses superintendent, Veterans' facility, distributing sample ballots. Accusation false. Demand show-down as head laundry department. Have 22 employees and all will testify under oath charges false.

D. L. KINSLAND,
Superintendent of Laundry.

JOHNSON CITY, TENN., *January 4, 1939.*

Senator KENNETH MCKELLAR,
Senate Office Building:

As head of hospital department, this facility with 250 employees immediately under my supervision, resent SHEPPARD'S report that sample ballots were distributed to employees here and that political coercion was practiced. No witnesses were called from my group of employees, and any and all of us will be glad to testify under oath that such report is untrue and unwarranted.

J. H. S. MORISON,
Chief Medical Officer.

JOHNSON CITY, TENN., *January 4, 1939.*

Senator KENNETH D. MCKELLAR,
Senate Office Building:

Disgusted with unfair report of Sheppard committee. Have 74 employees under my jurisdiction and was charged specifically with responsibility of prohibiting political activity on station. These attacks are for sole purpose of hurting your friends here, and in my opinion you in 1940.

DAVID H. TAYLOR.

"Air Raid" Over Bergen County, N. J.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. SMATHERS
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Thursday, January 5), 1939

EDITORIAL FROM BERGEN (N. J.) EVENING RECORD OF DECEMBER 2, 1938

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Bergen Evening Record under date of December 2, 1938, on the subject of an air raid over Bergen County.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[Bergen Evening Record, December 2, 1938]

AIR RAID OVER BERGEN COUNTY

Yesterday Hackensack and many contiguous Bergen County towns were bombed from the air. The attacking airplane was provided through the initiative of Hackensack's progressive Chamber of Commerce—not to dismember and destroy helpless women and children but to advertise its amazing example of community cooperation to attract Christmas shopping to the county's business center. Instead of lethal bombs the plane dropped 10,000 parachutes attached to which were boxes of candy, credit coupons for merchandise, and other prizes. Instead of filling hospitals with the stricken and the wounded, it filled 10,000 American children with joy and excitement.

As an advertising stunt yesterday's display of business enterprise has attracted attention far beyond the confines of the county it was intended to serve, but that is not the motivation for this editorial comment. It was inspired by the remark of a middle-aged spectator who perhaps unconsciously was thinking out loud. Observing the shower of candy-laden parachutes, he ejaculated: "Thank God for America! In Europe they might have been bombs loaded with TNT to flatten our homes and to murder our wives and kids. It makes me a better American just to see those harmless parachutes coming down and the kids scrambling for candy instead of screaming with terror."

To all of which every American worthy of his citizenship can voice a heartfelt "Amen." The abject fear which caused the surrender of erstwhile mighty Britain and France to the threat of Germany's air armada with its potentialities for wholesale death and dismemberment to helpless women and children must not find repetition in free America. But the sense of security in our geographical isolation must not be permitted to lull us to sleep. Airplanes have succeeded in annihilating space, and the territorial greed and personal ambition of dictators have no ascertainable limits.

Without adequate defenses in the air, on the sea, and on the land that peaceful plane of Clarence Chamberlin's might have been multiplied by 200 or 500 enemy planes dropping over the metropolitan area morale-shattering and body-destroying explosive bombs instead of pleasure-creating and business-attracting boxes of candy. So, without realizing it, the Hackensack Chamber of Commerce has provided the people of its section with an example of what might have been. No American loves war, but every American loves his home and his family. He has worked and denied himself to create them both. He has insured them against all possible hazards but one.

Europe has graphically disclosed to him that new hazard from the air. As in all other forms of insurance the protection from that possibility will cost money. He is prepared to pay the premium. The world's dictators respect only one potential opponent, and that is a more powerful one. We are not now in that enviable classification, but with our industrial and manufacturing resources we soon can be. Our best insurance against Europe's dictatorial creed of might makes right is immediately to create an air force at least twice as strong as any foreign totalitarian power's.

If minorities-persecuting Germany can build 9,000 planes and scare Britain and France into supine surrender of all that they have held dear, America should build 18,000 or 36,000 to show Mr. Hitler and all his satellites of other dictatorial nations that America can and will defend its democratic self-government against them all. Its ancestors fought and died to create its priceless freedom of individual conscience, speech, and opportunity; and this generation are not spineless ingrates. They are prepared to at least pay and live to discharge their trusteeship in equal measure to their posterity. They can do no less if they would continue to call themselves Americans.

Public Address System

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1939

Mr. STEFAN. Mr. Speaker, this House Chamber has been used since 1857. There has been no material architectural change in this Chamber since that time. What important changes have been made were in the seating arrangements. Formerly each Member had an individual desk. This was eventually changed until the seating arrangement is as at present.

So, since 1857 Congresses have come and Congresses have gone, and Members have come and gone using the Chamber as it was used so many years ago. Speakers of the House have also come and also gone with recollections of terrible confusion; horrible chaotic conditions; terrible strain on the nervous systems and recollections and nightmares of disorderly and unruly membership. Speakers have suffered terribly from nervous shock as the result of failure to bring quiet and order. The beatings of the gavel must have rung long and loud in the brains of our beloved Speakers. Visitors from all over the world have visited the House gallery as the guests of Members. They have gone home with unpleasant impressions of a House of gentlemen in confusion. They have left bewildered because of the scenes they witnessed from these galleries. They went home with entirely the wrong impression of a lawmaking body of gentlemen at work.

Members of the House have become confused and bewildered time and again at the thought that their finely prepared speeches were seldom heard. Visitors in the galleries seldom heard the trend of the debates nor the trend of speeches being made by distinguished gentlemen who strained their voices in order to be heard even beyond the first row of seats in the House.

During many sessions a great part of the Speaker's time was taken up by pounding the gavel, endeavoring to bring order to the House, and urging Members who talked audibly and interfered with the business being transacted by the House to leave the Chamber and converse in the lobby. All of this confusion tended to wreck the patience, the nerves, and health not only of the Speaker but also those Members who were serious in the efforts to participate in the business

as being transacted. These conditions existed not only in our great Chamber but also in other chambers where law-making bodies assembled or where large gatherings were held.

Time marched on, and all over the world humanity took advantage of modern science and brought comfort and great convenience to those who could not hear so well and to those whose voices are not so strong as the voices of others. Thus came the modern public-address mechanism, which is so indispensable in these modern days.

Four years ago, through the aid of our beloved late Speaker, Joe Byrns, we installed such a public-address system in this House. It was not given sufficient time for testing and adjusting. There was general objection and it was removed.

A year ago our present distinguished Speaker with other distinguished gentlemen began studying the possibilities of better equipment, and our Architect did considerable experimenting and investigating, with the result that the system which is now installed in the House was given a trial. With more adjustments and experimentation, it is believed that it will become perfect and will bring more dignity to this House, and perhaps prolong the health of some of our Members, and certainly will facilitate the transaction of the important business which this Congress must transact.

By taking advantage of this modern science, Members of this House can transact business with more dispatch and efficiency, in my own belief. This is not a broadcasting system. The voice reaches only the confines of this Chamber. I call attention to all Members who have just finished their campaigns and ask them to recall the comforts of the loudspeaker system which so many used in making it possible for their constituents to hear what they had to say. Most of you have long ago learned how to speak into the microphone of your loud-speaking systems. This system in this Chamber is no different. Microphones are placed at various stations—one at the Speaker's table, one in front of the reading clerk, two in the Well of the House, and one each at the desks of the majority and minority floor leaders. The voice comes through the gondola which you see directly over the Well. An operator is located in the gallery with a monitoring apparatus which he adjusts to suit the various voices which come into the various microphones. It is all very simple. The adjustment is so made as to make the voice natural, and all mechanical sound is so eliminated as to make it practically a natural voice. Some may decide not to use the microphone. That is a matter of choice. Those who believe their voices are loud enough so that they can be easily heard may or may not use these microphones. It is just a matter of whether a Member wants to be heard or not. It is no longer necessary to strain the throat muscles. All that is necessary is to speak in a normal tone of voice. The operator who will have charge of the set will soon learn the inflection, quality, volume, and tone of each voice and can so adjust this system that each word should be heard in the remotest corner of this Chamber. Certainly our distinguished Speaker need no longer feel that he will not be heard. Certainly his voice will be heard, and dignity and calmness will prevail in this House.

Roll calls will be more rapid, reading clerks will have less difficulty in the transmission of readings to Members; reporters will have less difficulty in hearing; newspapermen in the press gallery need no longer hold hands to ears, the better to hear, and visitors in galleries will go back home with more impressive thoughts and feelings that the United States House of Representatives really transacts business in orderly and serious manner.

There are great possibilities for this public-address system. You will recall that many times even the President of the United States when he speaks in this House cannot be heard in the back seats nor in the galleries. Members see the Chief Executive and other speakers but many times cannot hear them.

I have been asked if this speaking system can be so constructed as to connect it with other offices. To this the reply is "Yes." The possibilities are unlimited.

Because of my interest in this new system and because of my earnestness in aiding the Speaker and others who are endeavoring so hard to bring more dignity and decorum to our congressional sessions, I ask that all Members be patient and give this public-address system a real serious test.

I wish Members who are jealously protecting the historical architecture of this great Capitol Building to know that I am continuing my fight against making any changes in the building which would destroy any of that historic architecture. The installation of this voice-aid system will in no way destroy this history. I understand that in another body there will be another attempt to change the front of the Capitol Building, and I wish to go on record here again against such a change. I pledge myself to fight against this proposed change and urge other Members to join me in this fight.

Roosevelt to Frankfurter

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1939

LETTER FROM FORMER PRESIDENT THEODORE ROOSEVELT TO HON. FELIX FRANKFURTER

Mr. THOMAS of New Jersey. Mr. Speaker, in view of President Franklin D. Roosevelt's appointment of the Honorable Felix Frankfurter to the Supreme Court of the United States, I believe the following letter from the late former President, Theodore Roosevelt, to Felix Frankfurter, written in 1917, and as published in the Boston Herald, June 4, 1919, should be of great interest to the people of this Nation, so I take pleasure in quoting the following letter:

DECEMBER 19, 1917.

MY DEAR MR. FRANKFURTER: I thank you for your frank letter. I answer it at length because you have taken, and are taking, on behalf of the administration an attitude which seems to me to be fundamentally that of Trotsky and the other Bolsheviki leaders in Russia, an attitude which may be fraught with mischief to this country.

As for the conduct of the trial, it seems to me that Judge Dunne's statement, which I quoted in my published letter, covers it. I have not been able to find anyone who seriously questions Mr. Dunne's character, judicial fitness and ability, or standing. Moreover, it seems to me that your own letter makes it perfectly plain that the movement for the recall of Fickert was due primarily not in the least to any real or general feeling as to the alleged shortcomings on his part, but to what I can only call the Bolsheviki sentiment. The other accusations against him were mere camouflage. The assault was made upon him because he had attacked the murderous element, the dynamite and anarchy group of labor agitators. The movement against him was essentially similar to movements on behalf of the McNamaras and on behalf of Meyer and Haywood. Some of the correspondents who attacked me frankly stated that they were for Mooney and Billings just as they had been for the McNamaras, and for Meyer and Haywood. In view of Judge Dunne's statement it is perfectly clear that even if Judge Dunne is in error in his belief as to the trial being straight and proper, it was an error into which entirely honest men could fall.

But the question of granting a retrial is one thing. The question of the recall is entirely distinct. Even if a retrial were proper, this would not in the least justify a recall, any more than a single grave error on your part would justify your impeachment of President Wilson for appointing you. Fremont Older and the I. W. W. and the "direct action" anarchists and apologists for anarchy are never concerned for justice. They are concerned solely in seeing one kind of criminal escape justice, precisely as certain big-business men and certain corporation lawyers have in the past been concerned in seeing another kind of criminal escape justice. The guiding spirits in the movement for the recall of Fickert cared not a rap whether or not Mooney and Billings were guilty; all they were concerned with was seeing a rebuke administered to and an evil lesson taught all public officials who might take action against crimes of violence committed by anarchists in the name of some foul and violent "protest against social conditions." Murder is murder, and it is rather more evil when committed in the name of a professed social movement. It was no mere accident, it was the natural sequence of cause and effect that the agitation for the recall of Fickert because he fearlessly prosecuted the dynamiters (and, of course, no human

being doubts that Billings and Mooney were in some shape or other privy to the outrage) should have been accompanied by the dynamite outrage at the Governor's mansion. The reactionaries have in the past been a great menace to this Republic, but at this moment it is the I. W. W., the Germanized Socialists, the anarchists, the foolish creatures who always protest against the suppression of crime, the pacifists and the like, under the lead of the Hearsts and La Follettes, and Bergers and Hillquits, the Fremont Olders and Amos Pinchots and Rudolph Spreckels who are the really grave danger. These are the Bolsheviki of America, and the Bolsheviki are just as bad as the Romanoffs and are at the moment a greater menace to orderly freedom. Robespierre and Danton and Marat and Herbert were just as evil as the worst tyrants of the old regime, and from 1791 to 1794 they were the most dangerous enemies to liberty that the world contained. When you, as representing President Wilson, find yourself obliged to champion men of this stamp, you ought by unequivocal affirmative action to make it evident that you are sternly against their general and habitual line of conduct.

I have just received your report on the Bisbee deportation. One of the prominent leaders in that deportation was my old friend, Jack Greenway, who has just been commissioned a major in the Army by President Wilson. Your report is as thoroughly misleading a document as could be written on the subject. No official writing on behalf of the President is to be excused for failure to know, and clearly to set forth, that the I. W. W. is a criminal organization. To ignore the fact that a movement such as its members made into Bisbee is made with criminal intent is precisely as foolish as for a New York policeman to ignore the fact that when the Whyo gang assembles with guns and knives it is with criminal intent. The President is not to be excused if he ignores this fact, for, of course, he knows all about it. No human being in his senses doubts that the men deported from Bisbee were bent on destruction and murder. If the President, through you or anyone else, had any right to look into the matter, this very fact shows that he had been remiss in his clear duty to provide against the very grave danger in advance. When no efficient means are employed to guard honest, upright, and well-behaved citizens from the most brutal kind of lawlessness it is inevitable that these citizens shall try to protect themselves. That is as true when the President fails to do his duty about the I. W. W. as when the police fail to do their duty about gangs like the Whyo gang; and when either the President or the police, personally or by representative, rebuke the men who defended themselves from criminal assault, it is necessary sharply to point out that far heavier blame attaches to the authorities who fail to give the needed protection and to the investigators who fail to point out the criminal character of the anarchistic organization against which the decent citizens have taken action.

Here again you are engaged in excusing men precisely like the Bolsheviki in Russia, who are murderers and encouragers of murder, who are traitors to their allies, to democracy, and to civilization, as well as to the United States and whose acts are nevertheless apologized for on grounds, my dear Mr. Frankfurter, substantially like those which you allege. In times of danger nothing is more common and nothing more dangerous to the Republic than for men to avoid condemning the criminals who are really public enemies by making their entire assault on the shortcomings of the good citizens who have been the victims of opponents of the criminals. This was done not only by Danton and Robespierre, but by many of their ordinarily honest associates in connection with, for instance, the "September massacres." It is not the kind of thing I care to see well meaning men do in this country.

Sincerely yours,

THEODORE ROOSEVELT.

Life of Karl Stefan

EXTENSION OF REMARKS

OF

HON. CARL E. MAPES

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1939

RADIO PROGRAM EXTOLLING THE LIFE AND WORK OF HON. KARL STEFAN

Mr. MAPES. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following radio program extolling the life and work of Hon. KARL STEFAN:

Monday, December 19, 1938, was designated as "Karl Stefan Day" on radio station WJAG, Norfolk, marking the sixth anniversary of the beginning of the voice of the street program. Karl conducted the voice program and the noon news period. The latter was started in 1922 and Karl was its news caster for 12 years until he was elected to Congress. At 12:45 a Life of KARL STEFAN was broadcast in installments by the staff members of WJAG. This was compiled by Art Thomas, station manager. Data were obtained from WJAG and the Norfolk Daily News November 1, 1934, files.

I. KARL STEFAN AS A BOY AND YOUNG MAN

(Read by Art Thomas)

The first installment in the life of Congressman KARL STEFAN, our former chief announcer, covers the period of his boyhood and young manhood.

He is 54 years old. He was born March 1, 1884, on a farm near towns called Muelhausen (Mu-el-hou-zen) and Zebrakov, in what was then Bohemia, a part of Austria, later in Czechoslovakia. He came to Nebraska with his parents 52 years ago at the age of 2.

Karl's father was an artist. He was also an officer in the Austrian Army. When he died in Omaha he was buried with two medals which had been presented him by the late Emperor Franz Josef. He gave his son his name. Neither Karl nor his father had a middle name.

Karl's father fought against the Turks and was wounded in the arm by a poisoned bullet. Afterward, on the Danube River, Karl's father painted many of the pictures which hang in the old Scwartzenburg Castle in the mountains of Bohemia. In what is now Yugoslavia, Karl's father met Karl's mother and they settled on a farm in the Bohemian Mountains, where Karl was born.

Fifty-three years ago Karl's father decided he wanted to go to America. He didn't know just where he wanted to settle. So he took a map of the United States; hung it on a wall; walked back 10 paces, then closing his eyes and with his right hand outstretched, he walked toward the map and his finger touched Nebraska. So he and Karl's mother came direct to Nebraska. Karl was only 2 years old then. His father became the first settler of the Riverview Park district of Omaha and for many years a sign stood in front of the Stefan home reading, "The First Settler's Home." Karl's father was one of the community boosters which resulted in the building of Riverview Park. He painted murals and frescoes. This artistic ability skipped a generation. Karl's daughter was an artist before she married.

He attended the public schools of Omaha, going to what is now known as the Edward Rosewater School.

His first teacher was Miss Carrie Kumpf. Karl's mother wanted him to learn Bohemian and sent him to the Bohemian parochial schools. His father wanted him to learn German, and he sent him to the German parochial schools. For several months he attended German and Bohemian parochial schools.

Karl finished about the seventh grade in the public schools and the remainder of his education he received in the school of hard knocks and by self-education, night schools, and correspondence.

His religious education was obtained at the Park Forest Presbyterian Chapel. In 1910 he was confirmed in the Trinity Episcopal Church of Norfolk, the first church he ever joined, and in which he was a vestryman for many years.

Hard times forced Karl to leave school and go to work at the early age of 13. His first job was in a packing house. He also worked for the publicity department of the Trans-Mississippi Exposition and as a telegraph messenger boy, but continued going to school nights at the Y. M. C. A.

II. KARL STEFAN, THE TRAVELER

(Read by Russell Jensen, morning announcer)

He studied telegraphy and became one of the youngest and perhaps the fastest telegrapher in the country. He became a press telegrapher and copied some of the fastest wires of the Associated Press, Scripps-McCrae, the United Press, and other news-gathering organizations. In this capacity he studied journalism and became a newspaper writer. As a telegrapher and newspaper writer he traveled into every State of the Union, continually studying nights and during his spare time.

KARL STEFAN learned telegraph theory and became wire chief and relay chief for offices of the Western Union service. He worked as railroad operator and telegraphed for some of the prominent grain exchanges. He learned much about livestock prices by telegraphing at the South Omaha stockyards. Incidentally his brother now is the manager of that telegraph office at the stockyards. He was what was known in those days as a traveling telegrapher.

During the Philippine Insurrection Karl passed examinations as telegrapher for the Philippine constabulary and went to the Philippine Islands, where he became field telegrapher for Col. D. J. Baker in the campaign against the Filipino outlaw band headed by General Felizardo. He became closely connected with the Filipino Governor of Zambales Province and made many friends in the islands. His first newspaper work was on the Manila Times.

He studied navigation, and his gift for language helped him as interpreter. He wanted more education and after leaving the islands he made a trip around the world, working his way partly through the use of his languages. He was interpreter with tourist parties following the eruption of Mount Vesuvius and accompanied scientists to other volcanoes. He learned much about early wireless by frequenting the naval wireless station at Cavite, P. I. When Karl went to the Philippines again in 1935 with a congressional party he was met by scores of friends, both American and Filipino, who knew him so well there when he was a young man. Before leaving the islands the Philippine volunteer organization made him a colonel and the Spanish-American War post at Lincoln made him an honorary member in recognition of his services to various patriotic American organizations.

While in Europe he took a tramping trip through Bohemia and visited the house in which he was born, saw the birthplace of his father and mother, and interviewed many of Europe's statesmen.

He continued his free-lance writing and telegraphing and news writing when he returned from his travels. He worked in Omaha on the Bee, World-Herald, and News.

In Omaha in 1907 he married his school-day sweetheart, who is now Mrs. Stefan, and lived in Seattle 2 years as a telegrapher. They have two children, Ida Mae Askren, who was born in Omaha and who is a graduate of the Norfolk High School and Northwestern University, and who now is a commercial artist and lives with her husband and baby daughter in Chicago. One son, Dr. Karl Stefan, who is a medical doctor, was born in Norfolk, and who is a graduate of the University of Nebraska and now lives with his wife at Ridgefield, Wash.

In later life he toured Mexico, Central and South America, and Cuba.

III. KARL STEFAN, NEWSPAPERMAN AND RADIO ANNOUNCER

(Read by Don Huddle, afternoon announcer)

Karl came to Norfolk in 1909 as Associated Press telegrapher of the Norfolk Daily News. In those days, before teletypes, the news came by telegraph, and Karl read the copy from the wires and rewrote it for the paper. He later became city editor and was in that position when WJAG started in 1922 as the hobby of Gene Huse, owner of the News. During the World War he taught telegraphy for the Signal Corps. Karl was interested in radio and it was natural for him to be selected to prepare and broadcast the noon news period, which was the first one of its kind in the West. It was about that time he began to be called the "printer's devil."

Karl resigned from the News in 1924 to go into business for himself. He purchased a news and magazine distribution business and store. He also acted as correspondent for several news services and newspapers. He was a successful businessman. Although he left the News in 1924 he continued to act as noon news announcer for this radio station until he was elected to Congress in 1934.

For many years he did considerable free lance news writing and contributed to magazines specializing on stories of happenings on the farms in this district. He has always been a close and intimate friend of north Nebraska pioneers who gave him much assistance in his news writing of early north Nebraska days and history.

Karl originated the style of presentation of many of our daily features. The old cowbell welcome for new babies, a daily hospital report for friends and relatives back home, the radio family mythical table idea with so-called officials in the family such as father, mother, chicken eater, cripple girl, we-got-here-all-right club, and so on.

During his 12 years on the air Karl had many firsts to his credit. Besides being the first regular newscaster in the West, in October 1922 he pioneered in the reconstruction of world series' baseball broadcasts. He would take the news direct by dot and dash from a telegraph line and pass it on to the crowds gathered around receiving sets all over northeast Nebraska. That was before the days of play-by-play broadcasts direct from the ball parks. For years he conducted a telegraph school of the air. Karl also started the first regular daily "voice-of-the-street" broadcast in the West just 6 years ago today.

Today has experienced our first opportunity as a member of the radio station staff to hear Karl in the roles he created, both on the street and on the noonday news broadcast, and we understand better than ever why, after more than a few years away from the "mike," his prestige as a radio personality has continued undiminished.

IV. KARL STEFAN, THE CONGRESSMAN

(Read by Harold Kline, Sunday announcer)

Karl had never been in politics previous to 1924. He did not seek the office of Congressman. It sought him. We well remember the first letter received at the radio station suggesting he run for Congress. There seemed to be a general feeling sprung up through the district that Karl should run for Congress. So many of his friends appealed to him to do so that he finally agreed to make the race. The rest is history.

In 1934 he received over 72,000 votes and secured a plurality of about 20,000 votes.

Karl was reelected to Congress in 1936. He got over 81,000 votes, and had a 50,000 majority, one of the largest ever received by a Nebraska Congressman. His plurality on a percentage basis was one of the largest received by any Republican Congressman in the United States that year. He ran over 14,000 votes ahead of President Roosevelt in the same district.

This year he received over 78,000 votes, a plurality of almost 53,000 votes, and carried practically every precinct in his entire district.

His campaigns have always been very clean. He does not discuss partisan politics and pays no attention to the slurring remarks of opposition, and does not discuss his opponents.

While Congressman STEFAN is in Washington, he takes time off to write a weekly letter for the radio family, which we broadcast. Few listeners know how much time that takes and how busy a Congressman is, but Karl does it somehow, and listeners seem to appreciate it. One listener in Iowa, who likes these Washington letters, once wrote, "What became of the announcer you had with a peculiar brogue which I liked to listen to?"

To our Iowa listener we replied, "The announcer with the peculiar brogue you used to like to listen to is the same man who is writing the Washington letters which you now like to listen to."

Karl made friends in Congress very early. His most intimate friend became the late Joe Byrns, of Tennessee, who was Speaker of the House. From Byrns and many other older Members of the House, Karl quickly received instructions which made him a valuable Member to Members on both sides of the aisle. He conscientiously refrained from making speeches on the House floor which were tainted with party politics. When Joe Byrns died, Karl was one of the first Members to be requested to accompany the body of the Speaker to its last resting place in Nashville, Tenn. Incidentally, JOE BYRNS, JR., was elected last November from Nashville and will now represent the district which had been represented so many years in Congress by the distinguished late Speaker. Photographs of the late Speaker and his son are among the many photographs which adorn the offices of KARL STEFAN.

Speaking of photographs, Karl has in his possession autographed photographs of President Roosevelt, Speaker BANKHEAD, and many other distinguished statesmen with whom he has become very well acquainted in the past few years. Among these photographs is one of Vice President JACK GARNER, with whom Karl traveled to the Orient in 1935. Both men are very close friends and visit frequently during sessions.

KARL STEFAN has dedicated his legislative program to farming. He made it plain early in his announcements in Washington that good farming legislation and aid for agriculture would be the basis of his work in Congress. He became one of the organizers of the new popular Prairie States Committee of Congressmen, which is composed of about 75 or 80 Members of Congress from the farming States. He was a member of the committee which called on the President and worked out the farm-to-market road program which resulted in many millions of dollars being expended on farm or secondary roads. He introduced such measures as the feed and seed loan bill which demands that these loans be repaid "bushel for bushel, in kind." He appeared many times before various committees and made many speeches on the House floor, giving detailed information of conditions on the farms of the Third District, with the result that much attention was given to this farming section. Karl was placed on five important committees in the House—Education, Roads, Buildings and Grounds, Patents, and Insular Affairs. He is a member of the minority committee on committees and also a member of the National Republican Congressional Committee.

He has urged the combining of Army and Navy under one head for the purpose of economy, efficiency, and peace. He protested against the extravagance of an army in the Philippines. He is opposed to the patronage system.

V. KARL STEFAN THE MAN

(By Art Thomas, station manager)

It is fitting that in closing this series we say a few words about KARL STEFAN the man.

His voice is known to thousands who have never seen him. It is an unusual voice, one that is well understood, one with a friendly tone. Karl has always been a student of human nature, interested in people. He has lived in a house by the side of the road and been a friend of man.

Some men's voices and mannerisms conceal their real self. Karl's voice discloses his sincerity of purpose.

He is not of the dynamic type but of the diplomatic type who gets things done quietly and effectively. He is constantly being underestimated by his political opponents and even by some of his friends.

In our 7 years' association with Karl we have noted one outstanding characteristic. He is constantly being advised by people to do things in a certain way, and he does them in another and better way, which is usually conceded to be right by the person who thought it ought to be done differently.

In order to save Karl's time and our own we have had a "gentleman's agreement" with him for 7 years that we were friends and always would be until one notified the other that we would never have to wonder how one felt about the other, that we would each go about our respective tasks and not feel obliged to waste any time in back slapping.

We are often asked by people who know his voice to describe the man.

Karl is five feet eight and a half inches tall, weighs 160 pounds, has medium light-brown hair, blue eyes. He somewhat resembles photos of ex-President McKinley.

There are many more incidents we might relate if time permitted; we recall this one:

One of the most embarrassing incidents in the life of KARL STEFAN, of which he talks frequently, is the first time he was elected to Congress, and when some of his opponents put out the rumor that he was not a citizen of the United States. The Associated Press and United Press asked Karl about it, and he had a hard time finding his father's naturalization papers which made him a citizen. Lola Moore, of Norfolk, who was Karl's stenographer at that time, found the papers in Karl's lockbox hidden carefully under some old newspapers. The naturalization papers, yellow with age, told how his father took out his first papers as soon as he arrived in Nebraska about 52 years ago and how his second papers were taken out shortly afterward. That proved that Karl was a citizen ever since he was a baby. Karl took the papers back to Washington with him and had them in his hand when he took his first oath of office as a Congressman.

Although Karl has traveled into every State of the Union and visited nearly every country in the world, his closest friends know that he loves Nebraska, and especially north Nebraska, the best of all. When asked where he would settle for life if he had the chance, Karl always said "Nebraska." His little five-room home

on North Tenth Street is one of the oldest houses in town, and although he has had lots of chances to get a bigger and newer house Karl has always told friends that he wouldn't trade his five-room house for the best castle in the world.

The Congressman's wife has never appeared in the limelight, but she is a charming lady, a good mother, and grandmother (she doesn't look it), and has aided him greatly in his work. She is corresponding secretary of the Congressional Women's Club. Her maiden name was Ida Rosenbaum. She was born in Watertown, Wis., on the 4th of July, one of nine children of Mr. and Mrs. Frank J. Rosenbaum. They moved to Omaha in 1886 from Watertown, Wis. Mrs. Rosenbaum was born in Germany, and came to America at the age of 16. Both Mrs. Stefan's parents are dead. She takes great interest in the welfare of the many relatives on both sides of the house, and we know she is looking forward to a visit soon with their first grandchild Elizabeth, about 1½ years old.

As a parting recollection of our honor guest, and as an evidence of his characteristics, we very well recall when Karl suggested the voice program. We explained to him the technical difficulties and expense involved. He offered to conduct the program without any extra compensation from us, if we would furnish the time and equipment, to which we readily agreed. For 2 years he conducted the program and put in a lot of time on it, as a friendly gesture to the station and its listeners, all without financial reward. He even paid for the advertising of his own business, just as he has always paid for the time he used during political campaigns.

In behalf of the radio family, we wish Mr. and Mrs. Stefan a very Merry Christmas and a Happy New Year.

The New Deal Armament Program

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1939

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, ON FRIDAY, JANUARY 6, 1939

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over the National Broadcasting Co.'s red network on Friday evening, January 6, 1939:

I propose to confine my remarks this evening to the foreign policies set forth by President Roosevelt in his address to the Congress and wait until he sends in his specific recommendations on national defense to discuss that issue. It is essential in any proper discussion of our foreign policies that problems of national defense be in no way confused with picking out the aggressor nation or acting as a policeman for the morals of the world. National defense is strictly a matter of proper and adequate defense of our own territories, the protection of the rights of our citizens throughout the world, and to uphold the Monroe Doctrine. I am and have been in favor of adequate national defenses to carry out such purposes.

President Roosevelt's sensational attacks on the forms of government in other nations and the tirades of members of his Cabinet can only lead to disastrous consequences and war. As much as American citizens abhor racial and religious persecution and ruthless militarism, it is none of our business what form of government may exist in Soviet Russia, Fascist Italy, Imperial Japan, or Nazi Germany any more than it is their business what form of government exists in our own country. We have our own problems to solve in America without becoming involved in the rotten mess in Europe or in the eternal wars of both Europe and Asia.

The inflammatory and provocative message of the President to Congress and the world has unnecessarily alarmed the American people and created, together with the barrage of propaganda emanating from high New Deal officials, a war hysteria, dangerous to the peace of America and the world. The only logical conclusion to such speeches is another war fought overseas by American soldiers.

I shall never vote to join in any foreign wars without the consent of the American people, expressed in a Nation-wide referendum, unless we are attacked.

The fact is the United States was never safer from attack or invasion by any foreign power than today. We have the most powerful Navy we have ever had, and with appropriations already authorized it will be 50 percent larger than the Japanese Navy and three times the size of the German Navy.

All the totalitarian nations referred to by President Roosevelt are and will be for many years seriously involved in their own immediate spheres and haven't the faintest thought of making war on us or invading Latin America.

I do not propose to mince words on such an issue, affecting the life, liberty, and happiness of our people. The time has come to call a halt to the war mongers of the New Deal, backed by war profiteers, Communists, and hysterical internationalists, who want us to quarantine the world with American blood and money.

President Roosevelt, very properly, quoted from Abraham Lincoln (the first Republican President) in his message to Congress, but let me quote to you George Washington's advice to the American people in his Farewell Address, which applies with equal force today:

"Antipathy in one nation against another disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable, when accidental or trifling occasions of dispute occur. Hence, frequent collisions, obstinate, envenomed, and bloody contests. The nation, prompted by ill will and resentment, sometimes impels to war the government, contrary to the best calculations of policy * * * The peace often, sometimes perhaps the liberty, of nations has been the victim."

Listening to President Roosevelt's speech Wednesday, I concluded that the New Deal farm and economic program had collapsed to such an extent that the Chief Executive had no plan or constructive suggestion to restore confidence, recovery, and reemployment of American labor, except to spend more billions for armaments and destructive purposes. He evidently desires to whip up a frenzy of hate and war psychosis as a red herring to take the minds of our people off their own unsolved domestic problems. He visualizes hobgoblins and creates in the public mind a fear of foreign invasions that exist only in his own imagination.

Nothing more clearly demonstrates the collapse and failure of the New Deal than the fact that he has no more white rabbits with which to pull us out of the Government-made depression and provide jobs for the 12,000,000 unemployed, but instead produces a red, white, and blue rabbit of war hysteria, imminence of war, and billions of the taxpayers' money for armaments for aggression and not for national defense.

"Beware of false prophets, which come to you in sheeps' clothing."

President Roosevelt said in his message to Congress: "Once I prophesied that this generation of Americans had a rendezvous with destiny. That prophecy comes true." What is this rendezvous with destiny the President speaks of? Does it mean foreign entanglements, entrance into the League of Nations, collective security, military alliances, united front with the Communists, and a huge spending program for destructive purposes and war?

Does it mean more millions of conscripted American youth to fight and die in foreign lands? Does it mean the scrapping of our traditional foreign policies of neutrality, nonintervention, and peace in order to select and make war on aggressor nations? Does it mean the saving of democracies through war and Fascist methods, which may instead overwhelm and destroy our free institutions permanently?

In spite of the fact that the American people want peace and to be isolated from other peoples ancient blood feuds and wars, President Roosevelt recommends that the Congress give him power to determine the aggressor nation and to set up economic sanctions and reprisals, which means becoming directly involved in foreign entanglements and in wars all over the world. It is sheer humbug for Senator PITTMAN or anyone else to try to make out that sanctions against a first-class power will not involve us in war.

Historians have not yet determined what nation started the last World War, but President Roosevelt proposes that we discard our traditional policy of neutrality and peace, as proclaimed by George Washington and adhered to by every President since that time, and substitute collective security, military alliances, and sanctions against the aggressor nation, all of which mean bloody, ruinous, and costly war.

I do not believe that the Congress will scrap the fundamental principles of our traditional foreign policy of peace for one of war and making the whole world the potential slaughterhouse for the youth of America.

President Roosevelt, true to his devotion to internationalism and entrance into the League of Nations, recommended action by Congress that would practically put us into the League body, boots and breeches, and into a united front with the Communists.

Failure to solve the problems within our own country does not justify conjuring up a fictitious straw man of war.

President Roosevelt said to us in Congress, that "we learned from the past what not to do." Now the President proposes that we make the tragic mistakes that will inevitably force us into war throughout the world. He wants us to repeal the neutrality law, aimed to keep us out of foreign conflicts, which he has refused to enforce in spite of his constitutional oath of office to do. Now, under the guise of a war emergency, which exists only in his own mind—and for what other purposes, political or otherwise, I do not know, as I am not in his confidence—he wants the Congress to turn over to him its war-making powers, such as determining the aggressor nation.

Instead, the time has come for the Congress to take back some of the emergency powers granted to President Roosevelt and restore representative government in the United States. The time has come to stop all this hysterical talk of war, attacks on foreign governments, and use of economic sanctions and force to make the world safe for democracy.

We tried that course 20 years ago, and since then the nations of Europe have gone to the left and to the right into communism, fascism, and nazi-ism. What a travesty; what a mockery; and

what a tragedy. England and France have rent the veil of illusion that they are champions of democracy when they sacrificed Czechoslovakia, the only real democracy in Central Europe. Furthermore, both England and France have recognized the seizure of Abyssinia by Italy and of Austria and Czechoslovakia by Germany.

Are we to ally ourselves with the Communists, the deadly enemies of America's free institutions, in order to make the world safe for the Communists? The Communists have reversed their position so often since 1935, when they first alined themselves with the New Deal in a united front movement, that they meet themselves coming back.

It should be no surprise to any well-informed American that the Communists are now leading the Roosevelt parade for superarmaments and beating the war drums louder than any other group in the country. They are united in wanting us to make war on Japan, Germany, and Italy for the benefit of Soviet Russia.

I do not agree with the President when he said that dangers within are less to be feared than dangers from without. I know of no nation that has the faintest idea of attacking us, or could if they wanted to, whereas there are millions of Communists, Fascists, and Nazis within our country who seek to destroy our free institutions and overthrow our republican form of government.

The American people must remain cool, calm, and collected and divorce national defense from war hysteria. We must keep our feet on the ground and ponder well before we act. I do not favor any economic sanctions, reprisals, or trade embargoes against any foreign nation except on arms, ammunition, and implements of war. If I had my way I would not sell such arms or implements of war in time of peace as well as in war. Sanctions and embargoes are unneutral and hostile acts and create and perpetuate enmity and hatred and eventuate in war unless applied equally against all belligerent nations.

The extent to which fear and dread of war has spread throughout the Nation was recently demonstrated in New Jersey by the actual belief in an invasion by warriors from Mars. There is no more chance of Nazi soldiers attacking or invading America than there is of an attack from Mars.

Let us unite in putting out the flames of war propaganda and hysteria. We should uphold our own American institutions and system of government and thus set an example to the world of justice, peace, and democracy.

In conclusion, I urge all loyal American citizens not to compromise in any way within our own country with nazi-ism, fascism, or communism. There can be no compromise in free America with any of these imported and alien forms of dictatorship and despotism.

Before I am a Republican I am an American and my attitude on keeping us out of foreign wars would be precisely the same under any administration that tried to involve us in economic reprisals, sanctions, or war commitments.

Congressional Problems

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1939

RADIO ADDRESS OF HON. EDITH NOURSE ROGERS, OF MASSACHUSETTS, ON THURSDAY, JANUARY 5, 1939

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by me over the Columbia Broadcasting System on Thursday, January 5, 1939:

Good evening, ladies and gentlemen, one of the real factors contributing to make our Nation a unity today is a general knowledge and understanding of our national problems by the people as a whole. The opportunities of discussion from time to time presented by the Columbia Broadcasting System and other similar institutions are of great benefit to the people throughout the country. As a Representative in Congress I am very grateful to the Columbia Broadcasting System for this chance to join in the discussion of some of the important problems confronting the Seventy-sixth Congress.

As this new Congress begins to work the eyes of the whole Nation are focused on it. Throughout the country all of us are concerned regarding the legislation and laws to be enacted directly affecting our welfare. We want these laws to specifically deal with the problems that are to be solved without violating our Constitution. We do not want any legislation that will interfere in any way with our rights and privileges as free men and women. The Nation wants strong, effective, constructive legislation, but at the same time our people want to act and think freely and independently. In all of our activities we want to be certain we are going forward. It is in this way of meeting our problems, of advancing toward a larger, fuller, and more independent life, that as a Member of Congress I talk over with you our affairs this afternoon.

The problems which must be solved by this new Seventy-sixth Congress have to do with conditions both within and without the country. Regardless of this division, however, they are closely related. Because of this relationship it would be inefficient and ineffective to solve only part of the problems. All of them must be constructively solved.

Looking over our domestic condition, the most important problem confronting us today is the same one we faced 8 years ago, namely, unemployment. There are over 12,000,000 workers without jobs in our country. Many of these men and women have families dependent on them, so that it can be conservatively said that one-third of the Nation is still without the means of an independent living. This condition cannot and must not continue. Since methods designed to correct it in the past have completely failed, it is necessary for us to attack the problem with new and different methods. I think you will agree with me that if work could be provided for our unemployed men and women at decent wages and decent hours and working conditions our country would soon enjoy prosperity again. Many of our apparent problems of today would then disappear. Prosperity, to me, means jobs—jobs for these millions of unemployed. I do not mean any old job or a temporary job, but a job that is steady, that a worker and his family can depend on—a job so necessary in the economic scheme of things that a worker will be interested—interested in doing his best. Prosperity to me means more. It means a contented and happy people, with sufficient purchasing power to obtain not only the necessities of life but a few of the so-called luxuries. It means a people sufficiently grateful to the country providing such opportunities that they will fight to protect it within from the devastating propaganda of cowards, anxious to take all the benefits of a free country yet wanting to destroy it on the shoals of totalitarianism and dictatorship. Prosperity means a people so grateful for their advantages that they will give all—life itself—to protect the country of their opportunities from the invasion of any enemy.

How can jobs be provided for this great number of unemployed? That is the burning question of the hour, just as it has been for the last 8 years. In regard to the solution of this problem, I have a few suggestions to present to you for your considered judgment that I believe are sound and progressive.

First. Business and industry must be assured that the Government is not going to control but rather cooperate and assist in every way possible for its improvement and successful operation. Government should aid in every way possible to discover new inventions, new products, new methods, and new ideas in the industrial process. Government should become a help, not a hindrance.

Second. Business and industry should reappraise its own activities and processes to determine whether or not it is honestly giving a fair deal to the public. Unreasonable prices for unreasonable products is a cause for a lack of purchasing power. Quality merchandise again should be obtainable at a fair price. Treat the public to a real bargain occasionally. Both will benefit by it.

Third. Just as the Securities and Exchange laws protect the people from dishonest investments and shysters with unsound money-making claims and get-rich-quick schemes, there should be laws enacted to protect the people from dishonesty in business, the misrepresentation of product, overchanging, and gyp artists in business not to serve the public but to actually steal the people's money. Such laws would establish again the confidence of the public in business in general.

Fourth. Minimum wages for all classes of work, high enough to afford a worker to live properly, must be established throughout the country. For these classes of work lower wages cannot be paid. The minimum should be the same everywhere. Higher wages may be paid, depending on the skill and efficiency of the worker. Maximum hours must be set up in order to allow the worker time for relaxation and pleasure. The wages and hours bill enacted by the last Congress is a big step in the right direction. I supported this bill, believing it could be amended and improved. This must be done.

Fifth. Small industries and small business must be protected from unfair competition of large, more powerful institutions.

Sixth. Government help must be made possible for all worthy industries and business institutions which are unable to obtain private credit.

Seventh. Credit should be made easier to obtain by a revision of the national banking laws, with a Government insurance plan set up to protect national banks from losses. The vast amount of frozen funds in our banks must be made available for the development of our industries, rather than loaned to foreign countries to be used for the development of their industries and for their rearmament plans. We will not permit our money to be used to finance armaments of countries opposed to our system of government.

Eighth. Industries in the United States competing with foreign concerns paying slave wages must be protected by law. This protection is not possible under the Reciprocal Trade Act.

Ninth No State should be permitted to steal another State's industries by offering cheaper labor, lower operating costs, and free taxes.

Tenth. An exhaustive study of our markets by experts should be commenced immediately in order to determine the best methods of facilitating and increasing consumption of our products. Wherever the Government can assist and cooperate, it should do so. Every

effort should be made to merge the seasonal trend into a constant flow of consumption goods. To do so would aid to make employment in certain industries steady rather than seasonal.

These suggestions are roughly stated. If they can be utilized, I believe the result would be a large increase in our business and industrial activities. This increase would require a large amount of employment, reducing unemployment to a minimum.

As I previously mentioned, our industries manufacturing products that directly compete with the products of foreign concerns, working long hours and paying slave wages, must be protected by law. This is necessary if we are to maintain a decent standard of living for our workers. Although the reciprocal trade treaties negotiated completely by the Department of State have some merit, they do a very devastating act when they force American workers to compete with the cheap living conditions of the slave labor of foreign industries. Furthermore, these treaties force the emphasis of competition on cheap products, in many cases so lacking in quality they are practically valueless. Because of this unfairness to American workers their emphasis toward a cheaper standard of living; and because they violate the treaty clause of the Constitution I have introduced a bill in this Congress calling for the repeal of the Reciprocal Trade Agreement Act. I believe the people should have a fair forum in regard to treaties with other countries. The Constitution made that forum the United States Senate by providing that all treaties between the United States and other countries must be ratified by the Senate. I demand that that power be returned to the Senate from the executive branch of our Government.

With employment taking place in business and industry there would be a great decline in the number of our people obliged to work for the W. P. A. Until, however, the time arrives when private industry again is able to reemploy our workers the W. P. A. must and will be continued. One of the problems this new Congress faces here is the removing of politics from W. P. A. activities as well as all Government relief agencies. Every person honestly requiring the service of any Government agency should receive that service regardless of politics and without any politics entering into the question at all. Politics must be removed from these agencies.

There are other large and serious problems of a domestic nature this Congress must consider. I haven't the time to discuss them in detail. The Social Security Act must be amended to make it more beneficial to the people.

Largely due to the economic upheaval caused by the war and changes occurring during the depression years, men and women have found it impossible to gain employment if they are over 60 years of age. Many have lost their savings and property. This new Congress faces the problem of working out some plan that will be helpful and at the same time feasible for the country as a whole.

Some time during the last few years many of you have either experienced or witnessed a terrible accident on the highway. During the last decade nearly a half million of our citizens were killed in highway accidents. This is a problem of national concern. This new Congress faces the task of working out some method that will aid in the prevention of this terrible toll of the highways.

Then there is the necessity of medical aid and hospitalization for the needy. This problem is closely associated with the painful, slow-killing disease of cancer which science knows so little about. Almost 600,000 men and women have cancer in America today. Approximately 150,000 die each year. This presents a problem of grave concern and is national in scope. This new Congress must give consideration to methods of aiding in the solving and prevention of this horrible disease. It is the greatest public-health problem before us today.

With your permission I desire to speak primarily to the people in my own section of New England. (As you know, I am a Representative from Massachusetts.) As a result of the hurricane there is a real menace to the lives and property of everybody in that area. I refer to the fire hazard caused by the fallen trees in the numerous wooded sections of Massachusetts and New England. The United States Forest Service is well aware of the danger, for on December 21 the Acting Chief of the Forest Service wrote to me—and I quote from his letter: "Fire hazard conditions in New England, as they will exist next spring, cannot be exaggerated. To anyone who has been in the disaster area, the thought of the possibilities of a disaster even greater than the hurricane is appalling. If measures are not taken and fires are not adequately handled during the coming spring fire season, I predict there will be loss of life and property throughout the path of this hurricane equal and even beyond that done by the storm itself. I feel a tremendous responsibility in all these undertakings and feel that all influential and thinking people should be apprised of the exact situation and then prepare to prevent these things from happening."

This peril to our people and their homes is evident to everybody who has seen the wreckage and havoc caused by the storm. It is an emergency that cannot be handled by ordinary means. The experts have estimated that it would require a force of 39,000 men to clear the forests and place them in a safe condition. The W. P. A. has been unable to furnish anywhere near the required number of men. Not only is there insufficient manpower, but funds for the work are not available.

On the opening day of Congress I introduced a bill calling for the appropriation of sufficient money to carry out this work. I shall do everything in my power to have that bill become law, and at once. It is of vital pressing importance, and I ask not only the support of my colleagues in Congress but of all of you who are listening, in this effort to provide relief from a very real danger.

Besides this emergency legislation, Massachusetts and its Representatives are urging that this Congress take definite steps toward a system of flood control. My congressional district has suffered repeatedly from the flood waters of the Merrimack River. Surveys have been made by the United States Army engineers and recommendations for flood control and prevention have been made. Congress must act upon these recommendations and provide the funds for the work. Each year the people living along the banks of the river dread the rising of the waters which have forced them so often to leave their homes and to lose their belongings. It is a problem that must be faced.

Turning from the domestic scene to foreign affairs, we find some very important problems this Congress must consider. First of all our neutrality legislation must be amended to make it practically neutral, or it must be repealed completely. As it now stands it is a measure possessing greater chances of involving us in war than in keeping us at peace.

Then there is the great problem of our national defense. Today, in this world of force and aggression, power seems to be the only quality that demands respect. All of you know about the invasion of Austria and the reducing of this proud 900-year independent country to a vassal state. All of you are familiar with Munich and its immediate results. All of us realize that there was no real peace obtained from the Munich conference. Here in America we possess a great country and the finest system of government ever conceived by man. We must protect that which we have. We must maintain our responsibility to the Western Hemisphere. From this policy there will be no turning, regardless of the party in power. In order that we may defend and command proper respect we must be adequately prepared. Adequate preparation involves complete units of defense on land, sea, and air on the Pacific and the Atlantic coasts in order to reduce the importance of the Panama Canal from a naval point of view. Our Pacific defenses must be adequate for the requirements there, and our Atlantic defenses must be adequate for protection there.

Ladies and gentlemen, I am a member of the great Foreign Affairs Committee of the House of Representatives. I do not favor war in any sense unless it is forced on us to defend that which we have. I know the horror and tragedy of war. I was overseas in the last one. May I remind you that at 2:30 a. m. on Monday, September 26, 1918, 2,700 guns opened fire in the greatest battle Americans ever fought—the Meuse-Argonne offensive. The barrage flashes as a million American boys flung forward across the terrible terrain in an attack that broke the Hindenburg line and continued on until the armistice. We pulled the chestnuts out of the fire for European democracies then. Today we are concerned only with our own democracy and those of the Western Hemisphere.

It is my work to try to prevent any more American boys from fighting on foreign soil again. I know you will agree with me that we must strive for peace always. To insure that peace, however, we must be prepared to adequately defend our country.

A New Antilynching Bill Presenting a Reasonable Plan on Which Both North and South Should Agree

---

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1939

Mr. LUDLOW. Mr. Speaker, there is only one way to cope effectively with the lynching evil and that is to impose swift, certain, and summary punishment on those guilty of the crime of lynching. The person who feels an impulse to join in this hideous crime will think twice if he knows that if caught he will do a long term at hard labor or stretch at the end of a rope.

I wish to suggest a new approach to this subject which, I believe, would go a long way toward curbing this despicable crime. It is a reasonable plan. It contains no trace of sectional discrimination or sectional animosity. It is a plan on which both North and South should agree.

Lynching will never be stopped until the law is made more terrifying than it now is, which is another way of saying that there will never be any adequate or effective control of this atrocious crime until Congress enacts a Federal antilynching law.

As long as the lawless element knows that prosecution under State laws is a farce, to be flouted with impunity, there will be no real curb on lynchers. But if the lawless element realizes that as soon as it commits this crime it will have J. Edgar Hoover on its trail and a bunch of expert G-men

running down every guilty participant, we may expect a cooling off of lynching ardor, and a probability that lynching will drop from the top of the list of abominable crimes to near the least in frequency and importance.

How then can J. Edgar Hoover and the Bureau of Investigation be brought into the picture? Attorney General Cummings, Mr. Hoover's chief, is inclined to think that Hoover and his Bureau cannot figure in the prosecution of lynchers. I asked why that is so, when they figure with tremendous effect in the punishment of kidnapers.

The difference, I learned, was that lynching is regarded as a local crime, the same as murder, while kidnaping is, or may be, an interstate crime. Theoretically, one is intrastate while the other is interstate. The fact is that Federal jurisdiction over kidnaping often hangs by an invisible thread. In many instances the interstate feature is lacking or is little more than a figment of the imagination, and yet, as far as anyone knows, there is never a crime of kidnaping that does not bring the Bureau of Investigation into immediate action, with very wholesome results.

If the same federal activity can be directed against lynchers we may hope for a cessation of the lynching evil. It was a very wise idea that brought the Federal Bureau of Investigation into action against kidnapers and it will be an equally wise idea that will turn its attention to lynchers. I have introduced a bill which proposes to attack lynching from this new angle of getting the Federal Bureau of Investigation interested. It is as follows:

Be it enacted, etc., That (a) it shall be unlawful for any person to move or travel from one State into another State for the purpose of aiding or abetting the lynching of any person.

(b) It shall be unlawful for any person to send by telephone, telegraph, or radio, or through the mails, any communication which urges or invites any person to aid or abet the lynching of any person.

(c) As used in this section the term "States" means a State, Alaska, Hawaii, Puerto Rico, and the District of Columbia.

(d) Violations of this section shall be punished by imprisonment for not less than 5 years.

SEC. 2. Whenever a lynching occurs in any State, the Federal Bureau of Investigation is authorized and directed to investigate the facts in connection with such lynching to determine whether, in connection with or in the course of such lynching, any crime against the United States has been committed.

Nowadays whenever a lynching occurs the Federal Bureau of Investigation takes no notice of it whatever. This seems strange when we realize the revolting, degrading nature of the crime and when we remember that the Bureau of Investigation is the Nation's strongest arm dealing with the criminal element. But let my bill pass and the Bureau of Investigation will be on the spot, wherever a lynching is committed. Furthermore, the knowledge that it will be on the spot will be a powerful deterrent to prevent lynching from occurring for all criminals have a genuine fear of Hoover and his Bureau.

I cannot but feel that my bill approaches the problem in a more sane and sensible way than the legislation that has been urged before Congress in recent years. I supported that legislation because I believed a start should be made, but always with a feeling that it was in a considerable degree impractical and unjust. Both the Gavagan bill as it passed the House and the antilynching bill as reported to the Senate proposed to lay a monetary penalty up to $10,000 against the county where a lynching occurs. In any county where a lynching is committed perhaps only a small fraction of 1 percent of the people are guilty, the remaining 99 and a fraction percent being wholly innocent. It is manifestly unjust to penalize such a large group of people who are as innocent as a newborn babe. What it amounts to, in the final analysis, is that the innocent are punished and the guilty escape, because, as a general rule, lynchers are irresponsible riffraff who do not pay taxes and who therefore would not have to pay any part of the fine.

It certainly is a strange principle of law that the innocent should be punished and the guilty should go scot free. That is not the way, in my opinion, to uproot the crime of lynching. The way to uproot it is to impose a punishment on the guilty that will be swift and tough, to make certain that those who are guilty are made to feel the lash of justice, and to cause all others to realize that it does not pay to go up against the Federal buzz saw. The bill I propose would remove these antilynching cases automatically from the communities, where local sympathy is too often a handicap to justice, to the Federal courts, where the trial will be according to the law and the evidence.

I doubt whether a bill that inflicts punishment on a whole county, 99$\frac{9}{10}$ percent of which is innocent, will ever pass Congress. Southern Members of Congress will never permit such a bill to go through. I believe that my bill, which limits the punitive operations of the law to the guilty but provides a way to inflict swift punishment on those who ought to be punished, can be passed by a majority composed of Members from the South as well as the North. Lynching is not entirely a sectional crime. The worst lynching I ever have known occurred in Indiana and the victims were whites. As I understand the attitude of the South, it does not object so much to punishment of the guilty as it does to the humiliation of the indictment and punishment of entire counties for crimes committed by a few lawless persons. As it appears that this is a subject which Congress must sooner or later deal with, I commend my bill to Members from both North and South.

CORRESPONDENCE WITH DEPARTMENT OF JUSTICE

For further enlightenment, I present herewith correspondence that has passed between the Attorney General and myself, as follows:

JULY 15, 1938.

Hon. HOMER S. CUMMINGS,
Attorney General, Department of Justice, Washington, D. C.

DEAR MR. CUMMINGS: I am writing to suggest that you initiate at once a study of the horrible crime of lynching, which has again broken out with virulence in two States of the Union, with a view especially to drafting and having ready for presentation to Congress when it reconvenes in January a plan of legislation to suppress this awful crime in the future.

Put some of the best legal minds of your Department on this work, and if you select a committee to make the study, which I think would be a practicable method of procedure, by all means appoint J. Edgar Hoover on that committee. Indeed, Mr. Hoover would be a very good selection for chairman of the committee, in my opinion.

A plan of governmental campaign against lynching similar to the one which proved so effective against kidnaping would soon erect a powerful deterrent against mob violence. If the Government will exercise the same foresight, initiative, vigor, and intelligence in dealing with lynching it has exercised in dealing with kidnaping, the problem will be near solution. It is true that kidnaping has not entirely ceased as a result of the law proposed by your Department, but means have been provided to bring kidnapers to swift and summary justice and the evil has been measurably abated. Surely lynching is no less terrible and repulsive a crime than kidnaping and no less deserving of governmental attention.

It could hardly be said that any kidnaping crime could be more abhorrent and more destructive of the peace and dignity of the United States than the crime which took place, for instance, at Rolling Fork, Miss., on July 2, when Tom Green, 48-year-old Negro, was shot, tied to an automobile, and dragged through the streets, and then burned, or the similar mob outrage committed at Arabi, Ga., on July 9, when John Dukes, a 60-year-old Negro, was burned to death as he was in the throes of dying from bullet wounds.

Such revolting crimes are enough to chill the marrow of every right-thinking citizen and to bring a crying demand that the Government, which is entering into so many far-flung activities for social advancement, shall make a study of the unspeakable crime of lynching, with a view to devising some effective measure to suppress that major crime. You are the official best qualified to direct that study, and the time to undertake it is now, so that Congress, when it reconvenes in January, may have before it the concrete results of such study in the form of an antilynching bill that will do the work. With the Government's prestige back of such a bill, just as it was back of the antikidnaping bill, the problem of suppressing lynching will be tackled in a way that will promise real results. The Gavagan antilynching bill, which we passed through the House at the last session, may not be the entire solution of the lynching problem. It may not be even the right solution, though I believe it is a step in the right direction. Every lynching is a blot on the Nation and a crime against America. It is, therefore, a problem for the Government to study, to try to find the remedy, and especially for your Department, which is dedicated to the maintenance of law and order.

I respectfully submit these thoughts for your careful and serious consideration and I would appreciate having your reaction to them.

Very sincerely yours,

LOUIS LUDLOW.

JULY 22, 1938.

Hon. LOUIS LUDLOW,
House of Representatives, Washington, D. C.

MY DEAR MR. CONGRESSMAN: This acknowledges your letter of July 15. What you say about lynching is entirely warranted. I view the

crime with loathing and would welcome any feasible method of dealing with it.

Lynching is murder however you look at it. In almost every instance it is, like any other murder, entirely local, and has no interstate aspects whatsoever. The kidnaping statute to which you refer is, of course, based upon the existence of an interstate offense, viz, the transportation of a kidnaped person in interstate commerce. Any comparison between interstate kidnaping and intrastate murder is apt to be misleading.

The subject of lynching has been so long under consideration by Congress and eminent and learned members of the Senate and the House have so thoroughly debated it and so well understand its legal problems and its social implications that I feel it would be presumptuous on my part to volunteer advice as to what course Congress should pursue.

Such studies as we have made in the Department of Justice with reference to the legal problems involved are now, as they have heretofore been, available to any appropriate congressional committee having the matter in charge. As I view it, the responsibility, so far as Federal legislation is concerned, is primarily and unmistakably upon Congress.

Upon reflection I am sure you will agree with me that the only appropriate course for the Department of Justice, under the circumstances, is to be as cooperative as possible in connection with the problems of law involved, leaving the ultimate conclusion both as to the form of a proposed statute and the policy to be pursued entirely to Congress.

Very sincerely yours,

HOMER S. CUMMINGS,
Attorney General.

AUGUST 1, 1938.

Hon. HOMER S. CUMMINGS,
Attorney General of the United States,
Washington, D. C.

DEAR MR. CUMMINGS: There will never be adequate or effective control of the atrocious crime of lynching until Congress enacts a Federal antilynching law.

That, in brief, is my answer, respectfully submitted, to your courteous letter of July 22, for which I wish to express my thanks and appreciation.

So with all the earnestness I can command I renew my suggestion to you and J. Edgar Hoover and others of your departmental personnel, who are skilled in dealing with crime, that you make a summer recess study of the crime of lynching with a view to laying a definite plan for a Federal antilynching law before Congress when it reconvenes in January.

This, as I conceive it, would be in entire harmony with the administration's social program. A large majority, in fact almost all of the acts conducive to social betterment which Congress has passed in recent years, have been drafted in the executive department. For instance, in the Seventy-second and Seventy-third Congresses, 77 major measures were enacted, and of these only 18 originated in Congress and 59 in the executive department. So there would be no violation of precedents, and certainly there would be nothing indelicate or improper if your department would draft and send to Congress a proposal for a new Federal law to deal adequately with the terrible evil of lynching, which presents a social problem of first magnitude.

With all due respect for your great mastery of the law, I doubt whether your definition of lynching, in which you place that crime in the same category as an ordinary murder, is an accurate description of the nature and quality of the crime of lynching. A murder is a local crime, properly punishable by the laws of the State. A lynching is more than that. A lynching, whether it occurs in Indiana or in Mississippi (and the worse lynching I ever knew occurred in Indiana), is an ugly, diabolical crime against the Nation. A lynching is a mass insurrection against law and order and therefore a violation of the Constitution under which the Federal Government was ordained and created, among other things, "to insure domestic tranquillity."

For your consideration, and in order that you may be offered something concrete as a basis of a study of this problem, I propose a draft of a Federal antilynching law as follows:

"A bill to make criminal certain acts in connection with lynching, and to provide for investigations of crimes in connection with lynchings

"*Be it enacted, etc.*, That (a) it shall be unlawful for any person to move or travel from one State into another State for the purpose of aiding or abetting the lynching of any person.

"(b) It shall be unlawful for any person to send by telephone, telegraph, or radio, or through the mails, any communication which urges or invites any person to aid or abet the lynching of any person.

"(c) As used in this section the term 'State' means a State, Alaska, Hawaii, Puerto Rico, and the District of Columbia.

"(d) Violations of this section shall be punished by imprisonment for not less than 5 years.

"SEC. 2. Whenever a lynching occurs in any State, the Federal Bureau of Investigation is authorized and directed to investigate the facts in connection with such lynching to determine whether, in connection with or in the course of such lynching, any crime against the United States has been committed."

There are almost innumerable ways in which a Federal question may enter into a lynching, thus affording a Federal jurisdiction of the subject. I am advised that a lynching occurred in Georgia when nearly all of the participants came from Alabama and Florida, crossing State lines to commit the crime. Certainly a Federal question was presented there. Lynching of an engineer on an interstate railroad would present a Federal question. In one case which I have in mind the victim was kidnaped and hurried across a State line and lynched. There is the Federal element again. If a victim is taken away from the custody of a Federal officer and lynched, a Federal question would enter, and the same question would arise if the victim is any one of an innumerable number of Federal officers, such as an internal revenue agent, a customs guard, an immigration inspector, et al., or if the lynchers drive a stolen automobile across State lines.

Under the bill as I have drafted it the Bureau of Investigation of your Department would investigate every lynching, wherever it may occur, to determine whether a Federal question is involved. This of itself would be a tremendous deterrent force to stop lynching, just as it has been in suppressing kidnaping. The name of the Federal Bureau of Investigation is feared by criminals everywhere, and if J. Edgar Hoover is given a chance he will add to that Bureau's distinguished achievements by quelling lynching with the same efficiency he has displayed in fighting other crimes.

I believe the bill I propose, roughly outlined above, would pass Congress and thus put an end to the bitter fight over antilynching legislation. I have word from some persons who speak the sentiment of the South that they would agree to this legislation, and therefore I respectfully offer it as a compromise suggestion. As I interpret the sentiment of southern leaders, they are not opposed to penalizing those who actually commit the crime, but they do protest the injustice of penalizing the entire county where a lynching occurs, as proposed in the antilynching bills of the last Congress. They point out that 99 $\frac{8}{10}$ of the people of a county are usually innocent of any connection with the crime, and to impose a monetary penalty on a county usually means that only the innocent would suffer, because the riffraff that commit a lynching pay no taxes.

The purpose of a wisely conceived antilynching law would be to inflict swift, sure, and summary punishment on the guilty. We should not aim nor desire to penalize a great number of innocent people.

I believe that a bill such as I propose would please instead of offend the sentiment of thinking people, South as well as North, who know that the subject of lynching is one which sooner or later must be dealt with federally. I believe, furthermore, that the legislation I propose is constitutional in every phase and detail.

For reasons I have stated I ask you to give this proposal the serious attention of your splendid mental and legal faculties, that you consult J. Edgar Hoover and others in your Department who are familiar with crime prevention, and that a careful study of this problem be made by you and your associates to the end of formulating a definite program for the enactment of a Federal antilynching law at the next session of Congress.

Very sincerely yours,

LOUIS LUDLOW.

AUGUST 9, 1938.

Hon. LOUIS LUDLOW,
House of Representatives, Washington, D. C.

MY DEAR MR. CONGRESSMAN: This acknowledges your letter of August 1, in which you request that a study be made of the crime of lynching with a view to laying a definite plan for a Federal antilynching law before the Congress when it convenes in January.

We note your suggestion that much of the legislation which the Congress has enacted in recent years has been drafted in the executive departments, and that therefore there would be no violation of precedents if the Department of Justice were to draft and send to the Congress a proposal for a Federal antilynching act. In this connection may I call your attention to the following statements made by the Attorney General in his letter to you of July 22, 1938:

"The subject of lynching has been so long under consideration by the Congress, and eminent and learned Members of the Senate and the House have so thoroughly debated it and so well understand its legal problems and its social implications that I feel it would be presumptuous on my part to volunteer advice as to what course Congress should pursue.

"Such studies as we have made in the Department of Justice with reference to the legal problems involved are now, as they have heretofore been, available to any appropriate congressional committee having the matter in charge. As I view it, the responsibility, so far as Federal legislation is concerned, is primarily and unmistakably upon Congress."

Section (a) of the specific bill suggested by you in your letter relates only to those participants in a lynching who have occasion to cross a State line. This provision would probably affect merely a small percentage of lynchings—only those which take place near a State boundary.

Section (b) of your bill would affect sending messages by telephone, telegraph, radio, or mail.

We also note your suggestion that if the victim is taken away from the custody of a Federal officer and lynched, a Federal question would enter. There is already, however, Federal legislation on the subject, since it is made a criminal offense knowingly or willfully to obstruct, resist, or oppose any officer of the United States in serving or attempting to serve or execute any process or warrant (U. S. C., title 18, sec. 240). If the victim is himself a Fed-

eral law-enforcement officer, the perpetrators of the murder are guilty of a Federal offense (U. S. C., title 18, sec. 253). If the lynchers drive a stolen automobile across State lines, knowing such vehicle to have been stolen, they may be prosecuted under the National Motor Vehicle Theft Act. Consequently these aspects of the subject which you specifically mention are now covered by Federal statutes.

We wish to thank you for the complimentary references contained in your letter to the work of the Department of Justice, and to express our appreciation of the support that you have always extended to it.

Sincerely yours,

JOSEPH B. KEENAN,
Acting Attorney General.

Address by the President

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 10, 1939

ADDRESS BY THE PRESIDENT AT THE UNIVERSITY OF NORTH CAROLINA, CHAPEL HILL, N. C., DECEMBER 5, 1938

Mr. REYNOLDS. Mr. President, I ask permission to have printed in the CONGRESSIONAL RECORD the address delivered by the President at the University of North Carolina, Chapel Hill, N. C., on December 5, 1938.

There being no objection, the address was ordered to be printed in the RECORD as follows:

The late Justice Cardozo, of the Supreme Court, wrote a few years ago:

"We live in a world of change. If a body of law were in existence adequate for the civilization of today, it could not meet the demands of tomorrow. Society is inconstant. So long as it is inconstant * * * there can be no constancy in law. * * * Law defines a relation not always between fixed points, but often between points of varying position. * * * There is change whether we will it or not."

It is recognition of this philosophy that has made the University of North Carolina representative of liberal teaching. And it is my recognition of your recognition of that philosophy that brings me so willingly to Chapel Hill today.

It is a far cry from the days of my first visit to the university, nearly a quarter of a century ago. I came then because my old chief—that great North Carolina liberal, Josephus Daniels—told me I should see for myself a great institution of learning which was thinking and acting in terms of today and tomorrow and not in the tradition of yesterday.

In those days the leadership of the Nation was in the hands of a great President who was seeking to recover for our social system ground which had been lost under his conservative predecessor, and to restore something of the fighting liberal spirit which the Nation had gained under Theodore Roosevelt. It seemed one of our national tragedies that just when Woodrow Wilson was beginning to accomplish definite improvements in the living standards of America, the World War not only interrupted his course, but laid the foundation for 12 years of retrogression. I say this advisedly, because it is not progress, but the reverse, when a nation goes through the madness of the twenties, piling up paper profits, hatching all manner of speculations, and coming inevitably to the day when the bubble bursts.

It is only the unthinking liberals in this world who see nothing but tragedy in the slowing up or temporary stopping of liberal progress.

It is only the unthinking conservatives who rejoice when a social or economic reform fails to be 100 percent successful.

It is only the headline mentality that exaggerates or distorts the true objectives of those in this Nation, whether they be the president of the University of North Carolina or the President of the United States, who, with Mr. Justice Cardozo, admit the fact of change and seek to guide change into the right channels to the greater glory of God and the greater good of mankind.

You undergraduates who see me for the first time have read your newspapers and heard on the air that I am, at the very least, an ogre—a consorter with Communists, a destroyer of the rich, a breaker of our ancient traditions. You think of me perhaps as the inventor of the economic royalist, of the wicked utilities, of the money changers of the temple. You have heard for 6 years that I was about to plunge the Nation into war; that you and your little brothers would be sent to the bloody fields of battle in Europe; that I was driving the Nation into bankruptcy, and that I breakfasted every morning on a dish of "grilled millionaire."

Actually I am an exceedingly mild-mannered person—a practitioner of peace, both domestic and foreign, a believer in the capitalistic system, and for my breakfast a devotee of scrambled eggs.

You have read that as a result of balloting last November, the liberal forces in the United States are on their way to the cemetery—yet I ask you to remember that liberal forces in the United States have often been killed and buried—with the inevitable result that in short order they have come to life again with more strength than they had before.

It is also true that other men in public life have protested against certain forms of economic control and that epithets far stronger than any I have used have been employed even by Presidents of the United States. Those of us who knew Woodrow Wilson and Theodore Roosevelt and Grover Cleveland could hardly call them mollycoddles.

I was reading a letter of Theodore Roosevelt the other day, written to a friend in the spring of 1908, and it will, I think, interest and amuse you if I quote from it. He was writing to a man who was fighting for social and political decency on the Pacific coast. He said:

"Now and then you must feel downhearted when you see men guilty of the most atrocious crimes who, from some cause or other, succeed in escaping punishment, and especially when you see * * * men of wealth, of high business, and in a sense of high social standing, banded together against you. My dear sir, I want you to feel that your experience is simply the experience of all of us who are engaged in this fight.

"There is no form of slander and wicked falsehood in which the New York papers, not only those representing the lowest type of demagogy, but those representing the interests that call themselves preeminently conservative, preeminently cultured, have not indulged in as regards myself. From all I can gather the feeling against me, not only in Wall Street, not only in the business houses of the greatest financiers of New York, but also in most of the uptown clubs * * * it is just in these places that the feeling against me has been most bitter. As a matter of fact, I do not care a snap of my fingers about it. I do not care whether they think well of me or think ill of me. But I do care a very great deal to do this work without flinching, on the one hand, and on the other hand without becoming angered and irritated to a degree that will in any way cause me to lose my head.

"Now, so it is with you and your associates. You must keep reasonably good natured; but above all things you must not lose heart; and you must battle on valiantly no matter what the biggest businessmen may say, no matter what the mob may say, no matter what may be said by that element which chooses to regard itself as socially the highest element. You are in a fight for plain decency, for the plain democracy of the plain people who believe in honesty and in fair dealing between man and man. Do not get disheartened; and keep up the fight."

Theodore Roosevelt, born of an old New York family, southern on his mother's side, trained as a young man on our western frontiers, was perhaps the first American President in modern times who knew the whole Nation. In the letter which I have read, and with this national background, it seems to me what he said, in effect, was, first, that the American people have, and must have, a definite objective for the improvement of government, for the improvement of social and economic conditions; second, that these objectives must be carried out by definite action; and, third, that in the attaining of them, the President and the Government and the people as a whole must have two essential qualities—first, a sense of proportion and perspective; and, second, good will and a sense of humor.

Almost every crisis of our history since 1789 has become a crisis because of a lack on the part of leaders or on the part of the people themselves, or both, of some of these essentials.

The very birth of the Democratic Party, at a time when President Washington publicly expressed the hope that the Nation could be run without parties, was due to the simple fact that the Government itself was dominated by the great commercial and shipping interests of the seaboard, and failed to give recognition to the needs and the desires of the masses of the inhabitants of the Original Thirteen States who did not subscribe to the theory that birth, wealth, or political position could give to the possessors of these qualifications the sole right to govern. Hence the Democratic Party.

A generation later a government dominated by the other extreme—the plainer people from the back country, from the Piedmont and the slopes of the Alleghanies—paying scant attention to the shipowners of the seaboard, drove our Nation into the second war against Great Britain. And here in the South it is worth remembering that the first suggestion of secession from the Union was proposed by delegates from the New England States in the Hartford Convention in 1814.

In both cases tolerance and the national point of view were absent. Another generation went by and it was the same lack of tolerance, the same lack of a national point of view which brought about a war which was not inevitable—the War between the States.

The scene changed and the Nation was confronted not by a sectional difference but by a struggle for economic and social control—a period which saw the control of our National Government by groups of individuals, who, owning their Government, through owning vast financial power, used the plea of development of our national resources that they might feather their own nests.

In the lifetime of people who are still with us there were men whom we must admit had courage and vision, who pushed railroads across the plains, opened mines, dammed rivers, created vast aggregations of capital; and left in their wake vast aggregations of National and State and local political power.

In a sense those were glorious days, because the wide-open spaces were open to those native Americans and those who were flocking hither from the centers of Europe to find work in new fields.

A current author emphasizes the perfection of life that surrounded our population half a century ago. He draws a picture of the complete lack of any restraints on any individual and infers that every American of those days, no matter what part of the country he or she lived in, lived in a Utopia of work and play to which we should seek an immediate return.

A few days ago in Georgia I talked with an old friend whom I have known for 10 years. He was what might be called an old-fashioned southern conservative. We got to "reminiscing" about the old days when I first lived in Georgia. He reminded me of the days when cotton was selling at 5 cents a pound, and, while he admitted that the ramifications of our Federal legislation, and especially of court decisions during the past 6 years were somewhat beyond him, he allowed that some principle of crop control—cotton and tobacco—decided on by a majority of the farmers themselves, was the most democratic way to prevent the return of 5-cent cotton.

He reminded me of two little banks in Warm Springs, Ga.—banks in which many thousands of dollars of local savings had been deposited, of the failure of both of these banks and the loss of the savings, and of the fact today that deposits in the banks of the United States are safe, and, he remarked, "I hope that that type of liberal legislation will not be repealed."

He reminded me of the white men and Negroes who never saw, as the heads of families, $100 in cash the whole year round. He reminded me of the days in 1932 when the States of the Union were going broke and losing their credit because the whole burden of the relief of the starving was placed on their shoulders without the contribution of one dollar from the Federal Government. He reminded me of the complete lack of any social-security program; of the days when a homebuilder was charged 15 and 20 percent to borrow the money to build his house; of the days when slum clearance was a beautiful ideal on paper and nowhere else.

And when he left he said: "Young man, I don't know the United States the way you do, but I know this section of the Nation pretty well. I don't understand the actual working out of all these new-fangled things that the Government has been starting in these past 6 years. But I know this section of the country, and I want to tell you that there is a new spirit abroad in the land. I am not talking just about the fact that there is more buying power, that houses are painted that were never painted before, that our banks are safe, that our roads and schools are better. What I am talking about is that all of our young people in my section of the country think that we are 'going places.'"

Those two words "going places" seem to be an essential in modern civilization.

They represent the conviction on the part of the young people of America that life never remains static; that there are better days ahead than ever before; that an opportunity to find a way of life, to earn a living, to raise a family in comfort and security, are better today and will be better tomorrow. There may be those in the world who believe that a regimentated people, whose every thought and action is directed by one man, may give some people a type of security which is pleasing to them. But whatever convictions I have, none is stronger than my abiding belief that the security and well-being of the American people can best be served by the democratic processes which have made this country strong and great.

The future, however, rests not on chance alone, not on mere conservatism, mere smugness, mere fatalism, but on the affirmative action which we take in America. What America does or fails to do in the next few years has a far greater bearing and influence on the history of the human race for centuries to come than most of us who are here today can ever conceive.

We are not only the largest and most powerful democracy in the whole world, but many other democracies look to us for leadership that world democracy may survive.

I am speaking not of the external policies of the United States. They are exerted on the side of peace and they are exerted more strongly than ever before toward the self-preservation of democracies through the assurance of peace.

What I would emphasize is the maintenance of successful democracy at home. Necessarily democratic methods within a nation's life entail change—the kind of change through local processes described by Mr. Justice Cardozo—the kind of change to meet new social and economic needs through recognized processes of government.

Because we live in an era of acceleration, we can no longer trust to the evolution of future decades to meet these new problems. They rise before us today and they must be met today.

That is why the younger generation means so much in our current affairs. They are part of the picture in their twenties without having to wait until they have passed middle age.

That is why I myself associate myself so greatly with the younger generation.

That is why I am happy and proud to become an alumnus of the University of North Carolina, typifying as it does American liberal thought through American action.

Address by Senator Maloney

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 10, 1939

KEYNOTE ADDRESS OF SENATOR FRANCIS MALONEY AT THE DEMOCRATIC STATE CONVENTION, GROTON, CONN., SEPTEMBER 13, 1938

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the senior Senator from Connecticut [Mr. MALONEY] at the Democratic State convention at Groton, Conn., on September 13, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This gathering of Connecticut Democrats, every 2 years, to nominate candidates for public office, and to rededicate themselves to the principles of liberal government, has always filled me with feelings of pride and affection. Although we now have the satisfaction of knowing that the character of government for which we have stood steadfastly for several generations is triumphant here, and generally throughout the Nation, we cannot, and should not, forget the earlier struggles during which faith in ourselves and our party was the only bulwark against despondency.

This convention, with its traditions, and its personalities, and its associations, is the bridge between the past struggles and the present victories, and it is the chief avenue to the glorious future that I know lies ahead for our people. What we do here, and the things that are recorded, become the authentic expressions of all Connecticut citizens who are devoted to the cause of liberal action in government.

We have had great men among the Democrats of Connecticut—men who could lead well and true—we have had even greater men and women—and we still have them—who can serve honestly and faithfully in the ranks. It is to the loyalty of these that we owe most for our recent victories—and it is to these able and active men and women of Connecticut that I would primarily dedicate the remarks I make in opening this convention tonight. It is they who, acting together for a common cause, and with a common purpose, frankly dividing on specific questions and issues, but uniting always as one great army in liberalism, give to this convention its deep significance.

Analysts more learned than I have often attempted to delineate the particular characteristics that distinguished the Democratic Party from other political groups in this country. Some have thought it is the attachment of the party to the doctrine of State rights as that doctrine was dramatized in the early part of the nineteenth century. Others have declared that the party's adherence to a low tariff has been its peculiar aspect. We know that the distinction cannot be so definitely or narrowly drawn.

To me there is a more fundamental difference between our party and all other parties, and that is our insistence upon the dignity and intellectuality of the individual citizen. What we stand for has always been the crystallization of what our individual members stand for.

That is why the Democratic Party has been so consistently liberal during its entire history back to the days of Jackson and Jefferson. The party sprang from the people and has remained true to the needs of the people. No man can be a leader of Democrats without being liberal, because no true Democrat is not liberal.

We know that this is especially true in Connecticut. I have been attending conventions such as this for nearly a quarter of a century, and not once in my experience has the Democratic Party in this State proposed a reactionary program or supported a reactionary candidate.

It is easy to talk about liberalism. It is a word which may conveniently be used to cloak many obscure and confused movements. But it has never had a vague meaning among Democrats.

Liberalism is what the Democratic Party in this country stands for—and it is what Connecticut Democrats have fought for since the early days of the Republic.

Our adherence to the American system of government makes us the mortal enemies of all foreign or alien forces of destruction. We are alert to bar from our shores any taint of communism or fascism or totalitarian doctrine which would run counter to the eternal American precept that government derives its just powers from the consent of the governed.

We insist upon humanity in government. By this we mean not only that the purpose of government is to secure to all men their God-given inalienable rights, such as life, liberty, and the pursuit of happiness, but also that the government should be the active agency to improve the conditions of living, under which those

rights may be exercised and enjoyed. We propose that under the American form of government the resources of the Nation shall always be utilized to aid citizens in distress, and that the power of Government should at all times be exercised to protect, to assist, and to encourage the plain people of our country in their striving for happiness and security.

As Democrats we were the first to propose social security laws, unemployment relief, and legislation to equalize the relationship between capital and labor in industry.

We believe that the power of the Government should be exercised to encourage and not to stifle individual initiative. We, therefore, adhere to the capitalistic system as that best suited for American economy, but we have always insisted that the voice of the people, acting through Government, should determine the extent to which private enterprise should be regulated by law. Ours has been the leading and most effective action against monopolistic abuses, especially in the utility field, and today, all over the country, the individual citizen has greater confidence in his own enterprise and opportunities because of the liberal laws controlling the issuance of securities, regulating the stock exchange, increasing the stability of our banks, preserving the integrity of home investments in times of stress, and arresting the vicious growth of gigantic holding companies and other forms of unconscionable concentration of economic power.

Beyond all of these manifestations of a liberal government are the careful guarding of the most precious rights of every American—freedom to speak his mind and heart, freedom to worship God as he pleases, and the uncensored communication of news and ideas.

This is the summary I would make of Democratic liberalism—and that it has a familiar ring to the delegates of this convention is proof of my original statement—that liberalism is known, felt, and understood by every true Democrat in the land—that it has definite meaning to him, and is not a mere campaign shibboleth—and that in a convention like this it is the priceless ingredient of every action that is taken.

I need not remind you that the greatest exponent of the liberalism we stand for today is President Franklin Roosevelt. Nor need I add that he is the greatest Democrat of this generation. His preeminence is based not merely upon personal qualities that make for leadership but, in my opinion, it flows equally from the fact that he emerged from the rank and file of the Democratic Party after years of work and associations in the liberal atmosphere of party councils. Franklin Roosevelt did not suddenly appear to captivate a confused people. He used no strong-arm methods to take personal advantage of a panic-stricken nation. His rise from the ranks of the Democratic Party had been gradual over many years, and long before he was elected to the govefnorship of his own State he had lived in the traditions of our party.

We may be justifiably proud that Franklin Roosevelt served the cause of liberalism within the Democratic Party for a long time before the final collapse of the reactionary forces in this country, when he arose to lead a united Nation. We may also be grateful that through a great favor of divine Providence this country, during the past 6 years of real crisis, has had a leader so amply endowed with personal courage and high purpose.

I shall undertake now to speak with the utmost candor—the only way anyone should speak in a Democratic convention. I and some other Representatives of the State of Connecticut in the Federal Congress have differed with President Roosevelt on the enactment of a few specific measures during the past 6 years. These differences have been in many ways magnified by the press, by opponents of a liberal government, and by others who would capitalize the intellectual honesty of a Congressman or Senator for personal benefit. This is the first time I have had the opportunity to speak to an official convention of the Democratic Party since 1936. Meanwhile there have arisen the differences to which I have referred.

First let me say that not once since I have been a Representative of this State in the Congress of the United States have I taken action or expressed an opinion which in my mind constituted disloyalty to the course of government under President Roosevelt's leadership.

Not once have I gainsaid the great debt this country owes to President Roosevelt for his humane, liberal, and courageous direction of national affairs in a great crisis.

I have, however, although approving the objectives of the President, opposed certain measures which I in my own mind and heart considered to involve the adoption of dangerous legislative precedents.

I have never considered that unanimity on specific issues was necessary for the maintenance of a healthy liberalism in government. On the contrary, I have considered that the great strength of our party has been that it never permitted a squelching of sincere differences of opinion. I conclude this subject by telling you that my conscience and my mind are clear and clean. I have already said to you that I consider President Roosevelt the greatest Democrat of our generation.

Under President Roosevelt's leadership, the administration of national affairs is supported by popular endorsement to a degree unparalleled in the history of our country. We move in the triumph of the Democratic liberalism to which I have referred. So emphatic has been the people's approval of the dynamic and humane action in government for which the Democratic Party stands, that it is doubtful if any other theory of government will long survive in this country.

Already we hear the plaintive exhortations of its despairing leaders that the time at last has come when the Republican Party must rouse itself from comfortable chairs and stoop down to the plain people. Likewise there are indications that those of the other extreme in this country may pretend an abandonment of their un-American tenets in an effort to ride the waves of sane liberalism which now sweep the country. As Democrats we stand firm for the principles of our party—molded in years of struggle—and wielded now by a true sense of American responsibility.

We have tasks still to be done which we shall face courageously. We will cure the problem of unemployment. We will restore stability to private enterprise in this country. We will bring about true harmony among our economic forces. We do not pretend to have a patent on panaceas but we do claim to be able to maintain liberal and humane influences in government, and to preserve the American system for all of the American people.

A liberal in government can never rest on his oars. He must fight treacherous tides and dangerous cross-currents. The Democratic Party has not yet fulfilled its purpose in this country and it will not renounce its mission while something still remains to be done for the people of the Nation.

Some nations are at war or enduring the anguish of threatened war. In some countries liberty as we know it no longer exists. Economic chaos still pervades wide regions. We in this country have not wholly conquered the ills of economic unbalance, but as a country we are rich and powerful enough to overcome the remaining distress if we will but take advantage of our God-given wisdom and hurry to the finally unavoidable conclusion that we are social and economic kinsmen. We can work things out by practicing an American unselfishness, under a guiding light that seems always to have burned more brightly for us than for other parts of the world.

In the convention of 2 years ago I talked in part upon figures and statistics, reviewed legislation, pointed to what I felt were legislative needs, and condemned the political philosophy of those opposed to us—condemned it as a probably well intentioned philosophy, but one that was misguided and one that in effect was sometimes fraudulent.

Tonight I dwell only briefly on specific measures and practices, less on statistics, and even less in condemnation of the philosophy of those opposed to us in this campaign. Rather I have been attempting to find expression for a more general and broad outline of what I feel confronts the Democratic Party in the State and in the Nation.

Lest there be one who might feel that I would too readily skip what has been unsuccessful or unpleasant, let me say that I admit mistakes within my party and in the administration of State and National affairs, but let me hasten to add that I am firmly and sincerely convinced that despite what mistakes there have been, the way of President Roosevelt has been the right way, and, as God is my judge, I believe that his calm and courage snatched America from the pitfalls into which other nations were plunged, and that his leadership preserved democracy in the United States, and the evidence of Franklin Roosevelt's devotion to the problems of his country and the needs of his countrymen is so firmly impressed upon the living pages of history—the minds of men—that the great majority will stay with him until his work is done.

This keynote address is not especially to point with pride to the accomplishments, though they were many, nor to apologize for the mistakes, which were few, but rather to hold a light that we may see some things more clearly in this campaign. I feel that the destiny of our country is bound up in the Democratic Party, and it is with the future that we are concerned.

The entire world is going through a terrible revolution. Fortunately for us here in America it is a revolution without violence, but it has been none the less the most pronounced political, social, and economic upheaval, within the memory of man. Ours is a sturdy Nation, and because our people are made of strong stuff I am confident we will escape the horrors suffered elsewhere in the world, but we cannot, however, hope to escape by giving only lip service to the national ailments. We will survive by faithful and militant determination and practices. We will survive through growing and guarded liberalism.

Woodrow Wilson, in an article published after his retirement from the Presidency, entitled "The Road Away from Revolution," declared that "our civilization cannot survive materially unless it is redeemed spiritually."

That statement was from the pen of a man—a brilliant and good man—who, as leader of the greatest nation of all time, had been through the bitter trials of a world at war. And what he maintained is still true. In spite of the lessons of century on century, and in spite of the onward march of destructive forces, there are still those who are aware of spiritual bankruptcy in some parts of the world, but contribute little to American problems that demand man's full measure in word and deed.

On the road toward the goal at which our party aims there will be political demagogues and business fakers and labor leaders who go too far. They will be the false prophets pointing to an imaginary primrose path and claiming that it leads to a new Utopia. The "primrose path" does seem to exist for those who are blind, or for those who wear rose-colored glasses, and the harm these false prophets do will be difficult to undo until American business leadership comes to a sympathetic understanding with America's political leadership.

I cannot in this speech bring myself to be satisfied with a proclamation of satisfaction over social measures that are in part faulty or insufficient. I am vitally concerned with these things, of course, and for myself will not abandon our party pledges of sufficient relief by way of work, a sane support of agriculture, and a never-relenting effort to get lasting jobs for men and women.

At this point I cannot resist the temptation to inject a more or less personal view. Because I believe that most of our troubles are involved in the fact that millions of Americans are without the necessary security of steady work, I have devoted much time helping in the search for a scientific method of regulating the hours of labor. This problem is paramount and is seriously aggravated by the fact that hundreds of thousands of young men and young women, some of them long out of school, and fortified with a fine education, have yet to locate their first "steady" job. The national administration under President Roosevelt has stepped forward in this situation, but I would go farther than my party has gone and I would do it quickly. Business as well as labor needs a regulation of working hours that is free from sectional favoritism and is rigid enough to give labor an economic force that guarantees sufficient wages, a steady buying power, and more jobs.

While unemployment remains the outstanding national problem, it is slow of solution because of the conflict in the minds of men, partially created by the fears of certain influential groups within our population. I believe our party will successfully meet this challenge.

Let me briefly cast the light on a second great challenge to our party. There are those who are misleading certain of their fellows with exaggerated promises of sharing the wealth. Sometimes the promise is in the form of a magnified old-age pension that could do naught but bring economic destruction—and a greater distress to those most deserving of pensions. While I am among those far from satisfied with the existing laws, and will earnestly work for their liberalization, I know that the hero of $25 on Saturday is likely to be only a trial horse for the more "generous" man who would arrange for a distribution of $50 on Wednesday.

This reference is to warn of a threat against true liberalism in this period of flaming passions and emotions, lest our party be used as a vehicle to mislead good people—young as well as old, who are honest and sincere, but some of whom are bewildered by the glitter of great promise.

At this point I should like to quote from a commencement address that I delivered a few years ago at an eastern university. I was briefly discussing such a subject as now has my attention, and I said: "Be very much alarmed with the 'share the wealth' advocate if he is talking about dollars, but give him your full support if he is talking about opportunity and happiness. Have little time for the demagogue who would give men a greater pension for retirement than they could earn if occupied at work, but never rest while there is a chance to give material comfort to men and women who come to the wintertime of their lives, threatened with the stigma of pauperism, in spite of a lifetime of economic usefulness and good citizenship."

Continuing this thought I want to give another word of warning to those whom we here will nominate, and to those who make up the aggressive and progressive party of Jefferson, and Jackson, and Cleveland, and Wilson, and Roosevelt. Let your minds go back, if you will, to the almost hopeless fights we made against an arrogant Republican leadership in the days when our lot was political poverty. Can you remember our condemnation of Republican officeholders and candidates because they neglected the welfare of the plain people—the working people—or labor? Can you remember how we charged that they were the willing servants of the special interests, and were continually unmindful of the rights and needs of the factory worker and the small businessman and the farmer? I remember it well. We were right and they were wrong. We demanded that they represent all of the people—or get out.

My fellow Democrats, let us be certain that we do not commit that same political sin—for if we do, and as sure as we do—we will bring another period of chaos from which the Republic may not easily recover.

About 2 years ago I made a speech before the manufacturer's association in my own city. I said then that I hoped that if I made mistakes in connection with labor legislation or labor problems that my mistakes would be in favor of labor. I didn't want to make mistakes, I added, but it seemed to me best that what mistakes there were, if any, be in favor of the less articulate group—the group least able at that time to present its case. I haven't changed my mind. I still feel that way about it.

But neither have I changed my mind about the hope that there would be no mistakes, nor have I changed about the charges made in campaigns of a bygone day, that men elected to Congress or to other public office are bound by the solemn and almost sacred responsibility of representing the interests of all of the people. If we surrender the ideals we maintained then, we are not only doomed to a defeat we deserve, but we bring a crushing and perhaps lasting defeat to the less fortunate of our fellows and our country. Much as our hearts and sympathies direct us to an intensified and sometimes magnified effort in the cause of the man who works, if we challenge his employer beyond what is fair we hurt everybody, and most of all we hurt the worker and his family. By fairly serving business, big and small, we best serve those who have first call on our affection and sympathetic friendship. By a protection as well as a correction of the existing system we also best serve our State and Nation.

We must not permit ourselves to forget that without successful industry and business there will not long be work and wages. Neither can we for a moment forget that ours is still the party of economic as well as social justice. There may yet be devised a more perfect form of government than ours, but as we view the horrors and suffering of an Old World, we may find comfort and satisfaction in the progress we have made and in the standards we have maintained.

Responsibility increases with the passing of time, and more so for us because ours is the party now in power. We cannot shake off or repudiate our earlier criticisms or pledges, and so long as we have the public welfare in our keeping we are morally compelled to a just treatment of every man, regardless of his race, creed, color, or station in life. "The survival of the fittest" works more ways than one—the good way and the bad way. If we surrender our convictions for votes, or for public office, Heaven help us, all of us.

Tomorrow we shall select our candidates for the election in November. Our duty is to choose the best among us who are available. If we select our ticket with care and honesty, as I am certain we will, thousands upon thousands of Republican and independent voters will support us again this year. They have been confident of the true liberalism of our party and we should keep that faith.

This campaign, as every campaign, is certain to furnish false issues and some bitterness. The feelings and language of men are pretty certain to expand in a political contest. Every effort will be made to divide our legions and to lay emphasis upon the faults of those who have been of our fraternity, and of the differences of opinion within our party. I think the virtues have outweighed the faults and the errors, and that the occasions of the conflict of opinion are of lesser importance by far than the glorious fact that for the most part we have seen eye to eye and have fought shoulder to shoulder in the noble efforts and for the high purposes of the national administration under President Roosevelt.

I hope that what I have said here tonight will be not too disappointing to those who might desire a keynote speech devoted to oratorical effort and catch-phrase language, or to those who might prefer that the speaker hail the achievements and submerge the mistakes.

To me it seemed that the keynote of this campaign should be based upon the purposes and the philosophy of our party—true liberalism—economic and social justice—and a declaration of faith in our party and its leadership, and an undying faith in the goodness of God.

Since we last met in convention Governor Cross has led Connecticut through troubled times. I shall not trespass upon the privilege of the principal candidates, as our party custom provides that they address the convention themselves, and I await the addresses with eagerness and confidence.

I do, however, want to pay tribute to the successes of these years under Governor Cross. We have witnessed the smashing of a political dictatorship in the State of Connecticut. The government has been pretty much returned to the people, and the mechanism of our governmental machinery is being given added momentum under the direction of our party associates. Important among the advances has been a revision of the financial structure of the State, and, as a result of the new budgetary system, not yet perfect, of course, there will be a great saving to the taxpayers of the State and a more orderly management of our fiscal affairs.

Reorganizing so large a structure as a State government is not a simple thing and there are many obstacles to be overcome. The Governer has faithfully kept at the task and the rewards are becoming obvious. There has been an improvement in departments of the State, better services to its citizens, and there has been a continuing close and intimate cooperation with the agencies of the Federal Government. An entire address might be devoted to the advances we have made in Connecticut, but, as I have said heretofore, our candidate for Governor will want to discuss State affairs, and I shall not intrude upon his right and pleasure.

It would not be fair to our party, or to the President, or to myself, if I did not now again express our appreciation of the recognition given to Connecticut by President Roosevelt. We take great pride in the fact that Homer S. Cummings is Attorney General of the United States, that William O. Douglas is Chairman of the great Securities and Exchange Commission, and that other Connecticut men are holding high positions and places in the Federal Government. That these men have reflected credit upon our State, upon the judgment of the President, and upon their friends here at home is reason for gratitude and applause.

Despite the existing uncertainty in many countries of the world, and though there be some sadness at home and in our own State, we still have reason for thanksgiving and satisfaction. We are not at war, and with God's help we will keep out of war. Our churches and schools and press are free—and shall be free. Our democratic history and traditions and institutions are intact and will be so until the end of time. The United States continues the land of opportunity, and we rejoice in democracy and the perpetual freedom that is among the more precious of God's earthly gifts. We do have an everlasting faith, and I am certain that it is the prayer of all of us that it be strengthened.

I say again that the fight we make is intended to carry us down the middle of the road. The fight is to protect property rights and to completely reestablish human rights as we lift to a new level the men and women and children of America. We will destroy the haunting fear of uncertainty and insecurity. The loyal legions continue to press forward under the leadership of Roosevelt.

Naval Defenses

EXTENSION OF REMARKS
OF
HON. PETER G. GERRY
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, January 10, 1939

RADIO ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, ON JANUARY 9, 1939

Mr. GERRY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able radio address on the subject of naval defenses, delivered by the senior Senator from Massachusetts [Mr. WALSH] on January 9, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The American people are a peace-loving nation. There is no doubt on that score and no basis for argument. They have no passion for conquest; no lust for world supremacy. They covet nothing belonging to any other nation anywhere on earth. They do not aspire to the role of international policemen. With few exceptions they do not seek to interfere in the internal affairs of any other nation, however abhorrent they may sometimes be—as is the case today—and however much they may deplore oppression and despise dictators and grieve for the suffering.

Let me add my own views, apart from the question of national defense through armaments, on what I consider to be of equal importance and equally deserving of emphasis for the preservation of peace, or, perhaps I should say, for the avoidance of war.

First, we should not undertake to intervene in political disputes raging in other parts of the world. There is no duty, moral or legal, which imposes upon our Nation responsibility for policing international areas or gratuitously attempting to settle international disputes. The American people have learned from bitter experience, both in actual warfare abroad and from the heroic efforts our Nation has made from time to time since the World War to preserve peace, that we can expect nothing but loss of life, money, and prestige from interfering with situations developing out of the deep-rooted rivalries and animosities which continually plague the nations of Europe and now extend to the Orient. In my opinion, our national welfare demands and our people insist that in international relations we follow the wise Washingtonian admonition to avoid entangling associations abroad—in brief, to mind our own business.

Secondly, our neutrality must be wholehearted, clearly expressed, and emphatic. I mean by this that we should serve notice by law on foreigners and citizens alike that we in America consider the preservation of peace paramount to the economic interests of "follow the flag" diplomats representing American corporate business engaged in exploiting resources or markets in foreign countries.

Thirdly, our neutrality laws should not permit the commitment of this Nation to any policy or course of action favorable or unfavorable to any belligerent. Neutrality should be mandatory and not permissive. The reason for neutrality laws is for the very purpose of avoiding involvement in the wars of other nations.

Fourthly, Congress should enact a provision suspending all trade and commerce with belligerents at the inception and during the continuance of hostilities. Supplying munitions and implements of war to one of the belligerents and refusing them to another because of the impossibility of delivery, resulting from effective blockage, led directly to our involvement in the World War. Profits from trade with warring nations cannot justify the ever-present danger they entail of involvement in war. Our primary concern at all times must be the lives and welfare of our youth.

Fifthly, in view of the disturbed conditions—wars, threatened wars, and dissensions among nations—which exist today and which may very conceivably break out tomorrow into another international slaughter, it is my studied conviction that we should accompany this policy of strict neutrality with an equally decisive program of self-defense. Such a program should not be beyond our needs, neither hysterical nor exaggerated. It should be broad, comprehensive, and sufficient to meet any and all contingencies likely to arise from the threatening international scene.

What I have been saying amounts to this: I am convinced our peace and security in this country embraces a sincere and honest policy of neutrality as well as adequate national defense through armaments.

When we speak of arms and armaments for our country we should be thinking solely in terms of our own safety and security. Our objectives with respect to our national defense must never be to promote war, or to assist in war, but to insure peace.

We should proceed upon the conviction, amply supported by the records of history and reinforced by recent events, that a nation is seldom attacked if the weapons of its defense are so strong that attack is foredoomed to failure, and, conversely, that weakness invites attack.

I have always favored disarmament as an avenue to peace providing the disarmament is mutual and universal. But I am not in favor of disarming our own country while all the rest of the world is in arms—leaving the United States defenseless against foreign aggressors. In my judgment, that is not the way to peace but a certain invitation to war. I am convinced that in large majority, the American people share this view.

There are those, of course, who advocate disarmament for the United States under any and all circumstances and who invariably oppose measures designed to strengthen our Navy and other mediums of national defense, and often it is these various groups of self-styled "pacifists" who are the most persistent pleaders for intervention by the United States in foreign conflicts, for our taking sides and lending aid. They would have the United States weak in the weapons of war, yet pursue a course of intermeddling that in the long run would almost certainly involve us in war. The inconsistency of such a position is utterly incomprehensible.

Since events have demonstrated that treaties and international peace pacts afford no guaranty of peace and no real security, the wisdom and necessity for adequate national defense is now generally accepted. Facing the disheartening realities of today we are forced to the realization that in the world about us, wars and the prospects of more wars are terribly menacing.

Adequate national defense of the United States as a national policy is simple to affirm, but the exact limits are not so easily specified. Adequate is a relative term. It affords large differences of opinion. What is adequate under one set of circumstances may obviously prove inadequate under different circumstances.

In my judgment, however, as matters stand today, we must avoid exaggerated emphasis on European war perils and territorial ambitions of European dictators, and in the determination of our program of adequate national defense we should concern ourselves with our own needs, for our own security and nothing else. Let me add, also, that I do not favor armed forces based on the theory that if we have an armed force of supersize and effectiveness it will prevent dictator nations from starting a general war in Europe.

The need of an adequate Navy, of an adequate Army, of an adequate air force, of adequate trained reserves—all to be adequate for our defense and security, is, I repeat, generally recognized. But when it comes to fixing size and number in the various categories, and defining the limits of adequacy, and settling upon the time factor—the pace at which we shall proceed with the building of ships and coast defenses and aircraft and naval and air bases, and the amount of money out of the National Treasury that we shall appropriate and expend for national defense—we encounter great divergence of opinion.

Let me say at this point that a recognition by the Congress of the necessity for expansion and acceleration of our national defense program in many directions ought not to mean—and I am confident that it does not mean—any stampede to approve any intemperate and ill-considered and uncharted course of multitudinous activities and expenditures postulated upon the need for preparedness.

We took a major forward step toward strengthening the first line of our national defense—our Navy—in the enactment by Congress last year of the naval expansion bill, which was intended to give reality to our declared policy of maintaining naval parity with Great Britain and a ratio of 5 to 3 with Japan.

We are not embarking upon any new naval policy. We are not setting out to outstrip England or Japan in naval building. We are not proposing to build bigger ships or more than any other nation. We are not seeking naval superiority. But we are aiming to attain and then maintain the 5–5–3 ratio.

Testifying before the Senate Naval Affairs Committee last April, Admiral Leahy, Chief of Naval Operations, stated (and I quote his exact words): "The Navy Department is of the opinion that the Navy authorized in this bill will be sufficient to provide an adequate defense to America provided the foreign nations do not expand their navies beyond what we now believe they are doing." "It is not," Admiral Leahy added, "sufficiently strong to insure our being successful against foreign attack but it is believed to be sufficient to provide reasonable assurance." On this same occasion he defined an adequate navy as one (and I quote words summarized from the Senate committee report) "capable of meeting and defeating the enemy at sea, as the only sure way that they can be kept at a distance from our coasts, and the only sure way to bring it to a close." "A navy sufficiently strong to occupy the attention of the enemy," he said, "will prevent bombing attacks against our large cities and industrial areas; will automatically insure safety to our coasts and will free most of the trade routes except for sporadic enemy raids." Admiral Leahy laid emphasis in his testimony on the fact that the expansion of the Navy authorized by the Congress at the last session was not (and I again quote his words) "sufficient to permit of aggressive action overseas, of policing the world, or of projecting an invasion of the territory of any naval power."

I commend that statement and am sure it is a source of gratification to the American people to know that the Navy's attitude toward an adequate navy is in exact conformity with the wishes of the American people against intermeddling in foreign affairs or building up a navy for aggression.

What has taken place since these statements before the Senate Naval Affairs Committee last April to alter the picture? We now

know that naval building by Great Britain and Germany is proceeding on a far greater scale than was expected a year ago, and proceeding at a feverish speed. In fact, information available indicates that Germany alone has spent $3,000,000,000 in the last 2½ years for rearmaments, that France is spending 40 percent of its budget annually for armaments, and that Japan is expanding her Navy with ominous secrecy. We now understand Japan is building battleships reported to be in excess of 40,000 tons.

This information has prompted the Navy now to seriously consider the construction of 45,000-ton instead of our present and past 35,000-ton battleships and to develop further defenses against submarines, especially harbor defenses, from the future appropriations that will from time to time be appropriated by the Congress in conformity with the authorization of the 10-year naval expansion program in the last Congress.

In the light of these facts, we may be warranted in increasing the pace—and I emphasize that word "pace"—of the naval construction program authorized by Congress last year, but we are not increasing the size of the program, because the program of last year covered a period of 10 years of expansion. In the naval expansion program of last year, which, I repeat, was a naval 10-year program apparently adequate as of that time and date, Congress directed the convening of a board of naval officers to investigate and report upon the need, for purposes of national defense, of the establishment of additional submarine, destroyer, mine, and naval air bases on the coasts of the United States, its Territories and possessions. This report has been received by Congress within the last week and lays particular emphasis upon the need of new and enlarged air and submarine bases. The importance of favorable congressional action upon this report providing for enlarged air and submarine bases cannot be overemphasized. It is obvious that it would be the sheerest folly to build a great navy and project a great air force without the indispensable adjunct of the necessary bases and landing fields. This is one of the many phases of our national defense which has been sadly neglected during the years since the World War, while we were seeking naval disarmament by treaty.

The President's annual message on the state of the Union bespoke in general terms the need of great strengthening in our national defenses. The Federal Budget of recommended appropriations for the coming fiscal year, which was submitted to Congress by President Roosevelt last Thursday, reflects this policy and contains sizeable increased amounts for naval construction and for the Army and Navy Air Corps, as compared with the appropriation for the current year.

In connection with this recommendation of the President, insofar as it relates to the national defenses, it would seem to indicate that the President proposes to continue the increased appropriations that would be expected under the naval expansion building program of last year and possibly accelerate somewhat both the building of naval vessels and naval aircraft.

The Congress and the country will have to consider also the specific recommendations contained in a special message from the President on national defense which is expected to come to Congress within a few days, embracing a further and special $500,000,000 program for national-defense facilities, of which $210,000,000 is contemplated for the coming fiscal year.

Any comment or discussion of the President's specific recommendations must necessarily await the receipt of his message. The proposals should be received and analyzed apart from political partisanship. What specific recommendations will relate to the Navy I cannot, of course, prophesy. The recommendations that may relate to the Army can better be discussed by those more familiar than I with the details of Army defense.

I believe that the Congress at the present session will see the need for the immediate enlargement of our air force in order to provide aircraft in sufficient numbers, modernity, and effectiveness to serve as coordinating adjuncts to the fleet and coastal defenses in repelling invasion. Because of the speed with which modern plates become obsolete, it is important to have in mind in this connection the futility of building too many aircraft, which might be outmoded almost as soon as they are put into service.

We must not lose our perspective in the present popular excitement regarding air forces and aerial attack. We must remember that Germany's reputed 10,000 fleet of war planes is of no peril to us so long as the Atlantic Ocean separates us and our Navy controls the sea; they are of no danger to us without an enemy base on this side of the sea. Our Navy will, in my judgment, and by reason of our geographical location, always remain the mainstay of our security, our greatest safeguard, a powerful agency for peace so long as there be peace, and our first reliance in the event of war.

Time permits me only a brief mention of the need for larger facilities for our reserves among the civilians in and out of universities, colleges, service institutions, and training schools to teach and train skilled technicians, pilots, and general personnel as part of a great reserve force to supplement regular forces of the Army and Navy. In my opinion, the building up of our long-neglected reserves is supremely important in any plan of adequate wartime defense. Indeed, I consider the development of a Nation-wide plan of defense, including industrial mobilization, organization, and training civilian personnel so as to be in a position to move speedily and effectively in time of danger, second only in importance to naval vessel and aircraft building.

Let me say in summary and in conclusion that in every consideration of our national-defense needs we should always remember that we are formulating a program for peace rather than a program for war.

What are the prime elements of a program for peace?

First, absolute neutrality.

Second, strict adherence to our national policy of nonaggression.

Third, utter avoidance of entangling alliances.

Fourth, the building and maintenance of a strong, powerful, well-balanced navy capable of meeting and defeating an enemy far from our shores—this because of our geographical prerogative of defending ourselves first on the sea.

Fifth, creation and maintenance of adequate air forces and maintenance of a comparatively small but well-equipped and well-trained army, supplemented with trained reserves.

If we adhere to this program, we will be secure. If we adhere strictly to this program, we will be able to remain at peace. If war comes to us unbidden, we will be able to bring it to a quick and successful conclusion.

Whatever the cost of this program in money, it will be infinitely less costly in money to say nothing of the cost in human lives and human suffering of the alternative, namely, a long-drawn-out war.

This program for peace does not require the universal conscription of our manpower, the regimentation of capital and labor, the abandonment of our democratic processes, and the conversion of our Government into a dictatorship.

The Budget

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Thursday, January 5), 1939

EDITORIAL FROM KANSAS CITY STAR OF JANUARY 7, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a short editorial from the Kansas City Star on the subject of the Budget.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Kansas City Star of January 7, 1939]

ON THE WRONG ROAD

It is important to examine the facts and to cite the whole record of an apparently ceaseless splurge in Government spending and debt accumulation.

The administration's excuse for this policy is that it promotes recovery, revives business, and creates more jobs. The facts and the record do not bear out this contention. Mr. Roosevelt's own convictions shortly after he had become President were to the exact contrary.

Note these familiar words of the New Deal Executive in a special and urgent message to Congress on March 10, 1933, within a week after he had been inaugurated:

"For 3 long years the Federal Government has been on the road toward bankruptcy.

"For the fiscal year 1931 the deficit was $462,000,000.

"For the fiscal year 1932 it was $2,472,000,000.

"For the fiscal year 1933 it will probably exceed $1,200,000,000.

"For the fiscal year 1934, based on the appropriation bills passed by the last Congress and the estimated revenues, the deficit will probably exceed $1,000,000,000 unless immediate action is taken.

"Thus we have piled up an accumulated deficit of $5,000,000,000.

"With the utmost seriousness I point out to the Congress the profound effect of this fact upon our national economy. It has contributed to the collapse of our banking structure. It has accentuated the stagnation of the economic life of our people. It has added to the ranks of the unemployed. Our Government's house is not in order * * *."

Indeed it was not. Mr. Roosevelt then wanted it put in order—at once. He had been elected on a platform and on repeated pledges to that effect.

But within 90 days from the date of his special and urgent message, Mr. Roosevelt and Congress had launched out on an extravagant program of spending and debt that has continued to this moment and is now projected into an endless future so far as the New Deal administration is concerned.

So quickly was the shift to the spending made in 1933 that by the end of the fiscal year on June 30 the deficit had risen from Mr. Roosevelt's estimate of $1,200,000,000 to a total of $3,063,000,000.

The deficits in the closing years of the previous administration, of which Mr. Roosevelt spoke with such seriousness, had been due to the falling off of revenues under the powerful impact of the depression. They were not due to excessive spending.

But here, including the fiscal period covered by the Budget message of this week, is the 10-year record of deficits and added debts. The figures are in millions of dollars.

Fiscal year	Receipts	Expenditures	Gross deficit
1931	3,190	4,092	902
1932	2,006	5,154	3,148
1933	2,080	5,143	3,063
1934	3,116	7,105	3,989
1935	3,800	7,375	3,575
1936	4,116	8,880	4,764
1937	5,294	8,105	2,811
1938	6,241	7,545	1,449
1939	5,520	9,492	3,972
1940	5,669	8,995	3,326

The figures listed for the last 2 years are estimates. Both the expenditures and deficits may far exceed them, as they usually have in the last 6 years.

But there is the record, unparalleled in length in the entire history of the Nation. In 1930, before the deficits began, the Federal debt stood at $16,185,000,000. At the end of the 1940 fiscal year, according to the estimate in this week's Budget, that debt will have reached the enormous total of $44,458,000,000, or an added debt of $28,273,000,000. All except about five billions of that, or more than twenty-three billions, will represent the debt piled up by the Roosevelt administrations.

But that is not all. For it is seen from the record that revenues began to go up early in the Roosevelt administration, due to added taxation as well as the measurable recovery; also that in that administration expenditures have been nearly doubled over the previous administration.

What do we have to show for it? At the low point of the depression in 1932 the national income was $40,000,000,000. This week Mr. Roosevelt said it was running at the rate of sixty billions now, a gain of twenty billions. But we have gone into debt more than twenty-three billions in the meantime, not counting the added tax and revenue and the added expenditures not represented by debt.

Does that prove that spending pushes up the national income, promotes prosperity, and ends unemployment? Not yet; and we have had already a 6-year trial at it with still more to come.

Spending that brings prosperity must come from the bottom and not from the top. It must come from the people who have earned the money in wages and at real jobs and are using it to buy the things they need. Excessive spending and taxation by the Government tends to paralyze the industry that must furnish the jobs and pay the wages.

It is a fallacious theory and a dangerous practice. The facts and the record prove it. The administration won't or can't halt it. Congress can and must do it.

The Businessman and Congress

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 10, 1939

ARTICLE BY JOHN RAYMOND McCARL, FORMER COMPTROLLER GENERAL OF THE UNITED STATES, IN NEW YORK SUN OF JANUARY 7, 1939

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting article by Mr. John Raymond McCarl, former Comptroller General of the United States, on the subject The Businessman and Congress. The article was published in the New York Sun of January 7, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Sun of January 7, 1939]

THE BUSINESSMAN AND CONGRESS

NO LONGER CAN THE PEOPLE AFFORD TO ELECT A CONGRESS AND THEN ABANDON IT TO THE ONSLAUGHTS OF THE SELF-SEEKERS—HOW AND WHY BUSINESS WITHOUT FURTHER DELAY MUST GIVE CONGRESS FULL AND UNSELFISH SUPPORT IN WORKING OUT PROBLEMS OF SELF-GOVERNMENT

(By John Raymond McCarl, former Comptroller General of the United States)

Dictators have served us well. Unwittingly, of course, but well nevertheless. By their brutality, terrorism, and war-madness they have awakened us, made us see it must not happen here—that democracies must succeed if the world is to avoid reversion to barbarism.

If we may have dreamed that men so empowered might be guided by wisdom, benevolence, or justice it is fortunate we have been aroused from our slumber. Too bad we slept so long.

Now that we are regaining consciousness it is most encouraging that we are beginning to recognize Congress as a source of help if we are to escape irreparable damage.

Equally encouraging is the fact it is being recognized there must be an improved relationship between businessmen and Congress if we are to work out our problems and build solidly for the future.

Congress and business. How timely. How to the point.

The Sun is to be congratulated. It selected the subject.

We are failing in self-government because we are not trying to succeed—and are taking an occasional "shot in the arm" to escape seeing realities. We are drifting, following the course of least resistance, downward—and are nearing financial collapse and loss of freedom. The cold fact is—we now must demonstrate our capacity for self-government or forfeit its advantages—turn the job over to a boss. Be told what to do and when to do it.

It is not so much a matter of personal ambition to rule that is dangerous. It is the mistake of permitting growth of a condition which can have no other end—and a sure route to receivership is via bankruptcy.

Think of it. A nation blessed with everything man reasonably could ask going broke!

WE'RE SUPPOSED TO GOVERN OURSELVES THROUGH CONGRESS

Congress can't save us, but it can give us a chance to save ourselves and could be mighty helpful, and would be if once convinced we had come to our senses and intend trying. In fact, Congress is the one agency in which there exists the power and a natural incentive to help us work our way out of the woods. And lest we may have forgotten—we are supposed to govern ourselves through Congress.

While technically, perhaps, no special responsibility rests upon business, as a practical matter its responsibility is very real and very grave because its opportunities are greatest. All those in places of citizen leadership have a responsibility they no longer may treat lightly, but business is out on the firing line. It must swing into action with the best it has to give, not just for business—for country.

Already bowed down by the load of a tax-eating public debt of mountain size, we still are spending lavishly—and harmfully. Even exhausting and punitive taxes do not produce enough; we still are borrowing billions for doling out by government. It seems the one thing government knows how to do.

We might willingly endure the present load if it had produced a cure, but we have not even begun to solve our problems—and thus neglected they have become more difficult. Unemployment and want still hold relief rolls at a high level and agriculture has been forced to a point nearing complete dependency upon government. But worse—by our excesses we have all but crucified that unity that brought us so far forward in a few short years. Instead of team spirit we have class consciousness, with class pitted against class, and race consciousness at a dangerous pitch.

True, we have grand objectives—oft-repeated "objectives" so wholesome as to attract unanimous approval, and which must be our goal—but we have not been moving toward those objectives. We have been mislabeling our "medicines"—fooling the sick until, in their weakened condition, they are losing confidence—not only in government but in mankind.

ELECTIONS, A BUSINESS FLURRY, AND BILLIONS FOR ARMAMENTS

That our condition is precarious no one with ability to think longer doubts. Doubt does exist, however, whether we will muster that unselfishness and that don't-give-up purpose required to do something about it.

Danger exists, too, that we may mistake the recent business flurry for motion forward on firm ground—forget it was induced by lavish spending of billions of borrowed dollars feverishly doled out by government to cover its failures—or that we may assume the rebuke the superstaters received in the recent elections leaves nothing for us to do. What a terrible mistake if either assumption should be indulged.

We produced one business flurry on borrowed money—and it ended in the recession. Now we are spending more billions in an effort to produce another, and if we don't keep the ball moving this time, where will we get the billions with which to produce another? Note the appalling height to which this flurry is sending the public debt above forty billions, not counting more billions of contingent liability.

True, another heavy spending program is already being popularized by government—aware, of course, that another recession before mid 1940 would furnish its undoing—but how it is to be financed has not as yet been pointed out. Perhaps this phase has not even been thought of—relegated as too sordid and unpatriotic even for mention where national defense is the label. Too bad Government did not think about national defense before we squandered so many billions.

Is there danger too, that we may be frightened by specters and threats of war into loss of ability to see clearly and to think straight? God forbid.

The recent elections? Like the business flurry—all depends upon whether they are understood and taken advantage of. These contests, without issue other than government "as is," were made use of by the voters to register a stinging protest against the methods of present government—a rebuke to "rubber stamp"

Congressmen (many of whom were ousted) and condemnation, not of Government's professed "objectives" but rather, our failure to move toward them. Condemnation too, of its incessant reaching for power, political paternalism, wild extravagance, and selfish uses of public moneys.

These elections show both the alertness and the temper of the voters. They are quick to measure promise by performance. They are tired of "emergencies" and of government trying to run everything. They are tired of extravagance and fear bankruptcy. They want dependability, not make-believe. They want opportunity, not dole.

WHAT HAS HAPPENED BECAUSE WE LET GOVERNMENT RUN US

Ducking responsibility seems our besetting sin.

We got into this mess because when our follies caught up with us, back in 1929, we ducked. Selfishly dumped our problems into the lap of government and thought we had "pulled a fast one," as we are accustomed to express pride in skulduggery. Politicians, sensing a chance to grow big, seized them, and we have become almost hopelessly involved because we selfishly have allowed government to flounder with conditions it has no means to improve; problems we alone can solve.

For 9 years we have been "passing the buck" to government, with the result we should have expected. We have wasted 9 years, and our problems have multiplied. Among other new difficulties we now have a top-heavy government on our hands, expert in phrase making and effective use of propaganda, extravagance, and intimidation. A government twice the size and twice as costly as need be, so intent upon bossing as wantonly to risk doing irreparable damage. It's our Government, however, and we can bring it within bounds if we will. Not, however, merely by cursing it. We must remove the excuse for its trying to run everything.

If we intend working out a basis for stability and cooperative motion forward, it's high time we got at it. We have gone a long way in the wrong direction but not, as yet, too far. To win, we must tackle our problems, attack them aggressively. It may seem a big job. It won't seem so big once we get going and score a couple of wins.

A helpful Congress will be utterly necessary—but once such determination is evidenced by us, watch Congress respond.

True, it was a weak Congress that surrendered—paved the way for Government excesses that have nearly wrecked us—but in that surrender Congress was aided and abetted by businessmen who should have known better—urged to forego promised economy and to spend heavily. This in hopes of avoiding the consequences of those follies that caused the crash, but failing to realize such course might lead from frying pan into the fire, overlooking the temptations involved, ambitions likely to be aroused. They should have anticipated the mixing of politics with spending—the era of "pap, patronage, and projects" that was the harvest.

True, too, subsequent Congresses have not recovered the ground lost by the Seventy-third, but this has been due in large part to lack of effort by those to whom Congress has a right to look for courageous leadership among our people—that resentful or, worse, that surrender attitude some assumed when the whip of superpower commenced cracking.

At that, Congress has been far out ahead of citizen leadership. Not only has it resisted further dissipation of its authority by defeating the "disorganization bill" and protected the Supreme Court from packing for political ends; it has signaled the dangers ahead and sought citizen help in an effort to alter our course. Thus far it has signaled in vain.

In truth, Congress has proven surprisingly strong considering the abuse and lack of assistance it has received. Many of its Members have invited political extermination by their efforts to arouse us to action. Lifelong Democrats, to give us warning, have braved the wrath of the most powerful political machine ever supported by public money—a machine operated under the banner of their own party. Groups within Congress have tried desperately to curtail extravagance and foolish spending—to reduce the cost of government to its needs—only to meet the resistance not only of the superstaters but of those from the business world, willing for personal gain to push us further toward bankruptcy—accomplices for assured profits or those sightless few who so hopeful for profits as blindly to risk loss of all.

CONGRESS, TOO, HAS LEARNED FROM FUTILE EXPERIMENTS

Congress can't do the job, but how it could help. It still has all its constitutional powers; it merely has been making poor use of some of them. Then, too, Congress has learned a few things. Among others, that we can't—

Make everybody rich and happy by law;

Tax our way to needed reforms and improvements;

Borrow our way to prosperity;

Build an enduring social security on the quicksands of public debt;

Succeed in self-government by building government up—and us down.

Induce frugality, self-respect or self-reliance by providing dole instead of opportunity.

Rob the country of money, tax our people white, and expect jobs to increase or pay envelopes to expand.

Get teamwork in industry (and the most for our money) by fostering hate and distrust between worker and management.

Expect youth to be filled with hope when it can see action in nothing but government—or wildly patriotic when its expectancy is a yoke of debt.

Congress knows that every dollar business spends to create employment goes many times as far as would the same dollar if taken by government for relief or made work. That not only does it go directly to the mark when so spent, because no part is lost through Government extravagance or political manipulation, but that it augments the national income now and hereafter by being employed to improve or to create income-producing property. Government spends on public buildings, on publicly owned facilities and utilities, and for made work, which may in some measure add to the national wealth but not to that by which we live and grow—wheel-turning national income.

Congress knows that government cannot continue to use labor for political ends if we ever again are to have that teamwork in industry essential to production of that better quality, and at such costs, as will ring the bell—so induce buying at home and abroad as to insure both jobs and profits. It realizes that while tariffs will protect our home market, we can't get people to buy unless quality and prices are attractive, and that we must not even hope to sell abroad in world competition until we are prepared to serve needs better or cheaper than do our competitors.

Congress knows that if our machinery for national defense is in need of repair or improvement, the necessary means must be found. No question about it. It should know, and if it does not it must be made to know, that the label "national defense" must not be made use of by government as excuse for unnecessary spending or to justify a new reach for power, as it may not be used as excuse for keeping politics in public spending or to placate or to reward those who will reap the profits. Patriotism is for no such employment, lest we cry "Wolf" once too often.

Congress has learned that for it to build up a super-Executive is but to dig its own grave; that it can't delegate authority and still wield it; that it can't give the Executive a blank check on the Treasury and then refuse his bidding without feeling the lash. The purge was but a faint suggestion of what might be—and Congress knows it.

CONGRESS HAS THE POWERS, BUT NEEDS OUR URGING

But to know these things is not to provide a cure for our ills. Such knowledge may assist Congress in avoiding further mistakes, but it is motion forward we need—not further drifting. Congress has all the power it needs. What it needs is help—citizen cooperation. Congress actually has the power to—

Cancel authority delegated to the Executive and thus remove both the dangers and the uncertainties involved in government by decree—power to restore confidence in Government.

Lighten the tax burden by ending all waste and useless activity within and by government, and by eliminating politics from public assistance.

So adjust our necessary tax load as not to inflict undue hardship or retard employment-giving activity.

Give individual enterprise a chance by taking government out of competition with those who must earn their daily bread.

Amend unworkable laws so as to make substance conform with title and to repeal those which cannot be made to work beneficially.

To guide us toward our "objectives" by molding all legislation in their direction.

But don't expect Congress to accomplish much unless we begin helping. Government has injected itself so far into almost everything and our course has induced such dependency that Congress cannot safely take bold action in the right direction until we begin showing signs of readiness to do things for ourselves. We must not only assist the unemployed and needy, we must do it in such manner as to revive their hope—help them to look up, not down. Those who may have been tempted to the ease of dole must be given a fair and friendly chance through opportunity.

Congress needs two kinds of help—both from us:

1. We must do everything possible for ourselves, on our own. Tackle our problems, not duck them and leave them to government.

2. We must help Congress get the facts—the truth—respecting problems on which it must act and the most carefully considered means whereby Congress best can further our chances for success in self-government.

We can't help until we definitely have quit compromising with superpower—selling self-government short—and trying to save our individual necks by seeking "protection." If we go down, no neck will be spared.

A few can't do the job alone. There must be leaders, but there must be, too, an army of willing workers.

As to No. 1: Some of our problems government can't solve—can only make them worse by trying. While we leave these problems in government's lap it will keep tinkering with them—keep making them worse. By taking them over ourselves we will not only be going in the right direction but will be taking a load off the back of Congress—giving it cause for hope—reason to help—and time in which to do its own work well.

Our unemployment condition and resulting hardships, labor unrest, the plight of the railroads, and the needs of agriculture are practical problems—not political. It is this type of problem we ourselves must solve if self-government is to endure. Because they are practical problems business best can supply the practical experience and leadership necessary to their working out.

If there are to be more jobs, business must provide them. If there are to be new activities, business must contrive them.

If we are to produce more goods, and sell them, labor and management must work hand in hand. The stage is set for such a reunion. There is much soundness in labor and it is beginning to

assert itself. It knows government has been fooling the worker—encouraging excesses designed to provide excuse for government to come to the rescue with a cure, and has not only rewarded labor with gold bricks but with each cure has brought labor further under its control. Labor knows that reward such as a floor under wages—with no foundation to support the floor—and a labor adjustment law, so unworkable and so political as to handicap labor in its legitimate efforts, are gold bricks. Labor is waiting for the businessman to move—and there is a basis for labor-management cooperation if we will but try to find it—and don't wait too long.

To dignify collective bargaining and to get the best from it by helping worker and management solve their differences as they arise—and to help bring the "chiseler" to time—business might set up its own national labor relations board.

The plight of the railroads has been made worse by all sides leaving it to government—so bad, indeed, that the ways are greased for the carriers to skid into Government ownership and political use. This, because there is nothing else government can do about it, and those who might and who should be trying—the stockholder, the bondholder, and businessmen who need high-grade and dependable carrier service—are doing mighty little about it, for the most part merely studying what might be asked from government. The country is anxious to know, as is Congress, what the railroads themselves, owners and management, can and will contribute toward a solution of their difficulties. Both the public and carrier employees would be encouraged to help if convinced everything possible was being done by owners and management.

If the railroads are permitted to be "taken over" it will be but the beginning of government in business.

The problems of agriculture are of such a practical nature that attempted political management and loss of valuable time have so involved them that unless there is permitted soon a practical attack by those real farmers who know what is involved and what is needed, aided by business experience and cooperation, they will grow worse. If agriculture is to be a self-managing industry and is to avoid being a charity client of government—a political football—sound leadership in agriculture must have the helping hand of experienced businessmen. Not just sometime. Now.

BUSINESS MUST QUIT WAITING FOR SUPERGOVERNMENT TO CHANGE

A new role for the businessman—but one he must undertake. If present leadership can't or won't lead, new leadership must arise. Business must broaden its horizon and work for compensation not payable currently in dollars. It now must lead in things besides producing and selling. It must learn how by trying. Leaders must draw to them the best talent available.

There must be statesmanship in business as well as in Congress.

Business must quit waiting for superpower to alter its course. Power never admits failure. It tries to cover its mistakes by claiming it does not have enough power—needs more. Its advantage is in keeping the pot boiling.

Business must quit waiting for a savior to appear. Some fellow able to perform miracles—able to restore stability and prosperity as by magic. It's a dangerous waste of time. He will be our savior who makes us to understand we must merit self-government, or lose it.

Businessmen must learn to speak the same language and there must be such cooperation and cohesion as will permit of avoiding conflicting efforts—and of handling "chiselers."

Above all, business must forget its hurts and its fear of government. It must move with such boldness and effectiveness—and with such unity and high purpose—as will leave government tongue-tied.

Chambers of commerce and like organizations throughout the country must take on new life—throw up the window shades, dust off their desks, and get busy. Not the old way—the new. Not to see how much can be milked from government but how close each community can come to mastering its own problems. Self-sufficiency and self-respect are still worth working for.

The crash of '29 brought out the fact that our methods needed modernizing. All was not right—else we would not have crashed. The fact that what we got developed into a misdeal has not removed the need for a new deal. It has made the need greater.

We still need a new deal, but the kind of deal we need can't be made up and handed to us—by law or otherwise. We must do our own dealing—and team spirit must be our objective.

As to No. 2: Of the two this duty will be the most difficult to do well. It is the one businessmen are most likely to neglect—or to do badly. It won't be easy to do, but it must be done.

The memory of old methods, and the fact that business has been so maligned that even Congress for a time may doubt its sincerity, will handicap. However, business is able to furnish both facts and sound advice that are sorely needed, and it must do so.

We are failing in self-government because we have been neglecting Congress. We elect a Congress only to abandon it—leave it to combat alone that army of self-seekers forever wanting something for nothing, the crackpot with bulging portfolio, even the cunning of the executive branch lobby. Unfounded claims, half-baked schemes, half truths, and distorted facts in abundance—with no one for Congress to turn to for the truth.

Congress must know what not to do—what would be harmful—as well as what to do and when to do it. It can't do either intelligently without the facts. It can't do the latter quite so promptly, at least, or so well, without the best advice to be had.

WE MUST LEARN AT ONCE HOW TO WORK WITH CONGRESS

One of these fine days, if self-government should weather this storm, there may come a citizen possessing such farsightedness and patriotism (and means) as to create and endow an agency to further self-government through giving unselfish assistance to Congress—an agency so manned and so safeguarded as to justify Congress in making free and effective use of it. But until that far-seeing citizen appears, we must do our best to fill the gap, using such tools as we can contrive.

Curtailing Government costs—saving essential and getting rid of useless activities; reducing and readjusting the tax load; safeguarding our monetary system and managing the public debt; ascertaining our defense needs; finding how best government can help us to help ourselves; and similar matters are those upon which Congress must act. Consider the danger should it act upon any of them without the facts—if it should act upon misinformation or just shoot in the dark. What damage may result, too, should Congress fail to act and act wisely. At present its chief source of information is the executive branch—and its so-called "experts" feed it what an ambitious administration wants it to believe. The unwholesomeness of this condition has become all too apparent—even notorious.

Then, too, government has not only become monstrous in size; it has been made complicated and intricate—much bad intermingled with good and thus difficult to untangle. Great care must be exercised in operating upon it to make sure that the bad is eliminated without injury to the good—and the patient will be all but cooperative.

No sure-fire procedural formula for businessmen is possible of prescribing. It is a work that should have a modest but sincere beginning and made to grow. A few things, however, are apparent: Business and the rest of us must—

Learn to give—and quit demanding;

See problems unselfishly—see them as Congress must view them;

Find out what Congress needs—then go get it;

Anticipate its needs—be ready;

Make our material and suggestions available to Congress in understandable and usable form.

No use submitting 20 different proposals to help a particular condition. Just confusion added to uncertainty. Proposals will be purified and rendered less likely to contain selfishness if considered and perfected by groups representing different branches of business. Possibly a clearing house for public service proposals would prove helpful and beneficial.

Businessmen likely will be clumsy for a while but they must begin and must keep trying. We must learn how to work with Congress. In its doing, businessmen will grow to be better businessmen.

Only well-informed and upstanding spokesmen should attempt speaking for business—and even such should be wisely counseled. The volunteers of the past too frequently have spoken selfishly or in anger. Neither will help Congress—only hurt business.

WHY SHOULDN'T BUSINESS LEADERS GET TOGETHER AND OFFER HELP?

What seems needed is a new group, or a series of new groups, working in harmony to bring out the best that businessmen and organizations of businessmen are able to supply and to employ that best in helping work out our problems. Many businessmen are trying, but there is lacking coordination of effort. Organizations which may be doing good work in their respective fields lack the status to be effective in affairs going beyond their fields.

What would seem desirable, as a beginning, is this: That a small group of outstanding businessmen, each from a different field, should promptly begin deliberation upon what businessmen can do best to help both in working out our problems and in finding a basis for stability and cooperative motion forward, and to make recommendations accordingly.

While its only authority would come from the quality of its motives and the soundness of its recommendations, there still is great force in public opinion. Its work might prove the beginning of a better day for all.

The new Congress contains much outstanding ability—and few Members, if any, who are not earnestly seeking to find a way to stability and sound motion forward. Views differ, of course; but no mind is closed to fact or to sound reason. Then, too, this Congress enjoys an advantage over its precedessors:

It has had better opportunity to witness the damaging effect of mistakes made by prior Congresses.

It has a new mandate from the people—notice that there must be a change of course.

It has a generous supply of new talent—some of it most promising—all of it independent.

It likely will go far wrong only if we should fail it or if it should permit itself to become involved in politics instead of problems. It would be a tragic thing if this should happen, particularly if the lines of the constitutionalists should be weakened when there is such need for a united front if we are to make self-government work. While the proximity of 1940 provides a temptation, the danger can be measurably lessened if our support be real and is free from partisan tinge.

Jackson Day Address by Assistant Secretary of War

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 10, 1939

ADDRESS OF HON. LOUIS JOHNSON, ASSISTANT SECRETARY OF WAR, AT THE JACKSON DAY CELEBRATION AT MONTGOMERY, ALA.

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered on last Saturday evening by The Assistant Secretary of War, Mr. Louis Johnson, at the Jackson Day celebration at Montgomery, Ala.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Democrats, here in Alabama tonight and in every State of the Union we, the militant and energetic vanguard of the aggressive and progressive Democratic Party, have gathered to pay our respects to a great battle and to an even greater fighter.

On this day in New Orleans in 1815 a raw and untrained body of frontier sharpshooters, supported by tattered refugees from Santo Domingo, inexperienced Creole militia, and variously arrayed Negro freemen, held at bay 12,000 experienced, well-trained, battle-scarred British veterans. Flushed with victory in the campaigns of the Spanish Peninsula over the marshals of the great Napoleon and eager to add new laurels to the Crown, these seasoned troops moved forward utterly to destroy America's makeshift forces, but they met a tartar in the form of Andrew Jackson.

In 25 minutes of actual fighting, the dead-shot riflemen of the great American West converted an orthodox and methodical British attack into a disastrous and disorganized rout. The proud chariots and mighty hosts of Lord Pakenham, Andrew Jackson "cast into the sea."

In one masterful stroke "Old Hickory" had won back for the American people their confidence in themselves and in their ability to meet the vicissitudes of life, which years of bad bungling and faulty leadership had almost destroyed.

We of the Democratic Party celebrate the anniversary of this outstanding military and moral victory to remind ourselves that in every year and in every generation there arise in our society disintegrating elements which would uproot and undermine the faith of the American people in our Government and in our institutions, and that we must look to democratic leadership to smite these sinister forces hip and thigh.

In 1815 General Jackson dealt a death blow to the attitude of military defeatism that had crept into American life and injected a new spirit of courage and confidence in our Nation's political destiny. In 1933 his successor in the leadership of the Democratic Party, our beloved President, Franklin D. Roosevelt, stunned the forces of economic defeatism that for 12 years had misruled our country and revived the old spirit of initiative and enterprise in our country's industrial democracy.

Today the ideals of a free America again are subjected to vigorous attack. This time it has taken the form of insidious propaganda against American institutions and against the American way of life. Foreign isms of varied hues and colors, conceived in darkness and ignorance, and nurtured in greed and intolerance, have spread their deadly germs throughout the civilized world and have filtered even into the United States.

Again it has become necessary for American ideals to assert themselves forcefully and unequivocally. Again the Nation is fortunate in having as its President a leader who is thoroughly American himself and who in his public and private life epitomizes the ideals of democracy. His example of honest thinking and fair dealing has reawakened in the overwhelming majority of the American people the fine democratic traditions of freedom and of tolerance. These are the aspirations of the average American of today.

These are the ideals of your own forefathers of yesterday who followed the fearless Andrew Jackson into the turbulent, treacherous Creek country and converted it into the peaceful, loyal State of Alabama.

One hundred years ago there was a man in the White House who understood the aims and the aspirations of the average American. Andrew Jackson mobilized the trapper in the wilderness, the worker on the wharf, the toiler in the factory, and the farmer in the field, and galvanized them into a vital, energetic, and dominant force in American life.

Andrew Jackson never veered from his definite goal of greater opportunity and more happiness for the common man. He never compromised with his principles. He never was frustrated by the narrow legal interpretations of the sophists. He was opposed by all the so-called great minds of his day, but he won over them all, and time has added to the luster of his victories.

He was opposed by Clay, the greatest compromiser of all American history. Clay's adjustments have disappeared. Jackson's policies still survive. He was opposed by Webster, the greatest constitutional lawyer of his day. It took a war to settle some of Webster's principles. Jackson's program has contributed to the peace and prosperity of America. He was opposed by Calhoun, the master logician of 100 years ago. Today, Calhoun is but a mere tradition. Jackson is a living, dynamic force.

Today we again have at the head of our Government the same type of champion of economic and political freedom for the common man, the farmer, the laborer, and the small storekeeper. President Roosevelt, too, will not veer from his determination to add to the security and to the happiness of the American people. Long after the carping criticism of those who oppose President Roosevelt's program has been forgotten, the achievements of his administration in the field of political, social, and economic democracy will be remembered.

Let us rally behind our President. Let us marshal our strength against all forces of un-Americanism that rise to block us in our efforts. Let us, on this Jackson Day, recall the steadfastness and the courage of "Old Hickory" and vow to uphold the ideals of the Democratic Party, whose foundations he had laid more than a century ago.

To your forefathers in Alabama, the very name of Andrew Jackson conjured up images of personal courage. They never forgot the sight of their gallant leader lying in bed, his arm hanging limp by his side, broken by fever and weak from loss of blood, receiving the disturbing news of the Creek revolt. The Indians were on a rampage. They had massacred 250 white settlers at Fort Mims. Immediately Andrew Jackson seemed to regain his poise and his strength. Propped up against a pillow, he announced to the pioneer settlers who looked to him in their hour of distress:

"The health of your general is restored. He will command in person."

He was as good as his word. Haggard, weak, his arm still in a sling, he started out in command of his infantry. The terrors of a winter campaign in a hostile country did not deter him. He cut his way through the wilderness. He marched across swamps. He bridged over streams. He sought the enemy in his own lair and captured the Indian ringleaders. He broke up the revolt of the Creeks. He established law and order.

To all Americans of today the name of Franklin D. Roosevelt should recall feats of similar courage. To be sure, his victories were not won with brave soldiers on the field of battle, but they were fought on the political and economic front where fortitude equally counts. Recall, if you can, the dark days of 1932, of official inertia, of public fear, and of individual resignation. Contrast that picture of dark despondency with the energy, the confidence, the courage, and hope that transformed America when Franklin D. Roosevelt ascended to leadership.

In 1933 Democracy returned to power. The battle against the Republican depression, thank God, has been won. Here in Montgomery and throughout the country we are reaping the harvests of the seeds of recovery planted with your help and cooperation. Our ideals, our principles, and our form of government have been secured and strengthened. We have a reasonable prosperity to a degree almost unknown in the civilized world.

Ours is a happy nation. We have our faults, but we are honest enough to admit them and are making every effort to correct them. Despite shortcomings here and there, we probably still provide greater security to property, more protection to life, and greater happiness to our individual citizens than does any other nation on the face of the globe.

We have not reached the millennium. There are still some sores in our economic system that must be healed. There is still some strife in our society that must be eliminated. There are still needed reforms that must be completed. When we consider, however, what already has been accomplished we should be encouraged in facing the battles of today and tomorrow.

It is impossible in the brief period of time allotted me to discuss fully the accomplishments of our Democratic administration since 1933. Let me invite your attention to a few of the more outstanding ones. The handling of international affairs is an excellent test of the statesmanship of any administration. Let us begin with that.

We have cultivated patience and self-restraint in dealing with our neighbors in America and with nations across the seas. We have avoided force or the threat of force in the pursuit of our governmental policies. We do not interfere in the internal affairs of other nations. We encourage and ourselves use peaceful methods to adjust differences between this country and others. We have extended our open hand in friendship to all nations but have not hesitated to tighten our grip when our rights have been disregarded. We have been polite but we have been firm.

We have stood ready to cooperate with the rest of the world in the reduction and limitation of overburdening military armaments. We have encouraged trade treaties among nations. When the President speaks in international matters, he expresses the conscience and the peace hopes of the entire civilized world.

As in the days of Jackson, our work in the field of foreign relations is marked by a procession of triumphs. In keeping with the traditions of Martin Van Buren, Edward Livingston, and John Forsyth, whose administration of the State Department under Andrew Jackson elevated the United States to a new high pinnacle of influence

in the family of nations, President Roosevelt has placed in charge of foreign affairs a man of wisdom, of learning, of courage, of kindness, and of firmness. Both Republicans and Democrats have endorsed the splendid administration of our State Department under the outstanding leadership of Cordell Hull. Behind the voice of the President and the hand of Mr. Hull stands a united nation.

Every loyal man and woman in our country is thankful for the leadership of our President in awakening a spirit of solidarity among the people of America. Every friend of peace in every corner of the civilized world is grateful for the achievements of Mr. Hull in crystallizing the spirit into a new "declaration of American principles," which was recently adopted at Lima by the 21 American republics.

No; there was no complete accord at Lima, but neither was there unanimity in Philadelphia on July 4, 1776, when the Declaration of Independence was adopted, nor in New York City on September 13, 1788, when the Constitution was ratified. In the years to come we may find that the Pan American Conference of 1938 has proved just as significant a landmark in the history of free people.

The conference at Lima condemned religious and racial persecution. It protested against the collective, political activity of groups of aliens. It declared its opposition to unreasonable trade barriers. It favored freer commerce between nations. It pledged the republics of this hemisphere to the peaceful settlement of all international disputes. It denounced force as an instrument of national or international policy. It announced respect for the binding contract of international treaties. It proscribed as inadmissible "the intervention of any state in the internal or external affairs of another." In brief, it revealed a growing sense of unity and common interest in fairness and justice among all the peoples of North and South America. Harmony, tolerance, freedom, peace, and democracy, these were bywords of the conference. By pledging faith in these principles, idealistic America has answered with an effective counter barrage the attack upon its institutions that have come from the decadent ideologies of the Old World.

To reach great heights in international affairs, diplomacy is not always enough. In a great world made up of all kinds of peoples and all types of governments, there are usually some nations who live only by the sword. So long as they can bully their way through international society, they allow their ruthless ambitions to run rampant. They always think twice, however, before they dare step on the rights of those who are capable of resisting their evil machinations. We need an army and navy so strong that no nation will dare attack us without thinking it over not only twice but 3 or 4 or perhaps 10 times.

Toward the strengthening of our defensive forces, the President is lending the aid and encouragement of his great office. He is insisting upon a navy second to none. He is demanding an army small in size, compact in organization, wholly equipped with the best of modern arms and equipment, and capable of expansion to meet any grave emergency.

Our Army requires planes of every type, skilled operators to fly them, trained combat crews to man them, experienced mechanics to maintain them, efficient equipment to protect them, and ample bases to support them. We need tanks and machine guns in greater quantity and of better performance. We must augment our new semiautomatic shoulder rifles which the world regards as the peer in small arms. We must add antiaircraft guns. We must streamline our Infantry and Cavalry divisions. We must build up our reserves of munitions. We must fortify ourselves against the possibility of shortages in an emergency. We must build up a reserve supply of all our military needs except food and clothing. With such a physical reserve on hand, there would be no need, in an emergency, to dislocate industry's normal services. Instead of rushing madly into war production upon the declaration of a grave emergency, industry would have time to convert our factories into arsenals and to go into full war production in a logical and orderly manner. We must keep abreast of military developments. We must build our defenses so strong that no nation in the world will dare attack us.

To the strengthening of our national defense the President has now pledged himself. Mindful of his past achievements, we have every reason to feel that he again will accomplish his purposes.

So far, we have discussed the achievements of the Roosevelt administration in fields not so very well known to the average voter. Now, let us consider its accomplishments in the life and work of every man and woman in the State of Alabama. Most of them are known to you. I repeat them here in a summary manner to refresh your minds and urge you to keep the facts before you to help you silence the voices of defeatism that may be raised in your communities.

The wave of bank failures that characterized 12 years of Republican rule has broken. When a bank is in distress the small depositor escapes without loss.

For the farmer, production is being brought into line with demand. His submarginal lands have been abandoned. On his good land, improved conservation methods have been employed.

In the securities market, the dishonest, get-rich-quick promoters who manipulated security prices to their own advantage, have been clipped of their wings and their rackets broken up.

The Democratic Party has kept faith with the youth of America. The Civilian Conservation Corps has saved not only our physical but our human reserve. It has proved useful and stimulating activity for hundreds of thousands of our young men, many of whom have become familiar to you in Alabama. It helped put an end to those bands of roaming, homeless, hopeless youths who cluttered our street corners and our speak-easies.

In his emphasis upon youth, however, the President has not forgotten the aged. A great social-security plan has been enacted into law, a measure which some day will stand forth as a landmark in the long battle to remove the specter of penury and need from aging men and women.

The Democratic Party has ended the reign of terror that hovered over some of our biggest cities. It has driven out gangs and racketeers. It has broken the grip of the kidnaper. It has ended the reign of crime and of delinquency which prohibition and the Republican depression had brought in their wake.

I trust I have given you enough reasons why the Democratic Party is in power today and why it enjoys the confidence of the American people. Its achievements speak for themselves. What the President and the Democratic Party have accomplished since 1933 augurs well for their ability to tackle the problems that still remain.

We are confronted today with great national issues. Let us approach them with a national point of view. Let us forego narrow localism and think only in terms of our country as a whole. Let us, who are meeting tonight in Montgomery in the very "cradle of the Confederacy," revive the toast of Andrew Jackson, "Our Union, it must be preserved!"

The President is leading the American people on a road toward greater security and more happiness. He needs lieutenants and subalterns to help keep his lines unbroken. It is up to us of the Democratic Party to close ranks and march in step behind him.

What the Retiring Congressman Thinks About

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1939

RADIO ADDRESS BY HON. ARTHUR P. LAMNECK, OF OHIO, ON DECEMBER 17, 1938

Mr. RICH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Representative Arthur P. Lamneck, Democrat, of Ohio, over the Columbia Broadcasting System Saturday, December 17:

I am an Ohio businessman and a Democrat who is just finishing 8 years in the House of Representatives. During much of that time I have served on the Ways and Means Committee. This is one of the most important House committees. Primarily its duty is to find money with which to pay Government expenses. That alone in rece years has been some job. But the committee does much more than raise money. Among other things, it selects members of all other House committees. One who has served on it should be familiar with what makes congressional wheels go around.

Despite the importance of the work that I have been doing in Washington, I feel that I am returning to private life to do even a bigger job than I have done here. While I shall be compelled to conduct my business to earn a living, I intend as a private citizen to devote every possible minute that I can spare to interesting people in taking an active part in the affairs of their Government. I want to help make them realize that it is their Government and that it will be run well or badly just as they permit it to be run. The task I have cut out for myself is that, insofar as time will permit, I propose to make myself available for addresses on public questions.

Most Members of Congress are responsive to the desires of their constituents exactly in proportion to the demands they receive from back home. Because of this situation it is imperative that the sound-thinking and industrious people of the Nation learn the truth about public affairs and voice their opinions to their Congressman regularly. Workers, employers, farmers, investors, property owners, life-insurance policyholders, bank depositors, and all others who believe in working for a living and are not seeking Government support must consider the situation from the standpoint of how their personal fortunes are involved. They must become militantly aggressive and highly vocal in their own behalf. They must not only elect capable men to represent them in Congress, but they also must stand behind these men when the fighting on Capitol Hill grows furious.

Make no mistake about the combat in our next Congress being furious. The fur will fly as it never has flown before. The little group of radicals, under the direction of Tommy Corcoran, the accordion player, who have been running things, are not going to give up just because they were repudiated in the last election. They will wage a fierce onslaught not only to expand their socialistic program, but also to prevent the enactment of constructive legislation.

Outstanding in their program will be another demand for huge appropriations to be spent without congressional control. Present

indications are that between eight and nine billion dollars will be sought. Do not be surprised if this amount reaches ten billion before Congress finally adjourns.

This step, however, will be only preliminary to further unbridled spending. Very early in the session an attempt probably will be made to legalize an expansion of the public debt. Under the present law the Government is prohibited from having more than $45,000,000,000 worth of paper outstanding. At present there is outstanding somewhere between thirty-eight and forty billion dollars. With a leeway of only approximately $5,000,000,000 existing, the spenders must have more money soon. Previously they have said the Nation could carry a debt of seventy-five billion.

I assert that an effort will be made to raise this debt limit because it was discussed during the last session of Congress. Every patriotic citizen interested in the American form of government and its institutions should adopt a slogan, "They shall not pass $45,000,000,000," and see to it that their Congressmen and Senators support such a proposal. If we hold the line on this issue, public spending must be reduced or taxes must be increased. If taxes are raised 150 percent over what they now are, which would be required, the American people for the first time will realize the fanatical policy on public spending that has been in effect for some time past.

A great war scare also is in the making. The radical inner circle is planning to whip the country into a state of feverish excitement and patriotic fervor over the preparedness issue. Having failed to solve the unemployment problem or restore prosperity, it realizes that it is in desperate straits for a popular issue to divert attention from its failures. With the Ship of State sinking, the crew will endeavor to direct the attention of passengers from their precarious position by shouting "sharks."

There also has been quietly discussed a scheme for elevating Harry Hopkins, the fair-haired political adviser of the inner circle, to either the Secretaryship of the War or the Navy Departments. Hopkins in either position, it is figured, would be able to continue in the pleasant pastime of spending more millions and at the same time popularize himself to such an extent that he might be the radical candidate for President in 1940.

None, of course, will oppose appropriations for adequate defense. They will be granted. But appropriating millions to defend and cover up mistakes and failures of the radical leaders is something else. The people won't stand for that.

Hopkins also has been discussed as successor to Secretary of Commerce Roper. Hopkins may be slipped into that position temporarily. A house-wrecking is probably in store for this Department. The fact is the inner circle hope to abolish the Department of Commerce as such, distributing the various bureaus among other Departments. The Commerce Department was established by Congress to "foster and encourage business," and such activities are wholly repugnant to the radicals.

A determined effort also will be made to pass a reorganization bill which will empower the President to reorganize governmental bureaus as he pleases.

Revelations by the Dies committee of the widespread activities of un-American groups and their protection by administration members has caused the inner circle much concern. It would like to eliminate the committee entirely, and set up a new one which would soft-pedal the facts about radicals within and outside the Government. A new group, for instance, which would train its guns on business and industry and charge their leaders with being Fascists. Such a program was well under way a week ago, when suddenly it encountered an unexpected obstacle in the form of the Gallup poll. That poll, taken in many different sections of the United States, showed a 3-to-1 majority favoring a continuance of an uncontrolled Dies committee. The question of its continuance under a new appropriation will receive early consideration in Congress and the radical group will endeavor to halt the committee. Whether the administration will be able to rid itself of these embarrassing investigators, who have proven especially irksome to Secretary Perkins by revealing the fact that she is protecting Harry Bridges, a radical alien, from deportation, will depend largely on how much Congressmen hear from the folks back home.

Changes in the social security law is another item on the inner-circle program. The principal reason for change is to include a great many persons who are not now covered, so that the spenders can get more money. They will also attempt to provide for socialized medicine. A sensible and economically sound old-age pension amendment would be advisable, but no other changes should be made until the law has at least had sufficient time to know whether it is practical. The most embarrassing feature of the social security laws, and one which the administration would like to keep under cover, is that the money being turned into the Treasury from pay rolls for the protection of workers is not being set aside, but is being spent as rapidly as it is received.

The foregoing in a nutshell constitutes the radical program. Obviously it does not contemplate meeting any of our major problems.

Patriots of the United States now have a golden opportunity to put this country back on its feet. All they need do is join together in demanding constructive action from Congress. Included in those who could and should stand together and insist upon a real program are 50,000,000 workers capable of being gainfully employed; 60,000,000 insurance policyholders, much of whose money is invested in industry; 30,000,000 residents of farms, who depend much upon workers in industry for consumption of their products; every taxpayer, every bank depositor, every property owner, and, finally, every person interested in the proper upkeep of churches, schools, hospitals, and other public institutions and in keeping the United States free from control by aliens and traitors within our gates.

The outstanding national issue, which the radical group plans to ignore, is that of creating steady jobs for the unemployed. Congress can solve the problem if it will assume governmental leadership.

Given reasonable assurance of protection against further onslaughts by the theorists, business, industry, and money owners generally would turn loose a flow of currency which will start commercial wheels turning and soon put to work all persons capable of being employed. This country is years behind in its necessary supplies and there is more money hidden away in banks than ever before in history. The total amount on deposit is something like $60,000,000,000. There is hardly a dollar of this that would not be brought out of hiding and be put to work tomorrow if its owners felt that Congress would stand between them and the unsound business practices followed during the last 6 or 8 years.

Specifically Congress should refuse absolutely to appropriate any more money for the purpose of putting the Government in competition with private enterprise. It should find a way to establish peace with the utilities. It should refuse to finance any further investigations designed solely to harass, embarrass, and intimidate business. It should make any reasonable tax adjustments which promise to increase prosperity. Business recently has indicated a desire to go along with government and government should hasten to embrace this unusual opportunity to emerge from the indefensible position against business into which it has gotten itself.

The Wagner Labor Act must be amended. This measure is the most vicious that radical haters of industry ever have put on the statute books. It has done immeasurable harm to the Nation by stirring up strife and retarding recovery. A bad law, administered by a group of socialistic- and communistic-minded persons, its stark unfairness has aroused opposition among fair-minded persons in all parts of the United States. Yet the administration plans, if possible, to avoid amending this act. Nothing will be done unless Congress is strongly urged by the people to make necessary changes. It is encouraging to note that such a fearless man as Senator BURKE, of Nebraska, who was active in the fight against the President's court-packing bill, is planning to lead a movement to amend this outrageous act so that it will be fair to employee, employer, and the public. Senator BURKE will need all the help he can get from you.

Likewise, leadership in the solution of the transportation problem probably will have to spring from Congress. This paramount question has needed correction for years. The present administration has side-stepped it so long that today our railroad lines are in a chaotic condition. The time has come when this problem can no longer be avoided. Congress must do its duty.

Public expenditures can and must be reduced. Whatever is spent must be spent honestly and not for political purposes. It is imperative, especially, that the Government drop the ridiculous and crooked plan of taking income-tax money away from industrial States like New York, Illinois, Ohio, Massachusetts, and Pennsylvania and using it for what amounts to political bribery in small States like North Dakota, South Dakota, Alabama, Arkansas, and New Mexico.

In 1937 the Federal Government collected a little over four and a half billion dollars in income taxes from the various States and then juggled this money around so that it distributed about three and three-fourths billion dollars back to the States in direct payments for twenty-eight different purposes. To illustrate how this money was juggled for political purposes, North Dakota paid one and one-third millions of income taxes into the Federal Government and drew out almost fifty-nine millions. South Dakota paid in a little over one and a half millions and drew out fifty-nine millions. Alabama paid in ten and a half millions and drew out sixty-one millions. Arkansas paid in six millions and drew out fifty-seven millions. New Mexico paid in less than two millions and took out over twenty-eight millions. In no case did a large industrial State get back anywhere near as much money as it put in. New York, for instance, paid in approximately $1,000,000,000 and got back less than half this amount. Ohio paid in about two hundred and seventy millions and got back a little over half of it. Illinois paid in over four hundred millions and got back slightly more than half of this amount. So the whole record runs through.

The total cost of Government last year was slightly over $8,000,000,000 and receipts a little over $5,000,000,000, leaving a deficit of $3,000,000,000, or three-fourths of a billion less than the Government paid to States. These figures would indicate that a very simple scheme for balancing the Budget would be for the Federal Government to get out of relief and other forms of political activity and let all the States take care of their own relief problems.

Briefly, I have given you the picture of our national problems. Whether the people will permit a little group of wild-eyed radicals to continue to ignore the fundamental needs of our great Nation or will take the situation in their own hands and demand constructive action, is entirely up to you. If the loyal citizens of this country will tell their Congressmen to forget party lines, ignore the radical inner circle, and go to bat for a prosperous United States, Congress will do it. You can help by letting your Representatives and Senators know that you will back them up in such a program.

Legislative Proposals Submitted by the American Farm Bureau Federation

EXTENSION OF REMARKS
OF
HON. HERRON PEARSON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1939

COMMUNICATION FROM AMERICAN FARM BUREAU FEDERATION

Mr. PEARSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication addressed to the President of the United States and the Members of the Seventy-sixth Congress by the American Farm Bureau Federation:

AMERICAN FARM BUREAU FEDERATION,
Washington, D. C., January 10, 1939.

To the President of the United States and the Members of the Seventy-sixth Congress:

Pursuant to resolution adopted by the House of voting delegates at the twentieth annual meeting of the American Farm Bureau Federation, the Board of Directors of the American Farm Bureau Federation herewith calls to the attention of the President of the United States and the Members of the Seventy-sixth Congress the following matters, which are considered by the organization to be of outstanding importance to the Nation:

1. In these critical times, when lack of economic balance between groups of our people prevents normal exchange of goods and services, which in turn results in a continuing unemployment problem, we reiterate our conviction that the full power of the Federal Government must be mobilized in an effort to restore the economic balance which is necessary to enable us, as a nation, to regain normal volume of production and normal national income. We must put to work our billions of unemployed dollars and our millions of unemployed people.

We recognize the fact that our national Budget cannot be constructively balanced until we have attained economic balance between groups, and until national income has been substantially increased. Therefore we recommend—

(a) That the Federal Government provide adequate funds to help restore agriculture, our basic industry, to parity position.

(b) That the Federal Government continue to provide employment for those who cannot secure employment in private industry.

We insist, however, that hours and wages of relief labor be modified so that private employment will be more attractive than relief employment, that every effort be made to return relief workers to normal employment at the earliest possible date, and that every effort be made to reduce overhead costs in the administration of relief.

We insist further that Federal works projects be limited to such constructive projects as can fairly be expected to increase national income and wealth or to add to the productive efficiency of our national economy. We believe further that the Federal Government should insist on a full day's effective work for each day's wages paid out.

We are convinced that the Federal Government must continue to supply the bulk of relief funds, for the burden is beyond the present capacity of the local political divisions to handle; and we recognize the continued necessity that the Government provide capital investment funds until such time as private funds are again attracted into productive enterprise.

As a further aid to restoring economic balance we suggest that both industry and labor refrain from advancing prices and wage rates, but that they seek higher annual income through greater volume of production and continuous employment throughout the year.

We are confident that each and every citizen is willing and eager to bear his just share of the recovery burden in order to preserve the fundamental principles of our historic democracy, provided he is assured that the public money is being expended prudently and efficiently on projects that will broadly benefit the people as a whole. All citizens must shoulder the responsibility of making our democracy work in order to maintain our system of free government.

Again we offer our complete and hearty cooperation to those charged with the responsibility of grappling with this great national problem.

2. The broad principles underlying the Soil Conservation Act and the Agricultural Adjustment Act of 1938 are fundamentally sound. This is no time to give serious consideration to substitutive programs when the facts indicate that the present program has not yet had a fair trial. These acts should be amended only as experience clearly justifies. For some time to come the adjustment of acreages of basic crops in line with effective demand will be necessary. Commodity loans to support price levels are fully justified. Adequate provision should be made for parity payments to bring agriculture into fair economic balance with industry and labor. The provisions of the Marketing Agreements Act have proved their value beyond question, and their benefits should be extended to additional crops.

3. A joint committee of the Congress should be authorized and commissioned to study and report on at the earliest possible date the monetary systems of the United States and other countries for the purpose of ascertaining the effect of monetary policies on basic commodity price levels, and that based on such a study such joint committee should propose effective methods for achieving greater stability in basic commodity prices. Pending the completion of such a report the Congress should continue the authority of the President to change the gold content of the dollar.

4. Farmers recognize that the railroads constitute an essential transportation agency and believe that private ownership will best assure the highest degree of improved service to the public. The need for action by the present Congress is apparent. Greater freedom of action on the part of railroad management could be granted without relinquishing present safeguards to the public.

5. Changed conditions would appear to clearly warrant the taxation of the income of all Government-issued securities; therefore no more tax-exempt securities should be issued.

6. It appears extremely difficult, if not impossible, for the Administrator of the Wage and Hour Act to make effective, by regulation, the exemptions to agricultural trades and industries as clearly contemplated by the Congress. Congress should amend this act to assure to farmers the full benefit and scope of the present exemptions as originally contemplated.

7. Reciprocal trade agreements which have thus far been negotiated and which do not have the effect of reducing domestic agricultural prices below the parity price level are generally satisfactory to agriculture. Until such time as curtailed market outlets, which require America farmers to restrict production, are enlarged, all foreign trade policies should be formulated so that the widest possible domestic and export markets may be obtained for all domestic producers at fair price levels. All imported agricultural and livestock products should be required to meet domestic standards.

8. The natural resources of soil, water, range, forests, and wildlife are basic to the welfare of agriculture and to the Nation. The future protection and wise use of these resources must be assured. Such a program of conservation should be of a national scope and should be correlated with other conservation programs. A cooperative farm forestry program would appear to meet the problem in many areas of our country. Most land, wildlife, and forestry conservation must be carried out in cooperation with the people who live on the land.

9. The fertilizer program of the Tennessee Valley Authority, the Rural Electrification Administration, and the farm-to-market roads program should continue to be supported with adequate funds.

10. The United States Department of Agriculture, the land-grant colleges, the agricultural experiment stations, the extension service, the vocational education service, and the regional agricultural research laboratories should have adequate appropriations for carrying on their work in the service of agriculture.

11. Since the Nation as a whole can prosper only to the extent that equalized educational opportunities are made available to all citizens, the Federal Government should provide aid to grade and secondary schools on the basis of educational need.

Since it is further apparent that preventable disease and lack of proper medical care and hospitalization in some areas cause great economic loss and human suffering, the Federal Government should reasonably extend its public-health program with respect to maternal and child health, rural hospitals, public-health services, and medical care for those unable to provide such care for themselves.

Respectfully submitted.

American Farm Bureau Federation, by its executive committee: Edward A. O'Neal, president; Earl C. Smith, vice president; George M. Putnam; J. F. Porter; H. J. King; O. O. Wolf.

The Federal Budget—Political Abuses in Relief

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1939

RADIO ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS, REPUBLICAN LEADER IN THE HOUSE, JANUARY 10, 1939

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the

following radio address delivered by Hon. JOSEPH W. MARTIN, Jr., on Tuesday, January 10, 1939:

The new Congress which assembled a week ago today already has indicated its vigorous American temper and businesslike mood.

There is every expectation that it will prove a responsible, independent Congress, free of unwholesome executive domination, free of subservient rubber-stamp inclinations, free of that dangerous spendthrift infection which has marked the New Deal Congresses of the last 6 years.

With an effective minority of 169 Republicans in the House, this new Congress must seek to give faithful expression to the real sentiments of the American people as they were so clearly voiced in the State and National elections 2 months ago.

President Roosevelt's Budget message last Thursday, with its demand for $10,000,000,000 of new spending, came as a shock and surprise to Representatives and Senators of both parties on Capitol Hill.

This staggering Budget not only affirms the prevailing policy of reckless extravagance and dangerous bureaucratic expansion in Washington, but indicates clearly that the President himself now has abandoned every pretext of leadership toward economy, lower taxes, and orderly financial management of the National Government.

This policy in the White House is contrary to the will of the American people as expressed at the polls last November.

As such it is a rejection and repudiation of the whole theory and practice of representative government.

In State after State, and in county after county, the people voted for a curtailment of bureaucratic extravagance and for a beginning on policies which would promise to relieve the country of the present crippling burden of taxation.

No working population ever can hope to prosper permanently under prevailing policies of taxation.

No farming population ever can prosper so long as 27 cents of every income dollar must go for taxes.

Taxes are too high.

The Government is spending entirely too much money.

Our people demand a restoration of common sense, prudence, thrift, and ordinary good management in the handling of the Federal business.

They do not countenance such defiance of the popular will and judgment as is indicated by this last Budget.

Run-away spending is a dangerous habit. It feeds upon itself. It aggravates every other social and economic problem before the country. It tends to create more unemployment, and to delay the return of our 10,000,000 unemployed to regular jobs at honest American wages.

Congress already is at work on measures to cut down the President's spendthrift estimates, and in this program we on the Republican side propose to cooperate wholeheartedly with the leaders of the majority.

Our pledge already has been given that throughout this session we will place the welfare of the country above partisan interest.

Nowhere is there greater need for practical patriotism today than in the solution of the Federal financial muddle.

We all recall the eloquent warning uttered by Franklin D. Roosevelt in his address at Pittsburgh on October 19, 1932. His words are worthy of the earnest attention of every citizen in the land tonight. As a candidate for the Presidency, Mr. Roosevelt said on that occasion:

"Now, the credit of the family depends chiefly on whether that family is living within its income. And this is so for the Nation. If the Nation is living within its income its credit is good. * * * But if, like a spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxing power to the limit of the people's power to pay, and continues to pile up deficits, it is on the road to bankruptcy."

But since this administration took charge in March 1933, which was less than 5 months after Mr. Roosevelt uttered the solemn warning quoted, the Federal debt has been increased (giving effect to the 1940 Budget submitted last week) by more than $22,000,000,000.

Let us consider for a moment just how much $22,000,000,000 really is.

We may visualize a house costing $5,000.

If we built 200,000 such homes, that would be $1,000,000,000.

So we multiply by 22, and we have 4,400,000 new houses which could be built with the New Deal deficit.

Now, this is more houses than are standing today—old and new—in the cities of New York, Chicago, Philadelphia, and Boston, combined.

That, in practical terms, is what these Roosevelt deficits mean—new homes, fully paid for, for 4,400,000 American families.

There is a pump-priming project for you. There is a housing program which would put millions of men to work and start a tremendous business boom.

But instead of these 4,400,000 fine new homes, what have we got today?

A crushing burden of national debt.

This generation, our children, and our children's children are denied these homes.

Instead, our people will be lashed to the wheel of toil to repay this reckless debt.

Our Nation is mortgaged for a century to come.

The social security of our children is clouded by the threat which Mr. Roosevelt repeatedly has told us we cannot hope to escape under such policies—the disaster of national bankruptcy.

This is not a partisan issue. It is a grave question of national concern. It reaches to the very heart of unemployment.

The first duty of this Congress must be to advance measures and programs which will put our 10,000,000 unemployed back to work.

And first among these measures is a sensible approach to the Federal Budget.

Only by Federal economy may we hope to restore the normal economic drive of a robust national confidence and a vigorous, sure-footed private enterprise.

The President's Budget for 1940 is a challenge to the very system of democracy and to statesmanship.

For unless our Federal finances are placed upon a sound and prudent footing, all business and every citizen ultimately will suffer.

In the name of 10,000,000 jobless men and women, we plead with the President to give earnest attention to this urgent problem. We bespeak the aid of his vast power and influence in the prompt solution of an issue which has been too long evaded and denied—an honest Budget!

During the years of the New Deal emergency the Republican Party consistently supported the successive relief appropriations demanded by the President.

We never have denied the principle of public assistance to the needy unemployed.

But we have opposed, and we will continue to oppose, the shameful and degrading manipulation of Federal aid by the political rings which have made relief a racket during the last 6 years.

Only last week there was published by the Sheppard committee in the Senate a ringing indictment of greedy political abuses in relief throughout the country.

This report, presented by one of the most distinguished Democratic Members of the Senate, charged that relief workers in many cities had been mobilized by their foremen and supervisors for campaign duties and that political contributions had been wrung from the needy W. P. A. workers.

The Sheppard report covered a 6-month investigation of relief as administered under Harry L. Hopkins. In final form it made an indictment of more than 1,000 typed pages.

Within these pages is set forth one of the most shocking and disgraceful public scandals in all American history—for which Mr. Hopkins promptly was promoted to the President's Cabinet as Secretary of Commerce.

We on the Republican side do not propose to go along any further with this sort of business.

Every State, almost every county, reveals its own sordid story of political corruption and mismanagement in relief. In my own, the Fourteenth Congressional District of Massachusetts, my opponent on the Democratic ticket in the last election was, until he entered the campaign, the State Labor Director of W. P. A. for Massachusetts. He entered the campaign, I am informed, only after a personal conference with W. P. A. Director Harry Hopkins in Washington.

W. P. A. workers were taken from their regular assignments in the cities and towns to do house-to-house solicitation in the interest of my Democratic opponent.

Mr. Hopkins' official reports show that the national W. P. A. rolls were expanded steadily throughout the summer, reaching a new record high in the week of the November elections. But between June and November roundly 1,000,000 persons had been taken back into private employment.

The cut in relief began the day after the elections, and during the next 2 months, in the dead of winter, more than 150,000 men and women were dismissed from their W. P. A. jobs.

They were not dismissed because their need was ended, but only because the political campaign was over.

Our party stands for cleaning up this relief scandal without further delay.

We solicit national support for the proposition that all the relief dollar should go to the unemployed, not half of it to political hangers-on.

We solicit national support for the proposition that relief should be administered by local bodies, not by a headstrong bureaucracy in Washington.

We solicit national support for the proposition that there should be no more of these blank-check appropriations to the President, but that every relief dollar should be spent under a definite and exact formula laid down by Congress, which will insure that the relief money actually reaches those in need.

Let us put a stop to this shameful spectacle of playing politics with human misery.

Let us put a stop to this demoralizing coercion and intimidation of the unemployed by hand-picked political racketeers.

In this proposal our appeal is to that unfailing American quality of decency and fair play—an appeal which never has failed in this bright land.

In the final analysis, relief is but one segment of the great problem of recovery.

The foremost problem still is to put our 10,000,000 unemployed back to work.

This we may do by encouraging private enterprise to go to work; by encouraging the free flow of honest capital into productive employment.

We need to restore an abiding public confidence in the security of orderly constitutional government and in the future of American opportunity.

We need to turn our backs upon centralized one-man government.

We need to reestablish hope and opportunity as the living emblems of American life.

This is the only road to real recovery. Every other road leads but to the bog.

We on the Republican side beckon our colleagues of the majority to the broad highway of time-tested American principles.

We call upon the President of the United States to lend his great prestige and power to such a program, to the end that we may quickly send this mighty Nation once more along its accustomed path toward peace, progress, and sustained prosperity.

Reciprocal-Trade Agreement with Cuba

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1939

STATEMENT OF HON. JAMES F. O'CONNOR, OF MONTANA, BEFORE THE COMMITTEE FOR RECIPROCITY INFORMATION

Mr. O'CONNOR. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my statement before the Committee for Reciprocity Information in connection with the negotiations of a reciprocal-trade agreement with Cuba at a hearing held in Washington, D. C., on January 4, 1939, as follows:

Mr. O'CONNOR. Mr. Chairman and members of the committee, I first of all wish to thank you for the courtesy which you have extended me here this morning in permitting me to say at this point in the program what little I have to say in connection with the matter that is before the committee. First of all, I want to say this, that I cannot, in language sufficiently strong enough, protest against any reduction in the tariff on Cuban sugar, particularly in view of the conditions existing in the district which I have the honor to represent from the State of Montana, which is the Second Congressional District, and the largest congressional district in the United States where a State has been divided into congressional districts.

In that territory, Mr. Chairman and members of the committee, we have an altitude in the neighborhood of an average of perhaps 3,000 feet, and in some places it is much higher than that. Consequently, the crops that we can raise are limited to such crops as wheat, feeds, or sugar beets. We cannot, except to a limited degree, raise corn, beans, and the high-priced seeds. Now, then, with the curtailment of wheat—that is, with the policy of the Government in curtailing the production of wheat—we are now getting down to a point where, in the whole area of Montana, we are principally limited to what we would call the production of sugar beets.

I might add, gentlemen of the committee, that the United States Government has assisted us materially in many ways in bringing into use large areas of dry land by the creation of irrigation districts in my territory, at a large sum of money, and if we are going to curtail the production of sugar beets, which this would amount to, then a lot of money which the Government has already spent in connection with these irrigation projects would be thrown away, because we could not produce a crop that could be grown in that area due to the altitude that I am talking about.

My own thought about the matter is, particularly in view of the plight of the American farmer, the farmer in my territory, we have had 7 long years of continuous drought in that territory, and the only cash crop that we can now raise there that is of any particular benefit to us is the sugar beets. As an incident to raising sugar beets we can produce and fatten a large number of livestock, and if we can go on in the production of our sugar beets and get an increase in the acreage of the beets that we will be permitted to raise, we cannot only take care of ourselves but we can keep a large proportion of the farmers off relief. Today, and I dislike to make the statement, but the greater number of the people on relief in Montana are farmers whose acreage has been curtailed along the line of the production of wheat and beets and because of drought and insects.

I cannot emphasize this case or state it as strongly as it has been put in a resolution, one paragraph of which I wish to call to your attention particularly, by the Montana-Wyoming Beet Growers Association, which not only represents the district that I come from in Montana but likewise Wyoming, which is also a large raiser of sugar beets. This paragraph reads as follows:

"Whereas, although reputed to be the lowest-cost sugar producer in the world, financed largely by foreign capital and always showing a keen desire to monopolize our sugar market, Cuba, during past years, has been granted very valuable concessions, all of which have served more or less to retard the normal development of our domestic sugar industry, among which are: (1) The Reciprocity Convention of December 11, 1902, which granted to Cuba a 20-percent preferential rate on import duty; (2) by Presidential proclamation on May 9, 1934, the import duty on Cuban sugar was reduced 25 percent (from 2 cents to 1½ cents per pound on Cuban 96-degree sugar); and (3) by reciprocal trade treaty of August 24, 1934, which further reduced the import duty on Cuban sugar of standard raw value from 1½ cents to 0.9 cent per pound, the latter concession extending under the most-favored-nation clause to other foreign countries with which trade agreements have or will be negotiated."

Now, it is my thought, in view of the plight of the American farmer, and particularly in view of the plight of the sugar-beet producer in territories which I serve, the American market ought to be preserved for the American farmer so we may take him off from relief, because if we do not preserve it for the American farmer it just simply means that the Government has got to take care of him anyway. I am opposed to any policy of the State Department or of the Department of Agriculture which will cause idle lands or increased relief rolls.

I ask permission at this point to insert into the record the resolution passed by the Montana-Wyoming Beet Growers Association and also a copy of a letter dated October 3, 1938, at Great Falls, Mont., addressed to the sugar-beet section, United States Department of Agriculture—I think that is probably coming to the wrong department—and also a letter dated December 28, 1938, received by me in the last few days from the Pondera Beet Growers Association, of Pondera County, Mont., which is in a very high altitude country, where the altitude averages 3,800 feet and where it is impossible to raise anything but wheat, sugar beets, and feed for livestock, and if we are cut off there in the raising of sugar beets, gentlemen of the committee, those farmers in those three large counties, Cascade Pondera, and Teton, are going to be put on relief and the Government is going to have to take care of them. Now, I do not believe that it should be the policy of this country, to the exclusion of the rest of the American farmers, to extend any further privileges to any county outside of the continental limits of America.

I thank you.

The matters referred to follow:

"Whereas national interest has prompted statesmen and economists of all generations in modern times to recognize the vital need of domestic sugar production, a condition that has also prevailed in the United States as has been amply evidenced by the encouragement given by the Federal Government toward establishing, improving, and maintaining, under adverse conditions, our continental sugar industry; and

"Whereas from the time of the earliest efforts to establish our continental sugar industry to the present it has been generally recognized that this industry could not compete in low-cost production of sugar with tropical countries, owing to their cheap labor and consequent lower standards of living, especially with our principal competitor, Cuba, and the means customarily employed to overcome differences in production cost has been the collection of an import duty on sugar; and

"Whereas, although reputed to be the lowest-cost sugar producer in the world, financed largely by foreign capital, and always showing a keen desire to monopolize our sugar market, Cuba, during the past years, has been granted very valuable concessions, all of which have served more or less to retard the normal development of our domestic sugar industry, among which are: (1) The Reciprocity Convention of December 11, 1902, which granted to Cuba a 20-percent perferential rate in import duty, (2) by Presidential proclamation on May 9, 1934, the import duty on Cuban sugar was reduced 25 percent (from 2 cents to 1½ cents per pound on Cuban 96-degree sugar), and (3) by reciprocal trade treaty of August 24, 1934, which further reduced the import duty on Cuban sugar of standard raw value from 1½ cents to 0.9 cent per pound; the latter concession extending under the most-favored-nation clause to other foreign countries with which trade agreements have or will be negotiated; and

"Whereas a hearing has been called by the administration in Washington to be held on January 3, 1939, to permit interested persons to present argument on a proposal to reduce the import duty on Cuban sugar to 0.75 cent per pound, which, if adopted, would serve to further depress sugar prices now approaching an all-time low and below which continental producers can profitably operate, and by establishing an import duty below the difference in production costs would virtually give foreign producers a preference in our American sugar market: Therefore

"*Resolved*, That we, directors of the Montana-Wyoming Beet Growers Association, in annual session, hereby vigorously protest any further reduction in the import duty on Cuban sugar; and

"*Resolved*, That copies of this resolution be forwarded to each of the United States Senators and Representatives in Congress from the States of Wyoming and Montana.

"MONTANA-WYOMING BEET GROWERS ASSOCIATION,
"By F. E. HUDDLESTON, *President*.

"Attest:
"F. J. COX, *Secretary*.

"BILLINGS, MONT., *December 13, 1938*."

GREAT FALLS, MONT., *October 3, 1938*.

SUGAR SECTION,
United States Department of Agriculture, Washington, D. C.

GENTLEMEN: The Sun River and Pondera Beet Growers Associations of Teton, Cascade, and Pondera Counties of the State of Montana, representing 950 farmers, 225 of whom are this year

(1938) growing sugar beets, respectfully request 10,000 acres of the unallotted 1939 reserve, consisting of 30,969 acres of sugar-beet land, be allotted to these associations and the Utah-Idaho Sugar Co. for the following reasons:

Water supply: The territory served by these associations is more particularly described as being bounded on the north by the Roosevelt Highway (U. S. No. 2), on the west by Glacier Park and the Rocky Mountains, and the south by the city of Great Falls. The total irrigated area is approximately 252,000 acres, served by the Gibson, Pishkun, Willow Creek, Lake Francis, Swift, and Bynum Reservoirs, with a combined capacity of 314,000 acre-feet. There has never been a shortage of irrigation water and none is contemplated. Fifteen thousand acre-feet of new storage water will be available in 1939 that was not available in 1938 as the result of the raising of the spillway on the Gibson Dam 15 feet by the Bureau of Reclamation.

New producers: These irrigation projects are comparatively new; and although sugar beets have been grown since the erection of the Chinook plant in 1925, the land had to first be built up in fertility, etc., to get it into shape for sugar beets. This year there is a total of about 5,000 acres in beets, and several thousand acres of land have been prepared earlier, before your announcement of acreage curtailment, to be put into sugar beets in 1939, by plowing down alfalfa and sweetclover, summer fallowing, leveling, etc. If this allotment is not granted, this work and preparation will be a loss to the farmers who have done it.

Of the 225 growers producing sugar beets in 1938 in this district, 32 are growing sugar beets for the first time; 106 more farmers want to raise their first crop of beets in 1939 and have gone to much work and expense in preparing their land and will be able to grow profitable crops of beets if our request for this additional acreage be granted. There has been $75,000 worth of new machinery purchased by these new beet growers in 1938. This new beet machinery will be useless for any other purpose than growing sugar beets.

Small producers: The large majority of present and prospective sugar-beet growers are operators of small units. There are 129 farm families on the Sun River irrigation project who have been placed there by the Farm Security Administration, having been moved from submarginal land areas. This movement has cost considerable money for the purchase of land, buildings, equipment, and machinery. All of these farmers are on units of small size, ranging from 80 to 160 acres, and the production of sugar beets is included in the farm plans that have been drawn up for these units, to the extent of 15 percent of the suitable acreage, and include a system of cropping designed to make it possible for them to pay their obligations. This is the first of a large movement of settlers in this area. In the fall of 1938 there will be opened for homestead entry 250 small irrigated farms by the Bureau of Reclamation on its Fairfield project, and each of the new farmers who settle there will want to and should include sugar-beet growing in their farm plan.

The Secretary of Agriculture has also recently announced a wheat reduction for those farms of approximately 30 percent for the season of 1939. Now the problem arises what these farmers and others represented by these associations are going to produce if they are also to be restricted in the amount of the sugar-beet acreages as already announced. Water charges, taxes, and other overhead expenses are burdensome and are becoming more so each year, and it is evident that idle land will not pay these obligations. Moreover, if this land is planted into hay and small grains, other than wheat, the present prices are so low and future outlook is so poor that it seems impossible to carry on.

Climatic conditions: Farmers of this area do not have a choice of crops available in most other irrigated sections because of the latitude and elevation, which averages about 3,500 feet above sea level. The crops that can be successfully and profitably grown here are limited to alfalfa hay, wheat, oats, barley, and flax. These conditions make it almost mandatory that our farmers grow sugar beets for which they have long been preparing. Experience has proven that farmers here can produce profitable yields of sugar beets and that the sugar content of the beets is much higher than in most other districts of the United States. In the season of 1937, growers experienced yields as high as 18 tons per acre and the sugar content as high as 21 percent. Regions to the south of us can turn to a large variety of other crops which they can produce if not given an allotment for sugar-beet acreage, without great injury.

Percentage of land allocated for sugar beets compared with total suitable acreage: Approximately 65 percent, or 186,500 acres, of the total area of the irrigated lands, according to a recent survey conducted by these associations and the Utah-Idaho Sugar Co., are suitable for sugar-beet growing. Tentative 1939 acreage allocation for this district as recently announced by you is about 4,000 acres, or 2.1 percent of the suitable land. We respectfully direct your attention to the allotment for the Sidney, Mont., district of 17,485 acres, which is about 35 percent of the total irrigated lands, or 50 percent of the suitable land now served by that factory. We also direct your attention to the other factory districts in this State, which appear to run about the same percentage as the Sidney district. No doubt the same is true of some other States, such as Colorado and Nebraska. The mere fact that farmers have been producing beets for the past 2 or 3 years should not, in our judgment, give them preference over other farmers who have been producing 1 year or who have been in the process of building their farms up to a condition to grow beets, which has taken several years to do. We also direct your attention to a district in California (Clarksburg) that has been given an allotment where there are possibly 100 growers in the entire district, which would give them more than 139 acres to each grower, or, in other words, corporation farming. We understand this is also a comparatively new beet district.

Availability of processing facilities: The processor company serving us, the Utah-Idaho Sugar Co., has ample processing capacity for handling this requested allotment, together with the tentative allotment already made for the Chinook district, without building a new factory. We are informed that this company now has five idle plants and with the recently announced allotments, will have at least two and possibly three more idle.

Labor: Sugar beets require a large amount of hand labor and give employment for many times as many workers as the same acreage of wheat or small grains. Any control of expansion of beets means less work and more relief clients.

Livestock: More livestock on our irrigated farms is a crying need of this district, both for the profit and the maintenance of soil fertility with the manure. The byproducts of sugar beets will make livestock feeding much more profitable, and the fine range livestock regions adjoining the irrigated sections makes feeder stock readily available.

Rural electrification: The Rural Electrification Administration has spent large sums of money for the purpose of bringing electricity to the farms in this area and establishing a permanent, prosperous community. The growing of sugar beets in their crop rotation will help these farmers pay for this additional great assistance to their standard of living, and will also make it easier for them to utilize this electricity to a better advantage.

Farm tenancy: Over 50 percent of our growers are tenant farmers and sugar beets are essential to their making a decent living and eventually becoming farm owners.

In view of the foregoing facts we therefore respectfully request your earnest consideration of our problems and that you grant 10,000 acres more to the Chinook factory district to take care of the beet growers in Cascade, Teton, and Pondera Counties in 1939.

SUN RIVER BEET GROWERS ASSOCIATION,
H. R. LENZ, *President.*
PONDERA BEET GROWERS ASSOCIATION,
BLAINE FERGUSON, *Secretary.*

PONDERA BEET GROWERS ASSOCIATION,
Conrad, Mont., December 28, 1938.

Re sugar-beet acreage quotas.

The Honorable JAMES F. O'CONNOR,
Member of Congress, Washington, D. C.

DEAR SIR: Your favor of the 23d is at hand and we appreciate what you are doing and are going to do for us in Washington. We sure need someone there to look after our interests.

On January 3, which is next Tuesday, there will be a hearing there in Washington on the Cuban sugar situation when they will take up with the Secretary of Agriculture the proposition of increasing the acreage quota and reducing the tariff on Cuban sugar. This should be stopped. What are American markets for if not for American farmers? Coming right home with this proposition, we irrigation farmers in the Great Falls area of Montana would like very much to get an increase in acreage quotas of sugar beets so that we could round out our rotations and stay off relief. It is not reasonable that we be forced to cut down our sugar-beet acreage in order that the Wall Street magnates be allowed to make a little more money on the cheap labor of the Cubans.

It would be different if we had some other cultivated crops that we could turn to. We live up here next to Glacier Park with an altitude average about 3,800 feet—corn, beans, and high-priced seeds are out of the question, we must raise wheat, feeds, or sugar beets. They have cut our wheat quotas down to where we can only put in about one-fifth of our good irrigated land to wheat, and feeds of all kinds are so cheap that they have no market price. The only answer, then, is sugar beets; and if it goes through as it is lined up now, we will have to cut our small acreage 20 percent instead of increasing it 100 percent, as we would like to do.

We are depending on you to look after our interests.

Yours very truly,

BLAINE FERGUSON, *Secretary.*

Exhibits of the State of Washington at the New York World's Fair and the Golden Gate International Exposition

---

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1939

Mr. MAGNUSON. Mr. Speaker, the world that parades through the two big world's fairs this year, at San Francisco

and New York, is to know more about the State of Washington through the most modern types of exhibits and displays.

Visitors to Washington State's exhibits at the New York World's Fair and the Golden Gate International Exposition in San Francisco will see the State in almost as much reality as if they were taking a personally conducted trip through the famed evergreen empire.

The displays, costing $35,000 each, are being prepared under direction of the Washington State Progress Commission, the State's official publicity department. F. B. McGovern, of Seattle, is the commissioner in charge of the State's exposition participation. Under his direction duplicate exhibits are being manufactured for each exposition.

The "sightseeing" effect will be contrived with the use of nine animated dioramas, 2,800 square feet of photomural wall decorations, and 72 phototransparencies.

The dioramas, central feature of the exhibit, will display actual scenes of the State in three-dimensional reality. Actual motion will be projected into these lifelike reproductions, with miniature clipper planes, automobiles, steamships, and trains traveling back and forth.

These exhibits, the most modern and effective display engineers have yet perfected, will portray the State of Washington as it actually exists in real life. They will be strictly modern without being modernistic.

Recreational attractions, scenery, and vacation thrills; industry, commerce, agriculture, and power; resources of minerals, fishing, timber, and fruit; all will be dramatized realistically to give the millions of fair visitors a keener conception of the life and opportunities as they actually exist in the State of Washington.

Every section of the State and every major industry will be represented in the comprehensive displays, from the wheat fields of the Palouse and Walla Walla regions to the fishing and dairying of the Puget Sound country; from the mines and fishing lakes of Pend Oreille and Spokane to the rich agricultural belt and huge lumber mills of southwestern Washington.

One of the outstanding displays will be an animated diorama of Grand Coulee Dam, the United States Government's huge power reclamation project on the Columbia River. Through skillfully manipulated models and lighting effects, Grand Coulee Dam will be shown as it will appear when completed. The reproduction will be complete even to the power houses and transmission lines. When ready for use, Grand Coulee Dam will provide water to transform 1,200,000 acres of arid but fertile desert into productive land that will provide farm homes for more than 40,000 families, and low-cost electric power for countless new industries engaged in developing the State's vast natural resources.

To better acquaint people with the State of Washington, a large map with photographs will portray the agricultural and manufactured products and industries of each of the 39 counties. By pressing a button, spectators can illuminate any county and see from photographs what that section produces.

Other outstanding displays will include reproductions of 3-mile-high Mount Rainier, Yakima and Wenatchee Valley fruit orchards, mining, San Juan Islands and fishing, Seattle from the water front, Olympic National Park and Olympic wilderness, evergreen forests, and many other representatives scenes.

In the dioramas, of which nine are being prepared for each exposition, form, color, and motion are blended to produce startlingly beautiful Washington scenes as real as nature itself.

Briefly, here is how a diorama is made:

An enlarged photograph or painting is set up. Then buildings, trees, roads, and other foreground and middle-distance objects are "pulled out" of the picture by duplicating them with actual models.

The result is a lifelike re-creation of the original scene, with three-dimensional effect that enhances its effectiveness.

But there are many refinements. Houses have windows. Trees, constructed of various materials, and logs, made of molding plastic, are faithful reproductions down to the last detail.

Coloring comes next. This is done with a spray gun and by hand.

Streams, stretches of salt water, and water pouring over Grand Coulee Dam are shown in motion by means of revolving lights which shine up through transparent material on which the water is painted. Sunrises and sunsets are done in the same way.

Model boats, trains, automobiles, and clipper planes actually travel back and forth.

For the New York World's Fair the State of Washington is erecting its own building on one of the main thoroughfares. It will be of modified colonial style, 60 by 100 feet, in which Washington building materials are used throughout.

The Washington State exhibits at the Golden Gate International Exposition will be housed in a 60- by 100-foot space in the strategically located Hall of Western States, along with the 10 other Western States and British Columbia.

The total cost at each exposition, including building space, exhibits, management, personnel, and so forth, will be approximately $100,000.

Mr. Speaker, I feel it a great honor to be privileged to invite the Members of this body to view these exhibits when they visit either of these fairs.

Religion and Present-Day Problems

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1939

RADIO ADDRESS OF HON. WILLIAM B. BANKHEAD, SPEAKER OF THE HOUSE OF REPRESENTATIVES, ON DECEMBER 25, 1938

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. WILLIAM B. BANKHEAD delivered December 25, 1938, on the Reconciliation Hour under the auspices of the United States News:

Thinking tonight, as we should, in terms of the significance of an immemorial anniversary to be celebrated tomorrow, my mind goes back over 20 centuries to the Man of Galilee.

This has been announced as an hour of reconciliation, and, being such, it involves considerations of tolerance, justice, and charity. If it were not universally recognized that the whole world is aflame with the passions of greed, martial fervor, national aspirations, race prejudices, and religious interdictions, and that our own domestic affairs are shot through with class consciousness, economic bitterness, and political fratricide, there would be no legitimate excuse for invoking the spirit and purpose of this hour.

Such premises being granted, as they must be, by all thoughtful men, we play the part of prudence and of wisdom in undertaking to solve and reconcile them by appeals not only to the public mind but also the public conscience. It would be the ultimate doctrine of despair to feel that the burdens now bearing down so heavily upon the sons of men are forever insoluble.

PRESENT PROBLEMS HELD SOLVABLE

The challenge, then, is a diligent quest for some formula of alleviation. Where shall we find it? By what processes of appeal and discussion and action may the barriers of misunderstanding be broken down?

I do not think the answer will be found in the realm of pure reason, or within the domain of economic argument, or by the bludgeoning of brute force, nor indeed in the field of purely economic advantages. Those are things of mind and muscle and money.

No great and enduring advances in culture or civilization have ever been achieved purely through gross materialistic agencies. All the pages of history "with their stories of tragic fate and pathetic grandeur do but serve to teach us that immortality cherishes as her choicest nurselings the wrecks and castaways of finite fortune."

SEES AN ANSWER IN APPLIED RELIGION

To my conception, possibly as old-fashioned and out-of-date as millions may now conceive it, the best solvent for our manifold modern difficulties, if found at all, will be in the realm of applied

religion. And that belief justified my opening reference to the Man of Galilee.

Aside from all considerations of divinity, in the sanctity of which some 600,000,000 people are dedicated, I feel justified in appealing to the grandeur of His moral and economic philosophy as an antidote for many of our most grievous domestic and international wounds. The essence of that philosophy is a direct appeal, not to the minds of men alone, but with searching directness to their hearts, and to me, what this troubled world needs more today than all other treasures combined, is understanding hearts.

If today all men in America in high positions and low, employer and employee, exalted and abased, could find the time to read the fifth, sixth, and seventh chapters of the Gospel by St. Matthew, the Sermon on the Mount, and ponder its wisdom, its clarity of moral standards, its implications of business square dealing, its appeal for sympathy and justice for the underprivileged, its admonitions of disaster to those who use power unmercifully—and remember these elemental things and fashion their conduct upon such standards—we would not need so many restraints and repressions in government; we would have far less of bitterness and rebellion from the "have-nots"; we would go a long way in reducing the sinister growth of class consciousness and a nearer approach to equality of opportunity and equality of benefit from their labors for every citizen under the flag.

ASKS FOR REVIVAL OF MUTUAL TRUST

With the utmost reverence I venture to suggest that today no greater political or economic or sociological platform could be contrived than this: "Therefore all things whatsoever ye would that men should do to you, do ye even so to them."

We politicians have been sorely beset in these later years to try to find a healing for the peoples' hurts; the partisans of factions have been at one another's throats with charges of incompetence to contrive remedies for a stumbling civilization; many of our citizens are seeing red and feeling blue. Maybe we have been grasping at shadows when the substance was within our hands. The chastening rod of frustration may yet drive us back to some of the sublimer, but much simpler, things of the spirit.

There may come the day when the collective judgment of our people will agree that for a long, long time they have been throwing away "the pearl more precious than all our tribe."

Dismissal of W. P. A. Employees

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1939

LETTER TO COL. FRANCIS C. HARRINGTON, ADMINISTRATOR, WORKS PROGRESS ADMINISTRATION

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JANUARY 11, 1939.

Col. FRANCIS C. HARRINGTON,
Administrator, Works Progress Administration,
Washington, D. C.

MY DEAR COLONEL HARRINGTON: I take this occasion to voice my protest against the dismissal of 7,000 people who are employed on the arts projects. As I understand it, $22,500,000 was allocated for the first 6 months for these projects. The amount now being allocated will be only $17,273,356. Hence the difference of $4,000,000 will save 7,000 people and their families from utter destitution.

The Works Progress Administration has the authority to keep every one of these 7,000 people on their jobs by virtue of the fact that under the last appropriation it could spend all of its money within the 7-month period ending January 31, 1939. Hence it can maintain the present quota, and in view of the deficiency appropriation, which is about to be voted, it need only use $4,000,000 of that deficiency appropriation to prevent any of these cuts.

As the arts projects constitute only about 1 percent of the entire Works Progress Administration, it makes the cuts all the more unnecessary. These arts projects have performed services that are way up and beyond the proportionate amount of money allocated to them. Over 120,000,000 people have attended Federal music concerts. Sixty-five percent of the people who have attended the Federal Theater plays never saw a play before in their lives. Art centers have now been created in some of the most backward regions of the United States.

The arts projects have been discriminated against in the last several years. They were substantially reduced in 1937. When additional personnel was added to W. P. A. generally, the arts projects received only a nominal increase, much below the rest of the program. In 1938 wages were cut on these projects and have never been restored, although restorations took place in all other projects. Even though pink slips have been rescinded on all other projects in New York City, 1,500 on the arts projects have received these pink slips and the ax falls on January 15.

This retreat at this time, and particularly in this field, is a concession to the reactionary forces in Congress who are going hammer and tongs after the W. P. A. workers throughout our country. This retreat only weakens the fight for adequate appropriations. Specifically does it weaken the fight for the figure asked for by the President. This is no time for retreat. It is the time for the Works Progress Administration to take a positive stand to continue useful and meritorious projects and to keep people from starvation.

I trust that you will deal with these people sympathetically and order a rescission of these cuts.

Sincerely yours,

VITO MARCANTONIO.

The Fiscal Policy

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1939

Mr. RUTHERFORD. Mr. Speaker, the great "middle class" of our country are worried about the fiscal policy of this administration. They do not understand the new theory of spending to get rich. They know that they cannot do it in their own affairs, and they wonder how a government can do it and survive bankruptcy. The Daily Review, a newspaper in Towanda in my congressional district, in an editorial asks the questions to which the farmers and small-business men of my district want answers.

LIKE A DRUNKEN SAILOR

How long can America continue to authorize $9,000,000,000 Budgets in the face of $5,000,000,000 tax receipts?

How long can the country stand annual deficits approaching the $4,000,000,000 mark?

How far upward can the national debt, which soon will have reached $45,000,000,000, be pushed without seriously impairing the Nation's credit and causing appearance of the twin evils of finance—inflation and repudiation?

These questions already are being raised by thoughtful citizens regardless of partisanship. The social value of the New Deal is not the fundamental issue. What is at stake is the fiscal stability of a country which for several years has been living on borrowed money and spending it like a drunken sailor.

There must be a limit somewhere. And the more cautious observers are virtually agreed that the limit has just about been reached.

One thing is certain—the administration's big spending program, when linked with the impending $2,000,000,000 armament project, gives legitimate pause for thought as to the fundamentals of the fiscal policy.

President Roosevelt, of course, envisions a national income of $80,000,000,000—a happy state of affairs that will find everyone sufficiently prosperous to pay high taxes and scarcely notice them. But businessmen are wondering how that goal can be reached so long as the uncertainty of governmental reform and the technique of bureaucratic interference with private enterprise continue to drive capital into hiding and penalize industry whenever it displays real resourcefulness.

Congress cannot fully discharge its duty to the American people unless it comes to grips with these basic issues before approving the Budget for the next fiscal year. The moment obviously has arrived for prudent reconsideration of the essential relationship of outgo and income. It will be fatal for America to be enticed into insolvency by reckless pursuit of an ever-vanishing mirage.

The President says that we are going to balance the Budget when the national income reaches $80,000,000,000, but nowhere does he or any of the New Deal statesmen tell us how we are to reach that figure. For 6 years we have tried every New Deal device to bring us prosperity, and they have failed miserably. We still have over 12,000,000 unemployed, commodity prices remain low, and the farmer and small-business man are in a worse condition than they were in 1933. As one columnist has well stated, "You can no more spend yourself rich than you can drink yourself sober." The only thing that

we as a nation can do is to get back to the old ideas of thrift, honesty, and hard work, because we will never work this financial situation out in any other way. So far as I am concerned I will oppose further spending. It may not do any good, but I will at least be voting as my constituents desire.

Venereal-Disease Control

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1939

LETTER FROM DIRECTOR OF PUBLIC HEALTH OF THE STATE OF CALIFORNIA

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks I include the following very significant letter from the director of public health of the State of California.

America is becoming conscious of the fact that earnest effort can eradicate dread diseases if pursued relentlessly and that the health of her citizens—the human resources of our Nation—is the most precious thing our country possesses. The letter speaks for itself:

DECEMBER 14, 1939.

MY DEAR CONGRESSMAN VOORHIS: At the coming session of Congress there will be considered the matter of appropriating for venereal-disease control $5,000,000 authorized by the La Follette-Bulwinkle bill for the fiscal year 1939–40.

Public health in California has benefited greatly by the allotment of $103,791 received under the appropriation of $3,000,000 for the current year. A sound beginning has been made which, if supported with increased funds, will be successful in bringing syphilis and gonorrhea under control and causing the annual incidence of these diseases to decline.

With Federal funds and the $150,000 appropriated by the State for the present biennium, we have been successful in assisting local health departments in a number of ways. A few of the accomplishments since the new program started, February 1, 1937, are:

The number of cases of syphilis and gonorrhea reported has increased from 17,568 during the first 9 months of 1936 to 39,479 during the same period this year. This increase of 73 percent does not mean that there are more venereal diseases; it means that more cases are coming under medical care and fewer are spreading infection. When the great number of hidden cases are discovered and treated, the incidence will begin to decline.

The number of clinic treatments has increased from 219,692 during the first 9 months of 1936 to 400,282 during the same period this year. This is an increase of 82 percent.

With the assistance of the State department of public health, new clinics have been opened or old clinics expanded in the cities of Santa Barbara, Sacramento, San Bernardino, Fresno, Pasadena, Long Beach, San Diego, Los Angeles, Richmond, and in the counties of San Mateo, Imperial, and Sonoma. Clinics will be opened this fall in Oakland and San Francisco.

The expansion of clinic facilities invariably means that the number of cases discovered increased two or threefold. The establishment of treatment centers will be necessary in all communities where clinics are inadequate.

State laboratory facilities have been expanded to accommodate greater demands. An average of 10,000 blood tests for syphillis are now being run monthly as compared with 3,000 when the program started.

Approximately 7 cents per capita is being spent from local, State, and Federal sources for venereal-disease control in California. The United States Public Health Service estimates that 25 cents per capita is needed. Local communities are increasing their expenditures for this purpose and the State legislature will be asked to increase its appropriation when it meets this winter. Money spent in controlling venereal diseases will ultimately decrease the amount of money necessary for the care of the aged, the insane, the sick, and the unemployed.

Your energetic support of the authorized appropriation of $5,000,000 will serve the best interest of the people of California.

Very truly yours,

WALTER M. DICKIE, M. D.,
Director of Public Health, State of California.

German Bondholders—Attention!

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1939

RADIO COLLOQUY BETWEEN HON. EMANUEL CELLER, OF NEW YORK, AND DR. MAX WINKLER, ASSOCIATE PROFESSOR OF ECONOMICS, CITY COLLEGE OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following colloquy between Dr. Max Winkler, associate professor of economics, City College of New York, and myself, given over the radio on Monday, January 9, 1939:

Mr. CELLER. The conduct of Nazi Germany toward American nationals has been shockingly unjust and intolerable. The treatment, or rather mistreatment, e. g., accorded American holders of German bonds has been inexcusably vicious. Don't you think, Dr. Winkler, that a firm stand against Nazi neglect, indifference, and discrimination must now be taken by our Government?

Mr. WINKLER. Yes, Congressman, our patience, especially that of bondholders, has been exhausted. Their position has grown increasingly worse. Time has come when our Government must take a firm stand. The Nazis may rant and rail against us. They may villify and vituperate us. They may express scorn at the outspoken and courageous remarks of our President and our most distinguished citizens in public and private life, but deep down in their hearts they fear us.

Mr. CELLER. Yes, Doctor, I am quite convinced that they are not unmindful of what happened a quarter of a century ago. They realize that although sentiment in the United States today may be against war, they also no doubt realize that public sentiment could be reversed much more readily than at the beginning of the World War. Frankly, don't you think that the Nazi leaders have a genuine fear of us and of what we can do?

Mr. WINKLER. Undoubtedly so. As a matter of fact, in his message to the Seventy-sixth Congress, President Roosevelt answered this question when he said: "There are many methods short of war but stronger and more effective than mere words of bringing home to aggressor governments the aggregate sentiments of our own people."

Mr. CELLER. Yes, indeed. We have many weapons we can use far short of war which can bring Hitler and his cohorts to their knees. I am convinced that the Nazi leaders will not harken unto works or oratory. They will heed only through fear of force—economic force. We have the power to deal out to Hitler economic blows from which he could never recover. Time has now come to compel him to see light. For example, to mention but one of many economic weapons of offense: Under our tariff laws the President has the right to clamp down completely on trade with Germany in retaliation for her discriminatory practices against us. He can lawfully place an embargo upon all Nazi products. That is a sort of Damoclean sword that can be held over the heads of the Nazi leaders.

Mr. WINKLER. But wouldn't such measures be too far-reaching?

Mr. CELLER. You mean they might be deemed too belligerent?

Mr. WINKLER. Yes. However, why can't we adopt another method of attack? Substantially more than $1,000,000,000 of American money was placed in the bonds of German States, cities, and corporations. Almost immediately after the advent to power of the Nazi Government a decree was promulgated, under date of June 9, 1933, whereby the service on virtually all dollar corporate bonds was stopped. Subsequently arrangements were made to pay only a part of the stipulated rate. Nothing has been paid for more than 2 years. At the time German corporate bonds were sold to American investors the bankers emphasized that many of the corporations were doing a substantial amount of business abroad which would enable them to have access to foreign exchange with which to meet their obligations. The decree just mentioned is most sweeping and applies to virtually all German corporations irrespective of the nature of their business. On the other hand, is it not strange that in European countries, including England, France, Sweden, the Netherlands, and others, payments have been made right along on German corporate bonds?

Mr. CELLER. Do you mean to say that Germany has right along been paying interest on her corporate bonds to all other nations but not to us?

Mr. WINKLER. Yes. Germany defends her action on the ground that she has a favorable balance of trade with those countries, whereas her balance of trade with the United States is unfavorable.

Mr. CELLER. The devil with that. That's no argument. A miserable pretext. Nazi Germany does not, or refuses to tell the whole story. Her trade balance with us may be unfavorable, but this trade deficit is more than made up by the large invisible income which Germany receives from the United States in the form of remittances, tourist and travelers' expenses, shipping and freight, inheritances, and interest and dividends on American securities owned by Nazis. We pay her all interest due on our bonds which the Nazis hold. We put no obstacles to the removal of moneys due Germany, yet American creditors of the Reich cannot collect what is rightfully due them. Take, for example, General Motors. It cannot remove from Germany any profits it makes on its plants there. The profits must remain there, although, for example, the American I. G. Chemical Co., owned by Nazis, can take all their moneys earned here into Germany.

Mr. WINKLER. But Congressman, don't we have any legal rights? Shall we take this punishment sitting down? Is it not asinine not to fight for our rights?

Mr. CELLER. We are, indeed, jackasses unless we do. Of course, we have been emphasizing Nazi corporate bonds. There are also bonds issued by the German Government, particularly the Dawes and Young bonds. Has interest on them been fully paid to the American holders, and has there been discrimination?

Mr. WINKLER. Only a portion of the interest has been paid to American holders on the Dawes and Young bonds, while at the same time European holders have been paid in full—another rank discrimination.

Mr. CELLER. I spoke of inheritances as one of the items of Germany's invisible income from this country. Last month the Honorable Raymond MacNeille, of the Philadelphia Common Pleas Court, refused part of a trust fund to go to claimants in Germany on the ground that since "money belonging to beneficiaries in this country is not permitted to leave Germany * * * I do not think it fair and proper to transfer funds from this country to beneficiaries in Germany." This opinion was promptly reported to Germany, and under date of December 16 the German Embassy in Washington advised the State Department that "Concerning the treatment of inheritance claims of American citizen to the estates of persons deceased in Germany * * * all inheritance credits of this kind, reciprocity provided, will be transferred to the beneficiaries in full extent."

Mr. WINKLER. In other words, the minute we threaten the Germans with retaliation which might hurt them more than us they yield. How about the rights of bondholders?

Mr. CELLER. Their position has been made perfectly clear by the decision of the Honorable Alonzo G. McLaughlin, of Brooklyn, in the Supreme Court of the State of New York. In deciding against a Nazi steel corporation whose assets in the United States were attached by a bondholder, he pointed out that the German decree of June 1933, which the Nazi steel company cited as a reason for the nonpayment of debts due us, cannot bind American citizens who are not subject to Germany's jurisdiction. This Nazi decree of June 1933 sought to suspend the payments of debts due Americans. The judge went on to say that every nation should protect its own subjects from injuries due to unjust and prejudicial influences resulting from foreign laws which are repugnant to its own interests and policies; that the rights of American holders of German bonds are not controlled by the laws of the Reich; and that failure to recognize the rights of American holders of German bonds in default because of legislation enacted in the Reich would be equivalent to depriving American citizens of the protection to which they are entitled in their courts.

Mr. WINKLER. How about Germany's plea of inability to pay interest on bonds held by American citizens? Is that plea genuine?

Mr. CELLER. Decidedly not. The moneys which rightfully belong to bondholders have been used to repurchase these bonds at greatly forced-down prices.

Mr. WINKLER. Do you mean to say that these Nazis take the interest due us on bonds and stealthily use that interest money to buy up the principal represented by these bonds?

Mr. CELLER. Yes; and it is a damnable outrage.

Mr. WINKLER. By the way, Congressman, when Austria was seized by Germany, all Austrian bonds held by American citizens were virtually repudiated by the Reich. Why has no satisfactory answer as yet been received to the protest which our State Department registered, and what is there to the explanation made by Germany's Minister of Economics, Dr. Funk?

Mr. CELLER. To what do you refer, Dr. Winkler?

Mr. WINKLER. I refer to the three precedents which Dr. Funk cited in justifying Germany's refusal to meet the Austrian (now German) bonds. He contends, first, that the British did not recognize the debts of the Boer Republic after the Boer War; second, that the French refused to assume the debt of Madagascar after its occupation by the French; and, third, that the United States refused to recognize the obligations of the Southern States after the Civil War.

Mr. CELLER. I do not know the sources on which Dr. Funk relies, but his facts are inexcusably wrong. The debts of the Boer Republic, I am reliably informed, have been met faithfully at all times. His statement to the contrary is therefore a lie. Madagascar, I am likewise informed, had no debt, so that there was nothing for France to assume—a second lie. As to the debt of the Confederacy, Minister Funk is indeed in a funk. Those debts were contracted by an unrecognized body which had rebelled against the United States. They were contracted illegally and those who underwrote or purchased them did so at their own peril. Dr. Funk's argument is mere balderdash—in common parlance, tommyrot.

Mr. WINKLER. Since it is clear that mere words will accomplish nothing for American bondholders, what concrete remedy do you propose, a remedy which is not merely academic but which will produce results?

Mr. CELLER. In line with the suggestions by our President in his message, and in line with the opinions and decisions of prominent members of our judiciary, I propose to introduce into the House tomorrow a resolution which will provide that for the purpose of protecting American citizens who are holders of Nazi corporate securities partially or completely in default, Nazi corporations in default on bonds owned by American citizens must register all their assets in the United States of every nature, name, and description which may be owned by them, directly or indirectly, with agents or agencies to be designated by our State Department, giving in itemized account of such assets as of the day on which the present measure would become law and also as of June 1, 1933, together with details as to any transfer or disposition thereof, in the intervening period; and that American financial institutions and kindred organizations, as well as agents or agencies directly or indirectly identified with or acting for Nazi corporations in default, shall likewise register all possible information as to such assets. Failure to comply with the requirements of my bill will involve severe punishments. The means will thus be afforded American bondholders to assert their rights by attachment of these assets in pursuance of Judge McLaughlin's decision.

Mr. WINKLER. Such a bill would be concrete remedy against the indefensible discrimination against American citizens by the Hitler government. I am certain that it will receive the wholeheated support of the American people and the gratitude of our victimized bondholders.

Mr. CELLER. Dr. Winkler, have you estimated the amount of Nazi assets that are hidden and undisclosed in this country?

Mr. WINKLER. This is difficult to say, but I conservatively estimate that Nazi investments in this country amount today to at least $300,000,000.

Mr. CELLER. Do you mean to imply that we thus have the means of collecting to that extent on Nazi corporate bonds?

Mr. WINKLER. No. Probably only to the extent of about half that amount, or about $150,000,000.

Mr. CELLER. Thus, holders of Nazi corporate bond claims could be paid in full by attachments to the amount of one hundred and fifty million and the United States economy could be enriched to that extent?

Mr. WINKLER. However, I do not think there would be need of forceful remedies like attachment. The mere passage of your bill, like the decisions of Judge McLaughlin as to bonds and Judge MacNeille as to inheritances, would summarily bring the Nazis to terms. Do you not think so?

Mr. CELLER. Indeed, I do. Only a day or so ago, January 6, to be exact, as a result of the MacNeille decision, the Nazis have by an aide memoir set up a legacy bureau whereby sufficient exchange would be provided to assure transfer of inheritances to America. I expect a similar result for our bondholders from the passage of my bill. In other words, as soon as we threatened to do exactly what the Nazis were doing to us, namely, refuse to transfer inheritances to Naziland, the Nazis quailed and quivered, and result, American heirs were rightfully paid. Now, pass my bill and the Nazis, confronted with possible wholesale attachments, will again cowardly retreat, and result, American bondholders will get what is rightfully due them.

Mr. WINKLER. What are the prospects of the passage of your bill?

Mr. CELLER. They are good, but they will be better if our listeners urge by letter or otherwise their Senators and Congressmen to support it.

Business Recovery

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

ADDRESS OF HON. PAT HARRISON, OF MISSISSIPPI, AT CINCINNATI, OHIO, DECEMBER 21, 1938

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD a speech delivered at Cincinnati, Ohio, on December 21, 1938, by the senior Senator from Mississippi [Mr. HARRISON].

There being no objection, the address, as reported by the press, was ordered to be printed in the RECORD, as follows:

Senator PAT HARRISON, speaking here this evening at the University of Cincinnati on the Wilson fall lecture series, had for his

subject Business Recovery. He laid great stress on the necessity for curtailment of Government expenditures and discussed at length the improvement and liberalization of the 1938 tax law. In discussing the spending and tax program of the Federal Government, the Senator said in part:

"Never in our lifetime have governments been confronted with greater and more momentous problems. War threats and war preparations are confined to no one country. World finance and economics have brought the peoples of all nations so closely together that an incident occurring 3,000 miles away will have its repercussions here. Impaired credit, economic dislocation, racial or religious persecution in other countries instantaneously fire the emotions and have their effect upon our own people. This is a time when persons in places of high responsibility, as well as all our people, should keep their feet on the ground and think along straight lines.

"For the past 6 years we have tried by legislation to solve many problems. In the main, our objectives have been most worthy and humane. There has arisen, of course, a difference of opinion as to the best means of obtaining those objectives, but the ends sought have deserved the favorable consideration and commendation of the American people. It would have been impossible to have done as much as we have without making mistakes. To me the highest order of statesmanship is, when a mistake is apparent, to confess the error and to apply, if possible, the correction.

"Who would have dreamed in 1933 that the unemployment problem would have continued along as broad a front as it has? Who would have thought in 1933 that world economic confusion would continue as long as it has?

"Today our country is suffering from high blood pressure. I shall not undertake on this occasion to discuss the causes for this condition. No common agreement can be reached by the diagnosticians; but we must agree that if the exercise has been too violent some modification must be employed and proper diet and rest be practiced.

"I am not so much alarmed at the more than $39,000,000,000 to which the national debt has risen. The country's rich and wonderful resources amply provide security for the national debt. The strongest and most convincing evidence that could be offered as to the strength of the credit of this Government is in the fact that today, even though the national debt has risen to exceptional figures, not a national issue is quoted on the open market at a value less than par, and the Federal Government is paying on money borrowed at the lowest interest rates ever chronicled in the history of the Government. And while the figures of the national debt in themselves may not be alarming, the continued and recurring deficits give us great concern. Governments, like individuals, cannot go along indefinitely unless the income is sufficient to meet the expenditures. And so I should very much like to see a policy adopted that will put a stop to recurring deficits, balance Government receipts with Government expenditures, and preclude the necessity of further increasing the national debt. If that much-desired objective is to be reached, it can be approached only from one or the other of two angles—one is to increase taxes on the American taxpayer. The other is to reduce expenditures

"To me the most appealing and necessary course is to reduce expenditures. During the last 5 years this Government has appropriated and expended for relief purposes nearly $18,000,000,000. These appropriations covered a wide range of Government activities and were made to meet an emergency. We all must appreciate the vast amount of benefit which has been brought to individuals, families, and communities from many of these expenditures. The program of assistance has given succor and relief, through employment, to millions whose fighting spirit was flickering and whose hope of future had almost vanished. Many a hungry mouth has been fed and naked body clothed because of these expenditures. It was the means of many communities' obtaining civic improvements that otherwise could not have been obtained. But it was the humane spirit to give employment to the deserving and needy that inspired the policy. Of course, as was inevitable, many jealousies upon the part of individuals as well as communities arise in the administration of the program. Suspicion, criticism, and charges of political activity were but natural. As good a job has been done in the administration of the program as could be expected from the character of the venture. But whatever benefits may have come from these expenditures and whatever good has been accomplished, there are tens of thousands of our citizens whose rugged characters have been affected and whose views on life and government have been transformed. Many whose forebears' pioneering spirit blazed the way through our forests and opened up this new and modern civilization have come to feel that the Government exists to support them and theirs. And so I have no doubt that it is the much wiser policy on the part of this Government to devise plans that will encourage private industry to give employment to the deserving citizens, rather than for the Government to continue its present relief program. If these large expenditures for relief and other emergency purposes are reduced and more rigid economy employed, then we can approach in the very near future the time when Government receipts and Government expenditures will be balanced, and the day will be hastened when our national debt will be reduced.

"I am not one of those who desire to see a further increase in taxes. I would not, however, indulge the idle hope that it can be avoided unless there is an immediate and radical change in our spending policy. It has been necessary for our Government to tap every source to obtain necessary revenue, and Federal taxes are heavier today than in any other peacetime period. In the imposition of surtaxes in the higher brackets, we have reached the point of diminishing returns. Before the adoption of the income tax, the Federal Government received 96 percent of its revenue from two sources—customs and internal-revenue tax on tobacco and liquors. Today 45 percent of the revenue of the Government comes from the income tax. It has been increased from 7 percent normal and surtax on individual incomes above $20,000 until now it runs as high in normal and surtax as 79 percent in the highest brackets. Few can be found today who object to the theory that a person should pay taxes according to his ability to pay; but wise economists have and will always agree that there is a point above which Government returns will not increase, but will diminish. If taxes are too high, capital will not become invested in new enterprise and new ventures to give new employment to thousands. Too high taxes have been one of the controlling forces in checking the industrial advancement and natural development of the country.

"At the next session of the Congress a tax bill will be necessary. It is impossible to tell at this time with what subjects it will deal or how difficult will be the task. Legislation will be necessary, because all miscellaneous excise taxes will expire July 1, and the tax on corporate earnings expires at the end of 1939. So, it will be necessary at least to deal with these two subjects, because so large an amount of revenue cannot be abandoned at this time. In the excise tax alone $500,000,000 are involved, and in the corporate tax $1,300,000,000 are involved.

"The tax law enacted at the last Congress was a tremendous improvement over the provisions of the prior law. The practical elimination of the undistributed-profits tax and the very progressive and sound rates on capital gains and the liquidation features of the 1938 law have and should give further encouragement to capital investment in new and enlarged industries."

The Senator discussed the liberalization of estate taxes and the legislation recommended by the President, proposing the taxation of income derived from future issues of Federal, State, and local securities, as well as ending the present tax exemption on Government salaries of all kinds—Federal, State, and local.

He said:

"The effect of taxing the income from Federal, State, or local issues will inevitably make them less attractive to the investor, and therefore make it more difficult for the respective governments to market their obligations. So, while it is difficult to prophesy what the Congress will do, it is my opinion that in the end an opportunity may be afforded the States and the people to pass on this question by constitutional amendment."

The Senator further stated:

"There is no such thing as perfection in government. There are always faults to be corrected, evils to be avoided, and new remedies to be worked out. These things must never be wrought through passion nor on the anvil of class antagonism. This Government must have a heart, and human rights should always be protected. But in the consideration of human rights I believe as the great Jefferson when he said:

" 'Restrain men from injuring one another, but leave them otherwise free to follow their own pursuits of industry and employment.'

"Believing in that philosophy, I could not sanction the right of any group to pre-empt or usurp another's property through sit-down strikes or other means. The right of collective bargaining is just and is guaranteed by the law. It is a very proper means to obtain deserving objectives. But the Constitution and our laws protect one in the right to own and possess property and to control it, when that control does not injure another. I cannot with clear conscience yield to the expediencies of the hour and surrender what to me is the most precious gift from God—the gift of freedom and of free life under the cherished principles of American institutions. We cannot prefer socialism or communism to free enterprise. In one there is the hymn of hate, the shackling of the human soul, and death to freedom. Under the other there is life, hope, and happiness. The American system guarantees the right of free speech, the right of free press, the right of free assemblage, and, more valuable than all, the right of man to worship the God of his fathers in his own way, without the tutelage of the state or the domination of a master.

"Much has been said about conservatives and liberals. It matters not to me if I be classed as a 'conservative' or as a 'liberal.' I believe as did Disraeli when he said:

" 'I am a conservative in that I would save what is wholesome, yet I am a liberal in that I would destroy what is evil.'

"The American system has brought us along the high road of prosperity. At times we have perhaps climbed too high, the bearings of the old machine may have become too hot and caused temporary adversity; but in that experience we have been taught bitter lessons in character building that will, if left unhampered, make us an example to the civilization of the world. We cannot reach importance as a world factor in trade and commerce and peace through differences within any political party. It cannot be accomplished by any one political party, but it must be done through the united and cooperative spirit of right-thinking Americans who believe in the preservation of our form of government and that equal treatment be accorded every class of our citizens. When we read today of what is going on in many of the other countries of the world—autocracy and religious and racial persecution, we can appreciate the broad principles upon which this

Government was founded, and rededicate ourselves toward a united effort to dissipate the faults that sometimes appear to blur our vision. At this time, in the tangled thought of the Nation, when diverse views and opinions are being expressed, let us remember that Voltaire was right when he said:

"'I do not agree with a word that you say, but I will defend to the death your right to say it.'

"What we need now, in all our people, is the quality of courage, magnanimity, forgiveness, and understanding."

Current Questions Before the Senate

EXTENSION OF REMARKS
OF
HON. WARREN R. AUSTIN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1939

RADIO ADDRESS OF HON. CHARLES L. McNARY, OF OREGON, JANUARY 10, 1939

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the distinguished leader of the minority, the Senator from Oregon [Mr. McNARY], on the subject The Current Questions Before the Senate, delivered over the radio on Tuesday, January 10, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After a week of this session of Congress, after hearing the President's message on the state of the Union and examining his Budget message, I feel very much as Alice did during her adventures in Wonderland. Washington since 1933 frequently has been compared to the experiences of Alice in Wonderland. That comparison never has been more apt than it is today.

In all seriousness, however, the atmosphere of Washington today is as lacking in reality as was the story of Alice in Wonderland. Good, hard common sense has been abandoned in favor of flights into the stratosphere of fanciful theories and wishful thinking. Fairy tales and stories of hobgoblins have been substituted in State papers for facts and realistic logic.

Once again we are told that we can spend our way into prosperity; that the more we spend the richer we become as a nation. Spending far in excess of our income is alluringly called an investment instead of a debt. Efforts to cause our flesh to creep are made in the form of references to mysterious foreign forces that threaten our shores and, indeed, our homes. The astounding revelation is made that for the last 6 years we have been engaged in what is called the most intensive "far-flung internal preparedness" of our history—and we did not know a thing about it until last week! Preparedness against what and whom? We have not been told. Most amazing of all is the solemn exhortation that the citizens of this country, the oldest and most successful democracy the world has known, a democracy which has thrived for 150 years and has made us the most prosperous and happy people in all history, that we now must commence action to make democracy work.

In view of that background of events of the last week, Members of Congress anxious to undertake actions for the promotion of economic recovery and the restoration of our great army of unemployed to jobs in private industry naturally feel a measure of discouragement. Particularly discouraging is the insistence of the New Deal administration on a further increase in Federal spending and an abandonment of all pretense of working toward a balancing of the National Budget.

At a time when business and industry need a word of encouragement and actions that inspire confidence to go forward, the administration proposes specifically only further spending and larger deficits. This is no more an answer to our economic problem this year than it has been in any of the last 6 years. The burden of Federal debt which this administration has piled up and clearly intends to continue to pile up constitutes a brake on any return to normal business activity. That was the view of Mr. Roosevelt in the brief period years ago in which he was economy-minded. It is the view now of every qualified economist not on the New Deal pay roll and it is a fact demonstrated by the record of events during the last 5 years.

In justification of his proposal for further spending the Chief Executive contends that we cannot have a national income of $80,000,000,000 unless the Federal Government each year spends in the neighborhood of $9,000,000,000. Let me remind the New Deal administration that in the late 1920's this country enjoyed a national income of $80,000,000,000 and at that time the Federal Government was spending only about 40 percent of the sum being expended in this fiscal year. Despite the huge sums spent annually by the New Deal, not once in the last 5 years has the national income passed beyond the $70,000,000,000 mark—and last year it was not much over $60,000,000,000.

Of course, this is an $80,000,000,000 country. With our increased population and improved technological processes since 1929, this country's national income today should be closer to $100,000,000,000 than $80,000,000,000. But the way to achieve such a national income is not by reckless Federal spending far in excess of the Treasury's revenue. It cannot be done by piling up deficit after deficit until astronomical figures are reached. In that direction, as we have so clearly seen, lies business stagnation, widespread unemployment, and a restricted standard of living for all our people. It is the desire to make the United States at least an $80,000,000,000 country that Members of Congress, irrespective of party, have been inspired to oppose a continuation of spending policies that for almost 10 years have mired us in the bog of economic depression.

The only way this country can achieve permanently a national income of $80,000,000,000 a year or more is to eliminate those New Deal policies which have strangled business, discouraged private investment, and thus decreased opportunities for employment. This country can never be prosperous with millions of its citizens unemployed or forced on relief rolls in order to live. Only private initiative operating through American business and industry can supply jobs for these millions of unemployed.

Consequently, it is the duty of this Congress to do everything within its power to encourage American business and industry to push forward with the task of giving employment to those who need jobs. In the exercise of that duty the first task of Congress is to subject to the sharpest scrutiny the proposals contained in the Budget message just submitted by the Chief Executive. For that document is the most astounding proposal to come from any Chief Executive of this country.

I do not wish to bore you with figures, but it is of the utmost importance that we clearly understand exactly what this Budget means. It calls for the appropriation by Congress at this session of approximately $10,000,000,000, a greater sum than Congress has ever been asked at one time to appropriate in the peacetime history of our country. This Budget proposes that Congress appropriate $875,000,000 immediately for the relief of distress during the remainder of this fiscal year. It calls for the appropriation of $8,995,000,000 for the fiscal year which commences July 1 next.

Breath taking as those figures are, they tell but one-half of the story. This Budget forecasts a deficit for the current year of almost $4,100,000,000, which is the largest deficit for any peacetime year in our history, except 1936, when the World War veterans' bonus was paid in full, and then, despite that huge outlay, the deficit was only $400,000,000 greater.

The Chief Executive's estimate last week of the deficit for this year is the fifth time within approximately 12 months that he has undertaken to estimate that figure, and on each occasion it has been substantially larger than the previous estimate. Twelve months ago we were told that the deficit for this fiscal year would be only $949,000,000. It was boosted last April. It was boosted again in the summer and it was increased twice last Thursday when the Budget message was submitted to Congress. Between the time the Budget was printed and its dispatch to Capitol Hill the Chief Executive added $125,000,000 to the proposed supplemental relief appropriation for this year, increasing the deficit estimate by that amount.

In view of the constant upward revision of the estimate of the deficit for the current year to a total more than four times greater than the original estimate, we must consider the estimate of a deficit in the coming fiscal year of $3,326,000,000 only as the absolute minimum. Nevertheless, taking the Budget figures as submitted at their face value, we find, as a result of the expenditures now proposed by the New Deal administration, that the public debt on June 30, 1940, will total $44,458,000,000. Add to that figure, the contingent liabilities of the Treasury not reflected in the Budget and you have a national debt in excess of $50,000,000,000.

At the beginning of his administration in 1933, when the national debt was less than one-half of that figure, Mr. Roosevelt asserted that "for 3 long years the Federal Government has been on the road toward bankruptcy." Since those words were uttered this country has traveled far down what Mr. Roosevelt called the "road to bankruptcy."

In order that there may be no misunderstanding, let me point out to you that neither relief appropriations for those in distress nor appropriations for national defense wholly account for the sharp increases in Federal spending that have taken place under the present New Deal administration. Of the sum of almost $9,000,000,000 which Congress has been asked to appropriate for the next fiscal year, only three and one-third billion dollars are for relief and all national defense, as shown by the Budget figures. The remaining five and two-thirds billions of dollars are for other functions of government not directly related to either the present relief or national defense program.

In assailing the New Deal's spending program let me make it clear that I refer primarily and chiefly to the amazing increases in the so-called ordinary expenditures of the Federal Government. Mr. Roosevelt's own budget shows that the so-called ordinary expenditures of the Federal Government in the year in which he was elected to the Presidency totaled $2,851,000,000. His estimate of the total of so-called ordinary expenditures for the coming fiscal year is $5,537,000,000, or almost twice as much within a period of 7

years. This is the largest sum for ordinary expenditures ever disbursed by the Federal Government in a single year—greater even than in 1936, when payment of the bonus was included in the figure.

Republicans in Congress favor adequate appropriations for the relief of those in distress. We are as insistent that no man, woman, or child in this country shall starve as are the members of any other political party. We favor adequate relief for all in distress. At the same time we shall resist with all our power the diversion of funds appropriated for relief into political activities. We propose to fight to make certain that the money appropriated by Congress for the relief of distress goes to those in distress and not to political spoilsmen and party henchmen.

The New Deal cannot escape responsibility for the disgraceful administration of Federal relief during the last 6 months. I need only call attention to the report of the Sheppard committee—controlled by Democrats—to the Senate a week ago today. That committee reported that "there has been in several States, and in many forms, unjustifiable political activity in connection with the work of the Works Progress Administration in such States."

The Sheppard committee further reported its belief that "funds appropriated by the Congress for the relief of those in need and distress have been in many instances diverted from these high purposes to political ends."

Nothing further need be said in substantiation of the merit of the unsuccessful fight made in the last Congress by Republicans to provide punishment for those who would play politics with relief and of the fight toward the same end which Republicans will again wage this year.

Were it not for the diversion of relief funds from the high purpose for which they were intended to political ends in the last campaign, it would not now be necessary for Congress to rush forward an additional relief appropriation in order that millions of deserving men and women shall not suffer privations after the first of next month. Ample money was appropriated by the last Congress to relieve distress among the unemployed until March 1—but under the guise that an unforeseen "extraordinary emergency" existed, those funds have been dissipated. It must be obvious now to all that this "extraordinary emergency" was nothing else than the Democratic primary elections, where party members were being subjected to a "purge" in certain States and the election on November 8. This conclusion is sustained by statistical evidence that the W. P. A. relief rolls reached their peak in the week before election day and have decreased steadily, week by week, since election day.

So the Republicans in this Congress will join hands with any group to drive the political racketeer and spoilsman out of the administration of relief. We likewise are ready to join with any group to bring about a curtailment of reckless Federal spending and take the first steps toward preservation of national solvency by bringing the Federal Budget into balance.

To those who derisively ask what expenditures we propose to reduce, we reply in the words used by Mr. Roosevelt in his 1932 campaign for the Presidency, when, speaking at Pittsburgh, he declared that "you can never expect any important economy" from an administration "committed to the idea that we ought to center control of everything in Washington as rapidly as possible—Federal control." On that occasion Mr. Roosevelt added—and I now affirm his statement—that "you cannot go very far with any real Federal economy without a complete change of concept of what are the proper functions and limits of the Federal Government itself" and "that means a complete realinement of the unprecedented bureaucracy that has assembled in Washington in the past 4 years."

In concluding that address, Mr. Roosevelt solemnly pledged himself to the task of preventing "economic disaster" by reducing Federal expenditures and he exhorted his audience to "join me and let's go." Tonight, Mr. President, the Republicans of this Nation stand ready, as they have been ready now for almost 6 long years, to join you in any movement for the reduction of Federal expenditures and the restoration of this country and economic recovery to "a firm footing, on a path that is broad, true, and straight."

Address by the President

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

RADIO ADDRESS OF THE PRESIDENT BROADCAST FROM THE WHITE HOUSE OCTOBER 26, 1938

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a radio address delivered by the President of the United States from the White House on October 26, 1938, on the occasion of the Herald Tribune forum.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

No one who lived through the grave hours of last month can doubt the longing of most of the peoples of the world for an enduring peace. Our business now is to utilize the desire for peace to build principles which are the only basis of permanent peace.

It is becoming increasingly clear that peace by fear has no higher or more enduring quality than peace by the sword.

There can be no peace if the reign of law is to be replaced by a recurrent sanctification of sheer force.

There can be no peace if national policy adopts as a deliberate instrument the threat of war.

There can be no peace if national policy adopts as a deliberate instrument the dispersion all over the world of millions of helpless and persecuted wanderers with no place to lay their heads.

There can be no peace if humble men and women are not free to think their own thoughts, to express their own feelings, to worship God.

There can be no peace if economic resources that ought to be devoted to social and economic reconstruction are to be diverted to an intensified competition in armaments which will merely heighten the suspicions and fears and threaten the economic prosperity of each and every nation.

At no time in modern history has the responsibility which rests upon governments been more obvious or more profound.

I speak for a United States which has no interest in war. We covet nothing save good relations with our neighbors, and we recognize that the world today has become our neighbor.

But in the principle of the good neighbor certain fundamental reciprocal obligations are involved. There must be a deliberate and conscious will that such political changes as changing needs require shall be made peacefully.

That means a due regard for the sanctity of treaties. It means deliberate avoidance of policies which arouse fear and distress. It means the self-restraint to refuse strident ambitions which are sure to breed insecurity and intolerance and thereby weaken the prospect of that economic and moral recovery the world so sadly needs.

You cannot organize civilization around the core of militarism and at the same time expect reason to control human destinies.

For more than 12 years the United States has been steadily seeking disarmament.

Yet we have consistently pointed out that neither we nor any nation will accept disarmament while neighbor nations arm to the teeth. If there is not general disarmament, we ourselves must continue to arm. It is a step we do not like to take, and do not wish to take. But until there is general abandonment of weapons capable of aggression ordinary rules of national prudence and common sense require that we be prepared.

We still insist that an armament race among nations is absurd unless new territories or new controls are coveted. We are entitled, I think, to greater reassurance than can be given by words. The kind of proof which can be given, for example, by actual discussions, leading to actual disarmament. Not otherwise can we be relieved of the necessity of increasing our own military and naval establishments. For while we refuse to accept as a permanent necessity the idea of force, and reject it as an ideal of life, we must be prepared to meet with success any application of force against us.

We in the United States do not seek to impose on any other people either our way of life or our internal form of government. But we are determined to maintain and protect that way of life and that form of government for ourselves. And we are determined to use every endeavor in order that the Western Hemisphere may work out its own interrelated salvation in the light of its own interrelated experience.

And we affirm our faith that, whatever choice of way of life a people makes, that choice must not threaten the world with the disaster of war. The impact of such a disaster cannot be confined. It releases a flood tide of evil emotions fatal to civilized living. That statement applies not to the Western Hemisphere alone but to the whole of Europe and Asia and Africa and the islands of the seas.

In all that I have said to you I have reaffirmed the faith of the American people in democracy. The way of democracy is free discussion—as exemplified by the objectives of the forum to which I am speaking. Free discussion is most greatly useful when it is restrained and relates to facts. It is not useful to suggest either to the American people or to the peoples of other nations that the American Government, its policies, its practices, and its servants, are actuated by motives of dishonor or corruption. To do so is, of necessity, an attack on the American system of constitutional representative government itself.

Let us work with greater unity for peace among the nations of the world—for restraint, for negotiation, and for community of effort. Let us work for the same ideals within our own borders in our relations with each other, so that we may, if the test ever comes, have that unity of will with which alone a democracy can successfully meet its enemies.

Accident Prevention on Highways

EXTENSION OF REMARKS
OF
HON. THEODORE F. GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1939

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, AT ACCIDENT PREVENTION LUNCHEON, PROVIDENCE, R. I., JANUARY 9, 1939

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the junior Senator from North Carolina [Mr. REYNOLDS] at a luncheon held on last Monday at Providence, R. I., to celebrate the world record made by the city of Providence last year in accident prevention on highways.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Governor Vanderbilt, Senator GREEN, honored guests, ladies and genelemen, it is indeed a distinct privilege to be provided the enviable opportunity of participating in this unique program. It is particularly pleasing since I find myself here at this festive board, the speakers' table, with your most excellent chief executive, the Governor, Bill Vanderbilt, to my right, and my colleague and friend THEODORE F. GREEN, of the United States Senate, to my left. I am indeed grateful of your generous welcome on this auspicious occasion and I shall hope for the opportunity sometime to not only welcome Gov. William K. Vanderbilt and United States Senator THEODORE F. GREEN to North Carolina, but I shall hope for the opportunity of welcoming all within the sound of my voice to my Commonwealth, one of the most historic States in all the Union, when and where I may be permitted to evidence my appreciation of your generous hospitality to me here in your delightful Commonwealth of Rhode Island.

This unique program is inspired by success here in your capital city of Providence as a result of the people of Providence, more than a quarter of a million, having reduced the number of lives wasted in traffic due to impatience, carelessness, and lack of understanding of personal responsibility for safe street and highway use. Leaders in this great municipality and in the State of Rhode Island are gathered here today to mark this humanitarian achievement. They have every reason to be proud. Any city can well afford to expand its community bosom when it is recognized as having one of the finest, if not the finest, traffic safety record for American cities. Providence—a city in which one can live well and live safely—certainly offers a sound keynote for civic development.

But the achievement in reducing traffic fatalities in Providence is more than a civic accomplishment. This is true because this fine city record is paralleled by an excellent State record. Thus this gathering here has national implications. Here they are. If the State of Rhode Island, the most densely populated in the Union and with a population more than 97 percent urban, can year after year set an example for safe driving and safe walking, there is no sound reason why the other 47 States and the District of Columbia cannot also reduce the tragic toll of deaths and injuries in traffic.

Since arriving in Providence this morning I have asked many questions as regards the factors responsible for the low traffic fatality rate in Rhode Island on the basis of number of fatalities to population. I found the answers readily available and comparatively simple. Efficient police administration, sound traffic planning exemplified here in Providence, community organization such as that of the Automobile Club of Rhode Island, directed by my old friend Wise Wescott, and equally as important, wholehearted community and State cooperation and public support with the aid of such civic-purposed groups as the Town Criers. And from what I have been told today, the well-developed program for traffic-safety education in the schools and the enlisting of support of the young by your popular "Uncle Red" on the air must not be overlooked.

In brief, I have found here in Rhode Island an answer to the traffic safety problem. It is a program for intelligent action with official and public support. And the fact that it works is justification enough for its continuance without further comment.

I have long been interested in the subject of traffic safety, both as an individual who has used an automobile since the days of the first models and as a Member of the United States Senate. I see in the traffic-safety movement many great humanitarian and economic aspects. It involves the effort to reduce the annual toll of more than 30,000 killed and more than a million injured as streams of traffic and millions of humans come into conflict on millions of miles of highways and streets. It affects the whole future of highway transportation—a mammoth industry, using an endless supply of raw materials, the products of farm and factory, and one of the largest employers of labor.

It also has a definite bearing on travel, the urge to go places, which runs strong with all Americans, and which has opened new reservoirs of wealth for every section of our country and which has been so largely responsible for our new national vision. This latter has, of course, resulted from sectional understanding and the knitting together of the far-flung corners of our great stronghold of democracy.

When viewed in these broad terms, it is obvious that the traffic-safety movement is designed to contribute to that great guaranty of "life, liberty, and the pursuit of happiness," and also to assure the economic stability of millions of gainfully employed and their dependents. Thus I say without hesitation that the traffic-safety effort is one of the most vital forces in American life today and should be treated as a major objective of our times.

I recognize, of course, that traffic safety is not a national problem but one which must be treated locally. Yet all of our problems are local in effect. It is the conditions at the crossroads and in the cities which produce national problems. As a result while we must continue to have better traffic conditions stem from intelligent treatment locally, and in the States, we cannot afford to overlook the national implications if we fail to improve these local conditions. To that extent the problem is national.

In recent years, particularly since I entered the United States Senate, I have watched many traffic safety programs and many traffic safety efforts. I have seen experiment after experiment attempted. I have viewed disorganized action on widely scattered fronts. I have heard Senators propose drastic Federal measures which have no place in our modern scheme. But still the charts showed an upward surge in the number of deaths and injuries.

Then a few years ago groups vitally concerned over existing conditions began to work together with a common objective. The best opinions and the best methods were incorporated into workable programs under the direction of men with training and experience. Other men were started in training to carry on. Already this new spirit is showing results, and they may be seen on every hand. The results here in Providence are an example. The drop of 20 percent in motor fatalities for the country as a whole during 1938 as compared with 1937 offers encouragement.

I am happy that the American Automobile Association, of which I am honored to be a vice president, has been a leader in this new national organization, and its affiliated clubs, such as you have here in Rhode Island, have helped to translate the new national program into action. Burton Marsh, American Automobile Association director of safety and traffic engineering, who is here today, has contributed much to the new national action.

Following receipt of the invitation to come to Providence, it was my privilege to read the annual report of Paul Hoffman, president of the Automotive Safety Foundation, which has been a spearhead in the modernized attack on traffic-safety conditions. The automobile industry is doing a fine thing in its contributions to the cause of traffic safety. It represents the spirit of American industry at its best.

Several things in Mr. Hoffman's report struck me as particularly appropriate for reference before this gathering. For example, one statement, with which I fully agree, is as follows:

"When it is considered that the motor age really covers a span of less than 30 years; that the greater majority of our streets and roads were primarily designed for horse-drawn traffic; and that nearly 30,000,000 motor vehicles, of varying types and in the hands of individuals of varying temperament and qualification, move daily over all traffic arteries, highway transportation is a marvel of efficiency and safety.

"The year 1938, from the standpoint of further adjustment of motorized America to safer and more efficient use of existing traffic facilities and improvement of these facilities, was one of the most notable on record. It demonstrated, more than ever before, that a greater degree of traffic safety can be achieved; that the public is more alert to the need for such achievement; that public support is solidly behind sound programs to assure safer and more convenient highway use; and that individuals, both drivers and pedestrians, are willing to accept reasonable regulations advanced for their benefit." Here are more results of the new national spirit in traffic-safety efforts, which I have already mentioned.

Quite obviously we are on the way to better traffic conditions—"orderly traffic." However, to again quote Mr. Hoffman: "The immediate outlook for continued reductions in traffic accidents and injuries is tempered by the prospects of a peak year of travel in 1939. The very size of the 1938 reductions makes unlikely another such sizeable decrease. We can, however, anticipate a continually improved rate, provided there is no let-up in our activities. It is simply a question of how generally we apply the techniques which have already proven successful."

In conclusion, let me again say that Providence and the State of Rhode Island have set an example for achievements in traffic safety and offered a pattern for progress elsewhere. It deserves to be applied elsewhere. If this is done I have no fear for the future of the traffic safety movement.

It has been a privilege and an honor to participate in this inspiring occasion—one which is in keeping with every American ideal and every consideration for the public good. As a North Carolinian and as a Member of the United States Senate, I salute Providence and Rhode Island for civic pride, civic cooperation, and civic accomplishment.

Jackson Day Address

EXTENSION OF REMARKS
OF
HON. J. HAMILTON LEWIS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1939

ADDRESS BY HON. SCOTT W. LUCAS, OF ILLINOIS, AT THE ANNUAL JACKSON DAY DINNER, CHICAGO, ILL., JANUARY 7, 1939

Mr. LEWIS. Mr. President, I tender an address delivered by my colleague, Mr. SCOTT W. LUCAS, on an appropriate occasion, Jackson Day, touching the affairs of Government, which I commend to the consideration of the Senate and take the liberty of asking its insertion in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I should like for this enthusiastic gathering of Democrats from every section of the State to understand that the junior Senator from Illinois is deeply appreciative of the honor and privilege conferred upon him by your national executive committeeman and the Democratic State Central Committee in tendering to him the invitation to address you on this, the anniversary of the great victory of Andrew Jackson at the Battle of New Orleans, January 8, 1815.

I hope that I may not shock the devotees of Andrew Jackson when I tell you that tonight I shall deviate somewhat from tradition and perhaps violate custom which is common at a commemorative occasion of this kind. It is generally assumed that an after-dinner speaker at such an affair will eulogize the honored one, indulge in pleasing generalities, and say little or nothing which might jolt the complacency of his listeners. But, my friends, if Andrew Jackson were here tonight and was the principal speaker at this banquet, he would indulge in plain talk, for Andrew Jackson was a patriot, a Democrat, and a fighter; he said what he had on his mind; he did not mince words. In my opinion, the highest tribute he can be paid is to adopt some of the tactics he used during his lifetime as he fought to preserve our Nation and to promote the ideals of true democracy.

This is, of course, a party given by Democrats on behalf of the Democratic Party in honor of a great Democrat. What better opportunity could there be to take stock of our assets and liabilities; to examine our weaknesses, and to take measure of our strength? Such would be truly the Jacksonian procedure, for it is inconceivable that he who won so many battles, both on the fields of war and in the marble halls of government, ever entered a fight without having a full accounting of his resources after the battle was over.

Now it is a matter of common knowledge that the Democratic Party did not poll as many votes in the November election of this year as it did in 1936, 1934, and 1932. In Illinois we polled enough, however, to elect the entire State-wide ticket and many county officers. The temporary resurgence of our enervated opponents can be attributed to several factors, a few of which I propose to discuss boldly at this time.

However, before I enter into this discussion I want to express my sincere thanks to the leaders of the Democratic Party in Illinois, both in Cook County and down-State, as well as all others, for their splendid efforts in behalf of the entire State Democratic ticket.

No one realizes better than do I the hard work, the long hours, and the unceasing effort which were required to keep the Democratic Party in the ascendancy in this State. And certainly we who are here tonight thoroughly understand what sacrifices Governor Horner made in that exhaustive campaign. So enthusiastic, so interested, and so industrious was he in the cause of the Democratic candidates and their ideals that today we find him in Florida still recuperating from the physical strain of political battle.

I know that you will agree with me when I say that citizens of Illinois in every walk of life, regardless of political affiliations, wish for Illinois' greatest Governor a speedy and permanent recovery, and truly regret his absence.

A moment ago I said I would discuss some factors and trends in the last election adverse to the interests of the Democratic Party in the State and Nation, and one of the first I shall deal with boldly involves social security and pensions for the aged. There is little doubt in my mind that many votes were lost to the Democratic Party in Illinois because of the hypocrisy and misrepresentation of our opponents on the subject of old-age pensions. Not only did my opponent, the mouthpiece and acknowledged leader of the Republican Party in Illinois, accept the Republican plank of $30 per month as a minimum to be paid out of State funds for all over 65 years of age, but he also worked for and finally obtained the endorsement of the Townsend organization. As the leader of the Republican Party he had no conscientious qualms about such inconsistency. His goal was public office in the United States Senate. He and his cohorts cared but little about the methods employed in trying to get there.

I am thankful that the Democratic candidates elected in Illinois did not resort to such chicanery, for we are now in a position to judge fairly the merits of any pension program, several of which indubitably will be presented at the current session of the Congress.

This is one of the gravest issues which faces our Nation, and I want to review at this point the position I have taken throughout in regard to pensions for the needy aged. One of the first bills for which I voted when I went to Washington 4 years ago as Congressman from the Twentieth Illinois District was the social security bill.

It was a Democratic administration which for the first time in the history of our Nation recognized the obligation of government to take care of those citizens now old who in youth had contributed to America's greatness. Having known the problems of aged persons through association with them in my immediate family, and recognizing the merit of and the need for such legislation, I voted for it gladly. I am wholeheartedly in favor of the principle of security and financial assistance for the aged.

It is highly improbable that any measure with such vast and far-reaching implications, and affecting, as it does, millions of our citizens, would be perfect in its original form. Nevertheless, the social security bill was drafted and passed after months of hearings, attended by the greatest experts in the world on social legislation. The amount of pension was set within the limitations of our Nation's ability to pay. From time to time the Democratic Party has pledged itself to expand and enlarge the social-security program in accordance with the ability of the taxpayer to meet the bill. President Roosevelt amplified this position in his message last Wednesday when he said, "All of us want better provision for our older people under our social-security legislation."

Meanwhile, America has been infested by a plague of Messiahs who hold out glittering and impractical dreams to old people. Most of the schemes are fantastic, many are ruinous. In practically every instance the plans have been engineered by able and alert demagogues who suffer no qualms of conscience over enriching themselves by deluding and holding out false hopes to the aged. Vivid and tragic examples already have been provided in the United States of the dire consequences of some of these schemes, yet they multiply and expand.

This is a fitting occasion to point out that many of the Republicans who won House and Senate seats at Washington waged their campaigns on a platform of huge pension payments. They will provide the nucleus, whether they like it or not, of a pressure minority which will seek to raid the Treasury or increase taxes. And I would like to see the fact driven home to the taxpayers that these same Republicans are members of the party which cries to the high heavens about heavy Government expenditures and promises a balanced Budget.

My opposition to Utopian pension schemes is based upon the conviction at which I arrived after hearing the testimony of qualified economists and experts upon social legislation. I predict that if any of these fantastic schemes are ever placed in effect upon a national scale they will break down of their own weight. The tragedy of this will not be that just that particular scheme will be shown up as wholly impractical, but that the entire idea of Government assistance for the aged will be discredited. And I can foresee the eventuality that such a plan could bankrupt the Nation, throw our social and economic system into chaos, and send tottering down into oblivion our entire governmental structure.

Again speaking as one who is sincerely interested in the progress of the Democratic Party, I think it behooves us to examine this vote with a view toward determining whether the gains made by the minority party came about through local conditions exclusive of Federal activities, or whether the voters were expressing dissatisfaction with laws passed the last 6 years, or with the administration of these laws. Let me deal with the latter question first, and say boldly to you that only those with eyes that cannot see and ears that will not hear can ignore the trend in the November election.

No less an authority than the Honorable WILLIAM B. BANKHEAD, Speaker of the House of Representatives, has publicly declared that if the latter be the case, steps should be taken to meet public opinion in the modification and correction of such criticisms as may have been influential in the recent elections. He added that a spirit of cooperation will animate the actions of the majority party at this session of Congress.

You and I know that it is the duty of Members of Congress to promote and foster legislation at all times which they believe to be for the best interests and welfare of our people. All such measures, and especially those dealing with new theories of social and economic recovery, should have a fair trial in the field of operation and before the bar of public opinion. If after this interim has passed we find widespread dissatisfaction with such laws and such disapproval is expressed through the ballot, it is the duty of those in charge of government to find a remedy that will satisfy public opinion, because, after all, this is still "a government of the people, by the people, and for the people."

While in some States and subdivisions thereof local conditions on election day were major factors in the defeat of some Democrats, certainly no one can gainsay that in the Midwest there was not a trend against the Democratic Party. Voters were telling

us through the secrecy of the ballot that mistakes were made which they did not like. If my conclusions are correct, it is up to this Democratic Congress to immediately pursue a course of industry and political honesty to meet such an emergency as was manifested through the ballot.

Last Wednesday our great President, Franklin Delano Roosevelt, delivered a statesman's message upon the state of the Union. He frankly admitted that some of the tools forged for a new role of government still need machining down, in the light of experience and operation. He made it clear that no new controversial legislation would be pressed at this session. He gave hope and courage to everyone when he said, "Our period of internal conflict is at an end." I believe he correctly interpreted the American viewpoint when he said that "the Nation looks to Congress to improve the new machinery which we have permanently installed."

Certainly the elimination of all controversial legislation and improvement of the new machinery which has been permanently installed will be approved by the public. I am of the opinion that the people are anxious for legislative peace rather than continued strife. They want to see us consolidate the gains made, iron out the rough spots, find ways to end factional and labor strife and employer-employee disputes, bring capital and manpower together, and make amendments to basic laws where needed in the light of experience. This is a program that I believe the great majority will readily subscribe to and should bring results beneficial to all America.

Such a common-sense course vigorously and honestly pursued by a united and Democratic Congress, having only in mind what is best for the greatest number of people, will restore business confidence and will remove from idleness the billions of dollars of private capital. Money so expended in private enterprise finds its way in the channels of trade and commerce, and when that comes to pass, I predict that we will be on our way toward an $80,000,000,000 country. It will also accomplish the Roosevelt objective to give every man and woman who wants to work a real job at a living wage.

President Roosevelt further said in that message, "It is my conviction that down in their hearts the American public—industry, agriculture, finance—wants this Congress to do whatever needs to be done to raise our national income to $80,000,000,000 a year."

To that statement I heartily concur, but the question is, How can these groups best utilize their efforts in the realization of this national necessity? Today each of these social and economic groups are experts in their own economic fields but are lacking in the knowledge of the others' problems. There is friction between them, there is a lack of understanding, and in view of the fact that every indication points toward more prosperity and business in this country in the future, I submit that if government, agriculture, labor, industry, and commerce could at this time sit around a table, present their aims and motives, compromise their clashing interests, admit to their mistakes, thrash out their problems, and attempt to emerge with a program of conformity with what is best of all America, at least if they were unable to agree they could have a better understanding of the others' aims and ideals, which would be of tremendous benefit to us all.

And I again suggest that the President of the United States could well call a conference of these groups during the present session of Congress for the purpose of accelerating our return permanently upon the road of recovery.

Obviously, I could not pass upon this day of commemorating the acts and deeds of Andrew Jackson without discussing that part of the President's message dealing with national defense. I have discussed that portion of the message with many Members of the Senate and Members of the House, and there are few who question the broad general premise of the President's plea for a stronger Army and Navy, and for a more alert and flexible national defense.

The unvarnished and uncomfortable truth is that a sudden emergency at this particular moment would place the United States at a disadvantage, with world conditions as they are. The wise course is to recognize this fact and place ourselves in readiness for any contingency. While I agree with the basic outline of the President's national-defense program, I shall wait until I see specific legislation before I express an opinion upon any of its component parts.

I am one who subscribes to the President's audible disapproval of dictator nations. Perhaps this is because my love for this land and its priceless Bill of Rights is so ingrained and deep that I resent, even though it does not affect me personally, the thought of entire peoples having their rights, their liberties, and their very lives taken away from them and imperiled under totalitarian forms of government. This is not our way of doing business here in America.

We have racial minorities here which not only live in peace with their neighbors but which have contributed greatly to our national heritage and culture. We are proud of them as citizens, and they have demonstrated their love for this great land on many an occasion, even to the extent of shedding their blood and giving their lives in its defense. Our way of living is a stunning reproof and rebuff to dictators, for under the American system of free democracy we have demonstrated that there is no need of, no excuse for, purges, persecutions, and other tactics of tyranny, mass murder, and oppression which they consistently employ.

One of the basic reasons for my enlisting in the fight to bring the Army-Navy game to Chicago next year is to herald before the world and to magnify what America has done for the sons of immigrant people. The captain of the Army football team next year is the son of Italian immigrants, living in Kankakee. The captain of the Navy football team is the son of German immigrants living in Kankakee. Was there ever a more beautiful and inspiring spectacle of what the land of opportunity has done for people of foreign extraction? Was there ever a note in the scale of true Americanism so sublime? Certainly this ideal is worthy of love and respect upon the part of every American who believes in the home of the free and the land of the brave.

Yes, to be sure the President used strong language in addressing dictators in that message, but my friends, they do not understand a soft answer. Peaceful persuasion and conciliation have not dimmed their arrogance. Perhaps they will understand better the sharp tongue of aroused American public opinion to which President Roosevelt merely gave expression when he spoke before the Congress.

So long as we keep the people of our Nation secure and happy under the American system within our borders and so long as we present a strong defense to those who might covet our land and our wealth, we need not fear the imposition of a totalitarian form of government.

Among the several methods of insuring our internal peace, none is more positive than the presentation of a militant front against communism, fascism, nazi-ism, and all other alien philosophies of government, no matter what they might be called. I have said repeatedly, and the truth of my declaration is self-evident, that there is no room in this Nation for any governmental "ism" except Americanism. Communists have assailed me bitterly, and I welcome their antagonism because I detest their philosophy. I am as firmly opposed to all other dictatorial theories of government, and I will resist to the utmost the creation of any form of supergovernment in our Nation by ruthless, brutal minority groups, no matter what disguise they assume.

In conclusion, my friends, I am asking the Democrats of Illinois and throughout the Middle West to continue the battle in behalf of the ideals of the Democratic Party. Be militant—take the cue from Andrew Jackson. He was a fighter and a patriot. He fought fairly and asked no quarter. The people still are on the side of the Democratic Party. Just remember it was our leadership which rescued this Nation from the depths of chaos and despair in 1932. True, we have had our difficulties, but few will deny that we are a wiser and a better Nation from the standpoint of humanity as a whole than we were in '29 or '32.

Let us meet this new challenge with constructive thought and action. Let us redouble our energy and our enthusiasm for our cause. The people have demonstrated in the past that they have confidence in our cause and leadership and we shall win in 1940 the same as in '32 and '36. I pledge you now as I go into the United States Senate to serve the great State of Illinois for the next 6 years that I shall ever have the best interests of the Democratic party at heart. I shall continue to pursue a course in legislative affairs in the Senate the same as I have in the House of Representatives. As Lincoln said, "I will stand with anybody that stands right, stand with him while he is right, and part with him when he goes wrong."

My friends, that is my philosophy of government when deep-seated fundamental and basic principles are involved. And as your United States Senator, I further pledge the people of Illinois, irrespective of party, that I shall give the best that is in me in the proper and adequate solution of these problems when presented, to the end that America may continue to be the last best hope on earth.

Soul Liberty

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

ADDRESS BY HON. THEODORE F. GREEN, OF RHODE ISLAND, AT NEW YORK CITY, DECEMBER 9, 1938

Mr. WAGNER. Mr. President, on December 9, 1938, the citizens of the city of New York met in Carnegie Hall to demonstrate their protest and indignation at the persecution of religious and racial minorities by the Nazi regime in Germany.

On that occasion the junior Senator from Rhode Island [Mr. GREEN] delivered an inspiring message which I commend to the attention of every Member of the Senate. I ask unanimous consent that the text of this speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, I come from a State that was founded by a religious refugee, a State which he dedicated to the principles of soul liberty—freedom to worship God according to the dictates of one's own conscience. Roger Williams, when a young clergyman in England, was hunted down by the ecclesiastical authorities there and came to America. Once here, he proclaimed that the authority of civil magistrates did not extend to matters of conscience. For that he was banished into the wilderness. He stayed awhile in Plymouth colony, until that weak settlement, fearing the wrath of its more powerful and dictatorial neighbor, bade him leave. So, in the spring of 1636, Roger Williams came to Rhode Island, and founded there a Commonwealth upon the doctrines of religious and political liberty.

In time his ideas received confirmation in a royal charter, in words that have been incorporated into the constitution of my State and now are carved over the entrance to the statehouse, whence they proclaim in their full plenitude Rhode Island's greatest contribution to America:

"To hold forth a lively experiment, that a most flourishing civil State may stand and best be maintained with full liberty in religious concernments."

From the time of his founding of my State till now, my people have not only preached but practiced these Williams doctrines. So it is but natural that I feel concern at religious persecution anywhere, in any form.

We do not protest against the existence of a state church in other countries, however strongly we feel opposed to such an institution here. We do not rise in wrath over the disabilities imposed on particular faiths in other countries, however much convinced we be with the essential error of such measures. But whenever we come face to face with organized religious persecution, whenever active and organized campaigns of cruelty are waged against defenseless minorities, then we protest, protest in the name of humanity as we Americans have always done, no matter who were the persecuted and who were the persecutors. Just as in the past we have protested when Russian persecuted Jew or Turk harried Armenian, so today we protest on the same ground—in the name of common humanity—when we contemplate in Germany the organized campaign of persecution launched principally against the less than 1 percent of Jewish population within its borders.

Not only our American people but our American Government as well have strongly and often expressed their moral protest against inhuman outrages religious and racial, nor should exception be taken to this here or abroad. As President John Quincy Adams wrote:

"This principle, that a whole nation has a right to do whatever it pleases, cannot in any sense whatever be admitted as true. The eternal and immutable laws of justice and of morality are paramount to all human legislatures."

Daniel Webster, as Secretary of State, well summarized this position when he said:

"While performing with strict and exact fidelity all their neutral duties, nothing shall deter either the Government or the people of the United States from exercising at their own discretion, the rights belonging to them as an independent nation, and of forming and expressing their own opinions, freely and at all times, upon the great political events which may transpire among the civilized nations of the earth."

It is difficult to find in any time, in any land, a parallel for the inhuman excesses, and the calculated, concentrated cruelty of twentieth-century National Socialist Germany. We have before our eyes the spectacle of 600,000 people deprived of all means of livelihood, stripped of their property, and daily exposed to indescribable brutalities that do not stop short of murder. Indeed, threats of mass murder of these unfortunates are now made openly in responsible German circles. It is a revealing commentary on the depths which have been plumbed by the constituted authorities in Germany, that the lot of the murdered seems to the disinterested outsider happier than that of the living. What can those look to, who still live, with not only material but spiritual comforts denied them? Their houses of worship have been sacked and burned, and further celebration of religious services has been forbidden—except for funerals.

In part, obviously, the German persecution of the Jews is a campaign for loot. Germans are forbidden to buy from Jews, they may only steal from them. But the Nazi policies are more than a plan for plunder, and more than a movement against Jews alone. It is not merely an attack upon the Jewish religion—it is also an attack upon all religion.

The Roman Catholic Church also has been a target of the German Government. Members of the clergy have been attacked, arrested, maltreated, and maligned. Mobs have stoned the homes of bishops and archbishops and have threatened death by hanging to princes of the church. A persistent and pernicious campaign of defamation has been conducted against the clergy and members of religious orders.

The attack has not stopped with Catholics. Protestants, too, are under the ban, and pastors by the hundred who would not render unto Hitler that which is God's lie in prison or in concentration camps. Those who remain have been ordered to strike from their churches, to erase from their altars, the word "Jehovah," and the Old Testament is being rewritten to eliminate all reference to the race principally mentioned therein.

No, my friends; let us not be deceived. This is no mere internal matter, no mere racial prejudice gone wild. This is an organized campaign against religion. It is a crusade against God. And why? Why, because God and nazidom cannot exist side by side. The two are as mutually exclusive as good and evil.

It is perhaps significant in this connection that the most recent proposals advanced in the German press are to the effect that any person who sympathizes with the persecuted in Germany is to be persecuted in his turn. You and I have been taught, in one way or another, by one faith or another, that God is love, and that sympathy and charity are noble traits. But in the Nazi lexicon there is no place for words like those.

May I say now what perhaps I should have said before, that I am no hater of the German people? I knew well the old Germany. As a young man for over 2 years I studied in her universities. More recently, both before and after the Great War, I have visited there in the reverent spirit with which a man returns to the scenes of his youth. So, in truth, the events of the past 5 years have saddened me deeply, and often I have wished that it were possible to attribute the dreadful tales of present-day conditions there to hostile motives. Alas, however, I have become convinced that they are all too true.

This being the situation, what are we going to do?

First, we shall protest, as Americans have always protested against inhumanity. Grover Cleveland once said, and it was at a similar mass meeting here in Carnegie Hall held to protest against the Jewish massacres in Russia in 1903:

"Our people when their sympathies are touched, when their humane instincts are challenged, and when their hatred of oppression is aroused, are not afraid to speak; and in such circumstances it is not their habit to smother or cautiously soften their words."

I commend that declaration to all Americans.

Second, we shall assist those who are oppressed for conscience. We cannot forget, we must not forget, that this Nation was settled, established, and made strong by refugees in other times—by Pilgrims, by Puritans, by Huguenots, by refugees from the Palatinate, by refugees from the potato famine, by forty-eighters, by refugees from bolshevism. Nor must we forget that the Nation's position as an independent state is due to the heroic sacrifices of men who preferred death to loss of liberty, and that throughout our history we have extended a sympathetic and helping hand to those who fought for liberty in other lands.

Third, we must strike at those who seek to create dissension and disunity among us by fostering distinctions that are un-American. There is no room in this free land for the differences that spring from different forms of religion. Soul liberty and the complete separation of church and state, first established in Rhode Island, are foundation stones of our Republic; let no one, whosoever he may be, attempt to instill here the hatreds and the prejudices that have brought Europe to its present deplorable condition. Nor is there any room in our Nation for the smoldering fires of racial hatred that have brought over the centuries untold misery to the Old World. Whether our individual origins were English, or French, or German, or Irish, or Italian, or of any other nationality or race, we are united in this country as Americans.

And, finally we must keep America safe for democracy. Twenty years ago we may have cherished the hope of spreading our ideals throughout the world. Today we are more modest; we seek only to preserve those ideals for ourselves. But today our institutions are being attacked from without, and an active defense is essential. To such a defense, in whatever form it may prove necessary, let us pledge ourselves here. We mean to make this Nation safe for our democratic institutions, be the cost what it may.

For the rest, we have faith in our people, faith in our institutions, faith in the precepts of the Jewish Carpenter of Galilee who preached the Sermon on the Mount, and faith in the power of Almighty God to preserve all of these for the making of a better world for mankind.

Interparliamentary Union

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

MINUTES OF THE THIRTY-FIFTH ANNUAL MEETING OF THE AMERICAN GROUP OF THE INTERPARLIAMENTARY UNION, JANUARY 17, 1938

Mr. BARKLEY. Mr. President, since the thirty-sixth annual meeting of our group in the Interparliamentary Union is to be held Tuesday, January 17, and because every Member of the Senate and of the House is ipso facto a member also of the group, I ask unanimous consent to have printed

in the Appendix of the RECORD the minutes of the thirty-fifth annual meeting of our group held at the Capitol January 17, 1938.

There being no objection, the minutes were ordered to be printed in the RECORD as follows:

The American group of the Interparliamentary Union met for its thirty-fifth annual meeting in the room of the Committee on the Library, United States Senate, Monday, January 17, 1938, at 10:30 o'clock a. m.

Among those present were Representatives Charles A. Eaton, of New Jersey; Millard F. Caldwell, of Florida; Ralph E. Church, of Illinois; William S. Jacobsen, of Iowa; Luther A. Johnson, of Texas; Fritz G. Lanham, of Texas; Thomas S. McMillan, of South Carolina; Caroline O'Day, of New York; and Senators Elbert D. Thomas, of Utah; Tom Connally, of Texas; Ernest W. Gibson, of Vermont; Robert M. La Follette, of Wisconsin; Kenneth McKellar, of Tennessee. Present also: Arthur Deerin Call, permanent executive secretary.

Representative EATON. Senator BARKLEY, of Kentucky, the president of the American Group, having been called to the White House, cannot be here until later, and I have been asked to call the meeting to order.

The first order of business is the reading of the minutes of the last meeting.

Representative LANHAM. Since these minutes appeared in the CONGRESSIONAL RECORD of January 13, 1938, I move that their reading be dispensed with, and that they be approved.

(The motion was agreed to.)

It was announced that Representative Charles J. Colden, of California, could not be present because of illness.

Representative LANHAM. Representative Biermann has been taken to the hospital this morning, and I have been asked to announce his inability to be present.

Dr. CALL. Mr. President, Senator Joseph T. Robinson, of Arkansas, died in July last. This highly valued friend in the Interparliamentary Union attended the conference in Stockholm as far back as 1921, the conference in Copenhagen in 1923, and at the meeting at Bucharest in 1931, being invited to deliver an address, he spoke with commanding eloquence, concluding with these words:

"We of the United States recognize that our own prosperity is inseparably bound up with the progress and welfare of the peoples of other nations. We are anxious to see trade barriers lowered, to contribute to the promotion of international good will, and to aid in the reduction of armaments, to the end that the wealth of nations may be devoted to spiritual and intellectual progress, rather than to mere purposes of defense or aggression."

Representative LANHAM. I move that two Members of the Senate and one Member of the House of Representatives be appointed by the president of the group to draft resolutions relative to the death of Senator Robinson, that the resolutions be spread on the minutes of this group, that a copy be sent to the family of the late Senator and also printed in the CONGRESSIONAL RECORD.

(The motion was agreed to.)

Dr. Call thereupon referred to various communications and publications available to members of the group, and called attention to suggestions that have been made relative to the award of the Nobel Peace Prize to the Interparliamentary Union.

Senator LA FOLLETTE. I move that the president of the group be authorized to appoint a committee to consider this matter, with power to act.

(The motion was agreed to.)

Dr. Call called attention to the suggestion that it might be advisable to hold the 1939 meeting of the Interparliamentary Union in the United States.

Representative LANHAM. I move that the president of the American group appoint an appropriate committee to look into the feasibility and possibility of arranging for this matter.

(The motion was agreed to.)

Dr. Call read a list of the various standing commissions of the Union—the commission on political and organization questions; on juridical questions; on economic and financial questions; on ethnic and colonial questions; on reduction of armaments; on social and humanitarian questions; and on intellectual relations. He stated that the group is expected to be represented on each of these commissions.

Representative MCMILLAN. I move that the secretary select the membership of this group on these commissions from the membership of the House of Representatives and the Senate, with the approval of the president of the American group.

(The motion was agreed to.)

REPORT OF TREASURER

Dr. CALL. The treasurer, Representative BLOOM, being obliged to be in New York, has asked me to submit his report for him. He reports that on January 18, 1937, there was in the treasury $106.65, and that on January 18, 1938, there is in the treasury $106.65.

Senator MCKELLAR. I move that the report be received and filed.

(The motion was agreed to.)

REPORTS OF DELEGATES TO PARIS MEETING IN 1937

Dr. CALL. A number of those present attended the meeting in Paris September 1 to 6 last. I am sure each one who was there could make a very interesting and valuable report.

Senator MCKELLAR. I suggest that Senator THOMAS of Utah make the report.

Senator THOMAS. Mr. President, I think the meeting was decidedly worth while from practically every standpoint. We all gained some good from going, and I am sure those who attended from other countries were also benefited through the exchange of opinions.

Senator MCKELLAR. We felt very proud of two of our representatives, Senator BARKLEY and Senator THOMAS. Senator BARKLEY made one of the finest speeches that was ever made in any parliamentary body out at Versailles. This fine address was published in the French, the English, and the American papers. His arguments were sound and seemed to meet with full approval not only of Americans but of our European and other foreign brethren. I was very proud of the speech.

Representative MCMILLAN. I was impressed by the very profound attention given to Senator BARKLEY during his entire address.

Representative LANHAM. Mr. President I think from many angles our country gets more out of the very small appropriation made for the Interparliamentary Union than any other appropriation of which I know. It enables us to keep in touch with the people of other countries, to learn of their views, to mix with them on entirely harmonious grounds and friendly relationships, and all this in an organization claiming no power to take final action. In such ways, it would appear, we gain a great deal for our country, especially in our efforts to impress the others with our own sincere willingness to help in promoting the cause of peace, to which this organization is especially devoted.

Many things impressed me in addition to the meetings themselves. It will also be recalled that Senator THOMAS and the lady member of our organization, Representative Jenckes, of Indiana, made addresses. The various receptions that were given—for instance, the one in the Chamber of Deputies, presided over by M. Herriot—were most impressive. These social contacts, which give an opportunity for an exchange of ideas among the various people, aside from the stated meetings of the Union itself, are most helpful. I know of no small expenditure producing results for our country comparable, in my estimation to the benefits received from our interest and participation in the Interparliamentary Union.

Representative EATON. You consider this organization of value to the world?

Representative LANHAM. I certainly do, and especially now, when we are all interested in peace—and there are so few organizations working effectively to that end. When men of these various nations get together in a harmonious spirit, having that common cause in view, the effects can be but helpful. It is a leaven. If it does not leaven the whole loaf, at least it has a tendency in that direction.

Senator LA FOLLETTE. Mr. President, I think there is little I can add to what has already been stated by the other members of the delegation which attended the most recent meeting of the Interparliamentary Union, in Paris. It was my first opportunity to be a member of the American delegation to one of these meetings.

I was much impressed not only with the opportunity which Representative LANHAM has stressed, of meeting men from various parliaments and legislatures, but it also seemed to me that the idea of the Interparliamentary Union demonstrated itself to be sound, namely, that it provides an opportunity for discussion of international questions of great importance in a manner which would not be possible if people were speaking officially, or assuming responsibility for their government.

I have always been interested in the work of the Interparliamentary Union, and I am very happy to have had my impressions previously formed confirmed by my opportunity to attend the gathering in Paris.

Representative LUTHER A. JOHNSON. I think there is no better way to enable Americans to get a better outlook on world affairs than to attend one of these meetings and mingle with representatives from other countries. The thing which impressed me most about the meeting in Paris was the apparently sincere desire on the part of the delegates from the many countries represented to see peace brought about. I believe that all, without exception, stressed the desire of their countries for peace.

I think the opportunity of seeing the representatives of the lawmaking bodies of 28 countries of the world, the way they dress, their appearance, and to learn how they are dealing with problems similar to those in this country, is of itself a broadening influence, a development of one's mind.

I was privileged to visit 12 countries of Europe with Senator MCKELLAR, and I think no one else saw more of Europe in less time and got a better impression of it, because we made the trip by automobile.

The meetings of the Interparliamentary Union are valuable, and Representative LANHAM, with his usual adept way of expressing himself, has described the meeting as it should be described, and has expressed the correct thought in stating that the money is well spent in this effort to promote good will among the nations, and to emphasize the desire of our country for cooperation in securing the peace of the world.

ELECTION OF OFFICERS

Representative EATON. The next order of business is the election of officers.

Representative LANHAM. I move that the present officers be reelected to their present positions, except that provision be made for filling vacancies which may have occurred or which may occur.

The following officers were declared elected:

President, Senator Alben W. Barkley, Kentucky.

Vice presidents, Senator Robert M. La Follette, Wisconsin; Representative Sam D. McReynolds, Tennessee; Senator Wallace H. White, Maine.

Treasurer, Representative Sol Bloom, New York.
Secretary, Representative Charles A. Eaton, New Jersey.
Permanent executive secretary, Arthur Deerin Call.

Executive committee

Senator Alben W. Barkley, ex officio, chairman.
Representative Albert E. Carter, California.
Representative Fritz G. Lanham, Texas.
Senator Tom Connally, Texas.
Senator Millard Tydings, Maryland.
Senator Arthur H. Vandenberg, Michigan.
Representative Robert L. Bacon, New York.
Representative Charles A. Eaton, New Jersey.
Representative Virginia E. Jenckes, Indiana.
Representative Thomas S. McMillan, South Carolina.

Members of permanent study commissions

Members asked to serve upon the permanent study commissions, with the understanding that others as they desire may be added, follow:

Political and organization questions: Senator James F. Byrnes, South Carolina; Representative B. Carroll Reece, Tennessee.

Ethnic and colonial questions: Representatives Caroline O'Day, New York; Charles A. Eaton, New Jersey.

Economic and financial questions: Representatives Thomas S. McMillan, South Carolina; Richard B. Wigglesworth, Massachusetts; Henry B. Steagall, Alabama; Senator Alva B. Adams, Colorado.

Disarmament questions: Senator Kenneth McKellar, Tennessee; Representative Fred Biermann, Iowa.

Judicial questions: Senators Sherman Minton, Indiana; Ernest W. Gibson, Vermont; Representative James A. Shanley, Connecticut.

Social and humanitarian questions: Representatives Jed Johnson, Oklahoma; Virginia E. Jenckes, Indiana; Senator Wallace H. White, Jr., Maine.

Intellectual cooperation: Senator Elbert D. Thomas, Utah; Representative Fritz G. Lanham, Texas.

Senator BARKLEY, entering the room, expressed his regret at being delayed. Upon question as to whether or not he favored inviting the Interparliamentary Union to meet in the United States in 1939, he expressed the view that it would not be possible to make it sufficiently agreeable to the conferees, especially during that year, to warrant such an invitation at this time.

THANKS TO THE EXECUTIVE SECRETARY

Representative MCMILLAN. I move that we express the thanks of the American group to its permanent executive secretary for the very fine service he has rendered to it from year to year, and for the interest he has always manifested in the Interparliamentary Union work. Without Dr. Call the American group would be hopelessly at sea in the preparation of anything we may have to say or do as we attend the meetings. He, always on the job, is also indispensable when we arrive at the meetings. I move that the group express its appreciation of his services.

Representative LANHAM. And for the geniality with which he has performed his services.

President BARKLEY. The question is on agreeing to the motion of Representative MCMILLAN as amended by Representative LANHAM.

(The motion was agreed to by a rising vote.)

Thereupon, at 11 o'clock and 50 minutes a. m., the meeting adjourned.

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

ADDRESS BY HON. HENRY A. WALLACE, SECRETARY OF AGRICULTURE, AT JACKSON DAY DINNER, MINNEAPOLIS, MINN., JANUARY 7, 1939

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Secretary Wallace, of the Department of Agriculture, at the Jackson Day Dinner at Minneapolis, Minn., on Saturday evening, January 7, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Tens of millions of people have listened this evening to the voice of that great American, who above all others typifies the spirit of Andrew Jackson—President Franklin D. Roosevelt.

The spirit of Andrew Jackson may seem to die away, but always a great man brings it to life again. Just before the Civil War the torch of national unity and human freedom began to burn low in the hands of the Democratic Party. Then came Abraham Lincoln, whose early youth had been inspired by Jackson, and one of whose advisers had been in the kitchen cabinet of Jackson—then came Lincoln to relight the torch in the time of the Nation's greatest need. After he died, the Republican Party more and more passed under the control of the great monopolistic corporations that sought and obtained high tariffs and other special privileges. Theodore Roosevelt, shocked by corporate excesses, tried to make his party act in the spirit of Jackson and Lincoln, but he was rejected by the Republican bosses. Woodrow Wilson, at the head of the Democratic Party, took up the torch. Once more the flame died down as the Republicans led the country through a speculative orgy down into the desolation of depression. And then came Franklin D. Roosevelt. He, too, was alight with the spirit of Jackson and Lincoln. He, too, believed in unity on behalf of human freedom. He, too, has carried the torch and he has not let it fall.

The spirit of those men—of Jackson, of Lincoln, of Theodore Roosevelt, of Woodrow Wilson, and of Franklin D. Roosevelt—the spirit of all these men was the spirit of the West. They were admired in the West and supported by the West. That is why I am glad to belong to the West myself. That is why I am glad to be here tonight, to shake hands on behalf of Iowa with our next-door neighbor, Minnesota, to present to the West again the challenge of these great progressives.

In this year of 1939 there is a challenge to the West. That challenge is this: Will the West, this year and next year and in the years to come, hold fast to its pioneer tradition? Will the people of the West stick to the progressive principles that are part of their bone and sinew?

The challenge is real. It cannot be dodged. The West is faced with a fundamental choice. The western progressives—and when I say "progressives" I know I am referring to the overwhelming majority of the people of the West—must decide which political party most truly represents their ideals. They must decide whether they will go back, in their national voting, to the Republican Party, which has repeatedly deserted those ideals, or whether they will help the Democratic Party keep on with the job that since 1933 has been so well begun.

Here in Minnesota many of the progressive voters, thinking mainly of State issues, have temporarily at least gone into the Republican fold. Some of these progressives may be wondering if they cannot take a chance once more with the Republican Party nationally.

On the basis of the record of the national Republican leadership of the last 30 years, any such hope as that is a vain hope. Any such hope as that seems bound to end, as it has ended before, in disillusionment and ruin. That was demonstrated once more only a few weeks ago, when the Old Guard put former Senator Hastings, of Delaware, on the executive committee of the Republican National Committee. In the final analysis the Republican Party is supported by the great corporations. That is the reason the Republicans don't have to hold Jackson Day dinners with which to finance themselves.

It is true today, just as it has been true ever since the Republican Party rejected Theodore Roosevelt, that the western progressive Republican is caught on the horns of a terrible dilemma.

If he is faithful to the progressive traditions of the West, then he runs head-on into the implacable opposition of the special interests in the East that dominate the Republican Party. If he tries to cater to those interests he is forced to desert the real welfare of the West. My father, as Republican Secretary of Agriculture, chose to fight for the welfare of the West. He could not break the strangle hold of the special interests of the East, and the fight broke his heart. Lester J. Dickinson, who for several years did real service to the cause of the agricultural West, was faced with the same dilemma in 1938. He chose to go along with the men who ruled the party. These men glorified him in the national party councils, but they refused to adapt the party's policies to the needs of the West, and for Lester J. Dickinson the result of that choice was tragedy.

A few western progressive Republicans have faithfully served the interests of their region and by good luck have survived. Such a man is Representative CLIFFORD HOPE, of Kansas. But where would CLIFFORD HOPE be today if a friendly Democratic President and a friendly Democratic Congress had not backed a sound farm program that would serve the needs of the district he represents?

Let us consider for a few minutes just what are the differences between the policies of the national Republican leadership and the policies of the national Democratic leadership. If the progressive voters of the West really understand these differences, there is only one choice they can make.

I have not time tonight to go over the whole range of issues between the national leadership of the two major parties. But here, in a nutshell, are four differences that to the West are vital:

First: The Republican leadership stands for the prosperity of big-business men, regardless of what happens to the rest of the people. The Democratic leadership stands for the prosperity of farmers, workers, and small-business men, knowing that if the common people get their share of the good things of life, the big-business men will also have a more permanent prosperity for themselves.

Second: The Republican leadership offers the farmers glittering farm plans which on trial turn out to be gold bricks. The Democratic leadership gives the farmers a program that is practical and that grapples with their very real problems.

Third: The Republican leadership stands for monetary, budget, and credit policies that in the past have brought inflation, deflation, and ruin, and, if followed again, will keep repeating these calamities. The Democratic leadership stands for monetary, Budget, and credit policies that are taking the country back to a sound

recovery and that will help to smooth out the extreme ups and downs of the business cycle so as to give the people of the United States the stable prosperity and security they want and need.

Fourth: The Republican leadership tries in every way it can to promote discord and dissension between groups and between regions. The Democratic leadership seeks to promote understanding between groups and regions, and to harmonize the group and regional interests in the service of the national interest.

Do the farmers of the West and Northwest want a workable national farm program? Do the property owners of the Northwest want to see the relief load paid for out of local property taxes instead of out of Federal taxes? To ask these questions is to answer them. Every thoughtful person in the West and Northwest knows that there must be a workable national farm program, and every thoughtful person in the West and Northwest shudders at the thought of carrying the relief load locally. If it had not been for Federal assistance, that vast area of land extending from the Twin Cities to the Rockies would today be almost depopulated. Farms would be deserted and the towns would be ghost towns, inhabited by stranded businessmen having no buying power to support the Twin City metropolis. In the last 6 years considerably over a billion dollars of Federal money in the form of expenditures and loans has been poured into Minnesota and the two Dakotas. That money has been a lifesaver for the Northwest. National Republican victory, in case the national Republican leaders do what they say they want to do, might easily produce a migration similar to those migrations that eventually overwhelmed the Roman Empire. I know that many westerners who voted for Republican Senators and Congressmen in 1938 had no such thought in mind. Neither did westerners when they voted Republican in 1928 have in mind the tribulations of the great depression that were to follow. Surely it is better to think about such things beforehand and prevent ruin, rather than be forced to resort to drastic remedies after ruin has come upon us. It has been a long job picking up after the mess of the twenties.

The Republicans within the last year have done everything they could to hamper the national farm program. They have tried to organize so-called rebellions in both the Corn Belt and the Wheat Belt. But except in the vaguest generalities they have not described the program they would offer to take its place. Would the Republican farm program—like the disastrous Republican farm programs of 1922 and 1930—consist merely of higher tariffs that would deprive our farmers of such export markets as they have left? Would the Republicans reduce the soil conservation program to an empty phrase? Would they do away with commodity loans, acreage adjustment, and benefit payments? Are they in favor of combining price fixing and export subsidies in such a way as to encourage unlimited production? Are they really against purchase of farm products by the Federal Surplus Commodities Corporation? Do they want to take away from farmers the right to manage the farm program locally through committeemen of their own choosing, and the right to vote in referendum on the use of marketing quotas and loans?

In three different ways in the last few months I have tried to find out what the Republican leadership has to suggest. During the fall campaign, after Senator VANDENBERG in a speech in Kansas had come out for some sort of two-price system, I addressed to him a series of questions intended to bring out what he really had in mind. He has not answered my questions. Following the election I offered to the newly elected Republican Congressmen the facilities of the Department of Agriculture to help work out any ideas they had. The offer has not been taken up. I also suggested that a newspaper debate between myself and a spokesman for the Republican leadership, on issues involved in the agricultural program, would be a constructive thing. But the Republican organization declined to bring forward a leader who was willing to state the case of the Republican opposition in this way. I am driven to the conclusion, therefore, that they have no program, and that their strategy is simply to sit back and try to get the Democrats into a squabble out of which the Republicans can eventually derive some partisan advantage.

The independent progressives of the West ought to recognize that, so far as western and northwestern agriculture is concerned, the national Republican leadership ever since the World War has been bankrupt of constructive policies, and it is still bankrupt today.

In contrast, the record of the national Democratic leadership in the field of assistance to agriculture is a record of solid achievement. Because the Triple A county associations are administered on a nonpartisan basis, some farmers and some residents of cities and towns in rural areas may forget that, if it had not been for the national Democratic administration and the Democratic Congress, these nonpartisan associations, manned by farmer-elected committeemen, would not even have existed.

Here in Minnesota concrete and tangible benefits have been felt this year from the corn program and the butter-stabilization program. In the commercial corn area of Minnesota farmers who participated in the Triple A conservation program by keeping their corn acreage within their corn-acreage allotments received 67 cents a bushel, including 57 cents on the corn loan and 10 cents in benefit payments. Even the noncooperators have benefited materially because the sealing of cooperators' corn has raised the price of their own corn from 30 cents a bushel to the neighborhood of 40 cents. The corn program is a good program, and the corn producers know it.

Butter producers have not engaged in any control program and they have made no sacrifice comparable to that of the cotton and wheat farmers. Their prices have held up much closer to parity. Nevertheless, the Federal Government has stepped in and rendered an unusual service to the dairy farmers. Last summer, when big butter supplies and shrunken buying power of consumers could easily have forced prices down to 16 or 17 cents a pound, the Government adopted a stabilization plan to hold the price around 25 cents, or approximately three-fourths of parity. This was done through furnishing the credit for the purchases with the knowledge that the Federal Surplus Commodities Corporation stood ready to divert into relief channels any stocks that could not be handled in the ordinary channels of trade. The butter-purchase program has put a plank not only under butter prices, but also under fluid-milk prices in many areas.

Dairy products, because there is no exportable surplus, have been more profitable in the last few years than most other farm products. As a result, many farmers have gone into dairying and those who are already in have kept more than the usual number of heifer calves. The good corn crops of 1937 and 1938 favor an increase in winter dairying. Inevitably there will be a considerable increase in dairy production and nearly all of this increase will be in the Northern States. The increase in the Northern States will be many times as great as the importations from abroad or the increase in the South. The dairy farmers of the North need to think about the problem as it really is instead of allowing themselves to be fooled by loud-mouthed people who point to countries overseas or to farmers down South.

Those Republicans who try to prejudice northern livestock farmers against southern cotton farmers who are compelled to adjust their crop to a changed world market forget three things. First, an acre of cotton in the South produces 175 pounds of cottonseed meal and 60 pounds of cottonseed oil which together represent almost as much livestock competition as the 15-bushel average corn yields in the South. Second, the corn acreage of the South in the 5 years of cotton-acreage adjustment have averaged only 5 percent more than in the 5 years preceding. Third, most of the land in the cotton South cannot be used effectively for any great volume of efficient, competitive commercial livestock production. For the sake of their soil and their health they ought to grow more livestock than they do but it is difficult to get them to do it.

Undoubtedly there will be much pressure in the years immediately ahead for control programs for dairy cows. For my part, I hope we learn to solve the dairy problem by methods of increasing consumption rather than by limiting production. For the sake of their health, the people of the United States should be consuming at least 50 percent more dairy products than they are today. While the Democratic Party is exceedingly interested in properly regulating wheat production and cotton production to a changed foreign demand, it is not and never has been interested in the economics of scarcity. More cotton and wheat in this country at the present time would increase our poverty rather than our wealth. The same cannot be said of dairy products as long as there are so many children who are getting less than a glass of milk a day. We have a committee in the Department of Agriculture which has been working on this problem for some time, and I hope in due season they will have a report ready for the public. Milk is especially vital to the health of children, and some way for promoting increased milk consumption by children must be found. I shall do everything in my power to help the dairy industry work out such a plan.

The Democratic Party is interested not only in practical programs for agriculture but also in such correlation between Government spending and private spending as will best prevent unemployment. New Deal Democrats are eager to make a science out of our monetary and budgetary policies, so as to end excessive unemployment and alternating periods of inflation and deflation. Republicans say it is a sin to think about such matters and that any planning by the Goverment is somehow wicked. They say the only thing to do is to cut down governmental expenditures at once by two or three billion dollars. Pointing to the fact that the debt of the Federal Government has increased by more than $2,000,000,000 a year since 1930, they ask how long this can keep up. "No private individual can go on increasing debt right along," so they say, "and neither can the Government."

They forget that in the decade of the twenties the total debts of the Nation increased by a far greater sum than ever before or since in this or any other country. Tremendous sums were borrowed from the people for business expansion. The net increase in debt averaged $5,000,000,000 a year. The period of excessive debt creation was in the twenties, not in the thirties. In the past few years business investment has shriveled, thus requiring more Government investment. The interest rate is lower on Government borrowing so it costs less total money to carry the debt than it did in 1930. Moreover the debts contracted in the thirties, although less than those of the twenties have brought a much larger increase of national income per dollar of money borrowed than in the twenties.

But all Democrats, both New Deal and Old Deal, feel that private capital should be given a chance and that the function of Government money is to tide over the situation until private capital has regained its courage. The patient is still convalescing from the terrible excesses of the twenties and the unusual sickness of the early thirties. He is still not well enough to be put back to full-time work. We all know that as soon as possible he must work again on the basis of regular financing, not deficit financing. In the future there will probably always be greater Federal expenditures than was the case previous to 1930, but we all hope the day will

soon come when private financing will increase and Government financing will decrease. Both the art and science of Government in the years immediately ahead will center in considerable measure around the problem of bringing about this transition as rapidly as possible but without shock. Those businessmen who ask for an overnight cut of two or three billion dollars in the Federal Budget are not thinking about the problem clearly from the standpoint of their own interests. Even from the standpoint of the Federal Budget itself, they forget that such drastic action would greatly reduce income taxes and might precipitate a political situation which would end either in revolution or a return to greatly increased spending.

Perhaps I am doing the Republican leaders an injustice. But it seems to me that insofar as they have a program they want to lower Federal taxes by doing away with most of the farm program and throwing the relief load onto the States and counties. Such policies mean lower income taxes and higher property taxes. If they had an opportunity to try out such a program for just 1 year the country would suffer, but the Democrats, as a result, would be sure of national power for a long time into the future.

These are days when, as in the days of Jackson and of Lincoln, national unity is threatened. In such a period one would expect the responsible national leaders of a major political party to be patriotic enough to reconcile the differences between groups. Instead, the national Republican leaders do everything they can to stir up dissension. They try to set farmers and workers against each other. They try to create the maximum of prejudice between the cotton farmers on the one hand and the wheat, corn, and dairy farmers on the other. Southern farmers are told that northern farmers are getting too large a proportion of benefit payments. Northern farmers are told that southern farmers are getting too large a share.

In contrast to this, the Democratic leaders have tried and are trying to bind the country together.

Rooseveltian democracy has learned and is learning more completely than any party has ever done the need for agriculture, labor, and capital to pull continuously together in a balanced way for the service and welfare of all the people. We are determined to serve the farmers, the workers, the small-business men, and the underprivileged. We know that if this is done in terms of increased balanced abundance the larger-business men will take care of themselves and will prosper along with the rest. We want to cooperate with capital to keep it continuously productive. Our program is one of unity in the service of the general welfare.

A hundred years ago Jackson thrilled the hearts of his countrymen with a toast given at a great dinner. "Our Federal Union—it must be preserved." Today Rooseveltian democracy stands for unity just as truly as Jacksonian democracy did then.

The task of Rooseveltian democracy in the years ahead will be to consolidate the achievements of the New Deal, to do the hard work that remains to be done if we are to assure continued security for the masses of our people.

The National Democratic Party could not have achieved what it has achieved in the last few years without the cooperation of the independent progressives of the West. Neither could the West have pulled out of its almost hopeless plight without the assistance of the National Democratic Party.

That is why the needs of the West are a challenge to the National Democratic Party. That is why the future of true progressivism is a challenge to the West.

The European Situation

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

LETTER FROM WASHINGTON HERALD OF JANUARY 2, 1939

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written by Howard Pitcher Okie, of Washington, D. C., which was published in the Washington Herald of January 2, 1939, dealing with the subject of the Versailles Treaty.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Herald of January 2, 1939]

At long last the men who sat at the council table in the old Palace of Versailles are coming into their own. For years no document has been more thoroughly condemned than has the peace treaty. Our own Constitution was as bitterly attacked during the formative years of the Republic. But our organic law had defenders. The Versailles Treaty has had none.

Today it is realized that the troubles menacing Europe are not due to the treaty but to the fact that it was suffered to lapse. Its authors were men who had been inspired by the awful responsibilities of their task—responsibilities which were well discharged. Its enforcement was placed in the weak hands of men who were infirm of purpose and swayed by the exigencies of the passing hour.

The ink was not dry upon the treaty before Germany and her unconscious allies began their campaign to separate those whose interests must always be opposed to Germany's professed aim of world domination. In America the most shameful lie of the propagandists and the most potent for evil in spite of the fact that its refutation is childishly simple was that we gained nothing from our participation in the war.

That lie keeps dripping from the lips of those who at the beginning of the war announced that Brazil would be a German state and offered to divide Mexico with Japan as an inducement to that country to keep aloof in the conflict. Later our entry into the war was precipitated by the interception of the Zimmerman telegram urging Mexico to foment a war between Japan and the United States.

If, at the conclusion of the Great War, a victorious Germany had not seized the Canal and all our island possessions, she would have violated the pledges she made to her own people before we entered the struggle.

Our gains through having prevented a German victory in the Great War are as enormous as they are imponderable. We have had 20 years of freedom from German molestation. The indecisive naval battle of Jutland shows how narrow was our escape. What would our position have been today if Germany had crushed Britain and added England's fleet to her own?

The Germans of 1914 may have been loud-mouthed braggarts, but it must be admitted that then only men of breeding and culture sat in the high places of Europe. Today many of those seats are filled with acknowledged ruffians and assassins. They must be dealt with as such. We must speak to them in the only language they understand. Now we may choose our weapons and the arena in which we may fight. Tomorrow we may have no option in either respect. Our weapons lie ready at our hand in our enormous store of gold and our creditable Navy.

If we do not immediately declare that every drop of oil leaving Mexico for a German port is seizable contraband, and enforce that declaration, we are fools. For the oil seized we should pay Mexico. Let the settlement of that country with her concessionaires wait.

We should interdict the shipment of all scrap iron to Japan. And do it now! If not, it may be returned to us in a very unacceptable form.

HOWARD PITCHER OKIE,
3621 Newark Street NW.

Matthew Fontaine Maury

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

ESSAY BY MISS MATILDA COPPER, GOSHEN, VA.

Mr. BYRD. Mr. President, in commemoration of the one hundred and thirty-third birthday anniversary of Matthew Fontaine Maury, I ask leave to have inserted in the CONGRESSIONAL RECORD an essay by Miss Matilda Copper, of Goshen, Va., which was awarded the State prize in a contest conducted recently by the United Daughters of the Confederacy.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

Matthew Fontaine Maury was born in the historic county of Spotsylvania, 12 miles west of Fredericksburg, Va., on January 14, 1806. Four years later the family moved to Tennessee, where Maury went out into the great world, but we must not forget his humble birthplace.

In the family of Richard and Dina Maury, Matthew was born the fourth son of the five sons and four daughters. He was named for his father's grandparents.

A few days before Matthew's fifth birthday his father hitched his team of horses to the squeaky old wagon and set out westward. Little Maury was full of joy and excitement, but I hardly think it was as exciting to his older sister, Matilda, who carried him most of the way. They traveled for about 2 or 3 weeks and then picked out their home about 6 miles west of the town of Franklin, in Williamson County, Tenn. With the Negroes and the other white boys around him he hunted animals, worked in the cottonfields, and now and then he attended an "old field school." The school was so

named because it was built in the corner of an old field which had been cleared by the Indians.

The Maury children all received good training at home. As Maury himself stated in later years, he was taught to respect women, to love the truth, and to remember God.

When Maury was about 12 years old he had climbed up into a tree about 45 feet, and it fell. The truth of the occurrence of this accident, which proved almost fatal to Maury, has never been known. Maury at the time seemed to be dead. He soon revived, but in falling his tongue was caught between his teeth and almost bitten off and his back was badly injured.

To make the best of this situation Matthew's father sent him off to school. He was sent to Harpeth Academy, where he had some wonderful teachers and soon became an assistant teacher himself.

Maury was anxious to go, but he soon wanted to enter the Military Academy at West Point, although the mere mention of this put his father into a rage. He gave up the idea of entering the Army, but turned to the Navy. He secured an appointment as midshipman through Sam Houston, then a Member of Congress from Tennessee.

Young Matthew, aged 19 in the spring of 1825, set out for Washington on a horse he bought on credit, and penniless. Maury's father was very much hurt over this act, probably more than anything else, because his son had obtained this appointment without consulting his parents. However, he allowed young Matthew to follow his own choice.

At Charlottesville he was invited to spend the night with his cousin, Reuben Maury, and it was here that Maury ate his first ice cream. Maury, being given a dish full of cream with a spoon in it, took a spoonful of cream and passed it on. No doubt in later years Maury could laugh over this situation, but certainly not now.

Good friends and fortune seemed to be smiling by the time Maury reached Fredericksburg. It was here he sold his faithful horse for $75 and returned the money to his former owner in Tennessee. He stopped here at his uncle Edward Herndon's, where he met Ann Herndon, his cousin, whose smiles he carried with him around the world for 9 years, and finally came back to wed her.

When Maury reached Washington, the Secretary of the Navy allowed him 15 cents a mile on his journey from Tennessee to Washington. This was the largest sum of money he had ever possessed.

On August 13, 1825, young Midshipman Maury left New York on the *Brandywine*, which was taking Lafayette back to France. It was on this voyage that Maury soon made a reputation among his shipmates for studious habits and scholarly ability. After traveling from the shore of one strange land to another, the *Brandywine* entered once again New York Harbor in May 1826. He spent a short time at home and then sailed on the *Macedonia*. It was on this trip that one of Maury's dreams was realized. He was starting on his cruise around the world. He sailed from Norfolk to South America. He visited in Brazil until he was transferred to the *Vincennes*. For 2 years he stayed close to the shores of South America, then sailed to the Philippines, West Indies, and the Hawaiian Islands. The ship turned northwestward from here toward the island of St. Helena, where Napoleon was exiled and died. They continued northwest and landed at New York on June 8, 1830.

Maury remained on shore a year, then he sailed again for the South Pacific. During this year on land, Maury took his examination and passed.

Maury was on this cruise around the world for 3 years, but Ann Herndon couldn't be forgotten, and he came back to wed her.

On this cruise around the world Maury stumbled upon his chief path to fame. He was anxious to make this trip quickly, but he could find no information about the winds or currents or the best paths for ships to take. Necessity was again the mother of invention.

On July 15, 1834, Lieutenant Maury and Ann Hull Herndon were married at her home in Spotsylvania County. The couple soon set up housekeeping in Fredericksburg.

It was in Maury's first few years of married life that he started using his pen. He began writing articles for the American Journal of Science and Art. These articles were on navigation, and, encouraged by his writings, he soon completed a book on navigation. When the United States Naval Academy was opened at Annapolis this book was used as the basic instruction in navigation for midshipmen.

Maury soon went on a short cruise, but resigned and spent several months assisting in the survey of various harbors in the United States. He got a short leave to go home, and, after spending a few days with his wife, he went to his old home in Tennessee. Returning to his duties, on a crowded stage coach on which he had given up his seat to a Negro woman and was riding outside by the driver, the coach upset. Maury's knee joint and thigh bone were dislocated. He lay suffering for 3 months in Ohio, but continued his studies in French.

Maury, the victim of two accidents, seemed unlucky, but the suffering and disappointment that resulted proved great and permanent value to the world.

Now, Maury began writing scraps from the "lucky bag." His main theme in these papers was "The Navy requires reorganization." His last paper in the "scraps" series was one of the best essays ever written in our country.

In November Maury again applied for active service, but was made superintendent of charts and instruments at Washington.

It was Maury who founded the National Observatory and Signal Service and the Naval Academy at Annapolis. His genius made it possible to lay the Atlantic cable. As early as 1851 Maury was urging a system to give weather information for the farmers. It was through Maury's travels, lectures, and articles that the Weather Bureau we have today was established.

Maury had won distinction in many fields, and his deeds suggested various titles of honor, but the one most widely known and loved is The Pathfinder of the Seas. The waters, whales, and wind have paths to follow; Maury also found a path for ships. Steamers going east were to take the southern lane, those coming west the northern one. At once ships were ordered to follow these lanes.

On August 23, 1853, a group of distinguished men assembled in Brussels. Maury was requested to be president of the group, but he declined the honor. Upon special request he gave a short address to the assembly. His suggestions were closely followed. At the close of the conference he returned to his duties in Washington.

While Maury was traveling over the country lecturing to agricultural societies, his older daughters, Betty and Dina, better known as "Nannie Curly," had been teaching the younger children to read, write, and cipher. They had been so faithful to their tasks that Maury promised to take them on a trip with him. He took them on two short trips and then to the Brussels Conference. They were accompanied by their cousins, Ellen Herndon and Ellen Maury. On this trip across Europe the girls, with Lieutenant Maury, visited many historic cities and places. Everywhere they went they were received with honor and entertained with hospitality, for the name of Maury had gone ahead all over the world.

A year and a half after Maury returned from the conference in Belgium he published his most notable book, The Physical Geography of the Sea. Some of the naval schools of Europe have used it as a textbook.

Maury was the first scientist to make a careful study of the Gulf Stream, and no one has written of it in a more picturesque manner.

"I am a man of few words. Maury furnished the brains, England gave the money, and I did the work." This is how Cyrus W. Fields recognized Maury's part in laying the Atlantic cable. The first message sent across the cable was from Queen Victoria to President Buchanan.

"Maury, like Julius Caesar, was both a writer and a fighter, but he fought ignorance with knowledge, error with truth, and wrong with right." When the War between the States broke out, Maury was much distressed, but he felt, like many other southern men, that he owed his service to his native State. He gave up his position in the United States Navy, left his office in Washington, and went to Richmond. For 19 years Washington had been his home and the observatory his workshop, so he left with deep regret. Mrs. Maury, with her younger children, returned to Fredericksburg to live with her relatives. Soon came her two older daughters, whose husbands were in the Confederate Army.

Soon Maury received two cordial invitations to come and live abroad, but because of the love for his State and the duty he felt toward her, he declined both invitations.

Maury was crippled and couldn't go into active service, but he gave himself in many ways to the Confederate cause. He was the first to use the electric torpedo successfully, and he assisted in fitting out the famous warship *Virginia*, one of the first ironclads in our history.

In September 1862 the Confederate Government sent Maury to England to purchase supplies and to make friends for the Confederacy. On this trip he took his third son, Matthew, Junior. When Maury returned to Fredericksburg to tell the family he had been ordered to England and to say farewell, it was the last time the family circle was united.

It was on this ship, the *Herald*, that Maury again proved himself a pathfinder. By the sixth day of this voyage, the vessel was completely lost, and the captain went to Maury for information. At 10 o'clock Maury went out on deck, studied the stars, gave the captain a course to follow, and told him that by 2 o'clock he would see a light on the Bermudas. At 10 minutes past 2 they saw the light.

Maury devoted most of his time to the Confederate cause, purchasing materials for torpedoes, but at the same time doing other work of importance.

By 1865 General Lee and some of the other Confederate generals had surrendered, but Maury still had hopes. At Havana, when he learned that Virginia had laid down her arms, he wrote a letter of surrender to the United States naval commander saying: "In peace as in war, I follow the fortunes of my native State, Virginia."

After Maury's surrender, he was given an invitation to live and work in Mexico, which he accepted but his wife did not accompany him, but she did join him soon after he went to England. He lived in Mexico less than a year but while there he introduced the Cinchora tree from which quinine is made.

Maury remained in England 2 years with his younger children in school and he at work. Five of the children were here, Nannie, Curly, Tots, Brave, and Sat Sing. But three of the children were missing, Col. Richard L., who had remained at his father's post in Mexico, Betty, and Davy Jones, who had mysteriously disappeared at Vicksburg 5 years before.

As time passed and bitter feelings of the war subsided, Maury and his family were anxious to return to America. He was offered a position in the University of the South, in the Virginia Military Institute, and at the University of Virginia.

On July 16, 1868, Maury, with his family, landed at New York. He had accepted the position at Lexington. He became professor of physics at the institute and director of physical survey of Virginia.

Maury was given a most cordial reception. His coming home to share the lot of his people was looked upon as high patriotism. His family remained in Richmond that winter.

Maury soon saw the need of an agricultural school in America, so in 1872 the State, with the aid of the United States Government, opened an agricultural school at Blacksburg. This school has rapidly grown and is known today as Virginia Polytechnic Institute.

The family left Richmond and moved to Lexington in June. This town is in a historic county, for we know many distinguished men have come from Rockbridge. About 14 miles southwest of Lexington is the famous Natural Bridge, for which the county is named.

Later Maury accepted a position in the University of Alabama, but Virginia put up such a protest that he finally resigned and remained at Lexington.

In 1870 his excellent Manual of Geography was published, and later his Physical Geography. Maury continued lecturing and addressing audiences all over the country. His last lecture was at the State fair in St. Louis in the autumn of 1872. He returned to Lexington, where he expected to speak on the day of his arrival. Although he had his address prepared, he was too ill to deliver it.

Upon returning to Lexington in October 1872, Maury said to his wife, "My dear, I'm come home to die"; and a few days before his death he told the doctor not to come to see him any more, but "leave me to the Great Physician."

In his death as in his life, Maury found great joy in having his family about him, and a few hours before he died they sang verses from his favorite hymns, Christ is Risen and How Firm a Foundation. His final words were "All is well."

Maury died at half past 12 on Saturday, February 1, 1873. For 2 days the body lay in state in the institute library, where his funeral was held February 5. The casket was placed in the Gilham vault in the Lexington Cemetery just opposite the grave of Stonewall Jackson.

Mrs. Maury's request was to bury him in Richmond where she herself wished to lie. He replied gently, "Very well, my dear; then let my body remain here until spring, and when you take me through Goshen Pass you must pluck the rhododendron and mountain ivy and lay them upon me." So Maury's body remained in Lexington until the following autumn, when it was carried to Richmond, its final resting place.

At this time the nearest railway station was at Goshen. The road now known as the Maury Highway, on which Maury took his last ride, runs through the beautiful Goshen Pass, with the splashing North River which flows for more than half the way on one side of the road, and the mountain scenery rugged and wonderful.

Half way through the pass, under the shadow of a cliff and bordered by spruce and rhododendron, stands a granite shaft to Maury, erected in 1923 by the State of Virginia. A bas relief of Maury is at the top of the bronze tablet on the shaft, and below it is an inscription. At the base is a huge iron anchor, and around the small enclosure is the anchor chain. On the anchor there is a small bronze plate which bears an inscription.

Armaments

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

ARTICLE BY JOHN T. FLYNN

Mr. HOLT. Mr. President, I ask unanimous consent to have inserted in the RECORD an article on armaments by John T. Flynn.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK.—If any American thinks that this Government has been skimping on the matter of national defense, let him look at the following figures. They represent the total expenditures for national defense—Army and Navy—for the years 1933–34 to the Budget just disclosed by the President.

Here they are:

1933–34	$540,356,000
1934–35	709,931,000
1935–36	921,684,000
1936–37	935,114,000
1937–38	1,027,841,000
1938–39	1,119,810,000
1939–40	1,668,283,000
Total	6,933,019,000

The last figure for 1939–40 is, of course, the President's estimate and includes $500,000,000 which he proposes to outline and ask next week.

Glance at the column of figures and see how each year the amount has increased. In 1937–38 it was twice what was spent in the first year of the administration. Now, in 1939–40 the sum proposed is three times what was spent in 1933–34. The whole total is a huge sum—nearly $7,000,000,000.

In arriving at these figures, which are taken from the Treasury reports, I have included the sums which have been spent from the recovery and relief funds. Each year the President has spent not merely the sums appropriated by Congress for national defense but also many millions which he has allocated from recovery and relief funds. The amounts are very great. Here they are by years:

1933–34	$60,663,000
1934–35	176,335,000
1935–36	147,246,000
1936–37	79,004,000
1937–38	53,735,000
1938–39	77,604,000
1939–40	50,726,000
Total	645,313,000

About these allocations two very significant features appear. First of all, these are sums not appropriated by Congress, but appropriated by the President himself. Thus, in 1935, Congress appropriated $553,596,000 for national defense. But Congress has been turning over to the President billions each year to spend as he likes. And in 1936 he appropriated another $176,000,000 for national defense.

Second, the money appropriated by Congress in each year was spent out of tax moneys. But the money appropriated by the President was spent out of borrowed funds. So we have actually in the last 7 years spent $645,000,000 on national defense which was never collected in taxes and which we still owe for.

The Budget

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

EDITORIAL FROM ST. LOUIS STAR-TIMES OF JANUARY 9, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the St. Louis Star-Times of Monday, January 9, 1939, on the subject of the Budget.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Star-Times of January 9, 1939]

DEEPER INTO DEBT

The immensity of the yawning cavern of debt into which Uncle Sam is digging himself staggers the imagination. The editor of the St. Louis Globe-Democrat tried to illustrate its proportions by pointing out that a man—or succession of men—would need 5,000 years just to count our 1940 expected debt if counting a dollar every second, 8 hours a day, every day of the 50 centuries, including Sundays and holidays.

If one man started counting the dollars today and his descendants finished the job, it would end about the year 7000 A. D., and the last dollar would be counted by his great- great- great-

(3) borrowing, (4) commandeering of funds earmarked for other purposes.

Let's consider each of the four methods.

(1) Taxation: The tax rates now in effect produced a revenue in 1938 of slightly more than $6,000,000,000. In 1940 they are expected to produce about $5,669,320,000. Expenses are supposed to exceed these tax-derived revenues by $3,326,000,000.

It would, therefore, take a tax burden approximately 58 percent above today's level to meet all the expected Government expenditures and provide for reasonable yearly principal reduction. Obviously the people would not tolerate such a burden and no government that attempted it would survive. Improvement in business and agriculture, resulting in larger national income would, of course, reduce this rate increase somewhat by producing larger tax revenue without any change in the tax structure.

(2) Devaluation: This expedient has already been resorted to in the action of the administration in reducing the gold content of the dollar from 100 to 59 cents. Under the same law the President can further devalue it to 50 cents. It is not necessary to comment here on the wisdom of past or future action of this sort.

(3) Borrowing: The crux of the present situation is borrowing. As long as Government credit holds out, borrowing to meet deficits can go on. The debt peak of $25,482,000,000 following the World War seemed staggering. It was reduced to a low point of $16,185,000,000 in 1930.

Large scale borrowings to meet the depression crisis started in 1932 and the debt burden has mounted along with the accumulated deficit as follows:

	Accumulated debt	Accumulated deficit
1932	$19,487,000,000	$3,010,000,000
1933	22,539,000,000	4,794,000,000
1934	27,053,000,000	7,689,000,000
1935	28,701,000,000	10,899,000,000
1936	33,778,000,000	15,449,000,000
1937	36,425,000,000	18,597,000,000
1938	37,165,000,000	19,981,000,000
1939 (estimated)	41,132,000,000	23,953,000,000
1940 (estimated)	44,458,000,000	27,279,000,000

About 1 more fiscal year of deficit at the present rate will raise the country's debt to $50,000,000,000, or double the peak debt incident to the United States participation in the World War.

(4) Commandeering of funds earmarked for old-age security, unemployment benefits, and Government employees' retirement and war veterans' funds. The amounts to be taken from these funds are as follows:

$579,000,000 from the social security old-age reserve account.
271,000,000 from the social security unemployment trust fund.
100,000,000 from Government employees' retirement and veterans' funds.

950,000,000

How will the Government restore these funds? The method now proposed is not further taxation, further devaluation, or further borrowing, but a transformation of a "$60,000,000,000 country" into an "$80,000,000,000" or a "$90,000,000,000" country. But suppose the transformation does not work and the debt goes on, interest compounding until the day of reckoning approaches. In that event the Government—moral considerations aside—will be in the position of the trustee who borrowed from his trust funds intending to repay, but who is unable to do so and must face the consequences.

There is no escape from the present situation until people understand what the Government is doing with their money and make their resentment known to Congress. The pressures now are all on the spending side. Perhaps as the inevitable end that follows such methods approaches a general awakening will overcome political considerations and put the Government's financial house in order before it is too late.

Tribute to America

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

STATEMENT BY WALTER WINCHELL WHICH APPEARED IN THE NEW YORK DAILY MIRROR NOVEMBER 27, 1938

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a brief and most eloquent tribute to America, prepared by Mr. Walter Winchell.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the New York Mirror of November 27, 1938]

Every American should look about him, and weigh what it means to be an American . . . Lest we forget—we should remind ourselves that the America of today stands for 150 years of effort . . . Lest we forget, we should remember that the land and the institutions we enjoy today—are the result of the combined work of almost every race and creed in the world—all resolved to leave America better than they found it . . . For America has grown great because it protected the lowly . . . America has grown mighty, because it was humble in spirit . . . Our greatest heroes, Washington and Lincoln, are exalted because they were human . . . We should all be thankful that in Civilization's Darkest Hour—our Country is the land that stands for Freedom, Tolerance and the Dignity of Man . . . That to the bewildered, oppressed and homeless—our country is the living proof that men of all races and creeds may live as neighbors . . . And, out of our thankfulness, we too should resolve to bequeath an America greater—than when it was given to us . . . So that our children's children, 150 years from now—will be thankful—that we were—thankful!

United States Maritime Commission

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

ADDRESS OF BON GEASLIN, GENERAL COUNSEL OF THE UNITED STATES MARITIME COMMISSION, AT A MEETING OF THE ASSOCIATION OF PRACTITIONERS BEFORE THE INTERSTATE COMMERCE COMMISSION AT PITTSBURGH, OCTOBER 6, 1938

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Mr. Bon Geaslin, general counsel of the Maritime Commission, on the subject of that Commission's duty with respect to commerce.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Possibly every lawyer in this country knows, or thinks he knows, something about the workings of the Interstate Commerce Commission and the control it exercises over interstate carriers. Indeed, most every active practitioner must be more or less familiar with the numerous decisions of the courts in which the regulatory powers exercised by the I. C. C. are examined and discussed.

But I venture to say that a very small percentage of the members of the bar have more than a hazy idea concerning the powers and functions of the old Shipping Board and of its successor, the United States Maritime Commission. When I joined the legal staff of the Commission a little over a year ago I entertained the illusion that I was entering that society of erudite practitioners known as admiralty lawyers, who talk casually about such things as general average, particular average, salvage, P. & I., and other mysterious doctrines that mystify us country lawyers. I soon discovered, however, that the legal problems in water transportation do not differ greatly from those encountered in other fields. Like railroad transportation, water transportation has its special doctrines and terms, but most of the legal work in connection with the various functions of the Maritime Commission involves the field of law with which any good lawyer is familiar. So if any of you gentlemen want to switch from railroad to water transportation you will be very welcome at the Maritime Commission. I am in a position to offer you anything but clients, jobs, or favorable rulings.

I presume that the reason you asked me to speak to you today is that you want to hear something about the work of the Maritime Commission. I am sure that all of you have heard Chairman Land's excellent radio addresses, in which he has described our shipbuilding and ship-subsidy operations, so I shall confine myself very largely to a discussion of the legal work of the Commission and particularly that which deals with the regulation of water transportation.

Everyone remembers, of course, that during the World War the Emergency Fleet Corporation built a great many ships of various kinds—steel ships and concrete ships and wooden ships. Particularly, people still remember about the wooden vessels, and they remember about the $3,000,000,000 the Government spent in trying to produce a merchant marine in a hurry when we were confronted with a war emergency 21 years ago; and more recently we remember the hundreds of millions of dollars we have spent trying to maintain it. The average citizen knows but little about the peacetime functions of the Government's maritime agency, and I have been

surprised to find that very few lawyers, including those who practice in Washington, have a clear conception of the authorized activities of the Maritime Commission.

The Commission exercises two kinds of functions. That is, it acts as a quasi-judicial body in regulating, and to some extent controlling, the rates, fares, charges, and practices of carriers by water in the foreign, coastwise, and intercoastal commerce of the United States; and also is the governmental fiscal and business agency which determines and administers the subsidies that Congress has provided shall be paid to assist in constructing and operating a new merchant marine to be built in American yards and manned with American sailors.

Prior to enactment of the 1936 act our merchant marine was in the doldrums. American steamship owners and operators, as well as public officials, were under fire because of alleged abuses that existed in the administration of the ocean-mail contracts—which were nothing more than disguised shipping subsidies—and the diversion of the mail money to purposes other than to the building of new vessels that were so urgently needed. Notwithstanding the large sums spent during the period since the war, the Commission found a situation where we were fourth in ships, sixth in speed, and next to last in age of ships among the eight principal maritime nations of the world.

When the new act was passed, Congress scrapped the Fleet Corporation and the Shipping Board Bureau of the Department of Commerce, which had been in existence for 20 years, and created a new five-member commission vested with an express mandate to see that sufficient new vessels were built and operated to carry a substantial portion of our water-borne foreign commerce. Construction and operating differential subsidies sufficient to equalize the difference in cost between constructing vessels abroad and operating them under foreign flags and constructing and operating them under the American flag were authorized for that purpose.

The new permanent Commission took office about 18 months ago and found itself upon no bed of roses. In fact, we frequently feel that we are entangled in sea nettles instead. The early days of any administrative body are fraught with peril. This is especially true where that body is concerned with paying out Government funds to private persons in order to effectuate a public purpose. And the worst position of all exists where even geography tends to prevent a majority of the taxpayers from appreciating the results of a "spending program."

I cannot criticize a farmer in my home State of Missouri if he considers a Government contribution of over $6,000,000 toward the purchase price of a ship to be owned and operated by a private corporation as sheer insanity, even though you and I may realize that the ultimate profit to the Missouri farmer of contributions such as this may be great indeed.

The public memory is short, and few businessmen who are actually conscious of the value of insurance in ordinary private enterprise realize the vital necessity for insuring our international trade by constantly maintaining an adequate American merchant marine. Thinking back 20 years, however, to the time when freight cars jammed our water-front terminals and farm products rotted on the docks, should convince every taxpayer that insurance should be taken out against a repetition of catastrophes similar to those which in two wars alone cost the American people between two and three billion dollars in excessive rates and through failure to move cargoes abroad. Our foreign trade last year was between six and seven billion dollars, and it is growing from day to day. The funds necessary to carry out the congressional mandate which imposes upon the Maritime Commission the duty of developing and maintaining a merchant marine are a very modest premium for insurance covering so vast a business risk.

As usual in every enterprise, the lawyers of the Commission play a dual role. An ambidextrous amphibian, the Commission's lawyer must be a wheelhorse when the work is being done and a scapegoat when the job goes wrong. A ruling that money cannot be paid calls down the curses of the industry upon his head. A ruling that money can be paid makes him fair game for any bona fide or self-constituted watchdog of the Treasury.

There should be a close sense of kinship between those who practice before the Interstate Commerce Commission and the Maritime Commission and close and sympathetic understanding between those lawyers and the legal staffs of these two governmental agencies. Transportation is the lifeblood of trade, and there is a close relationship between what affects transportation by land and transportation by sea.

The Interstate Commerce Commission is, fortunately for its peace of mind, now principally engaged in the regulation of existing transportation systems. The Maritime Commission, on the other hand, must create and maintain, which means support in a measure, the means of water transportation, and, at the same time, regulate the water-transport system. The Commission itself operates steamship lines in a few instances where it has not thus far been possible to secure private financing and management.

The creation of a merchant marine presents painful legal problems. So painful have they been in the past that even now we are litigating the construction cost of ships completed 20 years ago. The first duty of the Maritime Commission lawyers is to construe the law under which we operate, and which is far from perfect. In order that the Commission may progress steadily in the work entrusted to it by the Congress, which is not less than to keep the American flag on the high seas, every comma in a law which contains more than 100 sections, must necessarily be the subject of careful scrutiny when contracts involving millions of taxpayers' money are being let. The problems connected with invitations for bids, contracts for the construction and acquisition of ships, purchase of equipment from wash rags to silver services, subsidized operations and operations through managing agents, are many and complex. The various provisions of the Merchant Marine Act have necessarily been the subject of laborious research and carefully drawn opinions. The documenting of ships, the drafting and redrafting of preferred mortgages, and the preparation of other documents of a maritime nature never end with us. Our insurance business is tremendous even now, and will be greatly expanded by the recent act authorizing the guaranty of ship mortgages by the Commission under certain circumstances.

The Commission's maintenance work is effected by the payment of what are known as operating-differential subsidies. These are covered by operating subsidy contracts, but their amounts are frequently the subject of long contention, and no matter how simply the contracts are drawn, it always develops that their terms later require difficult and careful construction.

The actual litigation necessarily carried on is both general and specialized and, literally speaking, covers all the civilized world. One day we may lose a case in Holland and the next day win a case in Italy. On our docket will be found rental collections, bankruptcy proceedings, suits in admiralty, the resistance of inequitable foreign port charges, and claims for the bombing of our merchantmen. Our insurance interests involve us in endless controversy, and frequently in the reconstruction on paper of wrecks in storms, the waves of which have never touched our shores.

Our mortgages amount to many millions, and when we are forced to foreclose these mortgages we must always be prepared for contests of their validity and complicated questions of priorities.

As we progress in our program which should place 50 first-class American-flag vessels in salt water every year for the next 10 years, it is obvious that our regulation work will become more and more important. It is in this work that you as practitioners before the Interstate Commerce Commission will be particularly concerned.

It is somewhat astonishing to find how little the regulatory functions of the Maritime Commission have been understood even by those lawyers whose interests center in transportation matters. I am sometimes inclined to wonder if the reason for this may not be that our regulation of water transport has not been sufficiently vigorous and its incidence upon the industry as effective as it should be. You, of course, know, however, that the regulation of railroads began in a hesitant and almost half-hearted manner, but has since 1887 gradually expanded and become firm, though sympathetic and effective while at the same time constructive. The future of the regulatory functions of the Commission may well be charted along such forward-looking lines.

If you will examine the Shipping Act of 1916, you will find that the regulatory powers over shipping delegated to the old Shipping Board, and now exercised by the Commission, are closely analogous to the powers granted to the Interstate Commerce Commission over railroads.

The power of Congress to regulate shipping springs from the same clause in the Constitution that Congress has used in the control of interstate land carriers. From the pronouncements of our Supreme Court it must be concluded that there is no limit to the power of regulation that may be prescribed by Congress and exercised over all carriers by water engaged in commerce between the United States and foreign countries, provided the exercise of such regulation does not amount to the taking of private property for public use without just compensation or without due process of law. It is for Congress to determine when its full power shall be brought into activity and as to the regulations and sanctions which shall be provided.

The extent to which such regulations should go is a matter of discretion and national policy, which may or may not be qualified by consideration of international relations. But it is for the Congress to determine when and to what extent its power shall be brought into activity.

In referring briefly to these legalistic principles with which you are familiar, I am leading up to a comparison between the regulatory problems involved in regulating domestic land carriers and those in regulating ships and shipping, where the question of foreign ownership and international relations is involved. You will concede, I think, that the Maritime Commission's problem is enormously complicated.

Steamship owners do not necessarily conduct their operations between fixed points or on established routes. No rails have been laid between the continents, and competition in water transportation is more acute than between carriers by rail, because an engine and a train, of course, must stay upon fixed rails. The Commission is not authorized to issue certificates of public convenience and necessity and has no power to prevent the entry of a competing service into any territory or to prevent a carrier by water from discontinuing service whenever he sees fit.

Water carriers may operate on definite routes and schedules or may operate as "tramps" with ships wandering from sea to sea and calling at any port where sufficient cargo makes the call worth while. The service may operate as a common carrier or as a contract carrier, carrying only specific kinds of cargo, or it may use its vessels both as common carriers and contract carriers. A part of its service may be intercoastal or coastwise, where the competition is limited to other American-flag enterprises, or it may engage in foreign commerce, where it competes with vessels under the flag of every maritime nation. It is readily understood that the regulation of transportation of this nature is necessarily a difficult and, at times, a bewildering task.

As I have pointed out, Congress possesses power to regulate vessels of foreign registry as well as those of American registry, and the Shipping Act makes no distinction between the two classes of vessels in the delegation of regulatory powers to the Commission.

However, rates charged by foreign-flag vessels operating in our foreign commerce cannot be effectively regulated without producing retaliatory measures by other countries, and the only jurisdiction exercised over these rates is to prevent the imposition of rates and fares unjustly discriminating between shippers or ports or unfair to American exporters as compared to the rates charged to foreign importers, in which case the Commission has exercised power to alter rates or otherwise prevent discrimination.

Thus far, no attempt has been made to regulate tramp services, and with respect to contract carriers, regulation has been limited to those engaging in intercoastal service via the Panama Canal.

Congress has required that the rates of interstate water carriers must be reasonable and originally provided that the carriers should file their maximum rates. The provision for filing only "maximum" rates turned out to be the selection of a highly ineffective instrumentality. Maximum rates in highly competitive services—and almost all steamship services operate in brisk competition with others—mean little, and it speedily became obvious that when the issue was whether or not a rate was "reasonable," the "maximum" rate had little if any bearing on the case.

Between 1933 and 1938 the Commission found itself in the extraordinary situation of being able to require intercoastal carriers to file actual rates, while it could only require coastwise carriers to file maximum rates. This inequity was removed in 1938 by an act requiring all interstate carriers subject to the jurisdiction of the Maritime Commission to file their actual rates, and forbidding a change in these rates without 30 days' notice, except in cases where the Commission authorizes a change within a shorter period.

The development of regulation which began in section 15 of the Shipping Act of 1916 demonstrates the way in which regulation expands by practical evolution. That section provides that carriers and other persons subject to the act must file copies of all agreements which control, regulate, or destroy competition. These are the conference and pooling agreements with which you may be familiar. Under these agreements, carriers by water may pool earnings, fix rates, and allocate sailings so as to regulate or even wipe out competition, and their action in so doing, if approved by the Commission, is exempt from the provisions of our anti-trust laws. The conferences were designed and have developed as a system of self-regulation and self-control for water carriers, a system almost necessary because of the freedom of foreign carriers from rate regulation by the Maritime Commission. Incidentally, if any system could be devised whereby the rates in foreign commerce could be regulated without provoking foreign reprisals, our problems would be greatly simplified. As a substitute for such regulation, the Shipping Board consistently encouraged the creation of conferences and the extension of conference authority over the activities of their members in order to promote the stability and equity of rates and service in our foreign trade.

The Commission inherited the system of conference agreements fostered by the Shipping Board, but has found it desirable to strictly police the operation of the agreements to prevent abuses. Section 15 of the Shipping Act authorizes us to disapprove conference agreements found to be "detrimental to the commerce of the United States." It has been determined by the Commission's decisions that a conference agreement providing for an unreasonable rate is "detrimental to the commerce of the United States," and thus they have compelled an agreement to reasonable rates as the alternative to the dissolution of the conference involved. It goes without saying that this is plenary power which might be dangerous if arbitrarily used. The Commission has been careful not to invoke this power except in flagrant cases.

Two phases of water transportation are not subject to any regulatory Government control. They are—transportation over our rivers and the operation of water terminal facilities. The Commission is now making a survey of transportation by river, designed to supplement the careful study under the direction of the Federal Coordinator for Railroads, in order to determine whether or not it is desirable to have the rates and practices of river carriers regulated by the Commission, and, if so, the extent of such regulation. The regulation of water terminals has, of course, been the subject of congressional debate for a long time. The Eastman wharfinger bills introduced in the Seventy-fifth Congress would have subjected terminals to regulation by the Interstate Commerce Commission. With all due deference to the Commission before which you gentlemen practice, we believe that the operation of water terminals is so intimately and inextricably bound up with the problems of transport by water that they should be regulated by the Maritime Commission. Regardless, however, of the regulatory body to be selected, it is perfectly clear that there is a crying need for regulation of water terminals, and it is probable that such regulation may soon be written into law.

While our life as a regulatory body has been comparatively brief, it has been sufficient to develop a number of perplexing problems upon all of which the Commission would be glad to have the opinion of all of you gentlemen who are specialists in the sphere of transportation. Among them are: the right of a carrier to pay another to refrain from competing with it; whether or not an intercoastal carrier, if it enters into a transshipment agreement with an operator in foreign commerce, loses its intercoastal carrier status and should be treated as a carrier in foreign commerce; when transportation by a carrier ends and the obligations of the terminal company begin, and other related matters. I merely present these questions for your consideration. Heaven forbid that I should try to answer them today!

As I have not hesitated to discuss our own limitations and failures, I do not believe that I should be foreclosed from saying that the records made in regulation cases before the Maritime Commission on behalf of shippers and carriers alike have not been entirely satisfactory. This may in part have been caused by a feeling in the past that we ourselves did not intend our regulation decisions to be taken very seriously. We are now attempting—successfully, I think—to correct any such erroneous impressions. It may be, too, that the attention of carriers' attorneys is more frequently and more urgently called to cases involving cargo which is wrecked or damaged than cargo safely delivered to the consignee.

With respect to the evidence presented on behalf of shippers, there is, of course, an inherent difficulty in the problem of proof. The best evidence which could be established by an aggrieved consignor is frequently possessed only by the defending carrier, such as the exact amount of space occupied in the vessel by the commodity involved, the precise cost of loading and unloading, and the storage and stevedoring factors. The shipper plaintiff, with the burden of proof upon him, all too frequently enters a rate case with two strikes against him. The carrier, however, also has his handicaps because it is practically impossible accurately to determine whether a rate actually covers the out-of-pocket cost of carriage and whether the goods carried contributes its just share to the operating cost. On questions such as these your training in rate matters should be of great value to parties coming before us, and to the Commission itself, and I have no hesitation in extending to you a sincere and hearty invitation to become members of the Maritime Commission bar.

The factors entering into the determination of fair steamship rates differ somewhat from those involved in the determination of railroad rates, but the method of determining rates for both classes of carriers is essentially the same. The difficulties of proof inherent in the problem make it inevitable that rate decisions may be regarded as successful if they may be considered as a truly intelligent guess. In the regulation of water carriers we customarily talk, as I am sure you who are involved in land carrier regulation also talk, about the "scientific establishment" of rates. Inasmuch as we are lawyers talking to one another, I may as well admit that in actual practice we have not achieved the accuracy which we confidently assume, but I hope that continued effort will enable us before too long to say that we have succeeded in establishing our rates upon a truly scientific basis.

In closing I may ask you as lawyers necessarily coming into close contact with the representatives of every phase of American life to remember the gigantic proportions of the task which has been entrusted to the Maritime Commission and to impress your friends and associates with the importance of that task, and I may say confidently that you will not be in error if you tell them that our mistakes are the honest mistakes of men working wholeheartedly in an enterprise which they feel must, for their conscience sake, be successful in the end.

Before Joseph Patrick Kennedy resigned as Chairman of the Maritime Commission to represent this country in Great Britain, he said something which every American should hear:

"The American merchant marine is our own flesh and blood, our own treasure, our own ships, and our own money. Get behind it with the pride, the enthusiasm, and the patronage that other nations emotionally and financially give to their own. Has the time come when we will turn our back on American genius and enterprise? Congress has given an emphatic 'No!' No American can do less than give it his wholehearted support."

West Virginia and the National Debt

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

STATEMENT OF HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to insert in the CONGRESSIONAL RECORD a statement entitled "West Virginia and the National Debt." The national debt has been figured for each county of my State on a per capita basis.

There being no objection, the statement, in the form of a letter, was ordered to be printed in the RECORD, as follows:

DEAR FRIEND: I am enclosing some statistics about the indebtedness of your county.

The national indebtedness is figured in this table at $300 an individual. It is even more than that. The State and local indebtedness is from a State report of June 30, 1938.

The President said in his recent message to Congress: "Many people have the idea that as a Nation we are overburdened with debt and are spending more than we can afford. That is not so." He advocated a $10,000,000,000 Budget for the next fiscal year, and estimates the national debt to reach nearly $45,000,000,000 by June 30, 1940.

In a speech at Pittsburgh he said: "The credit of the family depends chiefly on whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good. If in some crises it lives beyond its income for a year or two, it can usually borrow temporarily on reasonable terms. But if, like a spendthrift, it throws discretion to the winds and is willing to make no sacrifice at all in spending, if it extends its taxing to the limit of the people's power to pay and continues to pile up deficits, then it is on the road to bankruptcy." Nineteen days before he made that statement our national debt was $20,611,241,804.76.

Our 1939–40 deficit is estimated by the President to be $3,326,000,000. What is the effect of continued deficits (this being the tenth)? President Roosevelt said: "The most obvious effect of extravagant Government spending is its burden on farm and industrial activity, and for that nearly every Government unit in the United States is to blame. But when we come to consider prodigality and extravagance in the Federal Government, as distinguished from State or local government, we are talking about something even more dangerous. For upon the financial stability of the United States Government depends the stability of trade and employment, and of the entire banking, savings, and insurance system of the Nation."

Some may say: "Tax more." I shall quote the President again: "Quite apart from every man's own tax assessment, that burden is a brake on any return of normal business activity. Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If those taxes are excessive, they are placed in idle factories, in tax-sold farms, and in hordes of hungry people, tramping the streets and seeking jobs in vain. Our workers may never see a tax bill, but they pay. They pay in deductions from wages, increased cost of what they buy, or—as now—in broad unemployment throughout the land. There is not an unemployed man, there is not a struggling farmer, whose interest in this subject is not direct and vital. It comes home to every one of us."

These words were spoken in 1932. The principle was correct then. It is correct now. If the effect was as stated in 1932, what would be its effect in 1939?

I have said time after time the expenses of government can be reduced. Of course, many of those on the public pay roll will try to make it appear that the only way to reduce expenses is to stop relief. They know better. They are hypocrites, hiding behind the excuse. Expenses can be reduced elsewhere.

Look at the figures for West Virginia. Our National, State, and local debt is two-thirds of a billion dollars.

Our entire personal property in West Virginia was assessed in 1937 at $371,683,346. Our National, State, and local debt is approximately $300,000,000 more.

Our entire real-estate valuation is only $150,000,000 more than our debt.

The deposits in all of our State and National banks amount to $287,480,024. This is far less than half of our debt.

We talk about West Virginia being a great coal State, and it is; yet, all the coal produced in West Virginia in 1936 was valued at less than $200,000,000, or about 30 percent of our indebtedness.

We have many farms and farmers in West Virginia. In 1935 the Census Bureau compiled the value of farms, including lands and buildings. They found this to be $237,643,860. Compare this with our $680,000,000 debt.

Some may not be worried about spending and debt. I am. I have and shall continue to oppose waste and extravagance.

Look at your county figure again. The debt is a mortgage against your property. It means taxes, taxes, and more taxes. Yes; even if you do not own any property, you will pay part of this debt, as the President said, in "deductions in wages," "increased cost of what you buy," and in "broad unemployment throughout the land."

Sincerely,

RUSH D. HOLT.

T. V. A. Investigation—Yardstick Rates

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1939

STATEMENT OF HON. JOHN E. RANKIN, OF MISSISSIPPI, BEFORE THE JOINT COMMITTEE ON THE INVESTIGATION OF THE TENNESSEE VALLEY AUTHORITY ON DECEMBER 10, 1938

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I insert a statement which I made before the Joint Committee on the Investigation of the Tennessee Valley Authority on December 10, 1938.

I hope every Member of the House, and everyone else who reads this RECORD, will take time to examine this statement carefully and to note especially the fact that I have shown by the record that electricity can be generated with coal, oil, gas, or water power, and distributed to the people in every community in the United States at the T. V. A. "yardstick" rates—which would reduce light and power rates to the ultimate consumers throughout the Nation by more than $1,000,000,000 a year. This would be like paying a dividend once a month to every consumer who turns an electric switch—a dividend that would amount on an average to more than 50 percent of his present light and power bill.

I wish to call attention to the fact, also, that I have shown by the record in this statement that the Tennessee Valley Authority is one of the most profitable investments the American people have ever made; that it has been the main factor in forcing reductions in light and power rates amounting to $556,000,000 a year. I have broken these reductions down by

States so that everyone may see at a glance the benefits the people of his State are receiving.

Probably the most important fact I have brought out in this statement is that I have shown by the record that private power interests are generating electricity for profit with coal, gas, and water power throughout the country, transmitting it over long distances and selling it wholesale to other private power companies at rates much lower than the Tennessee Valley Authority's wholesale rates.

Every municipality or cooperative association that is buying Tennessee Valley Authority power is distributing it to the ultimate consumers at the T. V. A. "yardstick" rates. If these private power companies will squeeze the water out of their capital structures and eliminate the graft, waste, and extravagance, they can also distribute power to the ultimate consumers at the T. V. A. "yardstick" rates, pay all their legitimate operating expenses, and make reasonable returns on their legitimate investments. If they will do this, the ultimate consumers of electricity in this country will save more than $1,000,000,000 a year on their light and power bills, the consumption of electricity will double, the use of electrical appliances, such as refrigerators, electric irons, water pumps, washing machines, and other labor-saving devices, will double and treble—to say nothing of the relief that would result to the commercial and industrial consumers of electricity throughout the Nation.

Since this is probably the greatest economic issue of this generation, and one of the greatest with which we will ever have to deal, I invite everyone who reads this RECORD to examine this statement which I made before the Tennessee Valley Authority Investigating Committee, take it home with him, examine the rates he and his neighbors are paying for electric energy, and join us in this fight to electrify at the Tennessee Valley Authority's "yardstick" rates every home in America, including every farm home, as well as every commercial and industrial establishment throughout the Nation.

The statement referred to follows:

Mr. Chairman, we have at last reached the real issue in this controversy, that is the actual monetary value of electricity. The question before us is, What is electricity worth? What should the ultimate consumer be required to pay for it?

That question can be easily answered since electricity has only one grade. It is 100 percent pure. It cannot be polluted or corrupted. It cannot be watered, although a great deal of water seems to have been poured into the stocks of the power companies, and especially the stocks of the holding companies that handle it.

Since there is no way to alter or affect the purity of electricity, since it is all alike, whether generated by water power, coal, oil, gas, wood, or corn cobs, then the whole controversy is reduced to the question of the costs of the three steps in handling electricity: (1) Generation; (2) transmission; (3) distribution.

In other words, the question is, What should it cost to generate electricity, transmit it into a given area, and then distribute it to the ultimate consumers?

That is the question—probably the greatest question before the American people today.

I might add that I stated in 1932, at the Chicago convention, that this was one of the greatest issues with which we would have to deal for the next 25 years, affecting the lives of 25,000,000 consumers of electricity throughout the United States.

It cannot be answered by theoretical arguments, or by the use of a blue print or a slide rule. It must be answered by practical demonstrations, such as the T. V. A. is now giving, and such as are being given by the Ontario Hydro Commission, the City of Tacoma, Wash., and other similar agencies.

The T. V. A. is the most profitable investment the American people have made since the Louisiana Purchase.

I want to emphasize that statement, Mr. Chairman. The T. V. A. from the standpoint of every individual in America who turns an electric switch is the most profitable investment the American people have made since the Louisiana Purchase.

It is the only one I know of that pays them a dividend of more than 100 percent every year that rolls around—which it does in reductions of light and power rates to the ultimate consumers in every State in this Union.

During the year ending February 28, 1932, the year before the T. V. A. was created, the American people used 62,000,000,000 kilowatt-hours of electricity, for which they paid $1,803,000,000 according to the Edison Electric Institute Bulletin, the mouthpiece of the private power companies. During the year ending February 28, 1937, the American people used 91,000,000,000 kilowatt-hours of electricity, for which they paid $2,086,050,300, according to the Edison Electric Institute Bulletin. These are their figures, and not mine.

If we had paid the same rate for this 91,000,000,000 kilowatt-hours that we paid in 1932, the year before the T. V. A. was created and its yardstick rates promulgated, the cost would have been $2,642,000,000, or $556,000,000 more than we actually paid.

In other words, we have reduced light and power rates to the ultimate consumers $556,000,000 a year. Remember that is a difference of $556,000,000 a year under what it would have cost them under the old rates. The people got that reduction last year, and they will get it this year and every other year from now on. In other words, they save more than twice as much every single year as the entire T. V. A. development will cost, including the Gilbertsville Dam and all the other dams that have been constructed or are now being constructed or contemplated on the Tennessee River. These savings will be increased, as time goes on, unless the T. V. A. and its yardstick are destroyed.

I might add here that that is the cause of this investigation. It represents an attempt to destroy the T. V. A. yardstick in order to prevent the American people from finding out what electricity is really worth and getting it at the prices they should pay.

I have those figures broken down by States, showing the amount of these reductions saved to the people in each State last year. They are as follows:

Alabama	$7,600,000
Arizona	1,500,000
Arkansas	3,400,000
California	33,200,000
Colorado	5,000,000
Connecticut	11,600,000
Delaware	604,000
Florida	11,000,000
Georgia	7,600,000
Idaho	3,000,000
Illinois	65,600,000
Indiana	20,600,000
Iowa	6,800,000
Kansas	4,800,000
Louisiana	3,600,000
Maine	2,000,000
Maryland and District of Columbia	13,600,000
Massachusetts	29,600,000
Michigan	14,600,000
Minnesota	5,600,000
Mississippi	3,400,000
Missouri	12,000,000
Montana	4,000,000
Nebraska	5,000,000
Nevada	230,000
New Hampshire	2,400,000
New Jersey	18,400,000
New Mexico	1,800,000
New York	67,400,000
North Carolina	4,000,000
North Dakota	1,200,000
Ohio	55,400,000
Oklahoma	3,800,000
Oregon	5,200,000
Pennsylvania	70,600,000
Rhode Island	4,400,000
South Carolina	2,000,000
South Dakota	1,600,000
Tennessee	1,200,000
Texas	14,200,000
Utah	6,200,000
Vermont	1,200,000
Virginia	2,400,000
Washington	7,200,000
West Virginia	6,600,000
Wisconsin	16,200,000
Wyoming	470,000

I will say to the chairman that his own State of Ohio shows an annual saving of $55,400,000. Wyoming is smaller, only $470,000.

Senator SCHWARTZ. We have some rates dropped from 12 cents to 3 or 4.

Representative RANKIN. I am going to get to that in a few minutes, Senator.

In New Jersey the reduction amounts to $18,400,000.

In New York it is $67,400,000.

Now, the only answer to this break-down is that if they undertake to reduce the break-down in one State, they must put it on in another because, according to their own statement and their own figures, the reduction amounts to $556,000,000 a year.

Senator SCHWARTZ. I think Dr. Morgan said that we have had a reduction progressively for the last 50 years, and if we go on we will finally get to zero.

Representative RANKIN. Yes; I will get to that in the next paragraph, Senator. Dr. Morgan seems to want us to wait another 50 years for these reductions.

Remember that there had been no appreciable reduction in light and power rates by the power companies in this country during the years immediately preceding the creation of the T. V. A. and the promulgation of its yardstick rates, and if it hadn't been for the creation of the T. V. A. and the promulgation of its yardstick rates, in my opinion, there would have been no reduction of rates by the private power companies anywhere in the United States.

During the Hoover administration the Commonwealth & Southern made a contract to purchase power at Muscle Shoals at a little less than 2 mills a kilowatt-hour. To be perfectly accurate, one year it was 1.56 mills.

That contract was to run for 5 years. There was no reduction of rates to the ultimate consumers in that area, however, until the T. V. A. was created in 1933 and its yardstick rates announced.

The top rate for electricity through that section of the country had been 10 cents a kilowatt-hour in those towns for 10 or 15 years. During that 5 years it was not reduced as I said until after the T. V. A. yardstick was promulgated.

The power company was selling this power at 10 cents a kilowatt-hour, and the average consumption in that area was only 30 kilowatt-hours a month, average domestic consumption, so that the power for which they paid the Government $1.56 was sold for $100 to those helpless little individuals within sight of the dam. There would have been no reduction if there had not been some public yardstick to enforce it.

But someone will no doubt say that not all of this saving of $556,000,000 a year is due to rate reduction; that a part of it is due to increased consumption. That may account for a small portion of it, but only a small portion. I would say not over 25 percent. Besides there would have been no increase in consumption if the rates had not been reduced.

But even if we attribute 50 percent of this difference to increased consumption it would still leave a yearly reduction of $278,000,000, due entirely to rate reductions which have been brought about as a result of the creation and operation of the T. V. A. with its yardstick rates along with the other power policies of this administration. Besides, as I said, the increased consumption was due to the reduced rates which the T. V. A. has been most instrumental in bringing about.

Even a saving of $278,000,000 a year amounts to more than the entire cost of the T. V. A. up to this time.

I have broken that down by States, and I am inserting that table in the record to show how much each State has saved as a result of the T. V. A. yardstick, if you give it credit for only half of these reductions.

Alabama	$3,800,000
Arizona	750,000
Arkansas	1,700,000
California	16,600,000
Colorado	2,500,000
Connecticut	5,800,000
Delaware	302,000
Florida	5,500,000
Georgia	3,800,000
Idaho	1,500,000
Illinois	32,800,000
Indiana	10,300,000
Iowa	3,400,000
Kansas	2,400,000
Kentucky	3,400,000
Louisiana	1,800,000
Maine	1,000,000
Maryland and District of Columbia	6,800,000
Massachusetts	14,800,000
Michigan	7,300,000
Minnesota	2,800,000
Mississippi	1,700,000
Missouri	6,000,000
Montana	2,000,000
Nebraska	2,500,000
Nevada	115,000
New Hampshire	1,200,000
New Jersey	9,200,000
New Mexico	900,000
New York	33,700,000
North Carolina	2,000,000
North Dakota	600,000
Ohio	27,700,000
Oklahoma	1,900,000
Oregon	2,600,000
Pennsylvania	35,300,000
Rhode Island	2,200,000
South Carolina	1,000,000
South Dakota	800,000
Tennessee	600,000
Texas	7,100,000
Utah	3,100,000
Vermont	600,000
Virginia	1,200,000
Washington	3,600,000
West Virginia	3,300,000
Wisconsin	8,100,000
Wyoming	235,000

So you can hardly blame the power trusts for trying to write the schoolbooks of Ohio in an effort to propagandize the people into believing that they are great beneficent institutions, administering prosperity.

I want to ask you, Mr. Chairman, who can read this list and fail to realize that the T. V. A. is one of the most profitable investments this Nation has ever made?

Senator SCHWARTZ. I would be glad to answer that. You referred to the power companies and I wasn't in Congress at the time that the matter of the death sentence was being discussed.

Representative RANKIN. I am sorry that you were not, Senator.

Senator SCHWARTZ. Possibly you could tell me about how many operating companies in the United States were integrated finally in one control?

Representative RANKIN. Senator SCHWARTZ, I believe a thorough investigation would show that they are all under one control.

Senator SCHWARTZ. The thought I had in mind was a little to this side. The suggestion was made here yesterday to one of the witnesses as to whether T. V. A. operations weren't a form of socialism, and I was wondering whether that kind of integration of all of these companies in one control was a form of fascism.

Representative RANKIN. It is; it is the worst form of fascism. In my opinion—it is one of the most powerful and corrupt combinations of wealth and influence ever organized in a civilized country, and I say that advisedly. It has attempted to usurp the functions of government in every State and in almost every municipality, and has invariably succeeded to a degree that would put Hitler or Mussolini to shame. It is now trying to control the Federal Government.

Senator SCHWARTZ. I have noticed in the past months a great deal of sustained agitation and fear about a lot of Communists in the country, but I haven't heard much about fascism that is gradually being developed from day to day.

Representative RANKIN. Senator NORRIS showed on the floor of the Senate that some of these local communities had 14 holding companies stacked upon them. In other words, 14 different companies were reaching down to the ultimate consumers and taking money out of their pockets to sustain them, without rendering them any necessary services whatsoever. I think if you will investigate thoroughly you will find that they have attempted to intimidate the courts; they have bribed legislators, directly and indirectly; they have insidiously attempted, and in a great many instances successfully, to control the press in various localities; they have attempted to influence even the church; and, as I said awhile ago, at one time they were writing the schoolbooks in the State of Ohio in order to saturate the minds of the little children with their propaganda—and who can blame them?

They were reaping a profit, as I will show in a moment, of more than a billion dollars a year in conscienceless overcharges, and are doing it yet.

Chairman DONAHEY. I might say to you, Mr. RANKIN, from my own experience in the State of Ohio, public utilities of all character collect far more for service from the people of Ohio each year than all taxes for all purposes.

Representative RANKIN. That is right.

Chairman DONAHEY. It is true, and I wanted to state it.

Representative RANKIN. Senator, before I forget it, I want to say that if you will take the overcharges they are now collecting, turn them over to the Federal Government, and loan them out at 3½-percent interest, you can pay the national debt with them in less than 40 years without placing any additional burden at all on the American people and without depreciating the principal.

The interest on them in less than 40 years, and one man estimates in 20 years, would pay the national debt.

Now, let us go ahead.

Let me talk to you about the wholesale price of electricity. I am taking the wholesale price because the T. V. A. does not retail power to domestic consumers, but sells it wholesale to municipalities and to the cooperatives, and they retail it.

Now, let us see what this electricity is worth.

On page 530 of the report of the Army engineers of March 24, 1930, which was signed by the Honorable Patrick J. Hurley, Secretary of War, we find the following statement. I am quoting now:

"The sales prices for Wilson Dam power necessary to obtain in order to pay 4 percent on the investment in plant and transmission lines and to cover the cost of operation and maintenance (indefinitely) of these are based upon the known cost of the hydro plant to date, a careful estimate of additional installation at costs of the present installation, and upon estimates of the cost of transmission lines, and operation, depreciation, etc. It is seen, therefore, that these prices are based largely upon known costs, and that an error in the items estimated would affect the sales prices but little. The hydro prices reduced to mills per kilowatt-hour would be as follows:

	Mills per kilowatt-hour
At the switchboard	1.352
Transmitted 100 miles	1.993
That is the distance to Tupelo.	
Transmitted 200 miles	2.310
Transmitted 250 miles	2.467
Transmitted 300 miles	2.625
Transmitted 350 miles	2.775

Now, further quoting:

"If it be thought necessary to add 20 percent to the hydro prices in order to be on the safe side, the cost of prime"—I want to emphasize that word prime—"power to the purchaser would be increased only 8.8 percent at a distance of 350 miles and 7.6 percent at a distance of 100 miles, and the prime power costs would be as follows, with Wilson Dam power transmitted:

	Mills per kilowatt-hour
Transmitted 100 miles	3.893
Transmitted 200 miles	4.134
Transmitted 250 miles	4.268
Transmitted 300 miles	4.402
Transmitted 350 miles	4.531

"These would still be very tempting prices, and especially tempting to companies depending upon steam power, and if these costs were increased 10 percent, the power would still be salable. And

referring to chart III, appendix G, section C, it will be seen that a circle having a radius of 350 miles passes through Dayton, Ohio, falls a few miles short of Indianapolis, Ind., Springfield, Ill., Springfield, Mo., Alexandria and New Orleans, La., Tallahassee, Fla., and Williamson, W. Va. Less than the west half of this circle will afford a market for all the power than can be produced at Wilson Dam."

Based on this report—by the way, Mr. Chairman, I want to call attention to the fact that this report of the Army Engineers shows that this power can be generated and transmitted from Wilson Dam to Dayton, Ohio, in your own State, economically at 4.531 mills per kilowatt-hour.

Now, that is the only reason for this investigation. They are scared to death for fear that the people of Ohio, Kentucky, West Virginia, and other surrounding States will wake up and demand justice. I have advocated for years the building of a transmission line into the center of Ohio from the Norris Dam, which would not be quite as long as this one indicated, in order to supply power to those municipalities, and especially to the farmers of that State. If we would do that, it would break down light and power rates in the State of Ohio probably $40,000,000 more a year.

Mr. BIDDLE. Could I interrupt you just a minute?

Representative RANKIN. Yes.

Mr. BIDDLE. I was not quite clear what the figures were that this was based on. What is the cost at the dam; where do you start, at the switchboard?

Representative RANKIN. Here?

Mr. BIDDLE. Mr. Hurley's figures that you are referring to, or the Army engineers' figures.

Representative RANKIN. 1.352 mills per kilowatt-hour.

Mr. BIDDLE. What is the figure 1.352 based on?

Representative RANKIN. He says it is based on the "known costs."

Mr. BIDDLE. The known cost of——

Representative RANKIN. Of the dam.

Mr. BIDDLE. Of the dam?

Representative RANKIN. Yes; the dam, generating system, and so forth.

Mr. BIDDLE. Does he give his cost figures; do you remember?

Representative RANKIN. He probably does in the early part of the report.

Mr. BIDDLE. And then he adds to that the cost of transmitting?

Representative RANKIN. Yes.

Mr. BIDDLE. Over the distance about which you spoke?

Representative RANKIN. Yes; he goes on to say that if you will add 20 percent to be entirely on the safe side, then it can be transmitted and delivered at a distance of 100 miles to 350 miles at the rates laid down in this second table.

Now, based on this report of the Army engineers, the accuracy of which has never been questioned, the Hoover administration made a contract to sell power to the Commonwealth & Southern at Muscle Shoals for 5 years at a little less than 2 mills a killowatt-hour.

Remember that was firm power—the only difference between firm power and what they call secondary power or surplus power is that firm power is power that can be generated all the time, while secondary power is power that can be generated only in floodtime.

But this was firm power—remember that—since it did not absorb the entire output of power generated at Muscle Shoals at that time.

It was perfectly all right, in the estimation of the power companies, for the Government to generate power at Muscle Shoals so long as the Government sold it to the private power companies at less than 2 mills a kilowatt-hour at the dam and denied it to the municipalities and rural power associations throughout the area.

Let me call attention to the fact, Mr. Chairman, that there never was a protest on the part of the power companies—and I especially emphasize the Commonwealth & Southern, that was buying this power at less than 2 mills a kilowatt-hour and selling it at a maximum of 10 cents a kilowatt-hour—until after the creation of the T. V. A. and the promulgation of its yardstick.

Chairman DONAHEY. In what year was that?

Representative RANKIN. There never was a protest so long as they were buying this power at 2 mills a kilowatt-hour or less until the T. V. A. was created and its yardstick rates promulgated.

Did you ask me a question, Mr. Biddle?

Mr. BIDDLE. What years was that?

Representative RANKIN. From 1930 until 1935, I believe, I think maybe it began in January 1931 and ended January 1, 1936; that is my recollection.

If the T. V. A. had continued to sell all of this power to the private power companies at that rate, there would have been no demand for this investigation; and if one had been called, these Power Trust lobbyists would be testifying here in defense of the contract; and none of these lawsuits that have been brought to hamper and hamstring the T. V. A. would ever have been instituted.

The New York Power Authority made a thorough investigation of the cost of generation and transmission of hydroelectric power back in 1934, and in its report of November 10 that year it states that power can be generated on the St. Lawrence River and passed out over a State-wide system that will absorb 60 percent of its load.

"On this basis," this report says, "it could be generated and transmitted to Utica, a distance of 135 miles from the plant, at 2¼ mills a kilowatt-hour. It could be delivered at the end of a 300-mile transmission line for less than 3¼ mills per kilowatt-hour." Just about what the Army engineers said about Muscle Shoals power.

Power is generated at Boulder Dam and transmitted to Los Angeles, Calif., a distance of 268 miles, and laid down at a little less than 4 mills a kilowatt-hour.

That provision, if I remember correctly, was written into the law and approved admittedly by one of the greatest engineers who has ever been President of the United States, I mean admitted by many authorities. And I don't question it. I am not reflecting on President Hoover. He is a great engineer and he was capable of analyzing this contract, and it was understood; it was written into the law, if I remember correctly, that this power was to be generated and transmitted and sold on this basis, which means 1.63 mills per kilowatt-hour at the dam, less than half the cost the city of Florence, Ala., is now paying for Muscle Shoals power, or about 4 mills laid down at Los Angeles, 268 miles away.

By the time it is laid down in Los Angeles, Calif., the cost is a little less than 4 mills per kilowatt-hour, 268 miles, which proves the statement of the Army engineers with reference to the cost of generation and transmission of Muscle Shoals power.

Remember that the cost of Boulder Dam is all charged to power, with the exception of about $25,000,000 that, I believe, is charged to irrigation and flood control. This 4 mills a kilowatt-hour is sufficient to amortize the entire investment at Boulder Dam in 50 years.

It might not be out of place at this point to call attention to the fact that there is a line loss of only 6 percent in transmitting power from Boulder Dam to Los Angeles, a distance of 268 miles.

You pin them down and show that this power is generated at a certain price, and these power lobbyists will throw up their hands in holy horror and say, "Oh, but you are a hundred miles from the dam. My God, do you realize what the line loss would be in sending it over here?" I have heard them say that to my own people.

As a matter of fact, power is now transmitted under normal conditions with a line loss of only 10 percent for every 300 miles, and not more than 5 percent for 100 miles. Of course, the higher the voltage the less the line loss, so this voltage, which I believe is 285,000 on the line from Boulder Dam to Los Angeles, transmits this power 268 miles, which is about the distance from Norris Dam to Columbus, Ohio, with a line loss of only 6 percent.

Now it costs at the dam 1.63 mills per kilowatt-hour. And if you want to know what the line loss is, the percentage of the amount of the purchase price, multiply 1.63 mills by 6 percent, and it will be very infinitesimal.

Mr. BIDDLE. My impression is that the city of Los Angeles owns the generators at the dam. Is that incorrect; do you remember?

Representative RANKIN. Yes; but that is included in this estimate. They buy falling water. They buy the power in the falling water.

Mr. BIDDLE. They buy the water and not the power.

Representative RANKIN. Yes; but after it is generated it is estimated, as Mr. Scattergood, I am sure, will tell you if you will call him here—he is head of the Los Angeles plant—after the generation and all, it amounts to about 1.63 mills at the dam. I went into that thoroughly.

Mr. BIDDLE. You mean the cost of the generation is included in that figure?

Representative RANKIN. Yes, sir; that is right; the cost of generation is included in that figure of 1.63 mills at the dam.

Now, as you will see from this chart to which I shall refer again a little later, the wholesale price of T. V. A. power laid down at Tupelo, Miss., my home town, which is about 100 miles from the dam, during the year 1937 was an average of approximately 5.5 mills a kilowatt-hour.

During the month of September of this year, 1938, the city of Florence, Ala., which lies adjacent to Muscle Shoals, purchased power from the T. V. A. at 4.68 mills a kilowatt-hour, and the city of Tuscumbia, which is only 4 or 5 miles from the dam, paid 5.45 mills per kilowatt-hour. Tuscumbia paid a little more than Florence because of the fact that Florence used so much more power than Tuscumbia.

Now, let's see about the price at which private power companies sell electricity wholesale.

During the year 1937 the Alabama Power Co. sold to the Mississippi Power Co. 145,580,000 kilowatt-hours of firm power at an average of 4.22 mills a kilowatt-hour and delivered it at four points—Sulligent, Ala., near the Alabama-Mississippi line; West Point, Miss., 50 miles south of Tupelo—by the way, that is in my district—Meridian, Miss., 147 miles south of Tupelo; and at Gulfport, Miss., in the extreme southern end of the State.

In other words, the Alabama Power Co., which as you know is a subsidiary of the Commonwealth & Southern Co., and which is generating, transmitting, and selling power for profit, sold this power to the Mississippi Power Co. for less than the T. V. A. is selling power to either Florence or Tuscumbia, Ala., both in sight of the dam, or to Tupelo, Miss., 100 miles away.

Now, remember, and I want to emphasize this as I go along, they have never touched side, edge, nor bottom of this yardstick. I will get to that in a moment. They are attacking these wholesale contracts. They are telling you that the T. V. A. is selling power wholesale below the cost of production. That is all the testimony that they have brought here. So I am emphasizing this to show you that they are selling power cheaper all over the United States than the price T. V. A. is selling it for at the dam or within 100 miles of the dam.

During the first 6 months of this year 1938 this same Alabama Power Co., generating, transmitting, and selling power for profit, sold 71,927,000 kilowatt-hours of firm power—I wish the stenographer would underscore "firm power" at every point along here—they sold 71,927,000 kilowatt-hours of firm power to this same Mississippi Power Co., delivered at these same plants, at an average of 4.3 mills a kilowatt-hour, which is less than the T. V. A. sells power to any municipality or cooperative association in the area.

Mr. Chairman, these figures are official and come from the records of the Federal Power Commission.

During the year 1937 the Louisiana Power & Light Co. sold 196,840,000 kilowatt-hours of firm power to the Mississippi Power & Light Co. at 5.39 mills a kilowatt-hour.

And during the first 6 months of this year, 1938, this same Louisiana Power & Light Co. sold to the Mississippi Power & Light Co. 91,000,000 kilowatt-hours of firm power at an average of 5.35 mills per kilowatt-hour, which is less than the average price paid the T. V. A. by various municipalities throughout the whole T. V. A. area.

Let me call your attention, Mr. Chairman, to the fact that this power sold by the Louisiana Power & Light Co. is generated by gas. It can be produced at least as cheaply as you can produce power on the Tennessee River or the Columbia River or Colorado River with water power, and there is enough gas going to waste in the Panhandle of Texas alone, just evaporating into thin air, I am reliably informed by men who have investigated it, to generate enough power to supply five States the size of Texas.

And yet the State of Texas was overcharged according to the T. V. A. rates $31,726,000 for electricity during the year 1936.

Let me also explain to you that this power which was transmitted by the Louisiana Power & Light Co. into Mississippi and sold to the Mississippi Power & Light Co. is also generated by gas in the Louisiana oil fields.

The Mississippi Power & Light Co. covers the western part of the State. The Mississippi Power Co. covers the eastern part of the State, except that now covered by T. V. A. power.

During the year 1937 the Alabama Power Co., which, as I said, is a subsidiary of the Commonwealth & Southern Co., sold and delivered to the Birmingham Electric Co. in Birmingham, Ala., 304,740,000 kilowatt-hours of firm power at 5.6 mills a kilowatt-hour. That is less than the city of Athens, Ala., paid for T. V. A. power during the same period. Yet Athens distributed her power at the T. V. A. yardstick rates—a yardstick 36 inches long—and made money for the city and at the same time amortized her investment, while the Birmingham Electric imposed exorbitant rates charged by private power companies throughout that area—using a yardstick 95 inches long—and never amortizes her investment. The people pay it as long as this Government will permit the power companies to levy the charges.

During the year 1937 the Louisville Gas & Electric Co. sold to the Kentucky Utilities Co. in Kentucky 32,966,000 kilowatt-hours of firm power at 4.5 mills a kilowatt-hour, and during the first 6 months of the year 1938 the Louisville Gas & Electric Co. sold to the Kentucky Utilities Co. 24,612,000 kilowatt-hours of firm power at 3.95 mills a kilowatt-hour.

The T. V. A. has never sold to a single municipality electricity at that low rate wholesale.

During the year 1937 the Louisiana Power & Light Co. sold to the Arkansas Power & Light Co. 235,195,000 kilowatt-hours of firm power delivered in the State of Arkansas at 3.5 mills a kilowatt-hour; and during the first 6 months of 1938 the Louisiana Power & Light Co. sold to the Arkansas Power & Light Co. 54,179,000 kilowatt-hours of firm power at 2.39 mills a kilowatt-hour.

Mr. BIDDLE. Would you mind telling us your source of the material?

Representative RANKIN. It just came from the records of the Federal Power Commission.

Mr. BIDDLE. Could you give us a reference to the record of the Federal Power Commission information? Is that in some of their reports?

Representative RANKIN. No; I had it dug out, but you can get it, Mr. Chairman. It will be no trouble for the committee to get it.

I want to say, Mr. Chairman, if I am wrong in any of my figures I want to know it. What I am after is getting power to the American people at what it is worth.

I have had all of this criticism that I have seen coming from certain individuals here, on the floor of the House and through the press. I have challenged every man high up in power authority to meet me in a Nation-wide debate on the radio, and if they can show where I am wrong I want to know it. I am not after taking anybody's property for nothing. Where we buy the power company's property, where the T. V. A. or the municipality buys the power company's property, I want them to pay what it is worth. We are not trying to rob anybody. We are trying to keep the unprotected millions of Americans from being robbed by exorbitant power rates.

Now, then, during the year 1937, the Susquehanna Electric Co. sold to the Philadelphia Electric Co., 1,565,562,000 kilowatt-hours of firm and surplus power which means stream run, produced at the Conowingo Dam on the Susquehanna River, at 2.8 mills a kilowatt-hour; and during the first 6 months of the year 1938, the Susquehanna Electric Co. sold to the Philadelphia Electric Co. 864,448,000 kilowatt-hours of firm and surplus power from the Conowingo Dam at 2.5 mills a kilowatt-hour.

Mr. BIDDLE. Is that at the switchboard or delivered, Mr. Rankin, do you know?

Representative RANKIN. My understanding is they delivered it at or near the Conowingo Dam, which is right on the line between Maryland and Pennsylvania, or near the line at least between Maryland and Pennsylvania.

During the year 1937, the Safe Harbor Water & Power Co. sold to the Consolidated Gas, Electric Light & Power Co. of Baltimore, in Maryland, 643,496,000 kilowatt-hours of firm and surplus power at 2.59 mills a kilowatt-hour; and during the first 6 months of 1938, the Safe Harbor Water & Power Co. sold to the Consolidated Gas, Electric Light & Power Co. of Baltimore, 362,622,000 kilowatt-hours of firm and surplus power at 2.65 mills per kilowatt-hour.

I want to say in this connection that the power we get at Tupelo is firm and surplus power. We use more of it in the wintertime than we do in the summer, as I will show a little later.

Now turn to the State of Wisconsin. We find that during the year 1937 the Northern States Power Co. sold Interstate Ltd. & Power Co. in Wisconsin 459,000 kilowatt-hours of firm power at 4.65 mills per kilowatt-hour; and during the first 6 months of the year 1938 sold 231,000 kilowatt-hours at 4.73 mills a kilowatt-hour.

During the year 1937, the Deep Water Light & Power Co. sold to the Philadelphia Edison Co. in Pennsylvania 522,647,000 kilowatt-hours of firm and surplus power at 4.06 mills a kilowatt-hour; and during the first 6 months of this year, 1938, sold 213,624,000 kilowatt-hours of firm and surplus power at 4.5 mills a kilowatt-hour.

Now, coming to the State of New Jersey. During the year 1937, the New Jersey Power & Light Co. sold to the Metropolitan Edison Co. in Pennsylvania 174,222,000 kilowatt-hours of firm and surplus power at 3.85 mills a kilowatt-hour; and during the first 6 months of 1938 sold 90,824,000 kilowatt-hours at 3.79 mills a kilowatt-hour.

During the year 1937, the Niagara Falls Power Co. sold to the Buffalo-Niagara Electric Co., in the State of New York, 179,025,000 kilowatt-hours of firm power at 3.4 mills a kilowatt-hour.

During the year 1937, the Niagara Falls Power Co. sold to the Niagara Electric Service Corporation in the State of New York, 17,550,000 kilowatt-hours of firm power at 4.8 mills a kilowatt-hour.

During the year 1937 the Niagara Falls Power Co. sold to the Niagara, Lockport & Ontario Power Co., in the State of New York, 241,117,000 kilowatt-hours of firm power at 2.9 mills a kilowatt-hour.

That power—let me say, Mr. Chairman—that power could have been distributed all over the State of New York, and delivered to every consumer, at a lower rate than the one at which the city of Tupelo is distributing T. V. A. power to its consumers, and if it had been done, the people of New York State would have saved $160,905,115 in the year 1936.

If it had been sold at the price charged by the Ontario Power Commission to the ultimate consumers just across the river, the people of the State of New York would have saved $190,000,000 in the year 1936—would have saved $190,237,800 during that one year alone—and this is what they are attacking—not the yardstick; they haven't got the yardstick; I will get to the yardstick in a few minutes; but they are attacking the wholesale rate price at which power is sold to these municipalities and cooperative associations throughout the T. V. A. area, and if they were to get by with this, they would next attack the Bonneville project, the rates at which power is sold to the municipalities and cooperatives throughout the Columbia River area.

During the year 1937 the Ohio Power Co. sold to the Ohio Edison Co., in Ohio, 26,426,000 kilowatt-hours of firm power at 5.3 mills a kilowatt-hour.

That power could have been distributed at the T. V. A. yardstick rates throughout that area and the company would have made money on its investment.

I am not guessing at that. The city of Tupelo, of which you have heard a great deal, purchasing power at the T. V. A. rates, during the first calendar year ending June 30, 1938, sold its power at the T. V. A. yardstick rates which are—do you want me to read these rates or shall I just insert them?

Chairman DONAHEY. As you desire.

Representative RANKIN. Are you familiar with them?

Well, a maximum of 3 cents a kilowatt-hour, ranging down to 4 mills.

At this point I ask unanimous consent to insert the table of the wholesale residential, commercial, and industrial rates charged at Tupelo for T. V. A. power.

CITY OF TUPELO, MISS., WHOLESALE POWER RATES

Available—

1. To municipalities owning their electrical distributing systems with kilowatt demands for 750 or more.

2. To others at option of the Authority provided load is 750 kilowatts or more.

Transmitted power rates:

Demand charge: $0.90 per kilowatt per month.

Energy charge: First 100,000 kilowatt-hours per month at 4 mills per kilowatt-hour; next 200,000 kilowatt-hours per month at 3 mills per kilowatt-hour; next 700,000 kilowatt-hours per month at 2.5 mills per kilowatt-hour; over 1,000,000 kilowatt-hours per month at 2 mills per kilowatt-hour.

Nontransmitted power rate: Demand and energy charges computed as for transmitted power but subject to 10 percent differential, i. e., bill is multiplied by 0.9, which results in total amount to be billed monthly.

Minimum monthly bill: $0.90 per kilowatt-hour per month, and in no case shall the minimum bill be less than the charge for 60 percent of the highest demand occurring during the previous consecutive 12 months' period.

Minimum bill subject to a reduction of 10 percent for customers taking delivery at reservation.

Adjustment of demand charge: Demand charge may be adjusted if and when Authority deems necessary to correct for power factors lower than 85 percent. Such adjustments being made in such manner as will adjust the demand charge to the equivalent of 85 percent power factor.

Delivery at outgoing terminals of main-line switch on low-tension side of step-down transformers.

Delivery at boundary line of reservation as prescribed by law.

CITY OF TUPELO, MISS., STANDARD RESIDENTIAL RATE FOR SERVICE EFFECTIVE FEBRUARY 7, 1934

Available—

To all residential customers at local distribution secondary voltage either 2-wire or 3-wire service as municipality may require: First 50 kilowatt-hours per month at 3 cents per kilowatt-hour; next 150 kilowatt-hours per month at 2 cents per kilowatt-hour; next 200 kilowatt-hours per month at 1 cent per kilowatt-hour.

Excess—

Over 400 kilowatt-hours per month at 0.4 cent per kilowatt-hour. Minimum monthly bill:

5 ampere meter, 25 kilowatt-hours	$0.75
15 ampere meter, 33⅓ kilowatt-hours	1.00
50 ampere meter, 50 kilowatt-hours	1.50

CITY OF TUPELO, MISS., BASIC COMMERCIAL RATE FOR SERVICE EFFECTIVE FEBRUARY 7, 1934

Available—

To commercial customers taking service from the municipality's secondary system: First 250 kilowatt-hours per month at 3 cents per kilowatt-hour; next 750 kilowatt-hours per month at 2 cents per kilowatt-hour; next 1,000 kilowatt-hours per month at 1 cent per kilowatt-hour.

Excess—

Over 2,000 kilowatt-hours per month at 0.8 cent per month. Minimum monthly bill:

5 ampere meter, 50 kilowatt-hours	$1.50
15 ampere meter, 66⅔ kilowatt-hours	2.00
50 ampere meter, 100 kilowatt-hours	3.00

Surcharge: Basic rate subject to a surcharge initially established by municipality and modified from time to time as net revenues improve of 10 percent.

Surcharge to take the form of straight percentage added to customers' bills.

Representative RANKIN. I call your attention to the fact that the 10 percent surcharge provided for in the beginning, for safety purposes, for fear that our rates would not yield a proper revenue, to keep us out of the red, or to keep the city out of the red, or the municipal system out of the red, has been eliminated. There was no surcharge imposed during this year, 1938, the fiscal year ending June 30, 1938.

The city purchased this power at approximately the rates I have referred to there, at the standard T. V. A. wholesale rates, and paid all of its operating expenses, had uncollectible customers' accounts of $134.46. We counted that in as expenses, paid taxes of $10,014.50, which is more than any private power company pays in any city of that size in Mississippi that I have been able to find—that is, paid that amount in lieu of taxes; set aside for depreciation on tangible plant equipment, $9,151.49; paid interest accrued on its bonds of $2,413.32; interest accrued on other debts of $141.73; and set aside 6 percent as the city's return on its investment, and still made a profit of $40,000; distributing this power at the T. V. A. yardstick rates, which you will find on this chart, a copy of which I presume has been distributed, and last week made another reduction in rates.

Mr. BIDDLE. That is right.

Representative RANKIN. Now, this power that was sold by the Ohio Power Co. to the Ohio Edison Co. in 1937 at 5.3 mills a kilowatt-hour, could have been distributed to the people of Ohio at the same rates, and the power company could have made money on its legitimate investment.

Now, let us go further. During the year 1937 the Metropolitan Edison Co. sold to the New Jersey Power & Light Co. in New Jersey 55,359,000 kilowatt-hours of firm and surplus power at 2.98 mills a kilowatt-hour; and during the first 6 months of the year 1938 sold it 12,479,000 kilowatt-hours of firm and surplus power at 2.49 mills a kilowatt-hour.

That is in New Jersey. That power could have been distributed to the people of New Jersey at the standard T. V. A. retail yardstick rates applicable in Tupelo, Amory, Athens, Alabama, Holly Springs, and other towns in that area and the company could have made money on its legitimate investment.

During the year 1937 the Duke Power Co. sold to the Carolina Power & Light Co. in South Carolina 61,320,000 kilowatt-hours of electricity at 3.5 mills a kilowatt-hour.

By the way, you have heard of the Duke Power Co., and we have had a Duke's Mixture of power lawsuits here lately. It sold to the Carolina Power & Light Co. in South Carolina 61,320,000 kilowatt-hours of electricity at 3.5 mills a kilowatt-hour.

That power could have been distributed all over the State of South Carolina at the same rates now being paid by the ultimate consumers in the T. V. A. area, and the power companies could have made money on their legitimate investment.

Illustrations of this kind, Mr. Chairman, could be piled up indefinitely, showing that private power companies are generating electricity, transmitting it, and selling it wholesale at a profit for less than what the T. V. A. is selling the same power throughout its distribution radius.

Now, this brings us to the question of the yardstick. Remember that the yardstick is for the measurement of retail rates, the price at which power is delivered to the ultimate consumers. Witnesses who have testified about the yardstick have not even touched the yardstick.

I am not talking about T. V. A. witnesses now; I am talking about the opposition witnesses.

They have, as a rule, put in their time talking about wholesale prices and apparently attempting to confuse the committee. Now, having pointed out the rates at which power is being sold and delivered wholesale, let us turn to the question of distribution and see what rates should be charged the ultimate consumers.

Mr. BIDDLE. May I interrupt for a moment, because I think that you have touched upon a very important point, Mr. RANKIN. Do I take it that in considering the yardstick, your approach is something like this: That the American people are interested in what they individually pay for electricity, and that therefore the primary question is the retail yardstick?

Representative RANKIN. That is right.

Mr. BIDDLE. And then, to follow that a step further, if it is true that the T. V. A. wholesale rates are more than or at least not less than the rates charged, wholesale rates charged by the power companies, you start with no advantage in retail operation?

Representative RANKIN. That is right.

Mr. BIDDLE. Since the municipalities and cooperatives do not purchase their power wholesale at rates which undercut the utilities, and that therefore you can start with the retail operation on an absolutely fair basis; is that the point that you make?

Representative RANKIN. Exactly.

Mr. BIDDLE. I wish that you would develop that a little. I think it is very important.

Representative RANKIN. I have brought you down to the city gate, so to speak, Mr. Chairman. What I have been showing is that the T. V. A. and the private power companies are bringing the power into a given area and selling it wholesale at about the same rates. The private power companies sell it at a lower rate wholesale to each other, or to other private power companies, than the T. V. A. is selling it to the municipalities and cooperatives.

In other words, it puts the municipality and the private distributing agency in the position of two merchants, grain merchants, buying corn from a wholesale merchant.

This T. V. A. merchant over here buys his corn, we will say, at 50 cents a bushel, and he distributes it at 60 cents and makes money.

His competitor buys it, which is the private power company corn market, we will say, for 50 cents, or even 40 cents, but when he goes to distribute it instead of distributing it at 60 cents a bushel he distributes it at $1.20 a bushel, because of the fact that he has a monopoly and his customers can't reach the other merchant.

The power interests have a monopoly in these areas and therefore limit their retail charges only by the amount the traffic will bear.

Mr. BIDDLE. Now, would it not follow, then, to go a step further, if you say that since the T. V. A. starts with higher wholesale costs, or at least not lower wholesale costs, or starts fairly, would it not be fair to say, then, that in considering yardstick, which then becomes a retail matter, the cost to T. V. A. of power has nothing to do with the problem of yardstick?

Representative RANKIN. The cost of—the wholesale cost of—this power; that is what you are driving at?

Mr. BIDDLE. Yes, sir.

Representative RANKIN. Has nothing whatever to do with this yardstick, as I will show as I go along.

Now, let me finish my statement, and then we will take up the yardstick.

I have prepared here a chart showing the electric yardstick for residential service, to which I desire to call your attention, and which I ask to have inserted in the record at this point.

(Whereupon the chart above referred to was received in evidence and marked "Exhibit 560.")

Representative RANKIN. Let me switch this chart to the last. We will start here.

I am going to show that the American people are overcharged now, even since these rates have been reduced—they are overcharged $1,000,000,000 a year for electric light and power—and I am going to break it down by States and show that these overcharges reach the people in every State and every community throughout the country.

Now, Mr. Chairman, let us see what this extra 59 inches on the yardstick amounts to.

During the year 1936, according to the Edison Electric Institute Bulletin, the ultimate consumers of this country used 90,580,000,000 kilowatt-hours of electricity, for which they paid $2,074,000,000. This 90,580,000,000 kilowatt-hours of electricity in Tacoma, Wash., where they have one of the finest public power systems in the world, at the Tacoma rates, this 90,580,000,000 kilowatt-hours would have cost $754,185,000 instead of the $2,074,000,000 which we paid for it or $1,320,000,000 less. In other words, we were overcharged in 1 year, according to the Tacoma rates, $1,320,000,000.

I haven't tried to break these figures down for later years because, as the chairman knows, I have been hors de combat a good deal of the time.

The Province of Ontario, Canada, also has a public power system, probably the outstanding public power system of its kind in the world. Under the Ontario rates this 90,580,000,000 kilowatt-hours would have cost, at the very outside, $602,720,000, or $1,472,000,000 less than we actually paid for it.

If this 90,000,000,000 kilowatt-hours had been sold to the ultimate consumers throughout the country at the retail rates now charged in Tupelo, Miss.—the T. V. A. yardstick rates—it would have cost them $1,150,000,000, or $924,000,000 less than what they actually paid for it, even though Tupelo is a comparatively small town with very few industries.

Therefore, according to the Ontario rates we are overcharged $1,472,000,000, and if it had been sold at the T. V. A. rates, as it was in Tupelo, where we have no large industries, the difference would have been $924,000,000; so that at the very minimum the American people were overcharged, after these reductions were forced, $924,000,000 a year for electric lights and power, and are still overcharged today; and if the Power Trusts should win this investigation and should succeed in destroying this yardstick and in keeping it destroyed and prevent any yardsticks of its kind being promulgated and applied, this generation would continue to pay an overcharge of $1,000,000,000 a year, and their children's children would pay it to the remotest generation.

They never amortize. Remember the city of Tupelo is amortizing its investment. All of these municipalities, including also the T. V. A., are amortizing their investments, but private power companies never amortize, but they continue to impose these rates throughout all time to come if unrestrained.

Now, I have broken those overcharges down by States, and I will ask that the tables be inserted in the record at this point.

I am inserting at this point in the record three tables showing the overcharges paid by the American people for electricity during the year 1936.

The first table shows the overcharges paid by the residential consumers in every State in the Union, as compared with the T. V. A. rates, the Tacoma rates, and the Ontario rates.

The second table shows the overcharges for commercial rates and the third table shows the combined overcharges for all classes of service.

(Said tables are as follows:)

TABLE 1.—*Residential sales data*

State	Estimated sales for 1936				Estimated overcharges according to rate schedules in 1936		
	Number of customers	Total kilowatt-hours (thousands)	Total revenue	Annual kilowatt-hours per customer	Tennessee Valley Authority	Tacoma	Ontario
Maine	152,372	89,138	$4,865,238	585	$3,644,184	$3,393,075	$3,962,764

Table No. 2: Overcharges to domestic consumers by States.

This table shows the amount of electricity used by commercial consumers in each State, the amount paid for it, the average annual consumption, the average rate per kilowatt-hour, and the amount overcharged according to the T. V. A., the Tacoma, or the Ontario rates.

I wish every merchant in America, every hotel or restaurant operator, every filling station operator, every proprietor of a garage, and everyone else who pays commercial rates for electric energy could examine a copy of this table and see the enormous burdens of overcharges which they are required to pay.

TABLE 2.—*Commercial sales data*

State	Estimated sales for 1936				Estimated overcharges according to rate schedules in 1936		
	Number of customers	Total kilowatt-hours (thousands)	Total revenue	Annual kilowatt-hours per customer	Tennessee Valley Authority	Tacoma	Ontario
Maine	29,921	81,824	$3,257,114	2,735	$1,760,000	$1,522,000	$2,025,000
New Hampshire	17,921	33,878	1,987,929	1,890	1,392,000	1,235,000	1,331,000
Vermont and Rhode Island	37,845	104,802	5,207,938	2,769	2,959,000	2,558,000	3,404,000
Massachusetts	180,850	497,672	25,297,359	2,752	14,552,000	12,658,000	16,065,000
Connecticut	60,261	220,833	10,241,585	3,665	4,582,000	3,968,000	5,158,000

Table No. 3: Total overcharges to all consumers by States.

This table shows the number of kilowatt-hours of electricity consumed by the people in each State for all purposes in 1936, the amount paid for it, the average rates charged, and the overcharges by States, according to the T. V. A., the Tacoma, or the Ontario rates.

Please study this table carefully and tell me how the people of your State can continue to stagger under such burdens.

TABLE 3.—*All electric services*

State	Estimated total sales to ultimate consumers, 1936				Combined overcharges according to rate schedules in 1936 for residential, commercial, and industrial services		
	Number of customers	Total kilowatt-hours	Total revenue	Annual kilowatt-hours per customer	Tennessee Valley Authority	Tacoma	Ontario
Maine	204,469	870,629,000	$14,047,020	4,258	$7,096,184	$7,281,075	$8,327,764
New Hampshire	137,365	274,043,000	9,266,643	1,995	4,897,469	4,949,565	5,394,965
Vermont and Rhode Island	282,585	750,263,000	21,606,449	2,655	11,209,616	11,445,288	13,118,329

No wonder this terrific drive is being made to destroy the T. V. A. yardstick. It is gradually squeezing the water out of these inflated valuations, and forcing reductions of rates in every nook and corner of every State in the Union.

We have already reduced these rates $556,000,000 a year, and still the electric consumers in this country are overcharged $1,000,000,000 a year.

Now, I want to make a little comparison of the investments, and I should like to have attention for just a moment. They have told you that the private power companies in this country had invested in 1934—they started out with $12,000,000,000 and I think that they have raised it to $14,000,000,000 now without investing anything additional. Although prices have been going down, they still claim to have $12,000,000,000 or $14,000,000,000 invested.

Now, let us see: The investments, according to the Edison Electric Institute, in 1934 were $12,124,000,000 in round numbers, while the municipal companies had invested $539,569,527, making a total of $12,664,376,952. They produced and sold that year 77,555,000,000 kilowatt-hours of electric energy, which was 12 times the amount produced and sold in Ontario, Canada, where the entire investments amounted to $398,224,000.

It would take 12 such power systems as they have in Ontario to produce and sell the same amount of power produced and sold in the United States. That would mean an investment of 12 times $398,224,000, or $4,778,688,000. That is what the investment would amount to if the Ontario system were expanded on the present basis to where it would produce the same amount of power now produced and sold in the United States, where the investment in 1934 was alleged to be $12,664,376,000.

In other words, the investment that they claimed in 1934 was $7,885,668,000 more, or almost three times as much, as it would be necessary on the basis of the Ontario Power Commission investment for generation and transmission and distribution of the same amount of power—that in a cold, ungentle climate with a sparsely settled population, where they have to reach into remote areas. For instance, they transit power to Windsor, Canada, right across the line from Detroit, Mich., 238 miles the way the line runs, from Niagara Falls, and sell it at those standard rates.

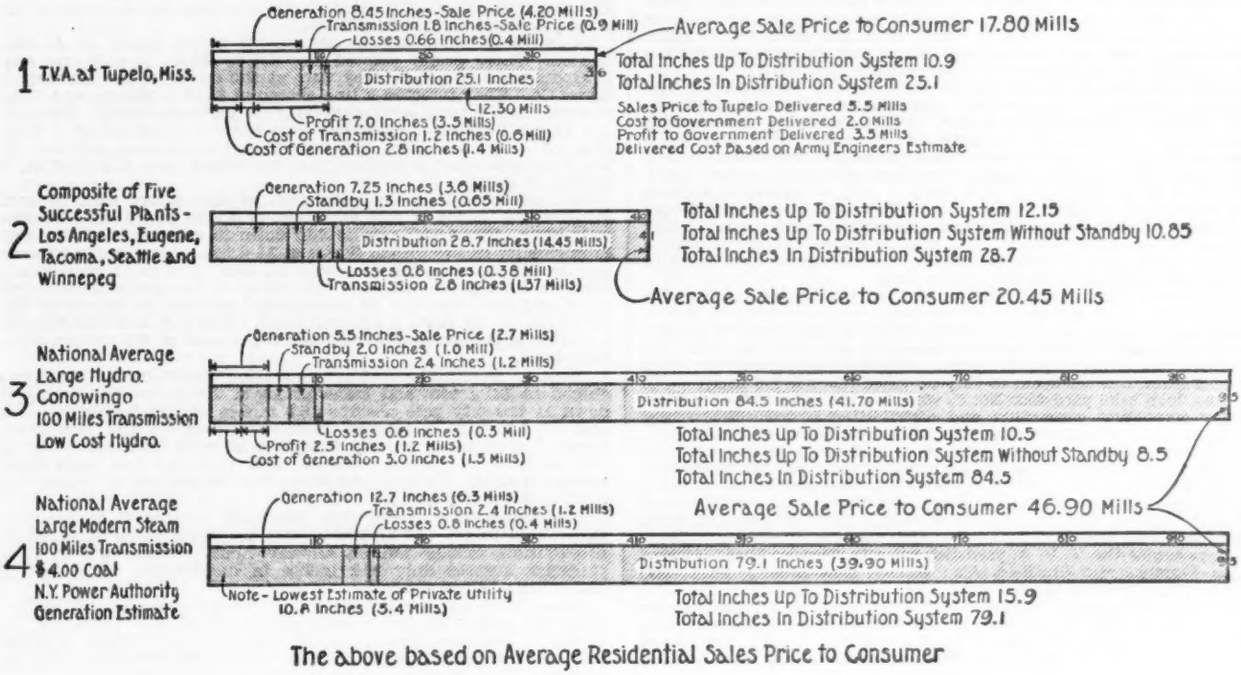
If we could just pick up the Ontario Power Commission's system and set it down in the United States and let it expand to 12 times its present size, and serve every human being that the private power companies in America serve now, instead of having an investment of over $12,000,000,000, we would have an investment of less than $5,000,000,000; and selling it at the Ontario rates, it would sell it to the ultimate consumers in this country for $1,420,000,000 a year less than we are now paying for it.

There is where this trouble is coming from; they don't want to turn loose this overcharge of $1,000,000,000 or more a year, wrung from the helpless consumers of electric light and power in every State in the Union, and from every community in this Union where they use electricity, from Maine to Mexico.

Let them squeeze the water out of their capital structure, eliminate expensive and useless holding companies, cut down their overcharges, and base their rates on honest values and honest service, and they can sell power at the T. V. A. yardstick rates in every community in the United States.

Instead of that, they are using every influence they can bring to bear to try to destroy this yardstick in order that they may continue to impose these enormous burdens upon the unprotected consumers of electric lights and power for all time to come.

And, by the way, the power companies are about to see the light in Memphis and Chattanooga. I see that at last they are reducing their rates down there approximately to the T. V. A. yardstick levels. Why didn't they do it before? Because they didn't have the influence of this golden wand, known as the T. V. A. yardstick, the greatest weapon ever devised to protect the helpless consumers of electricity throughout the United States.



I am going to analyze those rates and see whether they are charging T. V. A. rates or not. I know how they camouflage their rate structure, and I expect to analyze it and expose it during the next Congress, unless they do come clean, and impose the standard T. V. A. yardstick rates, and I might say here, Mr. Chairman, that I have opposed from the beginning, and I expect to continue to oppose, the sale of a single kilowatt-hour of electric energy, generated by the T. V. A., or on the Columbia River, or any other public project in the United States, to a private power company, unless it is written into the contract so that it cannot be evaded, that this power is to be distributed at the standard yardstick rates to all of the ultimate consumers of all classes.

So, Mr. Chairman, I hope that this investigation will continue until you fully expose and put an end to these vile practices. Then we can electrify every home in America, including every farm home, as well as every business establishment, at the T. V. A. yardstick rates.

Let me say in this connection that I have adopted as my slogan, "Let us electrify every farm home in America at the T. V. A. rates." We are behind every other country in the world except a few Central and South American countries in rural electrification. The average country in Europe has more than 90 percent saturation, and ours will probably now run around 10 or 15 percent.

Now, Mr. Chairman, getting back to this yardstick, I have prepared here a chart showing the yardsticks for electrical consumers for residential service, to which I desire to call your attention, and which I have asked to have inserted in the RECORD at this point:

ELECTRIC YARDSTICK
RESIDENTIAL SERVICE

The above based on Average Residential Sales Price to Consumer

On this chart you will observe four yardsticks:

No. 1 is the T. V. A. yardstick, which is 36 inches long and represents the average price at which T. V. A. power is delivered to residential consumers throughout the T. V. A. area, which is 17.8 mills, or 1.78 cents, per kilowatt-hour.

No. 2 is a composite yardstick representing five publicly owned or municipally owned systems—Los Angeles, Calif.; Eugene, Oreg.; Tacoma, Wash.; Seattle, Wash.; and Winnipeg, Canada. This yardstick is 41 inches long, representing the average price at which electricity is delivered to the ultimate residential consumers in those cities, which is 20.45 mills per kilowatt-hour, or a little more than 2 cents a kilowatt-hour.

No. 3 is the yardstick of private power companies, I might say the composite yardstick of private power companies delivering hydroelectric power to the ultimate residential consumers throughout the country, and is 95 inches long; representing the average price at which power companies deliver electricity to the ultimate consumers, which is 46.9 mills, or 4.69 cents per kilowatt-hour. That is hydropower.

No. 4 is the yardstick of the private power companies that generate power with coal purchased at $4 a ton and distribute it to ultimate consumers for profit. This yardstick is 95 inches long, also representing the average price charged the ultimate residential consumers for electricity, which is 46.9 mills, or 4.69 cents per kilowatt-hour.

Let me say, Mr. Chairman, that I did not take the trouble to develop the commercial yardstick and the industrial yardstick, but the commercial and industrial yardstick run right along with the residential yardstick.

Now, note while the T. V. A. yardstick is only 36 inches long, the private power companies' yardstick is 95 inches long, or 59 inches longer than the T. V. A. yardstick. Remember, that is after we have got the power to the city gates. I have shown you that the power was delivered at the city gates at practically the same price, except the private power companies delivered it in the various areas cheaper than does the T. V. A.

You will observe that those 59 inches have nothing to do with the generation and transmission of electricity, but represents only additional charges for distribution.

Now, let's go back to the yardstick No. 1, the T. V. A. yardstick, which is 36 inches long, representing the average price charged the ultimate residential consumers of T. V. A. power. You will note that the generation, transmission, profit, and line loss, all combined, take up 10.9 inches on this yardstick, or a cost of 5.5 mills a kilowatt-hour, which brings it right down here [indicating]. I want you to watch this. I will carry it right on down through all these yardsticks. [Continuing:] While the cost of distribution absorbs 25.1 inches of this yardstick, or 12.3 mills a kilowatt-hour——

Mr. BIDDLE. Before you leave that yardstick, then would another way of putting it be that the wholesale cost of generation is a little less than a third of the ultimate retail cost?

Representative RANKIN. That is right. In other words, the wholesale price now laid down at the city gate is 5.5 mills per kilowatt-hour on an average, and the retail price to the ultimate consumers is 17.8 mills per kilowatt-hour, which is about one-third; in other words, at 100 miles distance, you can lay this power down at about one-third the cost at which it should reach the ultimate residential consumer. That is where it is laid down at 5.5 mills, understand, but, as I have shown, these private power companies lay it down in these various areas cheaper than that.

Now, let's take yardstick No. 2, which is the yardstick for Los Angeles, Eugene, Oreg., Tacoma and Seattle, Wash., and Winnipeg, Canada, and which, as I said, is 41 inches long, representing an average sale price to the ultimate consumer of 20.45 mills a kilowatt-hour. You will observe that generation, transmission, line loss, and the cost of stand-by facilities combined, absorb 12.15 inches of this yardstick, representing a cost of exactly 6 mills a kilowatt-hour; in other words, at the city gate it costs those people 6 mills a kilowatt-hour, while the distribution costs represent 28.7 inches of this yardstick, or 14.45 mills a kilowatt-hour, making a total average cost to the residential consumers of electricity in those cities of 20.45 mills a kilowatt-hour.

Remember that these cities as well as the municipalities distributing T. V. A. power are paying taxes, or an amount in lieu of taxes, equal to and invariably greater than the taxes paid by private power companies, and are gradually paying their systems out. Remember also that the private power companies never amortize their investments, but continue to impose these rates indefinitely.

Now, let's take yardstick No. 3, which is the yardstick of private power companies generating and distributing hydroelectric power to residential consumers for profit, which yardstick, as I have said, is 95 inches long. That is what it is laid down to the ultimate consumers at, representing the average price charged the residential consumers for electric energy by private power companies, which is 46.9 mills a kilowatt-hour, or more than twice the rates charged in Los Angeles, Eugene, Tacoma, Seattle, and Winnipeg, and more than two and one-half times the rates charged the ultimate consumers under the T. V. A. yardstick rates in Tupelo, Miss.; Athens, Ala.; Florence and Sheffield, Ala.; Amory, New Albany, Miss., and other municipalities in that area.

We are using as an example the Conowingo Dam on the Susquehanna River, which is owned and operated by a private company. You will note that the generation, transmission, profits, line losses, and stand-by costs absorb a total of only 10.5 inches of this yardstick, whereas on the T. V. A. yardstick it absorbs 10.9 inches, and on this composite yardstick of these four municipalities it absorbs 12.15 inches.

But on this private yardstick, to lay the power down at the city gate, it absorbs only 10.5 inches of this yardstick, representing a cost of 5.2 mills per kilowatt-hour, while the cost of distribution absorbs 84.5 inches of this yardstick, or 41.7 mills per kilowatt-hour, considerably more than three times the distribution costs under the T. V. A. yardstick, and almost three times the cost of distribution according to the yardstick used by the public plants of Los Angeles, Eugene, Tacoma, Seattle, and Winnipeg.

You will note that it costs a little less to lay this power down at the city gate 100 miles from the dam—5.2 mills a kilowatt-hour—than the city of Tupelo and other municipalities pay for T. V. A. power laid down at the city gate the same distance from the dam, which is 5.5 mills a kilowatt-hour. Some of the municipalities pay a little more than that, because they use a smaller amount and transmit it a little farther. If you are interested in it, I have every one of them here. I have all of the power rates in America on this desk at this time; I mean the retail rates; what the ultimate consumers are paying.

Yet when it comes to distributing this power, the municipalities using the T. V. A. yardstick, paying as much money in lieu of taxes as the private power companies pay in taxes, or even more, and making a handsome profit, use 25.1 inches on their yardstick to distribute this power, representing a cost of 12.3 mills a kilowatt-hour, while private power companies, operating for profit, use 84.5 inches of their yardstick to distribute power to the ultimate consumers, representing a cost of 41.7 mills a kilowatt-hour, or considerably more than three times the cost of distribution under the T. V. A. yardstick, where the city makes a reasonable profit and amortizes its investment. As I pointed out before, the private power companies never amortize their investment.

Now, let's take yardstick No. 4, which is the yardstick of the private power companies producing power with coal valued at $4 a ton, transmitting it a distance of 100 miles and distributing to the ultimate consumers for profit. At this point, I submit, you gentlemen on the committee are familiar with the price of coal and know that coal can be laid down invariably at less than half this price, and sometimes for less than a third or probably a fourth of that amount; that is, in volume where this power is generated at the mine.

Private utilities have estimated that they can produce power with $4 a ton coal at 5.4 mills a kilowatt-hour, but the New York Power Authority estimates that cost to be 6.3 mills a kilowatt-hour. In order to be on the safe side, we will use that figure.

I believe someone testified the other day for the power companies that they could produce power with coal at about 4.18 mills per kilowatt-hour, but we are using the highest figure, that used by the New York Power Authority, which was arguing, so to speak, the hydro side of the power question as against the production of electricity by coal.

Senator SCHWARTZ. I think Mr. Kellogg put the cost at 4.18.

Representative RANKIN. I think you are right, Senator. I have not been able to read all of this testimony. In fact, I have not been able to get all of it, because it is coming so fast the stenographer has been unable to transcribe it, or to get it out and make copies.

You will note this yardstick No. 4 is also 95 inches long, the same length as the private power companies' other yardstick. No matter what it costs private power companies to generate, transmit, and distribute electricity, they charge the ultimate consumers the same price—all the traffic will bear.

There was a rural line in my county before the T. V. A. was created. Those people wanted electricity. There is only one way in God's world to get it; they were at the mercy of the Mississippi Power Co. They imposed a line charge of $3.25 a month, and then charged them 5 cents a kilowatt-hour for their electricity. Twenty-five kilowatt-hours of electricity cost them $4.50 a month. They now get it for $1. That not only pays the running expenses of the association but amortizes the investment over a period of, I believe, 20 years.

You will note that the generation of this power with $4 coal absorbs 12.7 inches of this yardstick, or a cost of 6.2 mills a kilowatt-hour. Since coal can be laid down in volume in almost any municipality in the United States at $4 a ton, or less, it is unnecessary to add transmission cost or line losses. But to be on the safe side, we have presumed that this power is being transmitted 100 miles and that the cost of transmission absorbs 2.4 inches of the yardstick, or 1.2 mills a kilowatt-hour. And the line loss absorbs 8 inches of the yardstick—representing a cost of 4.4 mills a kilowatt-hour.

In other words, the cost of generating electricity by coal purchased at $4 a ton, and transmitting it 100 miles and laying it down at the city gate absorbs 15.9 inches of this yardstick—or a cost of 7.9 mills a kilowatt-hour—according to the New York Power Authority—or exactly 7 mills a kilowatt-hour according to the estimate of private utilities, and probably less than that, according to Mr. Kellogg, and where coal is cheaper of course this expense is greatly reduced.

This leaves 79.1 at the very best now, putting it at the very worst, this leaves 79.1 inches of this yardstick to be absorbed in distribution, or 39.9 mills a kilowatt-hour, whereas the T. V. A. yardstick absorbs only 25.1 inches in distribution, or a cost of 12.3 mills a kilowatt-hour.

There is where your billion-dollar overcharge comes in, in that extra 59 inches of the private power companies' yardstick. It comes in the distribution end of the business. There is where your inflated valuations lie in these exorbitant overcharges for the distribution of electric energy to the ultimate consumers.

The figures which I gave a few moments ago show that private power companies are selling power to each other and laying it down at convenient points, for a great deal less than the cost indicated on any of these yardsticks.

Therefore, if they are honest and efficient, they could distribute electric energy to ultimate consumers throughout the United States at the T. V. A. yardstick rate of 17.8 mills a kilowatt-hour, to the residential consumers and proportionate prices to the commercial and industrial consumers, using the T. V. A. yardstick, which is 36 inches long instead of charging as they do an average of 46.9 mills a kilowatt-hour, and using a yardstick 95 inches long—I say they could lay this power down to the ultimate consumers in every State in the Union at T. V. A. yardstick rates, make a reasonable return on their money, and amortize all their investments in 20 or 30 years, I mean all their legitimate investments.

This yardstick, as I said, applies to residential rates. The residential consumers are invariably overcharged more than the commercial customers, and a similar yardstick will show about the same percentage overcharges in commercial and industrial rates, charged by private power companies throughout the country, the overcharges to the industrial consumers being less in proportion than the residential compared with the commercial customers.

That is what this fight is about. They don't want to squeeze the water out of this extra 59 inches of that yardstick, but want to destroy all legitimate competition in order to continue to impose their exorbitant rates on the helpless consumers of electricity throughout the country.

Now, let me point out again, Mr. Chairman, when the T. V. A. bill was passed and its yardstick promulgated, a yardstick was worked out for the ultimate consumers in the rural sections. They are charged exactly the same rate that the municipal customers are charged, but there is a cent a kilowatt-hour extra added up to the first 100 kilowatt-hours per month to amortize the cost of the lines.

At that time private power companies were refusing to go outside even of the municipalities and in some municipalities they would not serve all of the people who wanted it. This T. V. A. yardstick not only broke these rates down throughout the country but enabled us to start a program of rural electrification, and today there are more rural power lines being built than were ever dreamed of by the most enthusiastic advocates of public power 10 years ago.

We are taking to them the benefits of this greatest of all our natural resources, outside of the soil from which we live, which is the hydroelectric power in these streams. It has been absolutely going to waste. By harnessing it we do not exhaust a natural resource, as we do by using coal and gas or oil. There is enough of it in these navigable streams to serve all of the residential consumers in America, and all of the commercial consumers and probably have enough left to serve the industrial consumers. I am not sure about that.

But where these cheap rates have gone, and these power lines have been carried into the rural sections, it has created for those farmers a new civilization, and they are manifesting an enthusiasm never known before.

Now let's see what the result has been. I know they come up here and they will bring up in my State, they can bring up a municipality that owns its own plant and charges higher rates than they do, but it is one of those municipalities where they have the complex that they must pick the pockets of private power consumers in order to raise money to pay taxes on vacant lots. The T. V. A. does not permit that. Therefore, while those so-called taxless towns amortize investments, yet they impose enormous charges in order to get money for other purposes. That is not permitted under the T. V. A. contract.

This $40,000 profit that Tupelo made last year must go back into new development or be paid on their debts or used further to reduce the power rates which have already been reduced once.

If I understand Dr. Morgan's statement in reference to the city of Tupelo—while I won't say it is ridiculous—he is tremendously mistaken because there is the statement showing the facts. I telegraphed down there and the city clerk sent that to me by air mail in order that I might have it, showing that they made a profit last year of $40,000, which must go, as I said, into a reduction of rates or the extension of their system or be used in the payment of their debts.

Now, Mr. Chairman, let's see what the effect of this is on the ultimate consumer.

Representative JENKINS. Would you let me ask a question?

Representative RANKIN. I would be glad for you to.

Representative JENKINS. On that Tupelo business right there.

Representative RANKIN. Yes.

Representative JENKINS. I am sorry that I didn't get to hear all of your statement, and I probably ought not to ask this question, since I wasn't here, but this is my chance.

Representative RANKIN. That's all right; you ask any question you want to, and I want to say to you the sky is the limit on these questions.

Representative JENKINS. In Tupelo—you are talking about Tupelo, as I gather it—the yardstick is an important factor in Tupelo, the yardstick. Of course, the T. V. A. yardstick, to be anything like an accurate yardstick, should cover the cost to T. V. A. Now, whenever you talk about a profit at Tupelo, you can't be talking about the prices laid down by the yardstick because in Tupelo you put on a charge that you call "surcharge," don't you?

Representative RANKIN. No.

Representative JENKINS. How much is the surcharge difference between the yardstick price and the price to the public?

Representative RANKIN. If the gentleman had been here, he would have understood, as I told the committee that that 10-percent surcharge had been removed because they found it unnecessary. We put it on in the beginning because we were afraid that those rates would not keep the municipal system out of the red. We found we were mistaken, and, after reducing that surcharge, we were able to make a profit last year of $40,000, and our rates were reduced again a few days ago.

Representative JENKINS. How much did you reduce the surcharge?

Representative RANKIN. Took off the 10 percent.

Representatike JENKINS. You took it all off?

Representative RANKIN. It was 10 percent. It was all taken off; yes. Now, if the gentleman had been here——

Representative JENKINS. I don't want you to go back, Mr. Rankin.

Representative RANKIN. No, no; but I want to go back. The gentleman from Ohio missed one of the most valuable contributions that I made.

Mr. Chairman, may I be permitted to insert——

Mr. BIDDLE. No; it is in the record already.

Representative RANKIN. Well, I will say to the gentleman from Ohio, Tupelo bought this power at an average of around 5½ mills per kilowatt-hour, paid all of its operating expenses, and at the same time made a profit of $40,003.19 last year, and further reduced its rates to the consumers.

Representative JENKINS. I believe you are reading from a book before you. Are you going to read extensively? If you are, I wish you would give me the citation.

Representative RANKIN. No; I am not going to read extensively.

Mr. BIDDLE. This is the exhibit that was introduced on the operation of the municipalities yesterday. It is just before the "Cooperatives" here, headed "Tupelo."

Representative JENKINS. That is right. Thank you.

Representative RANKIN. I want to say that the gentleman from Ohio [Mr. JENKINS] should have been here to hear this information.

During the year 1937 the Ohio Power Co. sold to the Ohio Edison Co. in Ohio, and I think in the gentleman's own district, I think if you will look at it you will find this power was laid down in his district, or the one east of it.

Representative JENKINS. It is not in my district. The Ohio Edison Co. doesn't operate in my district so far as I know.

Representative RANKIN. It sold 26,426,000 kilowatt-hours of firm power in the year 1937 at 5.3 mills per kilowatt-hour. That is less than this 5.5 mills paid by the city of Tupelo for T. V. A. power laid down in that area.

But when they went to distribute it to the people of Ohio they used the 95-inch yardstick you see, and charged them 46.9 mills on an average, whereas at Tupelo we sold it for 17.8 mills, paid all running and operating expenses, including money in lieu of taxes, and made a profit of $40,000 a year.

Now, Mr. Brann, the great iconoclast, once said: "You can't explain the dead cat out of the family system." There isn't a man on earth that can take those wholesale figures and take the distribution costs in these various municipalities and ever reconcile them with this 95-inch yardstick that is used by the private power companies throughout the United States, and by which I might say they overcharged the people of Ohio last year about $40,000,000 for electric lights and power. As a result of that enormously long yardstick they paid an overcharge of over $40,000,000 a year and are paying it now.

Are there any other questions?

Mr. BIDDLE. I have just one.

Do I take it that the conclusion, not in terms of figures but in terms of a general conclusion of your yardstick, which, by the way, as a matter of record, is found on page 768 of the hearings before the Committee on Rivers and Harbors of the House of Representatives, No. 2, November and December 1937—hearings on H. R. 7365 and 7863—that the ultimate conclusion is, first, that the wholesale cost of power generation is substantially the same when you compare T. V. A., Los Angeles, Conowingo, and the national average?

Representative RANKIN. Yes.

Mr. BIDDLE. That is the first thing?

Representative RANKIN. Yes.

Mr. BIDDLE. And, secondly, that, whereas the relation of the wholesale power costs in the two first charts to the ultimate retail price is between a third and a fourth——

Representative RANKIN. That is right.

Mr. BIDDLE. Of the ultimate retail price, that when we compare the relationship of the wholesale and the ultimate retail price, or try to determine to what extent the ultimate retail price reflects the wholesale price, we find that that same ratio is more like one-ninth or one-tenth of the ultimate price——

Representative RANKIN. Instead of one-third.

Mr. BIDDLE. Instead of one-third?

Representative RANKIN. Yes.

Mr. BIDDLE. That that really is the essence of this comparison.

Representative RANKIN. Yes.

Mr. BIDDLE. And from that you conclude that the essence of the yardstick is a retail profit?

Representative RANKIN. That is right. In other words, that is to say where power is laid down at the city gate by all these yardsticks at approximately the same price—approximately the same price—nevertheless the municipalities using the T. V. A. power charge about 3 times that amount for distributing it, and the private power companies charge 10 times that amount for distributing it.

That is so plain that I believe I can make Wendell Willkie understand it.

Mr. Chairman, I want to repeat my opening statement: The T. V. A. is the most profitable investment the American people have

made since the Louisiana Purchase. This T. V. A. and its yardstick has taught the American people what electricity is worth, and forced down rates in every State and in every locality in this Union. Every human being in the continental United States who turns an electric switch gets the benefit from it every month that rolls around.

It has reduced light and power rates in the United States $556,000,000 a year; it and the other power policies of this administration, which is several times the amount, more than twice the amount of the entire cost of the T. V. A. from the beginning of the Wilson Dam until its entire completion of the present program. And I say that not only they get this reduction now but they will get it throughout the generations that are to come—unless this yardstick is destroyed.

If the American Congress will see to it that this yardstick is not interfered with, we will bring these rates down to the T. V. A. levels in every community in America from Maine to California, and electrify every farm home under the American flag at those rates.

Senator FRAZIER. You have rural lines out of Tupelo, as I understand it?

Representative RANKIN. Yes, sir.

Senator FRAZIER. What is the rate the farmers pay there?

They are farm lines, are they?

Representative RANKIN. Yes.

Senator FRAZIER. What is the rate the farmers pay there?

Representative RANKIN. Let me say to you, Senator, that the rural lines have no connection with the municipality of Tupelo.

Senator FRAZIER. Oh, they are separate?

Representative RANKIN. They are operated by the Tombigbee Electric Power Association.

Senator FRAZIER. Is that private?

Representative RANKIN. The Tombigbee Electric Power Association is incorporated under the laws of the State of Mississippi, and is a nonprofit cooperative.

They sell the power at exactly the same rates as in Tupelo, except that they add 1 cent per kilowatt-hour on the first 100 kilowatt-hours a month to raise the funds to amortize the lines.

Permit me at this point to insert the schedule for the Tombigbee Electric Power Association.

Mr. BIDDLE. It is already in the record.

Representative RANKIN. I would like for it to go in here, too, so as to make my statement consecutive.

Mr. BIDDLE. Yes, sir.

Representative RANKIN. You will note that the minimum electric bill in either the municipalities or in these associations is 25 kilowatt-hours a month. In Tupelo that 25 kilowatt-hours a month costs 75 cents and on the rural lines it costs $1 a month, because Tupelo has to pay for her distribution system out of other funds. They already own the distribution system.

This extra 25 cents added to the farmer is to pay for their distribution lines. That extra 1 cent a kilowatt-hour goes up to 100 kilowatt-hours a month.

In other words, if he uses 100 kilowatt-hours 25 miles out on a rural power line, he pays $3.50. In Tupelo he would pay $2.50. That extra dollar goes to amortize his line, and then he is not taxed at all any further. The same thing applies to the commercial rates.

Senator SCHWARTZ. That extra 25 cents would come off when they have paid for their line?

Representative RANKIN. When they have paid for these lines, that is right, Senator, why, that extra 25 cents, as the Senator says, comes off.

Now, I want to show you what this means. When this T. V. A. contract was made at Tupelo—and I refer to Tupelo more often because I live there; that is my home town—the average saturation for electric refrigerators throughout the country—well, I will take first the average kilowatt-hour consumption.

In that town it was 35 kilowatt-hours a month, only 35 kilowatt-hours a month, and that has grown now; it was in September of this year 148 kilowatt-hours a month. In the wintertime it runs up around 200 kilowatts a month. While the average through the United States is only about 60 kilowatt-hours a month.

And I might say to you, on these rural lines of this very Tombigbee Electric Power Association I was speaking of a moment ago, the average consumption was 81 kilowatt-hours a month in the month of September. They are learning to use electricity. When this contract was made, the commercial consumers in Tupelo were using 183 kilowatt-hours a month, and in the month of September of this year I notice they used 524 kilowatt-hours a month—that is on the average.

And, by the way, they pay less for that 524 kilowatt-hours a month than they paid for the 183 kilowatt-hours a month 5 years ago, and what they are paying now goes to amortize their power system and further reduce rates.

The saturation for electric refrigerators throughout the United States 5 years ago was only 29 percent. Of course, the country people didn't have any electricity, and they wouldn't have got any at all if it hadn't been for this drive for public power, to give the American people the benefit of the hydroelectric power in our navigable streams.

The saturation point for electric refrigerators was 29 percent. In Tupelo, which is a small town, less than 10,000 people, the saturation point was only 19 percent. In other words, only 19 people out of 100 who had electricity in their homes had electric refrigerators 4 years ago.

In 5 years it has grown from 19 to 90 percent. Ninety percent of the people, white and black, who have electricity in their homes in Tupelo now have electric refrigerators in their homes, and on this Tombigbee Association's lines it is 55 percent.

Thousands of people who never dreamed of even seeing lights in their homes now have electric refrigerators.

In Alcorn County, which covers the city of Corinth and the rural areas of that county, it is 79 percent, and in other counties the proportion is about the same.

So, Mr. Chairman, we are bringing to the people of this country the benefit of the greatest natural resource on earth, outside of the soil, and a resource that nobody knew existed until about 50 years ago. There was no power, electricity was never used for power purposes, and could not have been used for power purposes until after the invention of the electric light by Edison about 1878 or 1879.

I notice that Dr. Morgan says that the rates have been reduced in 50 years. My God, why shouldn't they be reduced in 50 years? The first plant that they established was in New York, and nobody could use it except rich ones. The first man that ever complained of an overcharge for electric light and power, I am told, was J. P. Morgan.

Of course, they have been reduced in 50 years, and still we are behind all of the other countries in the world.

Now, let us get back——

Senator SCHWARTZ. Morgan's objection would probably be persuasive?

Representative RANKIN. Yes; with private power companies.

I take the position that the water power in these navigable streams is public property, and belongs to all of the American people, and should be used by all of them. I think power used on the Tennessee River would serve a marvelous purpose if we used it for yardstick purposes and built lines in every direction 350 miles long, and laid it down at the yardstick rates, and showed the people in those areas what electricity is worth, and inspired them to make a drive to get cheaper electricity in their own homes and their places of business.

I take the position that it is public property, and should be used for the benefit of the American people.

I am of the opinion that they can generate power by coal—and I know that they can with gas, where natural gas is available—and deliver it at the T. V. A. yardstick rates in any community in the United States and make a profit, but they can't do it until they squeeze all of this water, about $7,000,000,000 of it, out of their capital structure, and get rid of useless officials, and stop spending so much money on propaganda, indirectly buying up newspapers, and contributing to the campaign funds of every fellow they think will help to rake their chestnuts when he gets into public office, and trying to control the public affairs of America.

If they will squeeze the water out of their capital structure and get down to doing the same legitimate business that the T. V. A. is doing, they can deliver power anywhere in the United States at the T. V. A. yardstick rates.

Now, let me show you what they are doing in other countries. We are far behind. In Germany, in France, in Italy, in Norway and Sweden and Denmark, and even in Japan, 90 percent of the farm homes have electricity. In Holland and Switzerland it is 100 percent, approximately, and report shows 100 percent of electricity in their farm homes.

Holland is the best housed, and the best electrified, and the most contented country on the face of this earth today, I think, and it is because this great wealth that has been throughout the centuries running waste to the sea has been harnessed and used for the benefit of those people and not for a few stock promoters; it is not permitted to go to waste or be used by a lot of stock promoters and other manipulators in the public power game.

I made this statement on the floor of the House, and some man arose and said, "Well, those countries are thickly settled." That doesn't make any difference. In New Zealand, a new and sparsely settled country, 65 percent of its farms are electrified now, and a farm in New Zealand covers a great deal of acreage.

We are far behind. What we are driving at is not only to break these rates down to the domestic consumers, to the commercial consumers, and industrial consumers, throughout the whole United States, but to electrify every farm home in America at the T. V. A. yardstick rates and make it the most prosperous country in the world.

I am not going into the industrial or commercial rates, but I will say this to you: That this same Mississippi Power Co.—and it is a pretty good example—that buys its power at 4.22 mills per kilowatt-hour, charges in round numbers $11,000 a month for 1,000,000 kilowatt-hours, that Tupelo delivers, under the T. V. A. yardstick, for a little more than $4,000, a difference of about $7,000 a month.

Now, you can bring that on down, and, of course, it is reduced as the consumption or the amount consumed is reduced, but those enormous burdens in that proportion are imposed on the manufacturers and the merchants throughout this country, from Maine to California.

If the merchants in every town, and every city, and every community, and at every crossroad; if every person who pays commercial rates, ever finds out the truth about these overcharges, we won't have any trouble defending the T. V. A. from then on.

Senator FRAZIER. Have you got the percentage of farms in Ontario that are electrified, of farm homes?

Representative RANKIN. Senator, I am not sure that I have that; but it is pretty high. They are far ahead of us.

They have been heating their houses; those farmers have been heating their houses with electricity in Ontario for 20 years. Many farm homes built in Ontario are built without any chimneys at all.

The time will come in this country—we are just on the edge of this development—and the time will come in this country when all of the coal produced in Ohio and all the other States will be used at the mine and the power transmitted, because it is cheaper than transmitting the coal and then attempting to generate the power.

Mr. J. D. Ross, the head of the Bonneville project, says that 300 miles is a reasonable transmission distance, with alternating current; and he says that he thinks that they will soon have a program worked out whereby they can transmit it 1,000 miles with direct current.

So we are just in the beginning of the electric age, and they are asking us to fold up and march backward in the darkness.

Is there anything further?

Chairman DONAHEY. Are there any further qestions of this witness?

Mr. BIDDLE. Mr. Chairman, the figures that the witness referred to from the Army Engineers Report is from Document 328, which has often been referred to, in part 1, on page 528, which showed the average cost of hydropower at the switchboard at Wilson, and on page 530, which shows the transmission cost.

Representative RANKIN. I put the numbers of those pages in the record. I had them copied into the record.

Chairman DONAHEY. If there are no further questions, Congressman RANKIN, on behalf of the committee, I thank you.

Representative RANKIN. Thank you, Mr. Chairman, and all of the members of the committee for your kindness and your patience.

The Government and Business—Where Do We Go From Here?

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1939

Mr. LUDLOW. Mr. Speaker, I am convinced, as firmly as I ever believed anything in my life, that we will never see our way out of the depression until we witness a business recovery in this country. The one must antedate the other.

Not until business again gets on its feet, functioning normally and confident of the future, will America be lifted out of the slough of depression.

In trying to analyze what ails us as a nation and what is required to cure us, let us try to apply a little of the saving grace of common sense to the situation.

We see millions of our fellow citizens, as good people as ever lived, unemployed and struggling to get work. I believe the latest conservative estimate is 11,000,000. Every self-respecting soul among them would rather have a regular job with industry if he could get it, but the sources of regular employment have dried up, and the result is a bedlam rush to get on the Government rolls. Formerly Congressmen were implored by constituents to give them letters to key businessmen and manufacturers so they might apply for regular employment. I have not had such a request in a year. The cry now is, "Help me to get on W. P. A." I have supported large work-relief appropriations because in America people must not be allowed to starve or go naked, but I hope that soon there may be a more fundamental solution of the employment problem.

The diagnosis and the remedy of the existing situation are, to my mind, clear as a flag on a pikestaff. Business and industry are frozen with fear. They need to be thawed out by the warm rays of confidence—confidence in their Government and confidence in the future. Without any disrespect to business and industry—which I highly respect—I might draw the analogy of the fish that is frozen stiff in untold subzero temperatures and which, when placed in warm water, straightway loses its rigidity and disports itself as if nothing had happened. I saw this phenomenon on the stage the other night, and I was surprised by the naturalness and agility displayed by the fish after it had been frozen as stiff as an icicle.

It would not require a very great effort to thaw out business and to enable it to conduct itself as it always has in our periods of greatest national prosperity. I think I know how it can be done, and this is my formula:

Give business the assurance of a fair and reasonable profit, free from unnecessary governmental interference, and the depression will soon be over.

BUSINESS WILL THAW OUT

Apply this formula and business will thaw out as if under the genial rays of a warm summer sun. Atrophied industry will become quick and nimble. In other words, all in the world that is necessary to start business and industry going in a normal way is assurance of a fair and reasonable profit and a chance to operate free from undue bureaucratic domination.

This kind of assurance will immediately turn on the "Go" sign. There is nothing fundamentally wrong with the country. Banks and other large financial institutions are literally bulging with money, and with the assurance I have described once given this pent-up reservoir of vitalizing funds will be turned into the streams of credit and creative enterprise and things will begin to hum. The millions now on synthetic Government jobs will then be happily absorbed into regular employment, and the depression will become nothing more than a horrible memory.

All of this I believe with all my heart, and I advocate this philosophy because I am a friend—a sincere, earnest friend—of the millions of worthy people who deserve a better fate in life than having to fight for a Government leaf-raking job. I want every person in America on whom rests the responsibility of a breadwinner to have a steady, dependable job at a saving wage which will enable him to rear and educate his family with dignity and respect and lay by something for the inevitable rainy day. It is his right to have such a job.

CAPITAL AND LABOR ARE INTERDEPENDENT

When, I wonder, will we learn the lesson that in this country and under our form of government capital and labor are interdependent? What the workingman wants is excellent wages, reasonable hours of employment, and healthful, sanitary working conditions. On the other end of the equation there must be somebody with capital, somebody with finances and earning capacity to provide those wages and those working conditions, or the same will not be provided and the depression will go on and on, with the Government more and more edging into the field of private enterprise and more and more becoming the sole employer, which is a very gloomy and dangerous outlook.

The encouragement to business I propose, which means so much to the country in the hope it holds forth for an economic revival, can be extended without any taint of favoritism or special privilege. It can be done, and should be done, without condoning in the fraction of a degree any evil or monopolistic practices. On the contrary, it should be the aim to strengthen the arm of the Federal Trade Commission so as to keep it ever alert and active against unfair trade practices. The businessman should be held to strict moral and legal responsibility and should not be relieved of any of his obligations or responsibilities to society, but on the other hand he should have reasonable assurance of governmental encouragement and support as long as he performs his normal and useful function of fostering creative enterprise and furnishing employment. I fear that in recent years he has been "the forgotten man" in our national equation, or perhaps it would be more accurate to say that he has been too much forgotten in respect to governmental recognition of his real problems and overly remembered in respect to governmental regimentation and punitive taxation.

American business has led the world in the past because of the absence of restrictions in the way of the spirit of enterprise.

Because this freedom has been abused by some, the public called for restrictions and more restrictions. Instead of merely punishing fraud and other flagrant transgressions against business ethics, our laws provide for blanket restrictions which have suppressed hundreds of desirable enterprises for every dishonest one.

Now the tendency is to add crushing and discriminatory taxation to unreasonable restrictions. The risks of new

enterprises have remained, the profit possibilities have been severely limited.

I want to do everything I can to help businessmen to get going again. I want to encourage them, not discourage them. I do not want to see them taxed any more than is absolutely necessary to provide for the needs of the people and the Government, and above all I do not want to see them harried and worried and disheartened by punitive taxes that take all the tuck out of their hope and purpose.

BILL TO REPEAL UNDISTRIBUTED-PROFITS TAX

Because I feel that way about it, I have introduced a bill which, if it should pass, would go a long way to revive the drooping spirits of business and industry and inspire them with confidence of the future. The bill I have introduced would repeal outright the undistributed-profits tax and would not leave a vestige of that statute on the books. In the last Congress the undistributed-profits tax was modified so as to mitigate somewhat the rigors of the burden it places on business, but the principle was retained in our tax structure. The principle should be eradicated, root and branch, and I shall lend my best efforts to wipe it out entirely. As long as even a germ of it remains it will be an unjustifiable worry hanging over the heads of harassed businessmen who will never be sure that the germ may not grow by future amendments until it becomes a great evil. I voted against the undistributed-profits tax when it was first enacted, believing that it would prove a millstone around the neck of small- and middle-sized business, and that view was vindicated by the experience of the law in operation. In the last session I voted for absolute repeal of that law and I hope in this Congress to see it wiped completely off of the statute books. Likewise I voted against the proposed tax on family owned corporations, which, fortunately, died a-borning. Like the undistributed-profits tax it was conceived in the notion that it would reach a few large unworthy corporations but apparently without a thought that in so doing it would murder thousands of small worthy ones that make up the warp and woof of our industrial fiber and in our own city of Indianapolis are basically responsible for our community well-being and prosperity.

I want to do all I can to aid business, not to confer special privilege on anyone nor to give any businessman any more than his dues, but because when business is prosperous workingmen are employed with steady jobs and at high wages. The farmer, too, is better off because there is a wider demand, and consequently better prices, for farm products. In my way of thinking, therefore, the man who helps to revive and restore honest business is helping most the workingman and the farmer.

LOANS TO BUSINESS AN ALLY OF RECOVERY

I think it is perfectly proper that all of us should pause and ask ourselves the question, "Where do we go from here?" As one of the old and original proponents of Government loans to industry, who introduced in Congress the first bill on that subject, I would continue that form of governmental assistance only with a loosening up of the regulations and a less harsh application of rules which now make it almost as difficult to get a loan from the Reconstruction Finance Corporation as from a hard-boiled banking institution. In Indianapolis we are fortunate in having one of the best chambers of commerce in the United States, a chamber of commerce capable of visualizing the needs of our community and State and most responsive in rendering willing and effective assistance to all of our business interests in every worthy endeavor. As a Member of Congress, it is to me a real pleasure to work with an organization of such efficiency for the upbuilding of the civic interests of Indianapolis and a better national business outlook. Such men as President C. D. Alexander and Executive Vice President William H. Book are known throughout the country and are highly regarded as public-spirited business executives who can be depended upon to do all that is possible to help in various ways to revive business, not entirely for business' sake but to assist the workingman and the farmer. That is your problem and my problem—to get business to going again. That is the problem of our National Government. I believe it is the biggest problem before America. I repeat that I believe it can be solved by the simple formula of giving business assurance of a reasonable profit and freedom from unnecessary governmental interference. Business as a whole is not asking for any special privileges or subsidies. It is willing to take its chances with the ordinary risks and vicissitudes of life that come to every business enterprise. What it does ask is that it be relieved from punitive and discriminatory taxes and excessive regimentation and that it be given a fair show for its white alley.

As one Member of Congress, with no pretension at all to unusual wisdom, but with some conception, I hope, of the realism of our country's distressed condition, I believe the position of business is fair and reasonable and worthy of our best thought and consideration.

The Arrest by the German Police of George Roth, Naturalized American Citizen, Employed by United States Line Steamship "Washington" as a Tourist Steward

---

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1939

Mr. CELLER. Mr. Speaker, on November 30, 1938, George Roth, a naturalized American citizen of German birth, and employed as a tourist waiter on the steamship *Washington* of the United States Line, was arrested and forcibly removed from the ship by the German police as it lay in Hamburg, and has been confined in a Nazi prison pending trial. This arrest took place in the absence of the captain, and upon no more than a vague reference to "criminal charges." It is worthy of note that this arrest took place in the hours immediately preceding the sailing of the ship on its return voyage to New York after a stay in Hamburg of 5 days. Not only was Roth's arrest apparently designed to occur at such a time that his friends would be forced to abandon him, but his trial is being set for January 14, when the *Washington*—having Roth's defense witnesses on board—will be safely on the high seas, and will not be able to touch at Hamburg until long after such verdict as may be expected from a people's court in Germany has been found.

Immediately after this arrest, the ship's delegates, alarmed at this summary action on the part of the Gestapo, interviewed the ship's chief officer, who was unable to offer any explanation as to why Roth was arrested. Therefore, accompanied by two witnesses, the ship's delegates sought out our American consul, who had come aboard a few hours previously, and asked why Roth was taken. He stated that he did not know the reason for the arrest but offered every assistance to procure, if possible, Roth's release or a fair trial if an immediate release were not possible. The *Washington* therefore sailed without Roth, and the "reason" for his arrest remained unknown to crew or to officers.

On behalf of the *Washington* crew, the ship's delegates have petitioned their union to act to procure for them adequate protection against possibility of false or irresponsible arrest in the future when their work requires them to take a ship into foreign port, and for the immediate release of this man, arrested with such insulting disregard for the niceties of international usage.

The State Department has been informed by the consul general that Roth will be tried on January 14, but that now the charge has been changed to one equally vague and indeterminate, that of "distributing 'communistic' literature." It is always so easy to charge "communism." I loathe and detest communism and all that it involves, but I resent using the red flag of communism when no other reason or charge is readily available.

Endeavors to ascertain just how much protection from tyrannous acts can be expected by American seamen when in the course of their employment they are required to venture into foreign ports reveals that the United States Lines are unable to assume responsibility for the protection and safeguarding of their employees in this respect, as evidenced by the following statement issued by Mr. P. E. Warfield, personnel manager for the United States Lines, in answer to a query from the *Washington* delegates:

No police, customs officer, or other governmental authority has to give any explanation as to why they are arresting a member of the crew of a ship. It is customary for the authorities to give notice to the consul representing the country of which the arrested man is a citizen and also to the master of the ship why they are arresting a member of the crew of a ship or seizing any of his belongings. However, there is no law which states they have to give any such notice.

This case places squarely before us—and we may not sidestep it—the vexed question of how far this foreign government, not at all distinguished by friendliness to America or Americans, can be permitted to assume jurisdiction over our citizens who are temporarily in their ports without rendering adequate accounting to American authorities. Must American sailors in the prosecution of the earning of a livelihood run the hazard of loss of liberty and worse whenever the whim shall seize foreign police agents to arrest them? This high-handed arrest of Roth, made without adequate reason being given, and obviously without due and proper notice to persons qualified to supervise such a proceeding, contains a grave threat to the future safety of all American sailors entering German ports. This arrest must be protested, and this man released. We must not permit this highly dangerous precedent to be set, and action must be taken immediately before the findings of such trials as we have come to expect in Germany can be used to justify this scandalous arrest of an American citizen.

The National Maritime Union is rendering, as far as I can learn, splendid service in aiding this unfortunate seaman, Roth, and should keep up its fight.

The Government of Puerto Rico and Trade Agreements

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1939

Mr. IGLESIAS. Mr. Speaker, Puerto Rico is an organized territory of the United States. Its people, approximately 1,800,000, are American citizens. Its total area comprises approximately only some 3,400 square miles, but it has a dense population of upward of 500 people to the square mile.

MORE TRADE THAN CUBA

For the past 6 years Puerto Rico's purchases from the United States have averaged $65,470,000 against $49,615,000 by Cuba.

For each dollar of export sales by Puerto Rico to the United States the island has purchased 83 cents' worth of American products as compared with 52 cents' worth purchased by Cuba for each dollar of Cuban exports to the United States. Thus American farmers and manufacturers sell 31 cents more per dollar of purchases to Puerto Rico than to Cuba.

Sugar production is the principal industry. If the tariff on Cuban sugar should be further reduced, the people of Puerto Rico would suffer still further from reduced revenues and the number of unemployed would be still further increased. The unemployment problem is grave.

Some 21,000 farmers in Puerto Rico are engaged in producing tobacco. A further reduction in the tariff on Cuban tobacco, one of the strongest competitors of Puerto Rican tobacco, would be highly detrimental to the interests of Puerto Rico.

Following the trade agreement of 1934, Cuba increased her plantings of pineapples abnormally, and, consequently, has unduly increased her exports of pineapples to the United States. This has resulted in lower prices and in throwing thousands of workers in the pineapple fields of Puerto Rico out of work. Production costs of pineapples in Cuba are much less than in Puerto Rico. The same effect will result through the reduction made in the tariff on coconuts of the British West Indies.

STATEMENT OF THE GOVERNOR OF PUERTO RICO

A formal statement in brief form of the views of the Government of Puerto Rico in relation to the negotiations for a proposed supplemental trade agreement with Cuba has been filed with this committee in accordance with the press release and notice of the hearing. It seems proper at this time, in amplifying the views of the Puerto Rican Government, to state more at length the economic situation of the people of Puerto Rico and the difficulties and problems with which they are confronted in connection with such proposals as those now before your committee in relation to modifying the trade agreement with Cuba. The Cuban Government is asking further reductions in the tariffs fixed by the Congress upon certain articles coming from that island to the United States, with relation to which Cuba already enjoys preferential treatment. These further reductions would be quite largely at the expense of Puerto Rico, and would further accentuate the favors already granted to Cuba largely at Puerto Rico's expense.

A brief review of the situation of Puerto Rico seems to be in order.

Puerto Rico, although a small island, only some 100 miles long by 35 miles wide, contains a population of approximately 1,800,000 people, one of the dense populations of the world. Of its total of about 2,200,000 acres, only about 1,500,000 acres are cultivable, after counting out the mountain peaks and the slopes and the forests, rivers, and marshes, and other noncultivable land. On these 1,500,000 cultivable acres, a farming population of 1,800,000 American citizens must seek their sustenance—less than an acre apiece. Their capability in utilizing their meager land resources is shown by the fact that they have made themselves into such an excellent market for the foodstuffs and manufactured products of the mainland United States.

In the calendar year 1936 Puerto Rico bought $86,350,000 of mainland products; in 1937, over $90,000,000 worth. That is at the rate of over $60 worth of mainland purchases for every one of Puerto Rico's 1,500,000 cultivable acres. It is doubted whether any other agricultural area anywhere buys so much per acre from our mainland. In 1936 Puerto Rico was the sixth greatest customer from our mainland in all the world. Its purchases were exceeded in value only by those of Canada, Great Britain, France, Germany, and Japan. Next after those great nations came the little island of Puerto Rico. It took approximately half of the entire rice shipments from the continental United States, mainly from Louisiana, Arkansas, and California. Its purchases of continental foodstuffs ran to some $28,000,000 that year; of shoes to $3,000,000; of textiles, $17,000,000; of machinery and iron and steel products, $14,000,000. Of all of its purchases from the entire world, Puerto Rico takes about 92 percent from our mainland. And it buys, of course, at full American tariff-protected prices, because it is a part of the United States within our tariff wall. It is a great and valuable American domestic market for the mainland. For that reason alone, if for none other, it should be protected and developed, rather than restricted.

When, in 1898, the United States took over the island and people of Puerto Rico, it was with the high promise that, as it was phrased by Gen. Nelson A. Miles in his proclamation to the people upon his landing at Ponce, July 28, 1898:

"We have not come to make war upon the people of a country that for centuries have been oppressed but, on the contrary, to bring you protection, not only to yourselves but to your property, to promote your prosperity, and bestow upon you the immunities and blessings of the liberal institutions of our Government."

This high promise has, upon the whole, been faithfully and willingly and generously kept by the people of the United States. The Congress has granted the island an organized territorial government upon the American model similar in all respects to the territorial governments formerly existing here in the mainland upon which States have since been erected. From the outset the customs duties collected in her ports have been given to the insular government for the benefit of her people, and, likewise, the internal revenue excises collected upon Puerto Rican products. In 1917, by the War Revenue Act, the Congress allowed the Legislature of Puerto Rico (and that of the Philippines) to repeal for the island the Federal income-tax laws and to levy their own income taxes and to retain them for the island treasury.

And in 1917, too, the Congress conferred full American citizenship upon the people of Puerto Rico, recognizing them as upon the same status with other American citizens. Whatever shortcomings there may have been, the purpose of the Congress and of the people of the United States, through all these years and through every administration, no matter which political party was in

power, and until the onset of the recent financial depression, was to be wholly fair and even generous to these newly acquired fellow citizens in the island. But the onset of the financial depression of recent years changed the situation. The people here in the mainland necessarily tightened their purse strings, and in spite of all generous intentions the tightening has been involuntarily reflected in their treatment of their fellow citizens in the island. Even among the States themselves here in the mainland a feeling of selfish localism in business has grown up in many quarters, unheard of for years before this recent depression. Thus we hear, for example, of campaigns of "buy Illinois," and even of attempts of State legislatures to impose restrictions against other States.

Puerto Rico is not a State. Its single Resident Commissioner to the Congress has no vote, has but his single voice. He is not in position by himself fully to protect Puerto Rico's interests in trying times. The Puerto Rican people must rely, as always heretofore, on the good faith and the good will and the generosity of all of the branches of the Government, and of the people of the United States at large, and on its own record as a valuable market and a business asset of the United States. The tendency is to sacrifice Puerto Rico to foreign interests, particularly Cuba, thinking that to be for the best commercial interests of the country at large; whereas, as a matter of fact, the records show that this reasoning is wholly mistaken. This mistaken tendency has been shown markedly in a number of ways: In the sugar quotas, actually cutting Puerto Rico's quota far below her normal prior production (and to only about half her present potential production with improved methods), throwing thousands of her citizens out of work, principally in favor of Cuba; in failing to give tariff protection to her native products and in admitting them free of duty or unduly lowering the tariffs on them, to the destruction or great damage to her industry; her coffee left wholly unprotected; her coconuts left largely unprotected by the recent lowering of the duties in the trade agreement just concluded with Great Britain; her pineapple industry sacrificed to Cuba by the trade agreement of 1934 with that country, cutting the tariff in two (and the sole intended benefit of which, of the right of purchasing pineapple "slips" for propagation freely from Cuba, has not been enforced); her $21,000,000 needlework industry sacrificed to China and Japan by the trade agreement with Switzerland, without even benefiting Switzerland at all, and subject to still greater sacrifice to other low-wage countries coming in under this trade agreement, by virtue of the "most-favored-nation" provision; the output of her manganese (although a vital wartime need of the United States) sacrificed; her budding canning industry and the entire output of her farms, her vegetables, and fruits generally, checked and well-nigh strangled by this lack of tariff protection emphasized further by the application of the coastwise shipping laws and the ensuing unduly high steamship freight rates protected from foreign-flag competition (although it should be said that we are even willing, in order to help American coastwise shipping, to endure our portion of the sacrifices entailed by the coastwise shipping laws, but we ought not to be asked to bear more than our fair share of the burden; and, finally, by the unduly small allotments to Puerto Rico during all the depression years from all of the Federal agencies of relief and rehabilitation.

My letter of June 26, 1938, to the President, with its enclosures, showed that, over the nearly 5-year period from March 4, 1933, to December 31, 1937, Puerto Rico received in the aggregate, out of all Federal funds expended from new and emergency appropriations, only $57.41 per capita; whereas the States on the mainland received during the same period an average of $222.99 per capita, and all the other Territories received far in excess of Puerto Rico—Hawaii, $141.50 per capita; Alaska, $211.40 per capita; and the Virgin Islands, $282.28 per capita. This is believed to have been largely due to a wholly mistaken impression that Puerto Rico had, because of the allotment of a lump sum to the Puerto Rico Reconstruction Administration, and because of the allowances given her of the customs duties collected in her ports, the internal revenue excise taxes on Puerto Rican products, and her own income taxes which she is permitted to retain, already received benefits in excess of her fair share, so as even to be said to be a "drain on the Treasury." But the foregoing figures include everything to the Puerto Rico Reconstruction Administration, which in the end proved not anything like as much as had been originally contemplated, and the statistics further show that all of the afore-mentioned taxes allowed to Puerto Rico, taken together, amounted only to around $5,000,000 per annum for that 5-year period, or to a total of only about $14 per capita in the aggregate. If you will add that $14 to Puerto Rico's total aggregate per capita receipts of $57.41, above stated, from all Federal appropriations during that 5-year period, including, as above noted, all of those actually given to the Puerto Rico Reconstruction Administration, from all Federal appropriations of every kind, you will then have a total of only something less than $72 per capita for that period for Puerto Rico, as against the average per capita for the mainland States of $222.99, as above stated. In other words, counting in everything possible, including the Puerto Rico Reconstruction Administration, Puerto Rico received less than one-third of her fair share per capita. It must further be taken into consideration that, notwithstanding this difference in the allotments, Puerto Rico will be compelled for many years to come to bear—chiefly by the increased prices of goods that it will have to pay in common with the rest of the country because of the necessary taxation until the indebtedness is repaid—its full proportionate share of the Federal indebtedness created for the purpose of furnishing the relief and rehabilitation funds during this period.

And now Puerto Rico, with her dense population and different conditions in many ways, is required by the Fair Labor Standards Act of 1938 suddenly to put her wages and her industries upon the same basis as those of the mainland. I will not say that it cannot be done; it is my desire, as it always has been, to help labor in every way possible and to increase wages as fast as practicable. During my administration as Governor of Puerto Rico during the past 5 years there have been four general increases in the rates of wages, by agreement between employers and employees. A general 8-hour day has been introduced and is effective for agricultural workers as well as others. Child labor has been prohibited; and an efficient workmen's compensation law has been effectively put into operation likewise covering agricultural workers as well as others. But this sudden Wages and Hours Act statutory fiat raise of wages in the island to levels far above those of our foreign competitors presents serious problems. Particularly, if the Wages and Hours Act is to be interpreted as extending to the hand-work industry in the home it may not improbably complete the destruction of our needlework industry, which at its peak was giving employment to some 90,000 women, very largely during the seasonal unemployment period of the men in the sugarcane fields and centrals, and thus supplying in many cases the only cash income of the family during that agricultural offseason. If this industry is to be destroyed, then, taking that together with the additional unemployment caused by the sugar-quota restriction and the other restrictions on the island industries, there may easily be as many as 100,000 additional island workers thrown out of employment, added on to our present grave unemployment situation in the island.

With this acute situation, our problems ought not now to be further accentuated by tariff reductions in favor of Cuba, further disturbing the economy of Puerto Rico.

The details of our situation with relation to the various items—sugar, tobacco, rum, needlework, pineapples, coffee, coconuts, manganese, and other matters—have heretofore been presented in separate letters, memoranda, and briefs addressed to the Secretary of State, and to the Secretary of Agriculture, and to this Committee for Reciprocity Information, as well as in my letter to the President of June 26, 1938, with its appended statistics, to which reference has already been made. They will be fully explained to you by Resident Commissioner IGLESIAS, of Puerto Rico; Mr. F. A. Lopez Dominguez, the commissioner of agriculture and commerce of the island; and other witnesses familiar with the details.

I am heartily in favor of the trade-agreement policy of the State Department; but, because of the character of Puerto Rico's products, it does appear that the island has been asked to bear an undue share of the burden of the trade agreements. This arises primarily from the fact that the range of our principal products lies within a limited field. They happen to be those that seem most available for negotiations with foreign countries, particularly with Cuba: Our sugar industry, our needlework industry, our pineapples and other fruits and vegetables, our coconuts, our manganese, and our tobacco. These are the very products on which the industries of the island and the income of the insular government depend. We have no other substantial source of income.

The above statements have been in the main factual, as gathered from all reliable sources. My observations with reference to the facts are based upon almost 5 years' service as Governor of the island.

The great outstanding question really presented here is that of our policy in dealing with the island. Every consideration of business and national interests dictates an equitable policy for the development of its commerce and industry.

Let me express the earnest hope that the interests of Puerto Rico will not, in the present instance, be further sacrificed to those of Cuba.

BLANTON WINSHIP, *Governor.*

JANUARY 3, 1939.

The Relief Problem

EXTENSION OF REMARKS

OF

HON. J. JOSEPH SMITH

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1939

Mr. SMITH of Connecticut. Mr. Speaker, the relief problem in the industrial cities of the Northeast is still acute. The most recent reports from the cities indicate that the recent cut in W. P. A. rolls has thrown onto direct relief the heads of families in a very short time in almost every case.

Our aim has been to put the employable persons on W. P. A. and let local communities, through their relief agencies, care for the unemployable. In practice we have never approached

that goal, but the direct-relief rolls of the cities and towns have been heavily burdened, not only with the destitute unemployable but with a large number who were, and are, able and willing to work. The recent reduction of the number on W. P. A. has added a corresponding number to the direct-relief rolls.

Reports from most of the cities of my district, including Ansonia, Derby, Naugatuck, Thomaston, Torrington, and Waterbury, indicate that further cuts in W. P. A. will increase the relief burden of the towns beyond the ability of the present budgets to stand it, and will increase the tax load on real estate, already overburdened.

Private industry is obviously unable to absorb those already laid off in time to lighten the burden this winter.

We are faced with a situation which requires the present maintenance of W. P. A. at the existing level. Regardless of the merit of proposals to alter the method of administration or to place the administrative force under civil service, we need now at least the sum recommended by the President if we are to prevent actual suffering at this time.

In substantiation of my position let me quote excerpts from letters received from public officials in the industrial communities of my district.

Miss Grace L. White, superintendent of welfare in the city of Waterbury, writes:

We have approximately 2,200 individuals on W. P. A. projects at the present time and a list of about 450 men and women waiting for assignments. In addition, there were 300 dropped from W. P. A. in December, many of whom have been placed on direct relief.

As the welfare budget for 1939 has already been set up with a view toward continuance of W. P. A., it would cause undue hardship to all if it became necessary to lower the standards in order to care for any number released from W. P. A. It does not seem likely that private industry in Waterbury would be in any position to absorb these individuals.

The views of the Waterbury Welfare Department are the same as those of Mr. John J. Driscoll, secretary of the Waterbury Brass Workers Union, and John J. Morrissey, president of the Waterbury Newspaper Guild. Mr. Driscoll telegraphs:

Nineteen hundred and thirty-nine Waterbury budget cannot cope with larger direct relief load than current; many local factories have cut hours and laid off since Christmas; managements offer little encouragement on rehiring those still laid off since 1937; no new hiring at all.

Mr. Morrissey telegraphs:

Observation of local factory condition tending toward further lay-offs makes larger W. P. A. appropriation imperative. Waterbury private industry unable to absorb those laid off over year ago.

Hon. John J. Sheridan, warden of the Borough of Naugatuck, writes:

I urge you to do everything in your power to the end that W. P. A. be continued at least at its present level. Naugatuck, which has an indebtedness at the present time of nearly a million dollars, will be unable to carry on the relief program properly without substantially increasing our tax rate. Of those who were recently dismissed by W. P. A., between 85 and 90 percent are now receiving either direct relief or other assistance from private relief agencies. Beyond the number dropped, which I believe totaled some 50 or 60, we have registered in our welfare department and qualified for W. P. A. employment about 55, making a total of about 115 now unemployed and in need of W. P. A. employment.

Hon. William A. Patten, mayor of Torrington, writes me:

Any drastic cut in appropriations for W. P. A. would indeed be a hardship on the city of Torrington. We have over 2,000 people receiving relief and have been under a heavy burden of expense the past year. The recent lay-off of 137 W. P. A. workers, together with over 150 more in the various factories in the city, has not helped matters.

We have only one means of securing money for relief purposes. That is taxation of small home owners, who are now taxed about as much as they can stand. Projects which are completed or are still in operation under W. P. A. have been a great help, not only in keeping relief costs down but also by providing much-needed benefits to the city of Torrington. As far as private industry is concerned I am sure that very few, if any, of those who were let go by W. P. A. in the past, or who might be let go in the future, will be absorbed. Anything you can do to prevent a cut in appropriations for W. P. A. will be greatly appreciated.

Hon. Andrew F. Nolan, mayor of Ansonia, writes:

I can truthfully state that the city of Ansonia will not be able to cope with any substantial increase in relief rolls occasioned by curtailment of W. P. A. Some few weeks ago the city of Ansonia suffered a 10-percent reduction and none of the men then laid off W. P. A. has been able to find work in private industry. All are now or will shortly be on direct relief.

The city of Ansonia at the present time has 810 cases on direct relief. There are approximately 800 obtaining partial relief—people who are partially employed but not earning sufficient to maintain themselves and their families, and the city must assist with rent, fuel, and food.

I believe the taxpayers and rent payers should not be made to sacrifice on account of economic causes beyond their control. None of the men on W. P. A. or on relief are there because they like it, and all, I am certain, would welcome return to private industry.

There is no likelihood that private industry will at the present time absorb any of the men now on W. P. A. or on direct relief. This fact can be established by a check on the pay rolls of the American Brass Co. and the Farrel-Birmingham Co.

Hon. John J. O'Connell, corporation counsel of the city of Derby, states:

Derby definitely cannot stand any decrease in Government aid or make any substantial increase in its appropriations for direct relief. We are overburdened as it is now. Hardships would result, and already the chill blast of scarcity is felt by those laid off during the last 2 weeks. I understand some more are due for the ax this week. If the city has to pay them direct relief, the city will be in a worse hole than ever. Private industry here cannot absorb even the number that already has been laid off, and definitely the manufacturers cannot take on any more.

Hon. E. R. Kaiser, first selectman of the town of Thomaston, writes:

Any drastic W. P. A. cuts at the present time would be a hardship. Every one of those recently laid off came back and applied for direct relief. * * * I doubt very much if any great number of persons laid off W. P. A. could be absorbed by private industry. * * * Any added load to the town of Thomaston would be a hardship, and I think you will find this true in any industrial community.

I have also received a telegram from the New Haven Council of Social Agencies, signed by Rev. William J. Daly, president of the council; Laura Jean Keiser, chairman of the family welfare and relief committee; and Hon. John W. Murphy, mayor of New Haven, protesting proposed reductions in W. P. A.

In addition I have had numerous messages from representatives of organized labor not only in my own congressional district but from the major industrial centers of Connecticut. There are too many of these to be reproduced here, but all are agreed that suffering would be entailed in further curtailment of W. P. A.

I hope that the Congress will appropriate at least the amount requested by the President.

Jackson Day Dinner

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1939

ADDRESS BY HON. MATTHEW J. MERRITT, OF NEW YORK, AT A JACKSON DAY DINNER IN NEW YORK

Mr. MERRITT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me at a Jackson Day dinner in New York:

Mr. Chairman, Your Excellency, Governor Lehman, and Mrs. Lehman, distinguished guests, and fellow Democrats—I'll broaden that, fellow Americans, the reason I changed that salutation is that it has become time in my opinion, to make fashionable one "ism" that has almost been forgotten. An "ism" that is attractive, an "ism" that is compatible with belief in God, that is compatible with love of country, an "ism" that protects the home, an "ism" that will make us all better citizens. I refer, my friends, to the "ism" all can embrace, namely, patriotism.

Any good sound Democrat must essentially be a patriot.

The principles of Jefferson and Jackson, on which our party rests, are principles in which every patriotic American can have confidence and hope for the future.

It is essential that we adhere to these principles. It is necessary that we do not allow foreign ideas and exotic notions of

government to infiltrate our administrations, whether in city, State, or Nation.

It must be remembered that our country has been the greatest melting pot in history. On the one hand, we have benefited by the influx of ideas, ambitions, and courage contributed by our immigrants.

On the other hand, there has been a dangerous tendency on the part of these newcomers to American soil to bring with them ideas and practices that are inimical to our form of government. Perhaps that is unintentional and the natural result of generations of strife, chaos, warfare, and persecution on the other side.

While these immigrants have our deepest sympathy in their memories of other lands, they must be taught that this Government is founded on a different conception of society than the European countries. They must be encouraged to break away from the Old World inclinations and to have faith in our way of doing things. The sacred reverence which we as Americans have for our Constitution and our democratic Republic must be communicated to our newest citizens. They must all be assimilated so that the spirit of our Government may be carried out in every phase of our political, social, and economic life.

Individual freedom of action—in fact, the maximum of it—compatible with the common good of all must be the basis of our laws and our administration of them. This is the only "ism." This is Americanism. Let us all embrace it during the new year.

Some Problems Facing Us

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1939

RADIO ADDRESS BY HON. A. LEONARD ALLEN, OF LOUISIANA, ON DECEMBER 29, 1938

Mr. ALLEN of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I delivered December 29, 1938, over station KALB in Alexandria:

I appreciate very much the kind invitation of station KALB to appear here at this time and address the people of the Eighth Congressional District. I am not coming to you at this time asking for any favors, and this is in no sense a political speech, but I am simply coming to you to have a heart-to-heart talk with you about some local, national, and international questions.

Before I pass to other matters I want to take this occasion to say to you people living in Alexandria that the Christmas lighting in Alexandria was perhaps the most beautiful this Christmas that I have ever seen anywhere. In driving to and from Washington during the Christmas holidays, as I have done several times, I have passed through many towns with beautiful Christmas lights, but I do not think that I have seen any Christmas lighting that was as beautiful as the city of Alexandria was this past Christmas. I congratulate your wide-awake city officials and civic leaders who have brought about this condition.

Two years ago you elected me to represent you in Congress from the Eighth Congressional District of Louisiana. I went to Washington more than 2 weeks before Congress convened in order that I might get my bearings and get acquainted, and thereby render you the better service. When the House has 435 Members and many of them have been there 10, 20, and 30 years, I realized that a new Member of Congress would not be able to accomplish a great deal. But I also knew that any Member of Congress could render service to his people, and I made up my mind in the beginning that I would rather have my career in Congress characterized by unselfish, patriotic service to my people, and I have tried to render the highest type of service.

You have just recently returned me to Congress without opposition and I very much appreciate this signal honor. I am returning to Washington in the morning and I am determined to continue to put all my energy into this job that you have given me. I want you to feel free to write me about anything. Two years ago I made it a rule that every inquiry that came to me in Washington had to be answered the same day it was received, and we have lived up to that in every case where it was at all possible.

I now wish to discuss with you a few of the problems that will confront us in the next Congress. In my allotted time I can only discuss just a few questions. If you agree with me in what I say and in what I am doing and trying to do, I would be glad to hear from you. If you do not agree with me, I shall also be glad to have your comments and suggestions. We live in a representative democracy. The Member of Congress whom you elect to represent you in Washington is entitled to know your opinions on great national questions. I covet your advice and help. Obviously, the Member of Congress cannot always follow the advice of everybody, but as long as I stay in Congress any citizen of the Eighth Congressional District is welcome to write me about any question which confronts him.

TAXATION

The question of taxation is nearly always a big one in any session of Congress. I sincerely trust that the national administration will not seek to make the tax burden in general any heavier than it is now. The charge has been frequently made—and there is probably some foundation for it—that business is being unduly hampered by our present taxing system. We must remember that we cannot kill the goose that lays the golden egg. We must remember that jobs come from industry, and unemployment is one of our greatest problems today. And while I am at this point, let me say that it is my earnest wish that we may be able to stimulate private employment to such an extent that very soon we shall find it unnecessary to appropriate the large sums now appropriated for public relief.

We have not reached that point yet, I fear, but I fervently hope that before long our people will be restored to economic independence when public relief on the present broad scale will no longer be necessary. There is one form of taxation which is always very fair. I refer to the income tax. It falls upon the shoulders of the man who makes the money, and such a one should not mind paying it. The man who does not make the money has no kick coming because he does not have to pay it. Certainly that is one of the fairest taxes in the world. That tax is one of the best ways to redistribute the wealth and I think was a cornerstone in Senator Long's great humanitarian plan. If more revenue is needed, it would probably be better for the country as a whole to increase the income tax rather than put it on business direct. I hope in the next Congress that machinery will be set in motion to impose a tax upon the income from Government and other public bonds and salaries. Our system of taxation in this country is such that one may be very, very wealthy and have his money invested in Government bonds and pay not one cent of taxes. That is not fair. That is one great reason why such bonds are very high in price right now when so many other things that are taxable are so cheap. If the income from such bonds is taxed, more money will flow out of them and will be put into lands, houses, and other things that we own and thus the prices of lands and other things will go up. Doris Duke is perhaps the richest woman in the world. Her husband testified before a Senate committee early this year that his wife, Doris Duke, had $50,000,000 invested in Government tax-exempt bonds on which she pays not one cent of tax. There is no sound reason why the income from such sources should not be subject to taxation just as any other income is. I hope to see this condition corrected. If I get a chance, I shall vote to correct it.

FARM PROBLEM

The farm problem, likewise, has always given Congress great concern. That was especially true in the Seventy-fifth Congress just closing. The 435 Members of the House and 96 Members of the Senate labored for more than a year on a constructive farm bill and the result was the 1938 Farm Act. I do not suppose this bill was entirely satisfactory to any group in the Nation. I know it was not satisfactory to many of us, but I want to emphasize that it was the best bill that you could get Congress to agree on. Permit me to say here that it takes votes in Congress to put things over. The South is all interested in agriculture. But the original 11 Southern States have only 102 Members in the House out of its membership of 435. In considering farm legislation, I would like for you to understand that most of the Members of Congress come from the great industrial centers, and it is difficult for the Members of Congress from those sections to become very much interested in the farmers in the South or West. Since the great agricultural sections are on the short end of the voting strength in Congress, we have great difficulty in securing what we want and need along that line. A Member of Congress cannot get the legislation he wants. He simply has to work hard, do the best he can, and get the best he can. Nearly all legislation is more or less a matter of compromise among the various representatives from all interests in the Nation. Under these conditions you can see that the Southern States do not have the votes to pass legislation nor to defeat it. I have made many speeches recently in the Eight Congressional District and I have asked the people everywhere I have been what they wanted to do about the present farm bill, that is, whether or not they wished to get rid of it. In every single place where I appeared, the people overwhelmingly told me that they preferred to keep the present bill rather than to do away with it. Of course, I should like to see a bill guaranteeing to our farmers at least the cost of production. Many of us worked for such a bill last year, but we did not have enough votes in Congress to pass it. I hope, my friends, to live to see the day again that the farmer will receive parity prices for his products. If we in the South could get parity for our products, I verily believe that the Old South would blossom as a rose again.

Louisiana is the greatest sugarcane producing State in the United States. Some sections in the Eighth Congressional Dis-

trict are interested in sugarcane. The United States cannot produce as much sugar as it consumes, and despite that fact the national administration has placed sugar upon a quota basis. It is unjust to American agriculture in general and to sugar in particular that we should import sugar from outside of continental United States and not permit our own people to grow sugar, in the face of the fact that we cannot possibly grow enough to satisfy our own American needs.

FLOOD CONTROL

I am the Louisiana Member on the Flood Control Committee of the House, and in that capacity I have been very much interested in flood control. The last Congress probably accomplished more real constructive legislation for flood control than has ever been done in any preceding Congress. We were able to divorce the Morganza floodway so that work could start on it and I am assured that that will greatly assist Avoyelles Parish and the backwater area of Red River. In addition to that, we secured the authorization in the last Congress for the Denison Dam on Red River which the engineers all say will reduce flood waters on that river. We also secured either authorizations or actual construction of certain other protective works, many of them in the Eighth Congressional District. I refer to the levee west of Red River in Natchitoches Parish, the cut-off opposite Colfax to save the town from washing away, the levee from Colfax to Bayou Darrou on the east bank of the river, the levee from Moncla south on the south bank of Red River, and other works. I am now working on a plan to properly drain the territory from Alexandria south through Bayous Rapides, Boeuf, and Cocodrie. I went over this territory recently in company with Federal engineers from the office of the War Department in New Orleans, the State board of engineers, and local citizens, and the engineers all advised that all of the water from the western watershed in Rapides Parish ran over the lowlands of Rapides and on across Avoyelles and that if this water could be channeled south through these bayous it would greatly help Rapides and Avoyelles Parishes both. While there is nothing definite on this at all, I hope that we may eventually get this.

FREIGHT DISCRIMINATION

My friends, the question of freight discrimination has always been a great handicap to the South. If the South is the Nation's No. 1 economic problem, as has been said by those high in authority, which, however, we deny, it was made so because of unjust discrimination. I do not wish to put this forth as a sectional matter, but everybody knows that the North and the industrial East have had the advantage in many ways. For 50 years there has been built up a system of freight rates that has handicapped the entire South. The railroads charge, and are permitted to charge, more for some of our products than the producer gets. For instance, last year I tried to get the railroads to haul some watermelons from the northern part of the Eighth District to Chicago. The finest watermelons in the world were selling in the field at 15 cents per hundred pounds. If I recall correctly, the railroads wanted 67 cents per hundred pounds to haul the melons, all of which meant that the melons were not hauled, because the railroads were asking more to haul the melons than they would have probably sold for in Chicago. To give you an idea how the South is discriminated against in the matter of freight rates, it costs 77 cents to ship 100 pounds of freight from Shreveport, La., to Cincinnati, Ohio, and it costs only 50 cents to ship the same freight from Cincinnati, Ohio, to Holyoke, Mass., the distance being exactly 808 miles in each case. An effort will be made in the next Congress to correct this situation. A bill will be introduced and I expect to do my best to help pass it. Frankly, I am afraid that we will not be able to get enough votes to do it.

OLD-AGE PENSIONS

I wish now to discuss the question of old-age pensions. We do not have at present, strictly speaking, an old-age pension. We have an old-age assistance, which is a different matter. May I say here that whatever I shall say along this line I do not wish it taken as a criticism of the public welfare department. I am merely discussing the system. Your local welfare directors and workers work under regulations and they are doing the best that they can under the circumstances. Under the system now they have to investigate the needs of a person. I do not think, ladies and gentlemen, that one who has worked 65 years ought to be penalized because he has been frugal and has saved and has managed to have a little home. I have long favored a direct Federal old-age pension. I am not discussing the amount and I am not discussing the age at which it should be paid. I am simply discussing the principle of a direct Federal old-age pension. When the time comes, if it ever does, that each person at a given age will receive a direct check from Washington, then you will have an old-age pension and it will be fair to everybody. Under our system now, the Federal Government matches what the State government puts up. It necessarily follows that a poor State—and our Southern States are, relatively speaking, poor States—cannot put up as much as a rich State like New York or Pennsylvania or Delaware or Michigan and many others. As the result of that the Federal Government pays much more to an old person living in a wealthy State than it pays to an old person living in a poor State. I do not believe that old people ought to be discriminated against because of where they live. I want my old people in the South to receive as much from the Federal Treasury as the old people who happen to live in the North or the East.

Therefore, I am advocating and working for a direct Federal old-age pension. I am not promising you that I will get you a direct Federal old-age pension, because I am only one Member of Congress, and I have always made it a practice never to promise anything unless I can personally deliver that thing. I cannot make any promise predicated upon the actions of anybody else, and therefore in all these matters I am giving you my views, my convictions, so that you will know my position. But I have always greatly loved old people and I have always exerted myself in their behalf and I expect to keep up the fight for them. I hope that at an early date we may be able to get enough votes in Congress to bring to you a direct Federal old-age pension. I want you dear old people who are listening in to me to know where my heart is and that I am interested in you and working for you.

UN-AMERICAN "ISMS"

Now, my friends, I want to discuss briefly with you the matter of the inroads being made by certain un-American doctrines. I refer to communism, nazi-ism, and fascism. These teachings have torn up Europe and they lie at the bottom of most of the world's trouble today. Recently the Dies committee, headed by my good friend and neighbor Congressman MARTIN DIES, who joins me on the west just across the Sabine River, has been investigating the activities of un-American "ism" in our country, and some startling disclosures have been made. I sincerely hope that the investigation will go on. While we do not have much evidence of un-Americanism in the South, in the North and East there are many organizations that are teaching subversive doctrines which are intended to undermine and destroy our churches, our schools, our civic organizations, our civilization, and our Government.

Most of these organizations are openly and notoriously atheistic and agnostic. The World War was fought to save democracy, so it was said, but the fact stands out that since that time we have had dictatorships in the ascendancy, and everyone who is posted on current events today knows that there is perhaps in the world a death struggle between democracies and dictatorships. My friends, we want to preserve this country, our country, this country founded 150 years ago upon the principles of right, liberty, and justice, dedicated to the perpetuation of faith in man and God. Our forefathers believed in the fatherhood of God and the brotherhood of man, and we do not want any alien philosophies of Europe thrust upon us to destroy those concepts. I, therefore, feel that our churches, our schools, our lodges, our civic organizations, our citizens in general, ought to oppose with all their might communism, nazi-ism, and fascism. We cannot control Europe. We make no attempt to control Europe, but we do not want these European "isms" to undermine our civilization. I have faith in our country. I believe that in the grand Old South there is perhaps today the purest and the most abiding faith in man and God that can be found anywhere in the world. I want to keep it so. I want to preserve our southern civilization. We can best do it by sticking to the ideals of our forefathers.

PEACE AND WAR

I am opposed to war. I hate war. War seems so unnecessary. In this enlightened age it is strange that so-called civilized people line up and shoot each other down. But, ladies and gentlemen, we have to take life as it is, not as we would like for it to be. These same philosophies of communism, nazi-ism, and fascism which I have just discussed have made Europe a potential armed camp. We are facing ruthless dictators who will not stop at anything. They know the voice of power. They do not heed the voice of love as enunciated by the lowly Nazarene. I am very much in favor of staying out of Europe and letting them have their own quarrel. I do not want our boys to go back to Europe any more to try to settle any more European quarrels. The European situation, in the hands of ruthless dictators, remains a perpetual threat to the peace of the world. We hate to spend money in our country for armaments. We do not want any war at all. I hope that the United States will never be called upon again to fight. I sincerely hope that I shall never be faced with such a vote in Congress. But, with conditions facing the world as they are now, I do believe that the American people ought to make preparation to defend our own country if we should have it to do. Since it appears that Europe recognizes only the voice of power and force, it would appear to be pretty good insurance for peace for our people to have an adequate Army and Navy to defend this country if it had to be done.

It sounds good to preach internationalism, but it is hard to preach it and practice it when so many nations are turning distinctly nationalistic. I, therefore, believe that we should look out for America first. We should practice more the slogan of America for Americans. I like the teachings and philosophies of our fathers. I am old-fashioned enough to think that the American way of doing things is still good. I want the sacred heritage handed down to us by our great fathers and mothers preserved. I believe in America, her mission, her institutions, her people. I have faith in man and God. With that faith, with a steadfast resolution, I go forth as your servant to continue my labors for you.

Alexander Hamilton

EXTENSION OF REMARKS
OF
HON. JAMES W. WADSWORTH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1939

ADDRESS BY JAMES W. WADSWORTH, OF NEW YORK, AT DINNER IN HONOR OF ALEXANDER HAMILTON, IN NEW YORK CITY, JANUARY 11, 1939

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at a dinner in honor of Alexander Hamilton, in New York City, January 11, 1939:

Mr. Toastmaster, ladies, and gentlemen, the closing years of the eighteenth century produced an extraordinary group of young men, each of whom startled the world and established his fame long before reaching the middle years. While older men such as Washington and Franklin were indispensable to the causes which they represented, nevertheless divine Providence seems to have willed that the spirit of youth should, in large measure, occupy the driver's seat. For example, in Great Britain, Charles James Fox before his twenty-first birthday was acknowledged to be the ablest debater in the House of Commons. Into that same arena came the younger Pitt, who at the age of 25 was Prime Minister and in that capacity guided the British Empire in a terrific crisis. Napoleon Bonaparte was in his twenties when he amazed the world by his victories in Italy in 1796. On this side of the Atlantic a like condition prevailed. Jefferson was 33 years old when he wrote the Declaration of Independence. While Washington had reached the middle years, most of those who sustained him in his long hour of trial were young men. The delegates to the Constitutional Convention at Philadelphia in 1787 averaged less than 40 years of age. Madison was one of the youngest. But of all the men on either side of the ocean who achieved greatly in their youth none compares with Alexander Hamilton. Not only did he outshine the other youngsters with the brilliance of his intellect, but he accomplished something which none of the others accomplished. Almost singled-handed he built a government and founded a tradition which stands today substantially unimpaired. Jefferson painted a great ideal and swayed the emotions of men the world over, but he did not found a government. Fox and Pitt served their country greatly but did not alter British institutions. Napoleon Bonaparte all but conquered the world but his empire perished. Of all these youths the work of Hamilton, only, still stands—the Government of the United States, buttressed by tradition, respected and defended by 130,000,000 people.

As time is measured, Hamilton's work was done almost in the twinkling of an eye. He began it as a youngster, and he finished it still a young man. The brevity of his appearance in the firmament was meteorlike. He illuminated the heavens for but a moment of history. It may well be that this very brevity accounts for the fact that his accomplishments are not better understood.

Let us take a brief glance at Hamilton's origin and earlier years. His father was a Scotchman, his mother was French. Alexander was born in 1757 in the island of Nevis. Thus he started life as a British subject. His father was a merchant, but did not prosper. His mother died while he was still a child. Such was his poverty that he was compelled to go to work at an early age. He secured a clerical position in the office of one Nicholas Cruger, a prosperous merchant of the island of St. Croix. When he was 12 years old he wrote to a schoolmate named Stevens. I read a portion of that letter, and, please remember, as I do so, the age of the writer. He writes:

"To confess my weakness, Ned, my ambition is prevalent, so that I condemn the grovelling condition of a clerk or the like, to which my fortune, etc., condemns me, and would willingly risk my life, though not my character, to exalt my station. I am confident, Ned, that my youth excludes me from any hopes of immediate preferment; nor do I desire it; but I mean to preface the way for futurity. I'm no philosopher, you see, and may justly be said to build castles in the air; my folly makes me ashamed, and I beg you'll conceal it; yet, Neddy, we have seen such schemes successful when the projector is constant."

Was there ever such precocity? But the fact is this letter is not a freak. The boy did not stop with its writing. His strides toward intellectual maturity were constant and his progress little short of miraculous. His employer was absent from the home office for long periods, and during those absences the Hamilton boy was left in complete charge of a very considerable merchant shipping business. At the age of 16 he was writing instructions to the firm's agents in New York—instructions having to do with freight and its destination, with accounts, and with estimates. In his heart he may have been protesting against the "grovelling condition of a clerk," but he was learning to recognize facts—cold, hard facts; he came to understand a business conducted upon sound principles. It is amazing that in his early youth he should have grasped knowledge of the practical world, and planted a seed so deep in his fertile mind that it grew a few years later into a veritable tree of knowledge, hale and green, resolute against terrific tempests. His relatives scraped together a slender fund and with it young Hamilton left his island home to seek an education in the British colonies of North America. He was enrolled as a student in King's College (now Columbia) in the city of New York in the year 1773. Immediately he found himself in collision with events of enormous importance. The colonies were shaken with a spirit of protest against the tactics of King George III and his rubber-stamp Parliament. The feeling of resentment was growing ever stronger. Public meetings were held throughout the colonies up and down the Atlantic coast. The authority of the Crown was being challenged. Within a few months of Hamilton's enrollment, tea was thrown into Boston Harbor. Despite the plea of the loyalists the spirit of revolt spread. Soon Hamilton's keen mind pierced the fog of passion and hysteria and discovered the great objective—ordered liberty in a new nation.

In July 1774 a public meeting was held in New York, an open-air meeting. Delegates were being elected from New York and from the other colonies to the Continental Congress, and the issue was intense. Several men addressed that meeting with excited oratory. Their identity and their words are forgotten today. Toward the end of the meeting Hamilton mounted the platform and addressed the crowd, this boy of 17. Physically he was not what is ordinarily termed an imposing figure. He stood about 5 feet 6 inches in height. He carried himself erect, very slender, approaching frailness. His features were finely cut. There was an air of distinction about him, of gallantry. This, with the animation and good nature which sparkled in his eyes, charmed all who came in contact with him. It is related that his earnestness commanded respect at the very beginning; that he gained in confidence as he went along; that he was clear, cogent; that he depicted the issue in glowing colors; that he held the crowd; that he swayed them. It was an amazing performance. It brought him instant recognition. It set his feet upon a path which he followed without deviation for years to come. That he was ambitious, intensely so, cannot be denied, but we find in the study of his life that his ambition did not seek power and glory for himself, the pride of place, or the luxury of wealth; rather he longed to build something great and enduring, something for the lasting benefit of his adopted country. As a mere stripling, endowed with an extraordinary vision, he dedicated himself to a great task, and in every move he made dating from that speech in New York, he asked nothing for himself.

Let us follow him along the road. He had scarcely finished that speech in New York when he began writing pamphlets which were printed and circulated widely. He did not employ the language of an infant prodigy, rather he weighed in the balance the contentions of the two parties to the dispute. He denied the right of the British Parliament to legislate for the colonies, much less to tax them without their consent. He examined colonial charters, discussed the British constitution, expounded the fundamentals—thoughtfully, seriously. He urged his readers to organize and to resist; if need be, to fight. These articles first appeared at the end of 1774 and continued into 1775. They were addressed primarily to the people of the colony of New York. While he was writing them the British troops retreated from Lexington. Ticonderoga fell into the hands of the patriots. Bunker Hill was fought, and George Washington was appointed to the office of Commander in Chief. Hamilton stopped writing and stopped speech making. He turned from his discussions of political institutions, of law, and of rights, and became a soldier. He joined an artillery company, and from that moment devoted himself to learning from the ground up how to handle a battery of field artillery. He rose to the command of his battery at the age of 19. His unit was the first to come under the fire of the British guns in the New York area. The Americans were defeated at the Battle of Long Island and, later, in a series of engagements along the Hudson north of the city of New York. Suffering under heavy blows, Washington moved his army to the west bank of the great river and retreated across New Jersey, his men in utter misery. Those were dark days. Hamilton and his battery were in that retreat. It was a part of the rear guard and he handled it with consummate skill. An observer said of him: "I noticed a youth, a mere striping, small, slender, almost delicate in frame, marching beside a piece of artillery, with a cocked hat pulled down over his eyes, apparently lost in thought, with his hand resting on the cannon, and every now and then patting it as he mused, as if it were a favorite horse or a pet plaything."

A little later, at a time when victory was needed so desperately, Hamilton's battery struck a vitally important blow at the Battle of Trenton. There, as upon former occasions, he demonstrated his mastery of the artillery arm and shared with Knox the reputation of being the best artillerist in the American Army. He had attracted the favorable notice of his superiors. Washington himself was impressed by his work—on Long Island, at White Plains, at the crossing of the Raritan, at the retreat through New Jersey, at Trenton. It was not merely his ability as a soldier but the brilliance of his intellect and his unquenchable spirit which brought him into notice. Recognizing these qualities, the overburdened Commander in Chief appointed him aide-de-camp on his staff, with the rank of lieutenant colonel, and made him, in effect, his military

secretary. The appointment was made in March 1777. Hamilton was 20 years of age at the time.

Here commences another phase of his career. Washington's correspondence was enormous. It consisted of a never-ceasing exchange of messages with the Continental Congress, with the Governors of the several States, with public characters scattered over the country, with European statesmen, and, necessarily, with his subordinate military commanders. Washington knew exactly what he wanted to say, but he was not a facile writer; to him the task of writing was laborious and involved numerous corrections and alterations of the text. Given ample time, he could do it; but there are only 24 hours in a day, and Washington labored terribly. Enters Alexander Hamilton, with the exuberance of youth and its strength, with a mind that worked like chain lightning, capable of divining with absolute accuracy the wishes of his superior, a master of lucidity, wielding a facile pen. Only 20 years of age was he at the time, but he proved to be the perfect instrument which Washington needed, and as such he commenced his really great contribution to the patriot cause.

He saw at first-hand the nature of the problems that confronted his Commander in Chief. Daily evidences of the deplorable weakness of the Continental Congress were laid before him. The utter ineffectiveness of that body was tragic. It possessed power to issue commissions to general officers from time to time and to conduct haltingly the foreign relations of the so-called United States. It could authorize the organization of military units, but it could not compel recruiting. It could call upon the several States for quotas of men and supplies, but it could not compel compliance. It had no revenue for the simple reason that it did not possess the power to tax. Presumably presiding over the destinies of more than 2,000,000 people, it never put into the field more than 40,000 men at a time. The average strength of the Army through those years of struggle was far less than that. At times Washington's active and dependable force was reduced to as low as 3,000 men. Neither the Continental Congress nor Washington could do anything about it. Throughout the entire war the people of America generally were prosperous. There was plenty of food in the countryside and no lack of clothing, and yet Washington's soldiers were starving and in rags. The Congress issued paper currency and tried to finance the revolution with it. It soon became almost worthless. There was nothing behind it to make it good. During the terrible winter at Valley Forge the British Army at Philadelphia, only 15 miles away, lived on the fat of the land so far as food was concerned. They bought large quantities of it from farmers in the neighborhood, paying real money for it. Hamilton saw, as Washington did, that the trouble did not lie in any lack of patriotism on the part of the people nor any lack of justice in their cause. It lay in the fact, rather, that the United States had no real government; that the problem was essentially governmental and not military; that if the British were to win, it would be because of that very lack of government.

It is true that we staggered along until hostilities closed at Yorktown, but it is doubtful that we could have done so had it not been for the French alliance which brought loans and supplies and troops to our assistance in the closing years of the struggle. By the same token, it is evident that with a strong government from the beginning the colonists would not have needed help from France. Hamilton, coming in close contact with all this, went to work at teaching men a true concept of government and a proper management of its finances. He wrote voluminously to important men in the country arguing, explaining, demonstrating. He sketched out the structure of a federal government which should preside over a union of the States. He even went so far, in a letter to Gouverneur Morris, as to propose the establishment of a national banking system and developed it down to its last details. He was 23 years of age when he did this. Already he was looking far ahead. While he feared that America might lose in her battle for independence, he feared another thing, and that was that having won independence, the States would fall apart, each of them impotent and destined to lose that independence so dearly bought in the war. Sitting in Washington's headquarters intimately associated with his great commander, knowing his mind, sharing his vision, Hamilton built for the future. He had youth on his side, and the miracle is that despite his youth he was a stern realist, ever insisting that facts should be faced. In 1782, when actual hostilities had ceased and he had reached the age of 25, he wrote lengthily upon the prospects of building a nation. He said, "There is something noble and magnificent in the perspective of a great federal republic, closely linked in the pursuit of a common interest, tranquil and prosperous at home, respectable abroad; but there is something proportionably diminutive and contemptible in the prospect of a number of petty States, with the appearance only of union, jarring, jealous, and perverse, without any determined direction, fluctuating and uphappy at home, weak and insignificant by their dissensions in the eyes of other nations." In that passage we find Alexander Hamilton's great objective clearly defined.

Hamilton resigned his appointment as Military Secretary in 1781. His great ambition at the moment was to secure a military command, and after some delay he obtained it. In that capacity he took part in the final campaign of the war which culminated at Yorktown. Upon that field he led his command in person in a dashing assault and capture of the British redoubt which was the key of Cornwallis' defense. Its loss forced the surrender of the latter a few days later. The incident was dramatic in that it was the culminating act of the war itself. In it Hamilton displayed not only superb courage but a high talent for the leadership of men in battle. He was 24 years old at the time.

The war over, Hamilton returned to the city of New York, studied law, and embarked upon the practice of his profession. The reputation which he had made for himself as a soldier and a writer, as well as his remarkable aptitude for the law, soon made him the leader of his profession and easily the most prominent figure in the city. Successful as he was in his profession and happy in his social contacts, he was fearfully worried about his country. The war was over, independence had been won for the 13 States. A treaty of peace had been signed with Great Britian. In it the British Government acknowledged the independence of her former colonies without reserve. Moreover, London agreed to withdraw from the frontier posts in the Great Lakes region—a concession of great importance. In return, the British asked and obtained the promise that the Loyalists and their property in the several States should be respected and protected, and that private debts due to British subjects should be honored.

These last conditions, however, were totally ignored by the Americans. The loyalists were persecuted, their property seized ruthlessly, and thousands of them driven out of the country. The payment of debts due to British subjects was laughed at. We must remember, of course, that the prejudice against England was very deep and bitter, and that as a result the people in the several States paid no attention whatsoever to the promises made in their behalf in the treaty. In retaliation, as it were, the British Government refused to turn over the frontier posts. The truth of the matter was that the Congress of the United States, which was merely a continuation of the old Continental Congress, had no power to enforce the provisions of the treaty, no power to see to it that the new Republic kept its promises. Hamilton was bitterly chagrined. If there was one thing deep in his heart, it was the hope that his country would be faithful to its contracts and thus would put itself in a respectable position before all the world. Matters went from bad to worse. The Government of the Confederation had no credit standing. Its paper money was next to worthless. It had no revenue, for it could not tax. The several States began going their own ways. Each put out its own paper money, and before long they were all knee deep in inflated currency. Jealousies arose among them. Tariff barriers and various restrictions against commerce were erected between them. Neither the States nor the central Government could borrow a penny, for no one at home or abroad had the slightest confidence in their ability to pay. So great was the jealousy, the bickering, and the confusion that for a time open hostilities were threatened between certain States. Everything that Hamilton had feared was coming to pass. The new Republic was disintegrating, impotent, and despised, and destined, surely, to lose its hard-earned liberty.

You all know the story of the Constitutional Convention at Philadelphia in 1787. A few thoughtful men determined to make one last desperate effort to save the country. Hamilton, as a delegate from New York, was a member of it. In his participation in its deliberations, which was not as continuous as those of Madison and others, he never ceased urging the erection of a strong central government and the binding together of the States into an unbreakable union. True, he had little faith in pure democracy as a political institution. He plead for a government representative in character, with the process of selection conspicuous in it. He plead for a strong executive, removed as much as possible from the influence of passion and popular hysteria, but subject to check by a senate. He was suspected of harboring designs for the establishment of a hereditary monarchy. What he really wanted was continuity of authority and policy, not a monarchy in the accepted meaning of the term. The Convention finished its work, and while it did not in some respects go quite as far as Hamilton had been urging, he saw in the Constitution reported to the people of the several States a tremendous advance and a potential blessing. With all his heart and soul he threw himself into the great battle for ratification. In fact, he became its chief exponent, and more effectively than any man in America he fought for the new Constitution. The Federalist papers, of which he was the most prolific author, stand today as the ablest exposition of the principles of sound government ever written in the English language. It is difficult for us to realize the strength of the opposition to ratification. Extreme States-rights men were numerous, and, in the main, were very sincere. They fostered State pride and locality pride at the expense of national pride. They expounded the blessings of home rule. They cultivated suspicion of centralized power—an easy thing to do among a people who had fought and suffered in their battle against the great central power at London.

As the people were electing delegates to their several State conventions, which would be called upon to render judgment, the fate of the new Constitution hung in the balance. One of the States in which the bitterest opposition arose was Hamilton's home State, New York. When the State convention met at Poughkeepsie in June of 1788, it was well known and officially announced that the opponents of ratification outnumbered its supporters in the convention in the proportion of two to one. The powerful majority was under the leadership of Governor Clinton. Against him and his supporters Hamilton entered the battle of Poughkeepsie. There did not seem a chance that he should win. But he was indomitable. He expounded every provision of the Constitution, he fought every point, he answered every question. Again and again he demonstrated, with a lucidity never equaled, the vital necessity of

ratification, so that a nation might spring into existence. At first he was voted down, but he never faltered. A friend of his in New York told him that people were asking about the prospects of ratification, and Hamilton replied, "Tell them that the convention shall never rise until the Constitution is adopted." Up the steep hill he climbed, practically alone, forcing his way step by step. Logic, patience, coupled with unquenchable zeal, were his weapons. Finally he topped the summit, and on July 25, 1788, the original minority of 27 was changed into a majority of 3. New York had ratified. It was the turning point in the great battle for ratification. The States had decided to become a nation. Hamilton led all others in bringing them to that decision. He was then 31 years of age.

The new Federal Government was organized at New York in 1789 and embarked upon its career with the inauguration of George Washington. To his Cabinet he appointed Jefferson as Secretary of State, Hamilton as Secretary of the Treasury, Randolph as Attorney General, and Knox as Secretary of War. Hard tasks were assigned to these men, but by far the hardest and most important was the task assumed by Hamilton. With the greatest possible dispatch the Treasury Department must be organized, competent to administer the finances of the new Government. No corresponding department or bureau had existed in the old Federation. There was no trained and experienced personnel to form the nucleus of organization. Hamilton had to pick his men, assign them to their several tasks, and then train them for their work. He labored day and night at it. His energy was inexhaustible. He got the job done as best he could in an astonishingly short time. Then to establish the sound financial policy which in Hamilton's view was essential to the happiness and prosperity of the people at home and the credit of the young Nation abroad, he advocated boldly that the unpaid and unpayable debts of the several States incurred during the Revolution, together with the debts unpaid and unpayable of the old Continental Congress, should be brought together, merged, and funded as the debt of the United States. His proposal struck with horror many hesitant souls, who visualized a huge national debt and resultant crushing taxation, and who much preferred a policy of drift. But Hamilton had two objectives in view—first, to establish the credit of the new Government in the eyes of the world, and second, and even more important, to bind together the 13 States into an unbreakable Union in which people of all classes should have a stake, direct or indirect, in the Federal Government itself. Let it never be forgotten that the ideal of the Union was an obsession with him. And above the Union he saw the Constitution, under which great powers were carefully delegated, with checks and balances to prevent oppression, yet wide enough to shelter a nation would would eventually occupy a continent.

With the steady backing of the President, Hamilton led in the fight. Despite opposition, his measures were adopted. The debts were funded, appropriate measures inaugurated for their amortization. To accomplish this suitable duties and excises were laid, all carefully calculated to produce sufficient revenue. Shortly the national bank was established. The subscriptions to it were completed in a single day. This meant a sound currency. In the twinkling of an eye a vast change was felt in the economy of America. Despair was succeeded by confidence. Men went to work, commerce increased. Within a year the obligations of the new Government reached par and better in the markets of the world. European powers accredited diplomatic agents to the new country. Bankers abroad, as well as at home, were eager and willing to lend to the new Government and to private enterprise at rates not less favorable than those which prevailed abroad. With the completion of these financial measures the first Congress adjourned and the Members went home to find a happy people.

One other important thing Hamilton desired to accomplish, and that was to establish, if he could, a wise policy to govern the foreign relations of the infant Republic. He knew thoroughly, although he had never been there, the pitfalls of European diplomacy and politics. He anticipated that as time went on some European power would try to ingratiate itself with the people of the United States and draw them into some conflict or attitude advantageous to the tempter and dangerous to the tempted, especially when the latter was a little fellow. He knew from his reading of history that things like this had happened upon many occasions and that, generally speaking, they happened as the result of the people's being swept off their feet by hatred or sympathy approaching hysteria. The issue arose sooner than most people, including Hamilton, expected. It came and made itself felt violently with the onset of the French Revolution.

American sympathy for the French people, supposedly following the American example in a struggle for liberty, was very deep. It swept the country. People wore cockades in their hats, great processions marched through the streets singing the Marseillaise, shouting encouragement to France. Public meetings were held at which it was insisted that the United States should aline itself with France in her battle against all the powers in Europe, including Great Britain. Could a vote have been taken, intervention would have carried overwhelmingly. Washington resisted it, bravely and patiently. Hamilton struck out against it. He knew it would mean exhaustion of the new Republic and perhaps its destruction. He led in the battle, and as a result was denounced by an ever-growing group of political enemies as being a supporter of the British King and a secret enemy of liberty. For a time it seemed as if the flood would get out of control, sweep over the administration, and plunge the country into a European war. It was a time of wild hysteria and most of the public men who deprecated it did not dare speak out. A fortunate incident occurred, however, which reversed the current completely. The French minister to the United States, one Genet, made the fatal error of appealing directly to the American people for their support and at the same time attacking George Washington. This blunder gave instant pause to the agitation, and, in a moment, destroyed it. Genet's act was more than the people had calculated upon, more than they could stand. In their hearts they adored Washington. To them he was the symbol of all they had suffered, and the man or the nation that attacked him lost the sympathy and friendship of the people of the United States.

The lesson came at exactly the right moment and was supremely salutary. Hamilton instantly took advantage of it. He drafted the rules of neutrality to be proclaimed by the President of the United States. A majority of the Cabinet, Jefferson dissenting, supported Hamilton. Washington approved, and the great neutrality proclamation of 1793 was issued. The policy contained in that proclamation written by Hamilton has stood from that day to this—no entangling alliances. It was again expounded in Washington's Farewell Address, and it is generally conceded that Hamilton was the principal author of that precious document. He resigned as Secretary of the Treasury and left office at the end of January 1795. He was then 38 years old. His resignation was prompted by two considerations: First, he believed that he had accomplished everything that could be accomplished by him under the circumstances and, second, his financial condition was such that it was absolutely essential for him to return to the practice of law and recoup his fortune, sadly depleted during his term of office. He continued for several years, up to the day of his death, as a leading figure in America. Not all his undertakings were successful, for he was not a good politician in the usually accepted meaning of the term. He was not skillful in political management and not always tactful. The leadership of the Federalist Party had been thrust upon him by the logic of events. In his earlier days he had not anticipated that such things as political parties would grow up in America. His vision was above parties. Not all of the mistakes of the Federalists during the administration of John Adams were Hamilton's mistakes. As the party disintegrated, partly as the result of its own mistakes and partly of the extraordinary skill of its opponents, the purely political influence of Hamilton waned.

The Federalist Party perished. Its last administration was followed by 24 years of uninterrupted Democratic supremacy—8 years of Jefferson, 8 years of Madison, and 8 years of Monroe. Those men and their adherents numbering thousands had been Hamilton's bitter enemies when he was in the Treasury. They left no stone unturned during all that long period endeavoring to belittle his work. But they did not, they dared not, disturb his structure. Not one stone or beam in it was removed. It was so sound and so strong a building that not even his bitterest enemies could shift it an inch on its foundation. There it has stood down through the generations.

As we look back upon those days we see that Hamilton lived and worked in an era of great events, that he was the master of them, that he was wise and brave and the purest of patriots, that he more than any other man established the tradition of the Constitution, the Union, and the honor of the Government. That tradition lives to this hour. Occasionally it has been challenged, never broken. After a hundred and fifty years it is not only strong, but instinct with that spirit of youth which was unquenchable in Alexander Hamilton.

W. P. A. Appropriations

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1939

TELEGRAM URGING CONTINUANCE OF W. P. A.

Mr. SHANLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

NEW HAVEN, CONN., *January 10, 1939.*

Hon. JAMES A. SHANLEY,
Member of Congress, Washington, D. C.:

Very much alarmed at hesitancy of Congress to approve appropriation recommended by the President for continuance of W. P. A. Recent reductions in W. P. A. rolls in New Haven area have precipitated radical increases in local public relief, for which local funds are not available. Of 349 men and families discharged from W. P. A. in New Haven proper, 328 already require local public or private relief. Of 1,554 in New Haven district, partial reports indicate almost as large a proportion now applying for public relief, and after careful

investigation being accepted. Urge that you support adequate Federal appropriation for relief needs. Community chest funds in whole area are reduced and insufficient.

Rev. WILLIAM J. DALY,
President, Council of Social Agencies.
LAURA JEAN KEISER,
Chairman, Family Welfare and Relief Committee.
JOHN W. MURPHY,
Mayor of New Haven.

American Neutrality

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1939

Mr. KNUTSON. Mr. Speaker, today the world is in a turmoil more violent and widespread than at any time since the World War. Racial hatreds and religious intolerance are spreading their blighting hands over other lands and in many places brother is fighting against brother. We are indeed fortunate to be so situated geographically as to be comparatively free from the destructive forces that are gripping those unfortunate peoples and it is our wish that we remain in our present happy situation, which we will be able to do only so long as we as a people remain neutral in act and thought, staying at home and attending to our own affairs.

Neutrality had been the traditional policy of the American people from the formation of the Republic up to the outbreak of the World War, when our greed for gold drove us to sell war material to the Allies, who controlled the seas, and it was our abandonment of neutrality that finally drew us into the war.

Today a very considerable number of misguided Americans, and many who are Americans neither in allegiance nor spirit, would have us again abandon that neutrality so that the embargo against the shipment of war materials may be lifted to permit their being sent to countries where there is war, civil or otherwise. In my opinion, that would be a most unwise thing to do, because it would surely lead us into another war, just as it did back in 1917, and that must be avoided at all costs.

The question of neutrality is not one that is generally understood. Certainly many of those who advocate the abandonment of our traditional policy of neutrality do not fully understand all the implications involved, and it is for the purpose of bringing about a better understanding of this most important and timely subject that I have asked to have incorporated as a part of my remarks a scholarly and thoughtful address upon the subject, delivered by Judge Martin Conboy, LL. D., of New York City, before a vast gathering of patriots assembled in Constitution Hall on Monday evening, January 9, which it was my great privilege to hear:

AMERICAN NEUTRALITY

The American reason for keeping the Spanish embargo is that it conforms to our national neutrality policy.

The neutrality policy of this country was established when the United States were formed as a separate Nation. Time has proved the wisdom of the maintenance of an attitude of impartiality and noninterference in the internal affairs of other nations. The policy was declared by the first President of the United States. It was enacted in one of the first laws adopted by the Congress of the United States.

The policy has never been narrowed. Whenever there have been any modifications of it they have all been by way of enlargement to make it more effective.

The policy has been extended to include the prohibition of the sale of arms and munitions of war. Coming to recent instances, the neutrality law, passed August 31, 1935, made the export of arms, ammunition, and implements of war from the United States to any belligerent state unlawful whenever the President found that there existed a state of war between two foreign states. Within a month after this enactment the Italian attack on Ethiopia began. On October 5, 1935, President Roosevelt issued two proclamations, one forbidding shipment of munitions to the belligerents, the other giving notice that American citizens could travel on belligerent ships only at their own risk.

When civil war broke out in Spain, July 1936, the President had no authority to lay an embargo on the exportation of munitions and implements of war to Spain for the use of either side because the then existing neutrality legislation did not apply to a condition of civil war.

Nevertheless, the established policy of the United States was opposed to such traffic and accordingly on August 7, 1936, the Assistant Secretary of State informed all American consular representatives in Spain that "in conformity with its well-established policy of noninterference with internal affairs in other countries, either in time of peace or in the event of civil strife, this Government will, of course, scrupulously refrain from any interference whatsoever in the unfortunate Spanish situation."

While the Government could not under then existing law, place an embargo on the exportation of munitions and implements of war to Spain for the use of either side, it nevertheless employed strong moral pressure to prevent American manufacturers and exporters from shipping such articles to Spain. Until the end of the year 1936 this pressure was successful. No licenses were issued by the Federal Munitions Control Board and none, in fact, was sought.

Had this situation continued it would have been unnecessary to have adopted legislation declaratory of the well-established policy of the United States.

But in December 1936 an American company applied to the Munitions Control Board for a license to export to the Loyalist Government of Spain $2,777,000 worth of airplanes and engines, and the Board, which had refused licenses for the exportation of arms and munitions to Italy and Ethiopia during the war between those countries, was without authority in law to refuse licenses to ship such articles to Spain.

The editor of The British Year Book of International Law, 1937, commenting upon this situation, says:

"With evident regret, therefore, the Board felt obliged to issue the licenses in the present case, and it did so. The President publicly expressed his disapproval of the action of the Cuse Co. in refusing to comply with the Government's nonintervention policy, although he admitted that the company was within its legal rights in shipping the airplanes and engines to the Spanish Government. At the same time he caused the various governments of Europe most directly concerned to be informed of his sincere regrets and of the intention of the Government of the United States to continue to pursue a policy of strict neutrality in the present civil war."

The President publicly characterized as "unpatriotic" such shipments as had been made and deprecated "the unfortunate noncompliance by an American citizen with this Government's strict nonintervention policy."

Thereupon, on January 8, 1937, Congress passed a joint resolution stopping exportation of arms and munitions to Spain. It was too late to prevent the shipment referred to, but it came early enough to stop a large shipment consigned to the Spanish Ambassador to Mexico, which was intended to be forwarded to Spain.

This embargo resolution adopted January 8, 1937, is a special act to stop the exportation of arms and munitions to Spain. It is still in force. It is founded on the well-established policy of the United States which had been violated by the shipments made before there was any statute prohibiting them. It reads:

"That during the existence of the state of civil strife now obtaining in Spain it shall from and after the approval of this resolution, be unlawful to export arms, ammunition, or implements of war from any place in the United States to Spain or to any other foreign country for transshipment to Spain or for use of either of the opposing forces in Spain."

The next step in the expression by Congress of our well-established principle of neutrality was the writing into our neutrality statute of a general provision relating to civil strife in any country. Such legislation was adopted May 1, 1937, in a joint resolution of Congress, and the President, acting under the authority thereof and on the same day, issued a proclamation, finding "that a state of civil strife unhappily exists in Spain," and adding to his finding "that such civil strife is of a magnitude and is being conducted under such conditions that the export of arms, ammunition, or implements of war from the United States to Spain would threaten and endanger the peace of the United States."

In that proclamation the President admonished all citizens and residents of the United States to abstain from the exportation of arms, ammunition, or implements of war from any place in the United States to Spain or to any other state for transshipment to, or for the use of Spain under the penalties provided for in this statute.

Since it would appear that pressure groups are endeavoring to induce Congress and the President to abolish the law prohibiting the export of arms and munitions to Spain and thereby to repeal the well-established policy of the United States, it is desirable to have clearly in our minds the consequences of such action.

The purpose of our neutrality policy is to keep us out of European disputes. It does not make the slightest difference whether the situation is a state of war between two nations or a state of civil war, where interference in that state of civil war will be productive of the same unfortunate results as would interference in a war between two states.

There is a condition of civil war in Spain. After 2 years of fighting the Insurgents are in control of 35 of the 50 provinces in Spain and more than half of the population of the country is within the territory they control. Congress has declared that while that condition continues no arms or munitions of war shall be exported from this country. There was implicit in that declaration that our interference in the Spanish civil war would threaten and endanger the peace of the United States just as if Spain were at war with another country, and the condition implicit in the finding by Congress is positively declared by the President in the Presidential Proclamation. Moreover, the condition is known to the world at large, and the outcome of the war, whatever it may be, and the sympathies of the pressure groups, whatever may be the interest of such groups, provide no justifiable reason for changing the well-established policy of the United States and thereby defeating the very purpose intended to be accomplished by that policy, to wit, the protection of the peace of the United States.

The argument put forward now is that by the prohibition of the export of arms and munitions from the United States, the chances of success of one of the parties to the civil strife unhappily existing in Spain are threatened and endangered.

This means, and only can mean, that the proponents of change either do not believe the peace of the United States to be in any way threatened or endangered by the export of arms and munitions to Spain, or that they believe that the risk of danger to the peace of the United States should be subordinated to their concept of the issues involved in the civil strife in Spain.

These considerations are entirely out of place when we consider the purpose of our neutrality policy. When two nations are involved in war it makes no difference so far as our policy is concerned, whether we sympathize with one or the other. Our neutrality policy is to assist neither. So, likewise, when a condition of civil strife exists, our established policy of neutrality is equally applicable.

Sympathy with one side or the other has no more to do with the invocation and applicability of our policy than would sympathy as between two warring nations.

Unquestionably there are many people in the United States who want to see the Loyalists succeed, and unquestionably there are also many people in the United States who want to see Franco succeed. This country's well-established policy of neutrality, if it is to remain what it has always been, is not affected by the desires of the one party or the other. Above the desires of both is the peace of the United States, and that peace the neutrality policy is intended to protect. The converse of neutrality is assistance to one or other of the belligerent parties, and such assistance is the direct antithesis of neutrality. In short, the change demanded under the circumstances would mean an affirmative act of aid and assistance in favor of one of the belligerent parties as against the other.

In the present instance, insistence upon maintenance of the integrity of our well-established policy of neutrality need not preclude us from inquiring whether, if the matter were one of mere temporary expediency, the President was well advised in affirming that the export of arms and munitions does tend to threaten or endanger the peace of the United States.

In respect to such an inquiry, we are not to forget that, whatever the issues in Spain may be, it cannot be said that the conflict concerning them has come about since we prohibited the exportation of arms to Spain.

Within limits, there can be no complaint against those who hold that the cause of one of the parties to the civil strife in Spain is better than the cause of the other party.

Those who are endowed with sight and hearing are aware that the minds of men and women are occupied with the relative merits of the various political cults now popular in Europe. There never has been a time when there were not differences of view between people living in this country as to what was happening in those parts of Europe with which they were most familiar. We need have no doubt, for example, that there exist here now among those who came from Hungary or Poland or Rumania or the Ukraine differences quite as accentuated as those put forward regarding Spain. We have recently witnessed a rather remarkable demonstration of interest in the current differences in England. If no well-established policy had been involved it might very well have been that the knowledge of these differences, and the prospect of war growing out of them, concentrated the attention of Congress upon the problem of how best to prevent the United States being drawn into the maelstrom of European passion and hate. Congress knew by experience how easy it is for the acts of citizens to get us into a situation in which the peace of the United States would be endangered. How to avoid being led into a situation of that kind was a more difficult problem. The way declared by our well-established policy was one that indicated how the danger of entry into war could be averted. It was a way the United States had adopted in other instances and found effective.

We abandoned the profitable business of selling arms and munitions. We abandoned the more deceptive expectation of profits from lending money on Government securities. We put behind us the indignation aroused by loss of lives that came from traveling on ships of belligerent nations. We cut clear of all the disputes that came when a neutral nation tried to maintain its place on the sea against the action of belligerents. And we decided that the favor and profit to be drawn from one set of European or other belligerents benefiting by our arms, munitions, and credits was too dearly bought at the price of the threat and danger to the peace of the United States involved in such transactions.

While no one could predict, with complete accuracy, all the conditions that might arise in the course of another world conflict, or be able to say in advance that in no circumstances would the highest interest of the United States be challenged during or after the hostilities, there was a general and entirely proper agreement that we should avoid being drawn into it through acts or omissions of our own.

There was one criterion by which we could be guided. We had been in very much the same position 20 years before, when the World War started in 1914. We knew that whoever may have been to blame for that catastrophe the United States had no share in that blame, no part in the maneuvers that precipitated the declaration of war. And we knew, also, that partly through what we did ourselves, and might have refrained from doing, we were drawn irresistibly into the war before it ended. After 20 years of reflection we had come to the conclusion that we had gone into it without having had any original intention of doing so. More than that, we were now presented with evidence that our intervention, in the terms in which we had conceived that intervention, had been fruitless. Instead of a world made safe for democracy, we saw all about us a world in which democracy was being extinguished by dictatorships. Where we had thought to establish the reign of peace we saw unprecedented preparations for war.

Therefore, we thought it well, while we could still do so without being under the influence of the passions that such a war in Europe must engender among us, even if we were not participants, to take thought about those actions of our own that could be identified as having in any considerable measure been contributory factors to our entry into that war.

The legislation that resulted in 1935, amplified in 1937, undoubtedly represented the sober judgment of the American people.

We made these enactments in development of our well-established policy, to safeguard the peace of the United States. We made them because we concluded, by costly experience, that our established policy had to be extended.

What was that experience?

Just how and why the United States did get into the Great War has been the subject of innumerable volumes. Just what was the operation of cause and effect will continue to occupy the attention of research students for many years more. But there were some facts concerning which Congress could not be in doubt.

We did take contracts for arms and munitions, and whether by our own choice or because the control of the seas left us no choice, we did supply, without limit or restraint arms, munitions, contraband of war, to one set of contestants. We did take pay for all this in securities of one set of belligerents. And we thereby exposed ourselves to the enmity of the other side. We had made ourselves in their eyes their potential enemies, and were exposed by our own acts to retaliation by them if the end of the war left them in position to retaliate.

When we had been drawn into the war by the inexorable logic of events and had come out of it as participants in victory, we found we were left with billions of debt, representing both the debts that others had contracted with us and the expenditures we incurred on our own account. We paid, or we are still paying, a large portion of the cost of the war. What we lost in lives and in the wrecked lives of our wounded, and in the care of these latter, likewise go into the account.

In the process we achieved nothing for ourselves. We might not have complained of that had we succeeded in bringing peace to Europe, but it was evident in 1935, as it is still more evident now, that we did not succeed.

If we had had no well-established policy of neutrality, Congress surely was justified in insisting that we must try to avoid letting the United States in again for a long chain of like consequences of avoidable errors.

It is true that in the neutrality legislation of 1935 and 1937 the major preoccupation of Congress was directed to the possibility of a world war. It might be fair to ask why the civil strife in Spain was made the occasion for the declarations made in the act of January 8, 1937.

When we enter upon that inquiry what we find is that this was only a development of the policy that from our very beginning had been adopted and followed by the United States.

As long ago as 1912, having in mind especially the supreme desirability of peace in this hemisphere, Congress provided for embargoes upon the exportation of arms or ammunition "whenever the President shall find that in any American country conditions of domestic violence exist which are promoted by the use of arms or munitions of war procured from the United States."

By an amendment of 1922, the resolution was extended to include, in addition, "any country in which the United States exercises extraterritorial jurisdiction," and the President's authority was broadened by authorizing him to include cases where conditions of domestic violence "are or may be" promoted by the use of munitions procured from the United States.

Under this law proclamations have been issued prohibiting shipments of arms to Mexico, to China, to Honduras, to Cuba, to Nicaragua, and to Brazil.

On May 28, 1934, the sale of arms and munitions of war to Paraguay and Bolivia, then engaged in armed conflict in the Chaco, was prohibited.

When these laws were adopted the United States was not the only possible purveyor of arms and munitions. It may have been quite

legal in some other country to sell arms and munitions for use in countries where there was domestic violence, or to one or both of the countries at war in the Chaco. The United States did not make its policy contingent upon adoption of the same policy by others.

Need we be surprised, therefore, that when the Spanish War developed Congress expressed no concern for the fact that arms and munitions could be purchased elsewhere by one or both of the parties to the civil strife. The peace of the United States was held to be of greater importance than the competition in manufacture and sale of arms, and the judgment of Congress was that keeping out of the business was the best way to maintain the traditional neutrality policy of the United States and meet any threat or danger to the peace of the United States, so far as our own action could conduce to that end.

Conditions that "would threaten and endanger the peace of the United States" are not to be lightly passed over, even if the desire of those who seek the change is to improve the chances of one of the contending elements in the Spanish strife.

We are to suppose that Congress had in mind something other than a theoretical gesture, and that the President when he said he found a condition that would threaten and endanger the peace of the United States if we sent arms to Spain meant just what he said.

There is no need for doubt on that point.

When Congress passed the present law it knew all about the conquest of Ethiopia and the futile demand for united sanctions against Italy. With that knowledge, it prohibited the export of arms to Spain. The war in Ethiopia was over, but the prospect of general war was not over.

Congress and the President, who knew what had happened to the peace of the United States because a shot was fired in Sarajevo, were not indulging in any vain imaginings when they foresaw what might come if we went carelessly along the road we had taken after 1914. There were present all the elements necessary to "threaten and endanger the peace of the United States" sooner or later, and to threaten and endanger it not in relation to Spain alone but to the much more potent forces that have transformed all Europe into armed camps.

It was utterly impossible for Congress, or for the President, not to find in the civil strife in Spain the most serious possible threat to the peace of the United States. The peace of the United States may be exposed to threats and dangers more difficult to avert than the threat and danger incidental to that civil strife itself. But so far as the United States could go in the effort to avoid being drawn into danger by acts of its own, Congress and the President were bound to go, and the people of the United States resolutely desired them to go.

It is something for us to know that what the President rightly calls the unhappy condition of things in Spain has not been further embittered, so far as we are concerned, by contributions of arms and munitions to be used by either side against the other. Neither half of Spain's twenty-eight millions will have that to hold against us.

If we were to seek evidence that the precautions then taken were well advised, we have only to recall the bare outlines of what has happened since. A Norwegian ship had been sunk in December 1936, a French ship bombed in January 1937, three British ships in February, and two French ships in March. The bombing of French and British ships in the harbors of Barcelona and Valencia has been a frequent feature of the news during the past 2 years.

We in the United States can be well content to have no immediate interest in such news. Had it not been for the action of Congress, our interest might have been intense, and the passions excited by loss of property and life might well have prepared our minds for warlike acts.

And if this was true of what might be considered phases of the civil strife itself, and of the troubles in Spain as a separate entity, what are we to say of that week in September when peace and war hung in the balance, and when the frontier between France and Spain was plainly marked as one of the battlegrounds included in the plans of the two great rival forces that from hour to hour seemed likely to be engaged in a conflict by which European civilization would have been destroyed?

The United States alone of all the great powers, was not involved in those critical hours. Thanks to our attitude, the President was able to make, without reproach from any of the interested powers, the advances he did make for the preservation of peace.

But for the prohibition of the export of arms to Spain it could very well have been said that the peace of the United States was threatened and endangered in those September days.

The threat of general war has not yet passed. Predictions are freely made that another crisis of world portent will be upon us before many months have passed. And yet, with that danger facing us, with the prospect that the utmost exertion may be required to maintain the security of the United States in the midst of a toppling civilization, there are those who seriously, and with unaccountable insistence, demand that our well-established policy shall now be reversed.

It is demanded that legislation designed to keep this Nation at peace shall be replaced by legislation that would lead to our again being trapped into war.

In my humble judgment, the people of the United States will have none of it.

Our preferences, either as to Spain or as to the world at large, may be as the poles apart, but when it comes to deliberately endangering the peace of the United States over the quarrels of other peoples, the solid good sense of the American people is certain to prevail.

The Constitution in Our Times

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1939

ADDRESS BY REV. LINUS A. LILLY, S. J., AT KIWANIS CONSTITUTION WEEK MEETING AT ST. LOUIS, MO.

Mr. ANDERSON of Missouri. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I include an address delivered by Rev. Linus A. Lilly, S. J., regent of the School of Law, St. Louis University, St. Louis, Mo., commemorating Constitution Week, as follows:

During these September days we are commemorating the first Constitution Week, when the fathers of our Republic concluded their prolonged deliberations and gave to our country and to all mankind the first draft of our Federal Constitution. Assuming your willingness that I convey to your minds the thoughts that are uppermost in my own, I shall call to your attention William Cullen Bryant's apostrophe to freedom:

"O Freedom, thou art not, as poets dream, a fair young girl, with light and delicate limbs and wavy tresses. * * * A bearded man, armed to the teeth, art thou, and thy brow, glorious in beauty though it be, is scarred with the tokens of old wars."

Of the 55 men in the Constitutional Convention, a relatively large number, more than a third, had seen actual fighting in the war with Great Britain. Their souls were tried, strengthened, and refined in the death struggles of revolution and their scarred bodies bore bleached memorials of the musket, the saber, and the bayonet. For them freedom was not to be symbolized by a frail figure, outlined in feminine delicacy, but by the bearded man armed to the teeth, "one mailed hand grasping the broad shield and one the sword." Do you think that the only tyrant before their mind's eye during those summer days of 1787 was George III? I think they saw Henry VIII, and Ivan the Terrible, and Nero, the archmonster of all ages. They knew that men like themselves, noble men, cultured and refined, had been obliged to bow down in lowly and degrading submission before monsters of iniquity, in whose base and sordid being every fiber of disordered humanity bore a several shame. Do you think their perspective of history embraced only their own colonial experiences when their "petitions were slighted, when their supplications were disregarded, when their remonstrances produced only additional violence and insult and they were spurned with contempt from the foot of the throne"? Do you think their view of the past stopped even with the convulsive struggles in the turbulent years of seventeenth-century England?

Indeed their survey of epochs agone stopped not with the century that witnessed the exile of one king and the execution of another, but included other years of lingering agony when men were too enfeebled for effective resistance and too subdued to even think in terms of positive opposition. They heard the voice of suffering humanity crying out from the lurid night of the past. They heard it in the mumbled curses of galley slaves, galled by the chains that bound them to the oars in the burning heat or whipped to their dungeon cells at the fall of evening. They heard it in the prayers of Christian martyrs when their trembling bodies twitched with the tear of grappling claws or withered under the torturing touch of the searing iron. They heard the clarion call to freedom's cause not only in the stirring eloquence of Patrick Henry in the Virginia Assembly but even in the oath of Rienzi, resounding from the walls that had echoed to the tread of either Brutus "The Eternal City shall be free." That too much power in hands too few, will lead to abuse of authority, to political degeneracy, to national decay, to unbearable oppression of the masses, is the clearest and most emphatic lesson of human history.

Confronted with the enlightening facts of world history, our fathers planned to give their country and their descendants a Constitution that would be a lasting charter of self-government for a free people. They declared as one of their chief purposes "to secure the blessings of liberty to ourselves and to our posterity." Self-government they had won in war and self-government they would adjust in Senate. They would not depend, nor have their descendants depend, upon the moods of a monster, the whims of a tyrant, or the caprice of an autocrat. With a view to preventing abuse or unreasonable extension of authority, they founded a Government of limited powers and in order that established limitations might be both clearly understood and easily remembered they reduced them to concise expression in simple, written language. To avoid controlling concentration, they distributed the legislative, executive, and judicial powers of Government, ordaining that no two should be exercised by one individual or agency and that no one should wield a dominating influence over either of the other two.

Dangers to our Constitution, in this our day, lie not so much in violations of its prescriptions as in hostility, open or covert, to its fundamental purposes. During recent times attempts to concentrate power and to subordinate departments of government have been very promptly and very successfully resisted. Yet, if we pause in our retrospects of Constitution Week to compare or contrast our attitude toward our posterity with the solicitude of the founding fathers for us, we may find lurking dangers that threaten the perpetuity of constitutional government. I fear that we have accumulated for and are leaving to our posterity a dangerous burden of national debt. Obviously we cannot everlastingly increase our indebtedness and remain forever solvent. Not many months ago very many honest and industrious citizens of this country protested vigorously against the burdens of excessive taxation. We were told that taxation had become so burdensome as to take the profits out of business, the inspiration out of initiative, the hope out of honest endeavor, and the heart out of everybody. But, nevertheless, with our shoulders bending under oppressive burdens, and the voice of complaint ringing in our ears, we increased our indebtedness by an additional $4,000,000,000. Our fathers suffered and saved and sacrificed that they might leave to use the priceless heritage of self-government in a land of opportunity. We have borrowed and spent and squandered to leave our descendants an appalling burden of debt with its distressing exactions of taxation. How does this compare with the spirit of solicitude which made the men of 1787 say, "In order to secure the blessings of liberty to ourselves and our posterity (we) do ordain and establish this Constitution for the United States of America?" Those who come after us will not be able to coin the gold of the evening sunset or the silver in the lining of the clouds.

When we make our indebtedness exceed $40,000,000,000, we must bear in mind that we have to think of interest in terms of billions. If we find it hard to pay taxes that are necessary to meet current expenses when we are using and spending billions of principal, how shall we expect our countrymen of the next generation to bear a greater burden of taxation and pay more interest on money they have neither used nor spent nor seen. Interest must be paid or allowed to accumulate. There is no third choice between these alternatives, and to allow interest to accumulate is only to put off the time of reckoning to another day, which is bound to be a worse day. The principal of a debt, however great, must be paid or repudiated. Between these alternatives there is no third choice and repudiation means dishonor. We should not make too great the temptation that may come all too soon when some pied piper paperhanger offers to lead weary multitudes out from under a burden that has become unbearable, even though the way may lead through repudiation to dishonor and to chaos. Much has been said and much has been done in our times to obtain social security, but unless we keep our constitutional government secure, the much vaunted social security which is being held before our people, and for which deductions are being made from the wages of toil, will prove to be as false as a face of painted paper. You cannot squeeze red blood from white turnips, you cannot gather grapes from thorns or figs from thistles, and you cannot obtain social security, or security of any kind, from a government that is insecure.

Beyond doubt, the social-security program has its desirable purposes and its commendable features. The fact remains that present financing plans are inadequate and that their continuation must mean added expenditure and increased taxation. To be secure against the ills that old age may bring or that unemployment may occasion, to have all our people secured against the essential ills and fortuitous calamities of life, is indeed a consummation devoutly to be wished. It cannot, however, be had by being wished for; it must be paid for. The mere fact that something is desirable does not necessarily mean that it is wise for the Government to provide it, or that the cost of obtaining and expense of maintaining it may be disregarded. A man who provides himself with everything he thinks desirable, whether he can afford it or not, is headed for bankruptcy, and a government which pursues a like policy cannot expect to avoid like consequences. All will agree that our Government should do all that can be safely done for the welfare of our people, but we should do more paying as we go and we should be less ready to pledge the credit of the future. To pass out benefits and gratuities with a liberal hand may be or seem to be the part of generosity, but there can be no charity or even justice in a spendthrift prodigality that would jeopardize our national safety. There can be no wisdom in piling up the eggs with one hand and killing the goose with the other. To live within one's means is the duty of a nation as well as of an individual, and penalty will follow dereliction, as night follows day, for the one as for the other, with unfailing fatality.

Our fathers of 1787 found self-government an ardent longing of the downtrodden and oppressed. They made it an abiding possession of the free and independent. They found freedom a frail ideal and molded it into stern reality. They found prostrate humanity trampled upon by rulers who believed that their authority came from divine right, and they established as a lasting principle that all men are entitled by the laws of nature and of nature's God to life, liberty, and the pursuit of happiness, and that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed. They not only obtained the blessings of liberty but made them secure and gave to us in the Constitution of the United States, with its distribution of powers and its limitations upon governmental authority, the means of keeping the functions of government under control of the governed. They not only gave to us an inheritance of incalculable value, but they charged us with a sacred duty—that of keeping secure the blessings of liberty for ourselves and our posterity.

The Late Representatives John J. Boylan and Robert L. Bacon

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1939

Mr. TAYLOR of Colorado. Mr. Speaker, at the first meeting of the Committee on Appropriations following the opening of the present Congress, I appointed a special committee to draft resolutions in tribute to our late fellow committeemen, the Honorable JOHN J. BOYLAN and the Honorable ROBERT L. BACON. The special committee was composed of the Honorable LOUIS LUDLOW, chairman, the Honorable JAMES M. FITZPATRICK, and the Honorable JOHN TABER.

The resolutions drafted by this special committee were presented at the meeting of the Committee on Appropriations held this morning, and, besides spreading them upon the records of the committee, it was the sense of the committee that they should be spread upon the records of the House of Representatives, where these two men served with such great distinction. I, therefore, present the resolutions at this time for inclusion in the proceedings of this body.

Resolution in tribute to our late fellow Member the Honorable JOHN J. BOYLAN, of New York, adopted January 12, 1939, by the Committee on Appropriations of the House of Representatives

Whereas since the last meeting of our committee our beloved colleague and friend, Representative JOHN J. BOYLAN, of New York, has answered the final summons; and

Whereas his death has deprived this committee of one of its most valuable, highly esteemed, and useful members; and

Whereas our late colleague was a man of broad humanitarian vision, whose heart beat in rhythm with the heartbeats of 130,000,000 people: Therefore

Be it resolved, That we, his colleagues on the Appropriations Committee, take this means of expressing our profound sense of grief on account of his untimely death. He brought to the service of our committee a mind trained in business affairs and a most genial and ingratiating personality that endeared him to everyone. He was a pioneer in Congress in the legislation affecting narcotics and the treatment of narcotic addicts, and many advances along this line were initiated by him. Each of us feels a very direct and personal sorrow over the loss of an associate who was so splendid, so companionable and true, a sincere patriot, and an unfailing friend. We wish those who were near and dear to him in ties of kinship to know that their grief is our grief, too, and that we of the Appropriations Committee shall always remember him with tender affection.

Be it further resolved, That these resolutions be made a part of the record of the Committee on Appropriations and that a copy thereof shall be furnished to the bereaved family.

Resolution in tribute to our late fellow Member, the Honorable ROBERT L. BACON, of New York, adopted January 12, 1939, by the Committee on Appropriations of the House of Representatives

Whereas the untimely death of Representative ROBERT L. BACON has deprived our Committee of one of its most loved and valuable members; and

Whereas his record both in peace and war was one of high renown, reflecting great credit upon his memory; therefore

Be it resolved, That we, his colleagues on the Appropriations Committee, take this formal means of making known our deep and genuine grief over his death. In Congress he represented the first district of New York for eight consecutive terms. He was a careful, painstaking, devoted legislator who served at various times as a member of 10 congressional committees, and whose crowning legislative service was as a member of the Appropriations Committee. Equally outstanding was his fine military record

which brought to him the award of the Distinguished Service Medal. His ideals of public service were high, his zeal in the public interest was unflagging, and he never compromised when principle was at stake. He was a sincere patriot and a true friend. Words do not permit us adequately to express our feeling of sorrow and loss. We miss the radiance of his presence and the wisdom of his counsel, and we shall always remember him with tender affection.

Be it further resolved, That these resolutions be made a part of the records of the Appropriations Committee, and that a copy thereof be furnished to the bereaved family.

W. P. A. Appropriation

EXTENSION OF REMARKS
OF
HON. BERNARD J. GEHRMANN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 13, 1939

Mr. GEHRMANN. Mr. Speaker, the time is short and many Members have not as yet had an opportunity to be heard on this bill, which provides funds to continue the W. P. A. until June 30.

I realize that what I have to say will not change a single vote, but I feel it my duty to give you some facts regarding the great army of unemployed as I know it to exist in upper Wisconsin, which embraces my congressional district.

I know that, with rare exceptions, everyone now on W. P. A. would be glad to accept private employment, if it could be found. I had several demonstrations of the truth of that statement when private employment was to be had in several instances. Wherever 25 or 30 people would be needed, several hundred would storm the offices of those needing help until they were forced to lock the doors and by sign advise those late arrivals that all places were filled and no more need apply.

Several road contractors in my district, needing from 50 to 100 men, had several thousand apply. Maybe my district is just a little worse off than many others, because we are in that transition period where lumbering is just about all finished and farming is in its infancy. Most of the sawmills and other woodworking industries have closed or dismantled their plants, and thousands were therefore not yet established when the crash came, and has continued since 1929. The former landowners stopped paying taxes, and each municipality is loaded up with tax certificates and land upon which no revenue is realized. They have had a tremendous load of social security and direct relief to carry during the last few years, and most counties and cities and other governmental units are bonded to the limit. The tax rate anywhere in my district is, at least, 4 percent, and most of them much more, and levied on full valuation.

The chairman of the subcommittee, Mr. WOODRUM, who made a very fine explanation of the bill in opening the discussion, and told why he thought it could be reduced by $150,000,000 below the Budget recommendation, said that the P. W. A. from now on would more than make up for the reduction in W. P. A. employment. No doubt, when we figure it strictly on a dollars and cents basis, that is correct. But I believe that all will agree that the amount of money allocated for P. W. A. projects is used to a much larger proportion for materials than for labor. I realize that these materials must be produced and thereby we create jobs somewhere, but nevertheless the immediate results are not noticeable in local communities. And still worse than that, the poorest communities, like most of those in my district that are now bonded to the very limit, cannot avail themselves of P. W. A. projects simply because they are unable to finance the 55 percent of their share of the cost. In spite of the fact that the last Congress wrote a provision into the P. W. A. appropriation which would permit the Government to construct needy buildings where the municipality was unable to finance its share, those in charge absolutely refused to do so. That is why I feel it is absolutely necessary that we appropriate sufficient money for the balance of the fiscal year so that at least the same number can be employed on W. P. A. that were on the rolls before December 1.

I know that even that small reduction of less than 10 percent ordered early in December is causing untold hardship in my district, because there just is not any additional private employment to be found, especially now in the middle of winter. I honestly believe that we need more than the President recommended, at least, by the figures that were furnished me by the League of Wisconsin Municipalities, as well as many counties, cities, and other governmental units, it is plain that never during the past year was it possible to employ anywhere near all those that were certified as in need of work.

Let us not be short-sighted again, as we were in 1937, when some believed that prosperity was here again, and we reduced the Government spending program, thinking private industry would take those laid off. We all know what happened; we went back more than we had gained the 2 years before. Let us keep the quota of last year, at least for now, and, if conditions warrant, a gradual reduction can be started, especially in localities where industry opens up or where large-scale P. W. A. projects replaces W. P. A. employment. But do not make those sections of the country that are bankrupt suffer, because others can finance local relief or have the ability to pay for their share of P. W. A. projects. We cannot do either, and those in charge of W. P. A. must have the necessary money and the right to assist those sections of the country that cannot help themselves more than other sections that still have the ability to borrow money.

We will have time between now and the end of this fiscal year to attempt to work out a better solution for our economic ills than we have thus far found to be practical.

I have, of course, advocated the cost of production to agriculture as the only permanent solution for years, and I am certain that some such bill will receive serious consideration this session. But in order to remove forever all the unemployed in this country I have given very careful consideration to the Townsend national recovery plan. The more I study this problem the more I am convinced that a transaction tax to finance the General Welfare Act—H. R. 2—now pending before this House, must be enacted this session. If we do that we need not ever appropriate another dollar for W. P. A. or any other Government relief agency. There will be money enough in the hands of the consumer down at the bottom that will cause industry as well as agriculture to do its utmost to produce what will be needed for home consumption. But for the next 5 months let us not cause suffering at this season of the year simply by trying to save a couple hundred million dollars.

LEAGUE OF WISCONSIN MUNICIPALITIES,
Madison, Wis., December 30, 1938.

Congressman BERNARD J. GEHRMANN,
House Office Building, Washington, D. C.

DEAR MR. GEHRMANN: In a recent press statement the senior Senator from Virginia is quoted as favoring the return of the relief burden to the local units of government on the basis that they took care of it before and can therefore take care of it now. We do not know how familiar Senator GLASS is with the relief situation in Virginia, but we do know that his recommendation can certainly not apply to Wisconsin.

The expenditures of local units of government in Wisconsin for relief during 1938 were the heaviest in history. I think you will be interested in securing some idea of the tremendous burden now borne by these local units.

With the W. P. A. program employing over 85,000 persons in November 1938, there were still on the local relief rolls over 46,000 cases, with approximately 53,000 cases expected in December. Of those on relief rolls on December 21, over 14,000 had been certified for W. P. A. jobs but were awaiting assignment because the W. P. A. quota for Wisconsin was not large enough.

Then there were about 8,200 additional cases of employables on relief rolls in October who for various reasons are not eligible for certification for W. P. A.

It should also be remembered that of the 85,000 employed by the Federal Government on W. P. A. some 11,000 persons have been receiving supplementary financial aid from local relief authorities because of the fact that their W. P. A. earnings were not large enough to support their families.

You undoubtedly realize that in addition to direct relief costs Wisconsin local units contributed over $7,000,000 during the first 9 months of 1938 as their share of the cost of the W. P. A. projects they sponsored. The following table gives a composite picture of the burden of relief and sponsors' contributions during the past year. The figures for general relief are estimated on the basis of actual figures for 10 months:

	Total	Federal	State	Local
General relief	$13,731,893.03	$875.98	$1,920,135.38	$11,810,881.67
Works Progress Administration (9 months only)	45,297,365.04	38,161,875.04		7,135,490.00
	59,029,258.07	38,162,751.02	1,920,135.38	18,946,371.67

It will be recalled that several years ago the Federal Government divested itself of the responsibility for financing direct relief. At that time it was stated that the Federal Government would be responsible for providing work for all employables in need of relief. This has never been done, and it has been pointed out that the W. P. A. quotas have not been large enough to provide work for all those eligible, and that in addition local supplementary relief must be provided for a large percentage of W. P. A. workers.

The increase in local relief costs since this unloading of direct relief responsibility by the Federal Government is shown by the following table:

Local share of cost of relief and W. P. A. program in Wisconsin

1935	$6,706,582.79
1936	16,776,908.53
1937	18,515,544.05
1938	[1] 21,000,000.00

[1] Includes conservative estimate of local share of W. P. A. program for last 3 months.

In listing those on local relief rolls there have not been included any persons receiving aid under the social-security program. This also has added heavy burdens on local governments, because Federal and State appropriations pay only part of the cost. In the fiscal year 1938-39 it is estimated that these aids will cost the local units as follows:

Old-age pensions	$2,320,000
Blind pensions	110,000
Aid to dependent children	2,100,000
County administration	614,780
Total	5,244,780

In addition, Wisconsin local governments have been required to raise many millions of dollars in the past few months as their share of the P. W. A. projects approved for this State. The retirement of bonds issued for this purpose will constitute a heavy burden for many years to come.

No attempt has been made to include figures for other local public-welfare costs not included under the heading of relief, W. P. A., or social security. In presenting these figures no effort has been made to distinguish between the amounts paid by cities, villages, and towns, and the amounts paid by counties. There has been a shifting back and forth under Wisconsin statutes, and in the long run there is little difference, since the cost must be met by general property taxpayers.

Ten years ago the total annual expenditures by Wisconsin local governments for relief, pensions, and other public-welfare activities aggregated less than $4,000,000 per year. Now this has jumped to approximately $30,000,000 annually, an increase of 650 percent.

The result has been a staggering load on the general property taxpayers of Wisconsin. It is generally recognized that the general property tax is not as fair a tax as some of the more modern forms of taxation, and yet Federal and State legislative bodies continue to act in such a way as to shift financial burdens to local government, which has no alternative source of revenue other than the property tax.

The Congress which soon convenes is faced with the immediate necessity of providing funds for a continuation of the W. P. A. program. The W. P. A. quota for Wisconsin has never, as is pointed out above, provided work for all employables on relief rolls. To further reduce the quota at this time will mean the exhaustion of local financial sources for paying the cost of relief very shortly.

Unless some plan can be worked out which will enable private business to pick up more than now seems probable there is no reason to believe that Wisconsin's direct relief load will decline during 1939. If those cut off W. P. A. by the recent or any future curtailment fail to secure private employment, then the local relief load will be increased accordingly.

Very truly yours,

JAMES R. LAW, *President.*

Peace Our Biggest Political Issue

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

ADDRESS BY HON. JOSEPH B. SHANNON, OF MISSOURI, AT KANSAS CITY, MO., NOVEMBER 13, 1938

Mr. CANNON of Missouri. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by the gentlemen from Missouri [Mr. SHANNON] before Dr. Marvin Sanbury's class, the Community Church (Linwood Boulevard Christian Church), Kansas City, Mo., on November 13, 1938:

When I was requested to address you today on the subject of war, my thoughts went back to the founder of your church, Alexander Campbell.

Several years ago my close friend Frank M. Lowe, who during his lifetime was a devoted member of the Independence Avenue Christian Church, gave me a book of the Addresses by Alexander Campbell. At the time he gave it to me he remarked that he felt sure some day I would find it useful and helpful.

About a year ago, and after Mr. Lowe's death, I picked up the book and read therein an Address on War, delivered by Alexander Campbell at Wheeling, Va., in 1848. To my mind then, and to my mind today, that address was one of the most convincing and comprehensive treatises on the evils of war ever written. I caused it to be printed in the CONGRESSIONAL RECORD of November 22, 1937, and I had reprints made of it which I mailed to every minister of your faith in the United States, as well as to thousands of other citizens of Missouri.

The thought occurred to me that it would not be necessary for anyone to speak to you about war if you were familiar with Alexander Campbell's eloquent utterance on the subject of four score and ten years ago. Hence, I brought with me here copies of Mr. Campbell's address for distribution among you.

I earnestly urge you to read it, to study it carefully, and to preserve it. The statements made therein will be as true and as forceful in the next generations as they were in 1848 and as they are today.

WAR NEVER A PROCESS OF JUSTICE

I stand on the question of war where Alexander Campbell stood when he said:

"War is not now, nor was it ever, a process of justice. It never was a test of truth—a criterion of right. It is either a mere game of chance or a violent outrage of the strong upon the weak."

I stand, also, where Thomas Jefferson stood when he said:

"I abhor war and view it as the greatest scourge of mankind."

And I stand where George Washington stood when he admonished us, in his Farewell Address, not to "entangle our peace and prosperty in the toils of European ambition, rivalship, interest, humor, or caprice."

It is important that we distinguish between those who talk peace while covertly working for war, and those who are sincere in their efforts to promote in America the continuance of peace and the conservation of happy homes and a contented citizenship.

Mme. Roland is said to have exclaimed, shortly before she was guillotined during the French Revolution:

"O Liberty, what crimes are committed in thy name!"

If she lived today she could well say:

"O Peace, what crimes are committed in thy name!"

WAR IN THE NAME OF PEACE

It is in the name of peace that Japan has been for many months invading China, mercilessly killing her people and destroying her property. Japanese spokesmen refer to this wholesale slaughter and destruction as the "Chinese incident," and maintain that they are merely attempting to enforce peace in China.

Every militarist, every jingoist, every munition manufacturer, every war profiteer, and every aggressor in warfare invariably prefaces his arguments as to the necessity for war with the statement: "Of course I am against war—but—."

I am against war without any buts. The history of nations has proved that war up to the present day never settled anything. And I was never more firmly convinced than I am today that the United States has no business in the quarrels of foreign nations.

Europe and Asia reek with war lords, with marching armies, with military madmen, and the time was never riper for the United States to guard to the limit her own shores and to refuse to finality ever to be drawn into another foreign war, no matter what the pretext.

The conditions in Europe today are not dissimilar to those described by Thomas Jefferson when he wrote:

"The cannibals of Europe are going to eating one another again." The war of that time was between Russia and Turkey.

"War against Bedlam," he said, "would be just as rational as against Europe, in its present condition of total demoralization. For us to attempt by war to reform all Europe, and bring them back to principles of morality and a respect for the equal rights of nations, would show us to be only maniacs of another character. We should, indeed, have the merit of the good intentions as well as of the folly of the hero of La Mancha" (Don Quixote).

THE MEN WHO MAKE WAR

Wars are never made by the people. They are made by very small groups in the cabinets of statesmen. In support of that statement, let me again quote Jefferson. In 1797, referring to a report that the French Directory had proposed a declaration of war against the United States to the Council of Ancients, who, however, rejected it, Jefferson said:

"Thus we see two nations, who love one another affectionately, brought by the ill temper of their executive administrations, to the very brink of a necessity to imbue their hands in the blood of each other."

An English commentator, Mr. White, commenting on Mr. Chamberlain's address to the House of Parliament after his second visit to Hitler, said:

"We don't want war. All of England is praying that we may be spared a war. However, we do feel that in the shaping of the universe our country was so placed geographically that we cannot keep out of this terrible thing—war."

You, Mr. and Mrs. American, have what that Englishman wished for his country. Fortunately, as so aptly expressed by Jefferson, "The insulated state in which nature has placed the American Continent should so avail it that no spark of war kindled in the other quarters of the globe should be wafted across the wide oceans which separate us from them."

LIBERTY THROUGH PEACE

Mr. Boake Carter, the well-known columnist, while testifying before the House Naval Affairs Committee last February, said:

"I have lived in 13 different countries. I was born in Baku, southern Russia. My father was Irish, my mother half Irish, half English. * * * My father was in the British diplomatic service. I served for a little more than a year as a pilot in the Royal Air Force in 1917 and 1918. Since those years I have been a newspaperman.

"Four years ago I received my final papers as an American citizen. My citizenship, to me, is the greatest gift and honor ever given me. With me, gentlemen, citizenship is not an accident of birth. It is one of choice and earnest desire, after mature thought and consideration. I sought and became a citizen of the United States because I felt that this country was the last and only real haven in the world where a man might pursue life, liberty, and happiness—in other words, a sanctuary from the disillusionment, the bitterness, and the oppression of the Old World; a country where one can relax, relax from the terrible thoughts of war. * * *

"For, gentlemen, I come from an Old World. I know what happens after war is over. I have seen peoples living close to each other, suspicious, afraid, with disillusionment in their eyes, with a fatalistic attitude and acceptance of life that makes one shudder when one has known the clean breath of democratic fresh air that is the gift that America still gives to her people."

This great gift that Mr. Carter speaks of can only be saved through eternal vigilance in the preservation of peace. Let me say that the American people have become awakened on the subject of war. They love their country and would gladly pour out their blood to defend it from invasion by foreign foes, but they resent and denounce the system whereunder their sons can be conscripted and sent to foreign slaughter pens in the settlement of the disputes of other nations.

NO WAR WITHOUT A REFERENDUM

The American watchword should be, "The American boy first, always." And at no time should he be sent to wars on foreign soil until the question has been submitted to the people in a national referendum. This involves no impairment of national defense but merely changes the mechanism by which war shall be declared, so that in the future those who have to suffer and, if need be, to die, and to bear the awful burdens and griefs of war, shall have something to say as to whether we shall go to war in foreign countries.

In the event of attack or invasion no enactment of law would be necessary to induce the American boy to rise to the defense of his country. There would be no need to conscript him, because he would gladly fight for our defense. He would not fail us. And American representative government must not fail him. We must protect him against unnecessary and useless wars in foreign lands.

Also testifying before the House Naval Affairs Committee last spring, Dr. Charles A. Beard, the noted historian, said:

"I am not and never have been a pacifist. * * * I believe in fighting for the defense of the United States and in supporting a program of defense adequate to the requirements of the American sphere of interest.

"The nature of this defense—the appropriate distribution of funds among the various branches of the defensive forces—cannot be determined by naval officers alone. The task of determination is difficult at best * * * and should be studied in connection with the whole foreign policy of the Government. * * *"

Continuing, Dr. Beard added:

"I am for keeping out and doing all we can to defend our spheres of interest in the hope that we can save some part of civilization by not joining a world afire."

THE OLD WORLD ASSAULT ON CHRISTIANITY

Let us examine briefly some of the conditions now existing in that European "world afire."

First, we find military tyrants bent upon stamping out every vestige of religion.

We learn of the execution in Russia of men whose sole offense was the teaching of the Christian religion. The trial accorded these "offenders"—if we may call it a trial—consisted of the following question by Public Prosecutor Krylenko:

"Will you stop teaching the Christian religion?"

The answer given was:

"We cannot. It is the law of God."

Whereupon the public prosecutor closed the hearing by announcing:

"That law does not exist here. You must choose."

In Germany Pastor Niemoller was arrested and placed in prison because, the reports state, he said he placed the law of God above the law of man. Upon being temporarily released from prison, he was again questioned, and when he reaffirmed that with him the law of God came first, he was sent to a concentration camp, where he remains to this day.

In Vienna another prominent churchman was recently mobbed for making the statement that there still are young people who "are not so easily tempted to listen to deceitful catchwords and hypocritical rhetoric."

The trends of the militaristic countries today in Europe are definitely away from the laws of God and from the humanitarian laws of man as well. Power is everywhere being substituted for religion; force for the doctrines of peace.

In their mad lust for power and economic advantages the war lords are even organizing the children of their countries to kill and be killed. They are reaching down into the cradles for recruits, and as the cradles become empty, they demand with importunity that they be quickly refilled, as the need for soldiers is great. Even the sacred rights of childhood are being violated to build up military machines to kill and destroy.

MILITARISM AND ITS IMPLICATIONS

"Militarism" is a term much used in the discussion of world affairs of today. I feel that it would not be amiss to say a few words concerning the meaning of the term and its historical development.

The Encyclopedia Americana defines militarism as follows:

"The term is used chiefly in connection with the vast armaments maintained by European countries and has come in particular to mean the preparation, as in the case of Germany prior to the launching of the European War, of a vast force maintained not for the purposes of national defense but for those of imposing at pleasure the will of the powerful nation upon those weaker and less well armed * * *."

The first record of a system of conscription was in the fourth century, when landed property of a certain size was called upon to furnish a man to the colors. Under this conscription system landed properties not large enough to be compelled to furnish a recruit would be grouped together until the required acreage was made up, and the different owners were compelled to furnish recruits in rotation.

This service was, of course, most unpopular. In fact, its unpopularity grew to such an extent that self-mutilation and fraud were often used to avoid it. Desertions became so numerous that the soldiers were branded like criminals to prevent their deserting.

The total number of men in the fourth century service has been estimated at three-quarters of a million, which was the largest disciplined force to exist down to the wars of the French Revolution.

For some 500 years prior to the outbreak of the French Revolution European armies were maintained on a professional basis, and the military organizations of most nations included large numbers of mercenaries hired to kill wherever they were sent or sold.

THE FRENCH REPUBLIC'S CONSCRIPTION PLAN

The French Constitution of September 3, 1791, provided that the "public force" of the Republic was "composed of the army and the navy, of the troops especially intended for internal service, and subsidiary of the active citizens and their children, in condition to bear arms, registered upon the roll of the national guard."

These national guards were described as "the citizens themselves summoned to service in the public force." Hence, under that constitution, every citizen, including "children in condition to bear arms," was a soldier.

In 1789 began the first attempt to establish in France a national conscription. For a time the regular army was supplied by voluntary enlistment, but this method proving unsuccessful, recourse was had to compulsion. Between 1798 and 1870 the basis of the French military organization was a law fixing the liability to compulsory service between 20 and 25 years.

Historians assert that it was this conscription law which rendered the Napoleonic policy of conquest possible. It will be remembered that Napoleon boasted: "I can afford to expend 30,000 men a month."

Other nations soon recognized the fact that Napoleon held an advantage over them in the efficient mobilization of his armies under the French system of conscription and many followed the example.

It was in 1814 that Prussia introduced the system of universal military service later adopted by every great power of Europe. Under this system, armies became national organizations in which nearly the whole male population, within certain years, was compelled to serve.

EUROPEANS SEEK REFUGE FROM WAR

From these seeds sprang the militaristic systems now prevalent and dominating in Europe. The tyrants ruled; the people had no choice. Military duty and hard pressure upon the population of Europe had much to do with increasing the immigration of its citizens to America.

History clearly shows that the high tides of immigration to this country usually corresponded with periods of warfare and strife in the native lands of the immigrants.

Taking, for example, the census reports covering German immigrations, it is seen that the crest of the wave was reached in the period 1850–54. This period was contemporaneous with the revolutionary troubles in Germany of 1848 and following years. It was during that time that such men as Franz Sigel, Friedrich Hecker, Ludwig Blenker, and Carl Schurz arrived on our shores.

Another high wave of German immigration came between 1866 and 1873, that period corresponding to the great wars of Prussia and the unsettled condition of the German states before their being welded into one nation by Bismarck through the Franco-Prussian War of 1870.

And still another wave of German immigration to this country is in progress at the present time, the number being limited only by our quota system. Beginning with June 1938 the maximum number of American visas have been issued to Germans each month, and thousands of applicants are awaiting their turn.

It is not difficult to comprehend why these people are seeking a means of escape from their native land.

WAR IS ALL-DESTRUCTIVE

Wars of the past have, of course, been destructive. One of the most destructive was the Thirty Years' War, 1618–48. In the course of that war it is said that 75 percent of the inhabitants of Germany, 66 percent of the houses, 85 percent of the horses, and over 82 percent of the cattle were destroyed, as a result of which Germany was set back 200 years in its material development. Describing the situation which existed in Germany following that war, Mr. Albert Bernhardt Faust, the historian, said:

"The moral degradation following in the wake of such devastation was even worse than the loss of life and property. Friend could not be distinguished from foe, and men would wrest from their starving neighbors a crust of bread. It has been recorded that not even human flesh was sacred, that the gallows and churchyards were put under guard to protect them against theft by desperate, famine-stricken people. Incredible as it may seem, in some instances even murder and cannibalism were resorted to."

Yes; that was destructive warfare; but the wars of today are far more destructive. It is not inconceivable that the same degree of devastation and moral degradation which existed in Germany following the Thirty Years' War could be reached in the present day in some of the countries, under an intensive drive with the use of modern instruments of death and destruction, in 30 days.

THE BOMBING PLANE A NEW MENACE

One of the deadly menaces of modern warfare is the bombing plane. Recent events have shown conclusively that this instrument of wholesale destructiveness is capable of multiplying the horrors of war tenfold. Militarists themselves are forced to admit that so far nothing has been devised to furnish adequate defense against this modern engine of slaughter.

We have recently seen conquest accomplished by the mere threat of invasion by vast fleets of planes, capable of wiping out cities and destroying millions of lives almost in the twinkling of an eye.

Army maneuvers in North Carolina within the fortnight demonstrated that antiaircraft artillery was almost useless against planes flying at altitudes of 20,000 feet. Blackouts, too, were found to be ineffective, since finely attuned "navigating" instruments enable planes to find their objective with uncanny mathematical certainty.

Bombing planes with a speed of 300 miles an hour and a cruising range of 4,000 miles are now in actual operation. The development of these planes has been so rapid in the past year that no stretch of the imagination is required to realize that within another year their potential destructiveness may be almost limitless. Then truly frightfulness can rule the world. No men of Mars will then be needed to terrify mankind.

Formal declarations of war are now outmoded. The modern tactics are to strike without warning and with sudden and awful fury. The "undeclared war" finds its victims unprepared.

There can be little doubt that England and France yielded to the dismemberment of Czechoslovakia in the realization that 500 planes could destroy London and Paris in a few hours. Austria gave up when a small squadron hovered over Vienna without dropping a bomb.

Apparently the totalitarian scheme of warfare is to guard their borders defensively and hurl bombing fleets against the capitals of their foes.

THE FINAL HOPE: HONEST STATESMANSHIP

Since military scientists have been unable to meet the menace of the bombing plane, the solution seems to rest with statesmanship. Peace-loving nations must declare the bombing plane outlawed. And in that declaration they must hold the heads of governments employing such planes in warfare personally responsible and to be declared beyond the pale of civilized codes. Disarmament treaties and pacts have been thrown into the discard. They are the dead letters on the books of many colors—scraps of paper in the hands of dictators to use or destroy at will—to forget, if it suits their purposes, as soon as the ink of their signatures is dry upon the pages.

My friends, it is no idle fancy that civilization is today in more peril of destruction than ever before from such warfare as these bombing planes can accomplish and are accomplishing in warring regions everywhere. It is an enemy weapon that can kill and destroy and escape unhurt—the hit-and-run monster of the air against which humanity is helpless—and it is against humanity in the sense of women and children and homes and institutions rather than against armies in the field that this monster fights. An outlaw decree against the use of the bombing plane, such as we had against the use of the dum-dum bullet, might rob modern warfare of some of its hideousness. But, even robbed of some of its terrors, war is still war, and the hopes of tortured mankind are for the reign of peace and for the dawn of an era of common sense and common justice in the settlement of the affairs of the nations of the world.

PEACE OUR BIGGEST POLITICAL ISSUE

Two years ago I said that the big issue before the people of our own country was to keep these United States out of foreign entanglements. I say it is still an issue of the greatest importance. We are still playing with fire. I say that the maintenance of peace and the keeping of our Nation's fingers out of that European witches' cauldron of trouble is one of the gravest problems before us today. A step in the wrong direction may be fatal to the ideals upon which our democracy was founded. America is for peace, and we must labor in its cause and in the hope of its accomplishment by day and by night, with that eternal vigilance which we have been told is the price of freedom.

It is my fervent hope that the people of this country will never stray into a path that will lead them into the armed camps of Europe, but rather keep up a firm and united front for peace certainly in our own homeland and hopefully for all nations.

Let the example of our free Nation, enjoying the liberty and the freedom of a democracy and the pursuit of happiness in our own ways, lend its inspiration to the world, so that the dream of the prophet may some day really come true—that the swords shall really be beaten into plowshares and the logic of peace come to supplant the illogical ideals of war.

Cuban Reciprocity (?)

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. REED of New York. Mr. Speaker, it is refreshing to have a faithful public servant of the present administration, one who is in sincere sympathy with it, point out for the benefit and guidance of Congress the disastrous effects of certain administrative policies when put into practical practice. I refer to the testimony offered by Mr. Gruening, Director of the Division of Territories and Island Possessions, United States Department of the Interior, at a hearing held January 4, 1939, before the Committee for Reciprocity Information. It is a timely, frank, and fearless statement by a man who is prepared to speak from experience and with finality and accuracy as to the devastating effects of the Cuban trade agreement upon the economic and social life of Puerto Rico. I respectfully invite the attention of the Members of the House to Director Gruening's testimony.

Mr. GRUENING. I would like to present the view of the Department of the Interior in regard to the proposed revisions of the Cuban trade treaty.

From the viewpoint of the Division of Territories and Island Possessions, we have been painfully impressed in the last 4½ years, since the creation of that Division, by the apparent unawareness of certain agencies of the Government and certain in-

dividuals in these agencies that American territory inhabited by American citizens exists outside of the confines of the 48 States. Without going further afield than the agency or agencies here concerned, there appears to be an obliviousness to the fact that there are areas under the United States flag which are tropical and whose products are the agricultural products of the Tropics.

In the making of reciprocal-trade treaties there has appeared to us a disposition to assume that since tropical products are not grown within the confines of continental United States, concessions could freely be made regarding them to other nations which desired to increase their market in the United States for their tropical products. It is therefore imperative to state what is, of course, familiar to those of us who are particularly concerned with those sections of the United States lying outside the continent—that our tropical products are as important to those parts of our country which produce them as, let us say, wheat is to the farmers of the Dakotas, wool, beef, and corn to the people of Illinois and Iowa, or manufactures to the people of our industrial centers.

Indeed, the problems of our Territories are relatively more serious when affected by trade treaties than the products of the mainland, since dependence of the Territories is wholly on agricultural products. The Department of the Interior, therefore, feels particularly concerned at the proposed further revision of the trade treaty with Cuba with the announcement of a considerable list of products, all of which are produced in Puerto Rico. This is not based on any psychic premonition. It is based on the bitter experience of recent years. The existing trade treaty with Cuba has done material, tangible damage to Puerto Rico. The lowering of the differential on pineapples in the Cuban treaty for the benefit of the Cuban pineapple monopoly is wrecking one of the few forms of agriculture which was peculiarly appropriate to Puerto Rico, and which, it was hoped, would compensate in some measure for the injuries done other Puerto Rican products by legislative enactment, trade treaties, or administrative action. Our efforts to secure the inclusion in these agenda of pineapples, with the hope that the former tariff rates would be restored, proved unavailing. Only recently in the British trade treaty the tariff on coconuts was reduced from $5 to $2.50 per thousand, thus dealing a crippling blow to our coconut agriculture.

Insofar as sugar legislation is concerned, it is our view that Puerto Rico has, in the reduction of its quota of raw sugar and the limitations imposed on its right to refine its own sugar, suffered serious discrimination with definitely detrimental consequences.

It is certainly not the Department's desire to assume a "dog in the manger" attitude, or to take a position that might seem not to be fully cooperative with a national program designed to increase commerce. It is certainly our purpose and desire to view these problems from the broad standpoint of securing the greatest good for our whole American community. However, our past experience has made us extremely gun-shy and we see no reason why Puerto Rico should continue to be offered up as a sacrificial lamb. In recent weeks, a new situation has developed which requires, moreover, an extremely cautious approach to this treaty revision with Cuba. I refer to the application of the wages and hours law in Puerto Rico this fall. That law has applied standards of wages and hours which, I think it may be said categorically, do not exist in other tropical areas with whose products Puerto Rico must compete. It seems to us a manifest paradox that the administration should on the one hand endeavor to raise the standard of living—a wholly desirable objective—by fixing maximum hours of work and minimum wages, and concomitantly enter into treaties which lessen the possibility of securing a livelihood from the only products upon which the economy of our tropical areas depends. I want to state that the Department opposes any modification of the Cuban treaty in regard to sugar and the products of sugar, such as sirups, molasses, rum, and in regard to tobacco and its manufactured products, such as cigars and cigarettes, unless and until it is conclusively proved that under the changed conditions brought about by the wage and hour law—a law the effects of which are not yet fully appreciated—Puerto Rico will not be adversely affected.

The plight of Puerto Rico is so serious, the condition of its 1,800,000 people is so desperate, that we must urge with all the emphasis at our command not only that this American territory be given the benefit of every doubt, not only that no revisions take place which could possibly further aggravate her distress, but that advantage be taken of this occasion to request a consideration for the island's needs, which we regret to say has been lacking in the past. The Department desires to go on record as requesting at the earliest possible moment a revision and abrogation of the previous concessions to Cuba on the matter of pineapples. We desire the consideration of Puerto Rican and Hawaiian coffee as American products for which markets are to be sought in future trade treaties. We desire that the case affecting Puerto Rico's tobacco, the processing of part of which comes under the wage and hour law, be reviewed with that condition in mind. We ask, in sum, that the island be not sacrificed, as it has been hitherto, to make a Cuban holiday.

If it be argued that we need to improve our trade with Cuba because Cuba is an important market for American goods, let me point out that Puerto Rico and Hawaii are, respectively, the sixth and seventh largest markets in the world for continental goods; that they exceed as markets any other nation or state in this hemisphere excepting Canada, therefore surpassing any Latin American country. Therefore, apart from the essential fact that these are American territories whose citizens are entitled to the same rights and consideration as any of our citizens, from the standpoint of improving our business alone, of increasing our exports, they should have priority, preference, and precedence.

It is not merely a question of fair play. National self-interest requires that we put an end to gross, repeated, and continuing discrimination against a part of our citizenry.

Chairman GRADY. Thank you, Mr. Gruening.

Mr. Speaker, inasmuch as relief funds are required to take care of those who are pauperized in Puerto Rico by the present operation of the Cuban trade agreement, the testimony of Commissioner Gruening is pertinent to relief.

Suggested Amendments to the Railroad Retirement Act

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. HOUSTON. Mr. Speaker, the Railroad Retirement Act of 1935, passed on August 29, 1935, set up a national system of retirement annuities for employees of carriers subject to the Interstate Commerce Act and of certain other employees whose business is directly connected with the railroad industry of this country. The Federal Railroad Retirement Board was made the administrative agency for this act and was empowered to determine, under standards and conditions prescribed in the act, the eligibility or noneligibility of individuals filing claims for annuities, to compute the amounts due monthly, to certify approved claims to the Treasury for payment, and to perform all other necessary administrative functions. Taxes for this purpose were provided in a separate act, known as the Carriers Taxing Act of 1935, so as to make the retirement system self-supporting.

These acts were almost immediately made the subject of concerted constitutional attack in the courts by the carriers. Pending determination of the suit, the individual carriers for the most part refused to cooperate with the Board, either in furnishing records of service and compensation essential to carrying out the provisions of the act or in signing "continuance in service agreements" to protect employees from reductions in annuities who continued in service after age 65.

The decree of the Federal District Court for the District of Columbia, entered on June 30, 1936, did not sustain the constitutional attack on the Retirement Act but did invalidate the tax, and further enjoined the Board from requiring the carriers to furnish records except at its own expense. Appeals were taken to the Court of Appeals for the District of Columbia on these points. The obstacles and the uncertainties naturally resulting very seriously hampered the Board's work during the entire period. Requests were received from many applicants who had filed to suspend their applications for annuities, while many other employees who would otherwise have been eligible continued in service and refrained from filing until these issues were disposed of.

The situation thus created was satisfactory to neither the carriers nor their employees, and conferences ensued between the authorized representatives of their respective associations with the object of finding some mutually satisfactory solution of the problem through new legislation. Those conferences are now history.

Accord was reached by the conferees on each point in dispute, and an agreement to request new legislation in conformity with principles and standards specifically set forth in the articles of agreement, was formally entered into by the authorized representatives of class I carriers and the 21 standard railway labor organizations, which agreement was ratified by members of their respective associations and accepted by the Short Line Railroad Association.

Pursuant to this agreement Congress passed the new legislation requested in the form of the Retirement Act of

1937 and the Carriers Taxing Act of 1937. The Retirement Act of 1937 continued the 1935 Retirement Act in full force and effect with respect to those employees whose claims had already been adjudicated and with respect to other employees who retired prior to June 24, 1937. All other claims were to be adjudicated under the 1937 act.

In addition to continuing the 1935 act in force, the 1937 Retirement Act itself constituted a separate piece of legislation in that it made necessary the determination of whether the standards of the 1935 act or those of the 1937 act should be applied in whole or in part in respect to each claim filed subsequent to June 24, 1937. Some of the more important differences which resulted were:

First. It increased the number of employers with whom the Board must deal, from a possible 1,300 employers under the 1935 act to a possible 20,000.

Second. It made eligible for annuities many thousands of employees who were not eligible under the 1935 act.

Third. It created new annuity eligibility standards.

Fourth. It changed the employment-relation status.

Fifth. It set up radically different disability qualifications.

Sixth. It completely altered the death-benefit provisions and increased the annual load with respect thereto by approximately 700 percent.

Seventh. It provided mandatory procedures governing elections of joint survivor annuities.

Eighth. It made necessary the distribution to all railroad employees by the Board of annual statements of monthly service and earnings as credited on the records of the Board after January 1, 1937.

Ninth. Finally, it required the Board to take over from the carriers the administration and payment of some 50,000 private pensions, separate and distinct from the annuity system.

Many railroad employees residing within the Fifth Congressional District of Kansas have urged that the 1937 Retirement Act be made more liberal, and this is a matter which should be seriously considered during this session of Congress.

The national weekly newspaper Labor carried an editorial in its issue of December 27, 1938, on this subject, listing most of the suggestions made by railroad employees and commenting upon the cost of such proposals to the employees and the carriers.

The editorial is quoted for the benefit of Members of Congress and railroad employees, as follows:

Last week Labor reiterated its statement that the railroad retirement system is "as strong as Gibraltar," but pointed out that if amendments were adopted liberalizing the law, additional funds would have to be provided.

As matters stand now, every railroad worker contributes to the railroad retirement fund $2.75 out of every $100 he earns. The carriers contribute a similar amount.

That is a considerable burden, and naturally the chiefs of the standard railroad labor organizations hesitate to ask Congress to increase it. Railroad workers sorely need every penny they are now receiving—and more. Therefore, in the opinion of Labor, it behooves them to consider the cost of amendments before urging their adoption.

Many amendments have been proposed and experienced actuaries, employed by the Railroad Retirement Board, have painstakingly estimated the additional tax which would be required to finance them.

It is, of course, impossible to discuss all the amendments, but here are a few which will illustrate the nature of the problem:

1. Amend the law by striking out the clause "totally and permanently disabled for regular employment for hire" and substitute the clause, "mentally or physically disabled for regular employment"; and eliminate the "30 years of service" requirement for disability annuity, making such annuity payable for any number of years of service, not exceeding 30.

Cost: About $28,600,000. Increased tax, $1.30 for each $100 of pay roll, equally divided between employees and carriers.

2. Under the existing law, in order to get the benefit of his "prior service," an applicant for pension must show that he was in an "employee relationship" with a carrier on August 29, 1935, the date when the law became effective.

It is proposed to change this provision so that if a worker is reemployed, even for 1 day, and then applies for a pension, he will be credited with all his prior service.

Cost: About $22,000,000 annually, or about $1 tax on each $100 of pay roll.

3. In place of the present death benefit—4 percent of all the deceased earned after January 1, 1937, minus what he may have drawn as pension—it is proposed to grant widows of employees pensions running up to $75 a month for the period of widowhood.

Cost: If this were restricted to those dying in railroad service, and before retirement, it would cost about $127,600,000 annually, and necessitate an increase in the tax of $5.80 on each $100 of pay roll. If it included widows of those who died after retirement, there would be a further aditional cost of $68,200,000 annually, or $3.10 per $100 of pay roll.

4. Compulsory retirement at 60 and permissible retirement, with 20 or more years of service, at 50 or over, with the further provision that an employee with 20 or more years of service might retire with a reduction of one-twentieth for each year he was under 50.

Cost: It would require $198,000,000 annually, or $9 out of every $100 of pay roll, to enforce compulsory retirement at 60, with no extensions. If retirement were permitted before 60 it would, of course, cost very much more.

5. Amend the law as follows: "The annuity shall be computed by multiplying an individual's years of service by the following percentages of his monthly compensation: 3 percent of the first $100, 1½ percent of the next $100, and ½ percent of the next $100." This amendment would produce an average annuity of $135 monthly, as compared with the present average of approximately $67 a month.

Cost: About $140,680,000 annually, or $6.44 per $100 of pay roll.

6. Permit employees to retire on full annuity after completion of 30 years' service, irrespective of age.

Cost: About $308,000,000 annually, or $14 out of every $100 of pay roll. Of course, that is based on the theory that all would take advantage of the provision.

If all these amendments were adopted, some of which appear to overlap the employee's tax on each $100 of wages would be increased from $2.75, the present figure, to possibly $20 per month, and the carriers would be asked to contribute a similar amount.

No one pretends that the railroad retirement law as it stands today is perfect, but it is the best law ever enacted in any country for workers outside the Government service. It is financially sound and has been humanely administered. We would all like to make it broader and better. It would be foolhardy, however, to advocate sweeping changes without counting the cost. The figures presented above give readers of Labor a pretty accurate idea of what that cost would be.

National Monetary Conference

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

RESOLUTIONS OF THE NATIONAL MONETARY CONFERENCE, CHICAGO, ILL., NOVEMBER 28–30, 1938

Mr. VOORHIS of California. Mr. Speaker, one of the greatest questions before this Congress is that of constructive reform of the monetary system under which we are now attempting to operate our national economic life. Because I agree so substantially with the principles contained therein I have asked unanimous consent to include with my remarks the following resolutions passed by the National Monetary Conference:

Whereas the National Monetary Conference, held at the Northwestern University School of Law, Chicago, Ill., on November 28, 29, and 30, 1938, after carefully considering and analyzing court decisions, factual data, and material, and after the exchanging of the views of those participating in the conference, as based upon years of study and experience in the field of monetary reform, has reached certain conclusions in regard to such reform and has considered it desirable to express those conclusions, as agreed upon by a majority of those so participating; and

Whereas the conference, however, deems it of still greater importance to initiate steps for spreading greater knowledge on this subject, for bringing the money question out into the open, and for developing more practical organized action for needed monetary reform; and

Whereas the conference realizes that there are honest differences of opinion among those interested in monetary reform in regard to various technical details of reform, including some of those matters covered by the conclusions reached by a majority of the members of this conference, but that there must be some common principle upon which the great majority of those, who realize that there is a very vital need for some such reform, can agree as a means of combining their efforts, in spreading knowledge upon the subject and in getting into practice such principles as they have in common; and

Whereas this conference further deems it desirable to suggest a common principle upon which to create an organization for

carrying on such work as those who realize the need for monetary reform have in common in the field of such reform, and to initiate the taking of various practical steps to be carried on in that field: Now, therefore, be it, and it is hereby,

Resolved, That the following are the conclusions which have been reached by a majority of those assembled in this National Monetary Conference:

1. The Congress of the United States has the sole power to coin or otherwise create legal tender money and has the power to regulate the value of money. Under this power Congress may assume full control over all of our medium of exchange and may prohibit the creation of all substitute mediums of exchange. However, Congress has not assumed such power, but should assume same.

2. Congress should prohibit all powers in the Board of Governors of the Federal Reserve System or the President inconsistent with the exclusive power in Congress to create money and regulate the value thereof.

3. There is no need for a change in the present reserve requirements for savings deposits in the banks.

4. The reserve requirements behind all demand deposits, or check-book deposits, should be 100 percent in lawful United States money.

5. The power of Congress to regulate and control all money necessarily includes the power to control bank credits.

6. Congress should assume such control by formulating a mandate embodying the requirement of stability of the monetary unit of the dollar, according to a definite criterion, which mandate should determine the functions of the monetary authority administering such mandate. This mandate should include the following objectives:

(a) Stability in the purchasing power of the dollar, according to a standard fixing the price level, consistent with other factors mentioned herein.

(b) Full employment in private industry.

(c) Production for profit to the farmers.

(d) The volume of additional currency, if any, to be added to our circulating medium from year to year should be determined by the monetary authority according to the above criterion set up by Congress, and may be paid into circulation in direct benefits, such as old-age pensions, relief to the indigent, for public works, or the like, or by the purchase of United States securities.

And be it further resolved, That the following be, and it is hereby, suggested as a common principle upon which to found a national organization for carrying on common endeavors in the field of money reform:

"All medium of exchange shall be originated exclusively by Congress and issued in accordance with some definite standard so as to insure stability of buying power, full employment in private industry, and equitable prices for farm products."

And be it further resolved, That a permanent committee be, and the same is hereby, created to work out ways and means of forming a national organization under which the various divergent groups interested in monetary reform may meet on common ground, and to work out practical measures upon which to build for the actual attainment of needed monetary reform.

Compulsory Wage Deductions a Disgrace

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. SHAFER of Michigan. Mr. Speaker, I have requested this brief period to call the attention of the House to a bill I have recently introduced.

This bill is drawn to abolish and correct unfair and substandard working conditions in the United States Veterans' Administration and is designed to raise the living standards among employees of the Veterans' Administration. It provides that upon its enactment no deductions shall be made from the earnings of civilian officers and employees of the Veterans' Administration for subsistence and quarters, laundry, and other facilities unless such service or facilities are voluntarily accepted, and where these facilities and service are voluntarily accepted the charges therefore shall be at cost.

Compulsory deductions for quarters, subsistence, and laundry from the earnings of Veterans' Administration employees are now made regardless of whether or not these facilities are used. In many instances these deductions amount to about $50 per month, or approximately one-half of salaries paid attendants and other employees of veterans' facilities.

In many instances these Veterans' Administration employees maintain homes and families off the Administration property, and because of the policy of compulsory quarters, subsistence, and laundry deductions their families are in want. In fact, these employees, whose services are of high value to this Government, are forced to live and maintain their families on less wages than are received by W. P. A. and P. W. A. workers.

Many other unfair and substandard working conditions exist in the Veterans' Administration and should be corrected. Passage of the bill I have just introduced will abolish one of its most disgraceful practices. It will not only raise the living standards of Veterans' Administration employees, but will develop a higher rate of efficiency in the conduct of veterans' facilities.

If Members of this House are sincere in their declared desire to raise living standards in America, they have an opportunity to demonstrate that sincerity by assisting me in obtaining favorable action on this legislation.

The Works Progress Administration in Oklahoma

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. JOHNSON of Oklahoma. Mr. Speaker, it would seem, judging from the discussion on the pending bill proposing an emergency appropriation to continue work relief until July 1, that the W. P. A. does not have many friends on the floor of this House. Even those who are supporting this appropriation are in most instances doing so apologetically. So it seems that the die is cast and that anywhere from 600,000 to 1,000,000 workers now on the W. P. A. are to be let out of work before July next.

I deeply regret that under the present parliamentary situation it is impossible to secure a record vote on this bill as recommended and submitted by the President for $875,000,000. I gave my support both in the committee and on the floor here today to the amendment offered by the gentleman from Missouri, proposing to restore the full amount of $875,000,000 as asked by the President. I also supported the amendment offered by the gentleman from Georgia [Mr. TARVER] proposing to adjust the wage scale in the different sections of the country. The fact is I offered a similar amendment when the bill was being finally considered before the full Committee on Appropriations. Certainly there is no justification for the present unreasonable differences in wage scale in the different sections of the country.

We have heard much criticism of the former Administrator of the W. P. A., Mr. Hopkins, and of certain projects in various States. Some of that criticism may be justified. If, for example, the criticisms offered here against unpatriotic and un-American plays written and dramatized in New York City by W. P. A. workers are true, and I have no reason to doubt what the gentlemen have said, then such theater projects are inexcusable, inexplainable, and absolutely indefensible. For that reason I opposed the amendment offered by the gentlewoman from New York [Mrs. O'DAY] to earmark certain funds for the continuation of such projects.

When this appropriation was considered here a year ago, the gentleman from Texas [Mr. LANHAM] offered and secured the passage through the House of an amendment forbidding aliens who have refused to become citizens to work on the W. P. A. It is true that the teeth were taken out of that amendment at the other end of this Capitol, but had the W. P. A. officials administered the law or even the spirit of the law, I am of the opinion that it would have eliminated a lot of criticism and undoubtedly placed thousands of real Americans at

work who are now walking the streets looking for jobs they are unable to find. I am in favor of making the law so plain on this subject that it will be impossible for aliens who refuse to become naturalized, or other enemies of this Government to have the opportunity of biting the hand that feeds them.

I supported the amendment offered today by my colleague from Oklahoma [Mr. BOREN], similar to the original Lanham amendment, providing that no W. P. A. funds shall be made available to pay any except citizens of the United States.

But, Mr. Speaker, as much as I am opposed to any un-American activities in connection with the W. P. A., I submit that it is unfair to judge the entire Works Progress Administration by a few isolated projects. The W. P. A. in Oklahoma has done an excellent job. In the district I have the honor of representing in Congress I know of no leaf-raking or boondoggling projects. On the other hand, there have been more schoolhouses constructed by the W. P. A. in Oklahoma than in any other State in the Union. In many instances these schoolhouses were constructed at a lower cost than a contractor, with his 10 percent plus, could have possibly constructed them. These school buildings, or at least a majority of them, could not possibly have been constructed had it not been for the W. P. A. program in my State. Many hundreds of other schools, especially in the rural sections, have been repaired, overhauled, and painted. Hundreds of school grounds have been improved and beautified.

In addition to this, many city halls, high-school buildings, courthouses, bridges, dams, roads, and other worth-while projects of a permanent nature have been constructed in the State of Oklahoma. This has been done without any political scandals on the part of those administering the program in Oklahoma.

The gentleman from Virginia [Mr. WOODRUM], chairman of the subcommittee, in his opening statement admitted that some five or six hundred thousand workers now on the W. P. A. will be laid off before July 1. He also admitted that some two hundred thousand of such workers will be laid off immediately. The report of the mayors of the United States would indicate that the figures will be far in excess of that of the gentleman from Virginia, but to my mind the only issue involved is whether or not Congress can afford to immediately turn some two or three hundred thousand workers out on the streets in the dead of winter in the name of economy.

Within a few days or a few weeks this Congress will be spending hundreds of millions of dollars for national defense and I expect to support any reasonable national-defense program, but I submit to you that a continuation of worth-while work-relief projects is real national defense. It is poor national defense, and certainly it will not help the spirit of national defense, to turn 500,000 to 1,000,000 men out of work by July 1 and then spend sixty to a hundred million dollars each for battleships that will take 5 years to build and within another 5 years will be out of date and practically useless.

Certainly the program of building roads and the widening of our highways is real practical national defense. What is flood control and the conservation of soil but national defense? The construction of schools, bridges, and the building up of the morale of our people, old and young, is, in my judgment, a mighty factor in true national defense.

The W. P. A. worker is not here today to defend himself. He has been represented by his critics as leaning on his shovel. Perhaps he is leaning today more than ever and looking toward Washington—looking toward you and me and wondering, as he tightens his belt strap another notch, if he and his family are to go hungry on account of any action of this Congress today. I am not so concerned with the white-collared supervisors or directors of the W. P. A., although I feel that in the main that they have honestly and conscientiously worked on their jobs, but I think I hear the inarticulate voice of the W. P. A. worker who is unable to be here and speak for himself. I am thinking of those underpaid women in the sewing rooms who are so grateful to earn a livelihood, but many of whom will be forced off of the pay rolls if and when this slash of $150,000,000 in this emergency appropriation is made today.

Mr. Speaker, I am standing by the President of the United States in his request for this emergency appropriation to feed hungry men, women, and children, even if appropriating the $150,000,000 might make necessary the elimination or postponement of one or two extra battleships.

Political Phases of W. P. A. Relief

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 13, 1939

LETTER URGING INVESTIGATION OF W. P. A.

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent:

MAHANOY CITY, PA., *January 10, 1939.*

HON. IVOR D. FENTON,
House of Representatives, Washington, D. C.

DEAR DR. FENTON: I hereby desire to give you some very important and interesting information concerning political phases of Government relief and W. P. A., also beg you to present these just facts to Senator G. Mason Owlett, sponsor on the State investigating committee.

The general protests that have followed wholesale dismissals of women with dependents from various sewing projects on December 9, 1938. The procedure which was inhuman requires immediate investigation, as they were all workers that received the so-called "top" security wage of $60.50, calculated as the minimum amount needed to provide human subsistence.

We quote, the dismissal of workers with dependents is contrary to rulings on W. P. A. as when a reduction in forces is necessary it must be applied to the single or lone person. This ruling has been disregarded by the politicians.

We have been informed the order for this drastic cut came direct from Washington, though it has not been applied to each worker in the same category. The reduction has not affected the single or lone person drawing $71.50, $85, $94, or $105 per month. They are maintained regardless of reduction in the $60.50 workers. Prior to November 8, 1938, this project had 123 women employed.

This included supervisor, which consisted of project head, salary $135, married, has dependents; two timekeepers at $85, inadequate work for one; a supervisor, $105; another supervisor at $94; a forelady at $85; also one at $71.50. There are four cutters, all single, no dependents, receiving $71.50. This staff is the same with approximately 28 now on the project at $60.50. The experienced seamstress uses her own sewing machine on the project and is requested to teach the amateur and receives $60.50, and is requested to pay 50 cents per month for the maintenance of the project.

The employees on supervision have not been questioned as to their qualifications for their respective jobs. No competitive examinations have been requested where Government materials are concerned. The waste and extravagance is abundant. Single cases left private industry just to get on the sewing project. The whole structure became a political football.

We quote, prior to November 8, 1938, women have been assigned to this project who, if eligible should be pensioned, and are still on, while those women with children and the responsibilities of a home have been laid off.

The relief problem and the abuses perpetrated in our community, as a result of waste, corruption, and political perversion of relief, result in a large number of our needy citizens being ill fed, ill clothed, and ill housed, despite the vast appropriation of millions of dollars in public funds for our benefit.

The administration of relief. Those dismissed on the 9th day of December 1938 as yet have not received aid; some received checks for Christmas. The relief ruling states 21 days after your last pay relief is granted. I shall prove where a case was under investigation for 4 weeks and when the client appeared at the assistance office she sat there 4 hours. When the supervisor arrived he stated they could not find her case. So developing is the political octopus now fastened upon relief in our community that there is precious little relief in relief.

We therefore beg an immediate investigation of the Senate committee for the dismissals of workers with dependents, and the retension of single cases who are unencumbered and may find a place in private industry or formulate some plan while there are no opportunities for the familied person.

Thanking you from the bottom of our hearts for your activities in behalf of the unemployed, and best wishes for a sound form of Government relief and administration of W. P. A.

Very respectfully,

MARY M. KRITCHEN,
518 West Spruce Street, Mahanoy City, Pa.

P. S.—If I can be of any assistance in the investigation, I shall be glad to do so.

Appropriations for Work Relief and Relief

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, January 13, 1939

Mr. WOLVERTON of New Jersey. Mr. Speaker, the question of relief for the needy unemployed of the Nation has become one of the most controversial issues with which the present Congress will be confronted.

The issue does not arise because of any serious difference of opinion as to existing need or the underlying obligation of the Federal Government to provide food and shelter for its needy citizens. This is generally recognized and has found expression time and again by each succeeding Congress providing funds for the care of the needy. The real question that demands solution relates to the administration of such funds in behalf of those for whom intended.

During the last campaign it became increasingly evident that relief funds were being administered in a manner to insure political advantage. Every Member of Congress and every observing citizen was aware that such was being done. The report of the Senate Committee on Campaign Expenditures leaves no doubt that such was the case. To use Federal funds, appropriated for the needy, for partisan political purposes is reprehensible. It is literally and truly "playing politics with human misery." The extent to which relief funds appropriated by Congress have been administered and used by machine politicians for political purposes has become one of the worst scandals in our political history. It is this condition that cries out for solution.

Republicans in Congress have always supported the relief appropriation bills. They will continue to do so as long as need exists. But they are equally insistent that the political use of relief funds shall come to an end. In this endeavor they should have the assistance of every Member of this House who thinks in terms of the national welfare. There should be no party division upon a question so fundamental to our welfare.

Congress is now being called upon to appropriate additional funds to carry the needy through until the close of the fiscal year, June 30, 1939. Congress, before it adjourned in June of last year, had made provision for such, but now we learn that the funds are almost depleted and will last but a few days more. Why is this? The answer is to be found in the political use of the funds prior to the last general election and in several primary elections where the administration was engaged in purging the Democratic Party of some "who had not gone along 100 percent." Furthermore, political workers with no claim for relief have been placed in administrative positions. The salaries paid to such were all out of proportion to the value and character of service rendered by these political overlords. Every dollar paid to them was that much less for the needy unemployed. Today we are reaping the consequences of this improper, injudicious, and un-American expenditure and use of taxpayers' funds. If the funds had been used only for the needy and not for political administrative officers, there would be no such shortage today. There is no excuse for giving any administrative job on W. P. A. to anyone not on relief. Within the ranks of the unemployed can be found men and women fully qualified to fill every administrative or other kind of job necessary to the functioning of the Works Progress Administration. There is no justifiable reason to go outside of the ranks of the needy unemployed to obtain such. Certainly there is no necessity to select such from the ranks of political workers not on relief. If relief funds were used solely for those on relief, there would be no such shortage as now exists.

How much longer will the citizens of America stand for this outrageous use of taxpayers' funds to reward political workers not on relief? The time is coming—and to some it seems close at hand—when this practice will be outlawed and relief funds appropriated by Congress will be used for relief of the needy, as intended by Congress. And now, as if to add insult to injury, a demand is being made to "blanket" all these political administrative officers of W. P. A. under the protection of civil service. The claim is made that thus will partisan politics be removed. Such is utter folly. The contrary will be the truth. If there is a sincere desire to eliminate "partisan politics" from W. P. A., let provision be made that its funds be administered by nonpartisan boards and all administrative offices be opened to competitive examination to all interested citizens, regardless of political affiliation. If this be done and positions filled as a result of such examinations, then we would be having real civil service and the first step toward elimination of partisan politics in control of W. P. A. But to "blanket" into civil service all those who are already in the administrative positions is to give permanency to those who now hold such positions for no other reason than political influence.

Republicans have always favored civil service in this and every other activity of the Government, but we seek real, genuine, and honest civil service that places the best man or best woman in the position regardless of political affiliations. That which is now proposed by the administration is nothing more or less than an effort to save the jobs for those now in administrative positions against an aroused public sentiment that seeks to remove politics from control of W. P. A. Unless relief is to be considered as permanent in character and the Works Progress Administration a continuing agency of government and thereby subject to all general laws, then the policy should be to select all administrative officers from among those on relief.

While there may be violent objections made to the manner in which the Works Progress Administration has been politically administered, yet I am certain that such does not constitute sufficient reason to cut down or refuse adequate funds for the relief of the needy. Thus, while we strive to correct abuses that have become apparent, we will just as zealously support the appropriation of necessary funds to care for the needy. Accordingly, my vote will be cast in favor of the resolution now before the House to provide funds for the relief of the needy unemployed.

Relief Appropriations

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 13, 1939

Mr. ALEXANDER. Mr. Speaker, my election from a normally overwhelming Farmer-Labor district in Minnesota was the result of but one desire on the part of thousands of relief recipients and W. P. A. workers—a mandate if you will, from the very people whom we have been discussing here these past 2 days, plus the other good, God-fearing, humane, and public-spirited, patriotic citizens of my district—a mandate not for a continuation of W. P. A. but for a change, for a new new deal, if you please, for a constructive, sound, and fundamental program which will give work,

honest work at honest jobs at good American wages. Not the dole, not relief, not starvation wages, but a real program to put men and women back to work, to put idle dollars back to work, to start idle machines humming again, and to rehabilitate the farmer, the small business, or the big business. I do not care whether you are for $725,000,000 or for $1,000,000,000, as long as you have no program. The people do not want relief or W. P. A. My election proved that, for my opponent, the former distinguished Congressman, Henry Teigan, based his appeal for reelection on what he had done for W. P. A. and relief recipients, and they turned him down in my favor with a smacking majority.

They did not want W. P. A., they wanted a constructive program. And because such a program is contemplated in this amendment according to the mandate of the great American voter on November 8 last, I support this amendment. And to that idea I wish to offer a few sober reflections for the Members of this House. First, should we not, instead of going on, session after session, year after year, during both New Deal and Old Deal regimes and continually making more and larger appropriations, should we not, I say, instead of merely debating the size of the appropriation, as we have been doing, or the presence of politics in its administration; or the employment of unworthy men or women; or the misapplication of the funds; or any of the other dozen and one criticisms which have been aimed at the W. P. A. here—should we not rather take this problem by the nose right now as we cattlemen from the West take a big bull in a pen—today, without further political partisanship or delay take it in a good, humane, patriotic manner and start to tear it apart and set it up again in a constructive and business-like way as contemplated by the terms of this amendment which proposes a committee of nine members from each congressional body charged with the responsibility of giving us a program. Secondly, should we not consider, in attacking this problem, which now and for 9 years has had us by the nose, the real issue of this problem—a cure for the problem, if you please. Should we not, in place of made work and hand-to-mouth planning based on the false assumption that prosperity is just around the corner, in this the Seventy-sixth Congress, take stock of some of the fundamental needs of the people of this Nation? I refer to their need for better homes, not drab and unattractive flats planted in the center of an unattractive district as they have done in the city of Minneapolis where few respectable families will care to live and where there is no decent arrangement for the needs of young Americans. I refer to their need for better health, both physically and mentally. I refer to their need for less slums and less crime-breeding cesspools and festering canker sores of foreign "isms." I refer to their need for protection from foreign importations produced with cheap labor with which we cannot hope to compete and still retain our high standard of living. At least 10,000,000 people could be put back to work if we could stop this foreign competition. I refer to their need for monetary reform as suggested by my colleague and good neighbor Mr. BURDICK, of North Dakota, in this house on January 11. I refer to the suggestions made by my colleague Mr. VOORHIS of California a few days ago, and I refer to the suggestion made by the Congressman from New York in his remarks yesterday that our people want work, not relief. I refer to the suggestion for a group of super transcontinental highways which was made here at the last session by Mr. L. E. Steiwer, of Wooster, Ohio, which he proposed to build without the use of any tax money. And I refer to other constructive suggestions which we could and should adopt and would adopt if we really are in earnest about this problem and its solution.

We in America are all wont to do a lot of wishful thinking. We wish for prosperity; we wish for greater exports, less imports; we wish for farm prosperity; we wish for a balanced Budget; we wish for peace, and now we are wishing that an increase in a rearmament program will serve to solve our unemployment problem without additional ill effects or bad results. I am afraid we are due to be disappointed in both aims except temporarily perhaps. Shall we continue on with this eternal wishful thinking and vain hoping or shall we prepare a program?

I referred above to slums and the need to do something about them. Probably no endeavor, if undertaken by local and Federal Governments, could do more for the physical, mental, and moral health of our cities than a real slum-clearance act. Slums are sores on the face of a city, which, when allowed to fester, as we have done, spread their infection far and wide, increasing juvenile delinquency, disease, and crime.

The evil effect of slums has recently been summarized by the United States Municipal News, as follows:

> The juvenile delinquency rate in the slum districts of Philadelphia and Cleveland is three times as high as the rest of the city; it is twice as high in the slum areas of Birmingham and Hartford and 10 times as high in a certain 50-block district in Detroit.

In other words, it is 10 times as hard for a boy or girl, a young man or young woman, to grow up and be a decent, self-respecting, honest, and honorable American citizen in some sections of this country than it is in others. No wonder that those who do come through this fiery trial of environment often do become outstanding geniuses. Hats off to these poor boys and girls.

The slum section of Jacksonville, which covers less than 2 percent of the city's total area, is the source of 32 percent of the city's major crimes and 42 percent of its social crimes.

The pneumonia rate in Detroit's slums is almost three times as high as for the city at large, and the tuberculosis rate is six times as high. These are but a few of the findings which show that our slums are not only a municipal but a social liability which results in crime and destruction of our democratic standards and civilization.

I referred also to the possibility of putting 10,000,000 people back to work by the elimination of foreign competition. As an example of what I mean by this and to show how that number of people could be cared for in 6 months' time without taking one dollar from the Budget, and thus also eliminating the necessity for the W. P. A., I suggest the following imports which compete with our own products and which should be stopped and these groups be put to work: Three million persons to cultivate new corn, beet, and sugarcane land when blackstrap molasses and foreign sugar is barred; 300,000 miners to operate our copper mines; 400,000 for additional pottery and china, carpets, rag and grass rugs; 150,000 fishermen and canners when these imports are stopped; the same number of iron and steel workers; and a like number of persons to raise cattle and meat products now imported, both frozen and canned; 100,000 silver miners if we buy our own silver instead of from South America, Mexico, and China; another hundred thousand shoe workers; and another similar number to produce gunny cloth, gunny sacks, and binder twine; 75,000 textile workers; 200,000 persons in electric-lamp, toy, novelty factories, cement, bricks, manganese, vegetable canning, and furniture; 25,000 additional coal miners—to say nothing of oil and lumber—and, finally, 50,000 distillery and fruit beverage workers.

These people are at this moment on Government relief. By eliminating the foreign imports now coming into this country we could return the numbers listed above to profitable employment. And in addition it would probably put another 3,000,000 to work to supply their wants in retail stores, warehouses, factories, and the whole chain of production and sales which would be started, to take care of increased business.

And then again think what would happen to our unemployment problem if we would attempt to properly house our people who are living in huts and hovels in our crowded city districts. And when you build decent houses in good healthful surroundings for our people you are putting your money into something which will have value for at least 50 years, perhaps longer. How much better this would be than to be throwing our money over the dam in made work and leaf

raking or doles and shovel jobs as we have been doing with so little to show for our billions and billions of expenditures of the taxpayers' hard-earned money. In addition to this feature of a real home-building program is the added one that happy people, self-respecting, living in decent homes are not usually revolutionists. Neither do their offspring grow up to be criminals or human derelicts, as I have already pointed out our slum conditions are now creating in numbers out of proportion to the total population.

America needed a potent fiscal shot in 1933, but now the protesting patient whether employed or unemployed has grown tired of these shots and is asking Congress for a program, a plan, constructive in its inception and practical in its administration, aimed at the solving of our economic torpor not its perpetuation as this W. P. A. appropriation known as House bill No. 83 seeks to do in granting this new $725,000,000 for use up to June 30, 1939.

Paving the Way to Future Jobs

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

RADIO ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA, JANUARY 12, 1939

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on Thursday, January 12, 1939:

The road to new jobs cannot be paved in a day. The construction of such a road requires patience, hard work, and skillful craftsmanship. No single unit of this road reaches the whole way to the goal of permanent employment for everyone. Instead it is made up of many units, each unit prepared separately, one at a time, over a period of many years. The completed structure, however, is destined to become the highway to greater economic comfort and security.

We have made progress in the construction of this highway, it is true, yet much remains to be achieved. This evening, I want to bring to you a picture of what has been done, of what is being done, and of what must yet be accomplished. First, let us look at the unemployment problem itself.

The assertion is often made that we face a problem of permanent unemployment in the United States. According to this view, thousands of American citizens who are physically and mentally capable of earning substantial incomes must, through no fault of their own, expect to be forced to live the lives of paupers or near-paupers. I cannot subscribe to such a concept of our future. To me it is unthinkable that any American who is able and willing to provide himself with the necessities and many of the luxuries and conveniences of life through honest work should not be given the opportunity to do so.

PROBLEM IS NATIONAL ONE

The chief obstacles to such opportunities are frequently of a national character. As such, they are beyond individual control. As a member of the House Labor Committee, I have used and shall continue to use every resource at my command to help in overcoming those national economic difficulties which are too great for individual workers to surmount alone. But I am convinced that men and women everywhere should depend upon their own physical and mental resources to surmount those obstacles within the scope of individual achievement. This distinction is necessary if we are to maintain a strong, healthy, and self-reliant people as the citizenry of this country.

I am thinking not only of those who are unemployed today, but I am thinking also of those who may become unemployed tomorrow. To consider the unemployed men and women in this country as a special group constantly out of work is an error. The unemployed population today is not composed entirely of the same men and women that it was last year, or the year before. Since May 1938, over one-half of the new employees assigned to W. P. A. jobs each month, had never taken W. P. A. jobs before. These new workers came from certified relief rolls, which means that they were actually unemployed and genuinely in need of economic relief until they could find private employment again. This is evidence of the changing personnel of the unemployed population.

It is also a mistake to regard the unemployment problem as a recent one. Unemployment existed long before the crash of 1929. The depression merely amplified it to such an extent that public recognition of its existence was inevitable. By no means did public recognition mark the beginning of unemployment. The sweep of the business cycle, displacement of labor by technological changes, seasonal variations in production, shifts in foreign trade, displacement of older workers by younger ones, and other causes, have been going on for many years. The unrecognized problem of unemployment was coexistent with the long-standing causes which account for its presence today.

DIRECT RELIEF WAS NEEDED

When unemployment finally gained national recognition in 1933, it was too late to attack the causes of the trouble in order to meet the emergency of the hour. Direct relief was the immediate need, and that was supplied by the Government. As soon as possible, employable persons were given useful, productive work. Then began the longer and more difficult task of remedying the causes of unemployment or of providing permanent measures for protection against its hazards.

One of the first steps was the establishment of the Social Security Board which provided for old-age pensions and unemployment insurance. Old-age pensions in most States now provide for protection of elderly workers when they are displaced by younger employees. This is a direct attack upon a specific cause of unemployment. Most other attacks have been made on a broader front as protective measures against general unemployment. Such is the unemployment insurance which helps to absorb the shock of losing one's job, regardless of the basic cause.

Another step was the establishment of the wage and hour law. It, too, is an attack on a broad front. Its object is to spread the available work among a greater number of employees and to raise the level of wages to a decent minimum. Indirectly, of course, it represents one type of adjustment to counteract technological changes which have made the 12- and 14-hour day of a century ago quite unnecessary in our times.

However, this is only a beginning. We have hardly started to pave the way to opportunity for everyone to produce and to earn a living for himself and his family. What, then, remains to be done? What steps must we take in the next advance toward this goal?

LABOR-SAVING DEVICES INSTALLED

First, adequate provisions should be made for workers who are displaced by technological changes. Second, a continuous accelerating force should be provided for our economic system so that private enterprise can constantly increase the number of jobs it has to offer. These are only two of the more important steps that should be taken at the earliest possible time. They are direct attacks upon specific causes of unemployment.

On the opening day of the Seventy-sixth Congress I introduced two measures, which, if enacted into law, will represent a long stride in the direction of remedying some of the underlying causes of our unemployment problems. The first of these measures provides for a special study of the technological displacement of labor. It calls for specific recommendations to be made to the Congress upon which sound legislative action may be based.

The time has come when we can no longer neglect the problem of technological displacement of labor. Only a few hours' drive from my home in Elkins, W. Va., a new automatic strip steel mill has just recently been put into operation. The old mill employed 14,000 men. The new mill erected in its place employs only 4,000 men. Here are 10,000 skilled and semiskilled men who are out of work today through no fault of their own. Must they be compelled to rely solely upon W. P. A. jobs for a livelihood? Must these independent, self-supporting citizens of our great Nation be forced to join the relief rolls for a subsistence?

Glass factories equipped with automatic machinery have displaced thousands of workers in the glass industry within recent years. These highly skilled, well-paid craftsmen were accustomed to a high standard of living. Is social justice satisfied by providing them with a mere subsistence, and even that subsistence of a temporary and uncertain character?

COAL MINERS ARE DISPLACED

In the coal mines throughout the Nation, the loading machine and other labor-saving machinery has displaced thousands of miners. Any machinery which lightens the burden of man's labor and helps him to produce more with less effort is always a welcome one. But must the workers displaced by such machinery be forced to pay the cost of this industrial progress?

It seems to me that a method can be found, if we really try, whereby some of the economic benefits due to such changes can be shared immediately with the workers affected. I have no preconceived plan of my own, but I feel sure, and I believe everyone will agree that definite steps should be taken to study this problem, to sift the evidence, and finally to arrive at a plan which may be recommended to Congress for action.

The second measure is the scientific research bill which I first introduced in the Seventy-fourth Congress and again in the Seventy-fifth, and which I reintroduced last week. It is one of the most important steps in making possible a continued increase in the number of jobs available in private enterprise. If industry is to provide a continually increasing number of jobs, one of the first requisites is stabilized business conditions. This is based upon adequate regulation of the supply and demand for capital, either by limiting the supply or by increasing the demand, or both.

In a recent copyrighted article, John Howard Payne pointed out that "The failure of capital outlets to absorb the entire supply of savings results in an unbalanced condition between the supply of investment funds and the demand for them. This is the major unbalanced condition that must be corrected in the economic system in order to preserve any semblance of stability."

He went on to say that if the goods and services produced in the United States in a given year have an exchange value of $80,000,000,000, then the income created must also be $80,000,000,000. No more. No less. But if for any reason a portion of this income, say, $10,000,000,000, is prevented from being exchanged promptly for goods and services produced, or their equivalent, business may expect a set-back.

For example, when $80,000,000,000 worth of goods is produced and only $70,000,000,000 of income is available at the market to buy these goods, loud cries will arise about the scarcity of money, overproduction, underconsumption, unbalanced conditions, and hard times. Meanwhile production will slow down, employment will decrease, prices will fall, and business confidence will give way to genuine fear.

CAPITAL OUTLETS MUST BE OPEN

Obviously, adequate capital outlets must be kept open to prevent the recurrence of such conditions. In his outline of the five principal outlets for capital, Mr. Payne emphasized two of them, namely, Government security issues to finance Public Works programs and private security issues to finance new industrial developments. These two may be used alternatively or in combination to bolster up the demand for capital when it falls below the level of the supply. In this way the No. 1 balance in the economic system may be kept in a state of approximate equilibrium.

I am convinced that a constant accelerating force in the form of adequate investment opportunities must be applied to the wheels of our economic system. The accelerating force of Government borrowing and spending should not be removed until a substitute has been placed in the hands of private enterprise. The initial impetus given by a year or two of heavy Government spending conveys no assurance business will be able to carry on after the accelerating force of that spending has been exhausted or withdrawn. That substitute must be in the form of private investment opportunities sufficiently great to absorb the supply of available capital. Therefore, the paramount need today is the adoption of a long-range program to bring about a continuous succession of new industrial developments and the attending investment opportunities.

The early stages in the development of new industries is very largely a mystery to those unfamiliar with actual scientific research. History reveals that fundamental science is the fountainhead from which practically all the great industries of modern times have sprung. Therefore common sense dictates that the starting point of a program to increase private-investment opportunities should begin with a stimulation of research in fundamental science.

RESEARCH PROGRAM IS NEEDED

The scientific research bill which I am sponsoring is the result of long study and the considered judgment of leading thinkers throughout the Nation. If passed this bill will provide the foundation for an intensive research program from which new industrial and commercial developments may spring. As these developments appear, new and profitable outlets for capital will be provided, as well as new and better jobs for thousands of unemployed workers. Consequently private investment may ultimately be substituted for Government borrowing as the chief element in the demand for capital. Business will then be able to carry on under its own power as it receives constant stimulation from the flow of new opportunities for private investment.

These two measures which I have discussed this evening represent the next immediate steps I believe should be taken to pave the way for future jobs and better business conditions. We cannot expect the highway to employment opportunities to be built without effort on the part of individuals as well as business and government. We must apply ourselves constantly, each one to his own part of the task, until we achieve our goal.

Henry Wadsworth Longfellow, in his famous Psalm of Life, said:

"Let us then be up and doing,
With a heart for any fate;
Still achieving, still pursuing,
Learn to labor and to wait."

Allotment of Cotton Acreage Under the Farm Act

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. NICHOLS. Mr. Speaker, last fall I held a series of meetings with cotton farmers in my district to discuss the Farm Act, and I found a uniform sentiment for a change in the handling of the program that I believe would be easy to bring about and one which would do much to ease present friction.

That is, to give the county committees the authority to reallocate cotton acreage given to farmers, when the farmers indicate that they do not intend to plant it. Suppose that a county has a 50,000 total cotton acreage allowed by the State committee. In our section generally at least 10,000 acres would not be planted because certain farmers did not want to plant any cotton at all or not the total amount allotted to them.

If the county committee had authority to dispose of this 10,000 acres by increasing the allotment of other farmers, or to permit certain farmers, formerly cotton growers who were on farms without a "cotton history" to grow some cotton, this committee could erase a large proportion of the complaints at present heard because of the rigid acreage control.

I intend to bring this matter before the House Committee on Agriculture and also the officials of the Department of Agriculture and request that county committees be given this authority. However, it is necessary that prompt action be taken, for farmers are already making their crop plans for this year and should have information now as to the number of acres of cotton they can plant.

The Problem

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

STATEMENT BY HON. VINCENT F. HARRINGTON, OF IOWA

Mr. HARRINGTON. Mr. Speaker, the problem of organized society is how to bring enough money into circulation each year to enable the people to buy the wealth they can produce in order that all may live on an American standard, provide for the needs of government, and something for savings account as a foundation for security and growth.

There are just three ways to bring money into circulation, viz:

First. By the production and sale of the raw materials—products of the ground.

Second. By direct issue as provided by the Constitution.

Third. By taxation or by some form of credit device.

The second method merely provides an instrument for the convenience of society.

The third method merely represents the act of levying upon savings or the pledging of wealth which has not yet been created.

Neither the second nor the third method actually creates any new wealth from which society and government may draw sustenance.

PRODUCTION AND PRICE

The process of creating wealth starts with the production of raw materials—products of the ground. Manufacturing, transportation, merchandising, and other functions of business and capital represent only services which could not be performed at all if the raw materials were not first produced.

The amount of real wealth brought into existence is measured by the number of units of raw materials produced.

The amount of goods and services such units of new wealth will buy is measured by the price per unit received by the producer of such new wealth.

Therefore, number of units of raw materials produced, times prices received, equals the new wealth income created during each production cycle or year.

Example: 1,000 bushels of wheat selling for 50 cents per bushel brings into circulation $500.

One thousand bushels of wheat selling for $1 per bushel brings into circulation $1,000.

It is the bushel of wheat, ton of coal, pound of copper, and so forth, that the producer of new wealth puts into circulation. When he spends the dollars received for his product he places the equivalent amount of purchasing power in the hands of the next man, who in turn passes it to the next, and so forth.

The units of raw materials—new wealth—are transformed by industry into other forms of wealth and become permanent assets of society.

That is not true of the dollar of issue or the credit dollar.

Thus the dollar brought into circulation by the production and sale of raw materials—new wealth—is the only dollar which represents real wealth.

Therefore all national income is based on the amount and value of the new wealth produced.

And the sale of the annual production of new wealth must bring into circulation enough money so that when turned over in the channels of business it will provide a national income sufficient to operate the Nation—society—as a solvent business institution.

NEW WEALTH INCOME AND NATIONAL INCOME

Since agricultural income represents roughly seven-tenths of all new wealth income and largely gages the industrial demand for minerals, lumber, and other raw materials, the relationship of agricultural income to national income becomes the governing factor in our economy.

The relationship of agricultural income to factory pay rolls—the best index to the state of industry—and national income is, for all practical purposes, 1–1–7.

Meaning that each $1 of gross agricultural income yields $1 of factory pay rolls and $7 of national income. Example:

	Gross farm income	Approximate factory pay rolls (ratio 1 to 7)	National income (ratio 1 to 7)
1928	$11,700,000,000	$11,700,000,000	$82,000,000,000
1932	5,330,000,000	5,500,000,000	37,000,000,000
Deficit	6,370,000,000	6,200,000,000	45,000,000,000

Production of all grains, corn, wheat, oats, rye, barley, flax:

	Bushels
1928	5,633,000,000
1932	5,253,000,000

Production of principal meats, beef, pork, mutton, veal:

	Pounds
1928	17,007,000,000
1932	16,800,000,000

Thus production of grains, meats, and so forth, in 1928 and 1932 reflects slight difference in number of units, but approximately 50-percent decline in dollar yield.

With more population in 1932 than in 1928 and slightly less production in 1932 than 1928, had the law of supply and demand operated according to orthodox economy the farmer should have received a higher price in 1932 than in 1928, since there was no important carry-over of grain and meat stocks from preceding years.

We produced the necessary number of units of new wealth in 1932, but failed to measure properly their value in terms of dollars which could be exchanged for goods and services.

CONSEQUENCES OF FAILING TO STABILIZE PRICES

Failure to stabilize farm new wealth prices at the level which existed in 1936, when parity, or equal exchange value, prevailed for agriculture, industry, and labor, has cost this Nation in 8½ years—January 1, 1930, to July 1, 1938, inclusive—approximately $233,000,000,000 of national income which the people might have had, as shown by the following table:

Year	Gross income from farm production (million dollars)	Deficiency from 1926 level, 1930–37 (million dollars)	Labor income (million dollars)	Deficiency from 1926 level, 1930–37 (million dollars)	National income, gross (million dollars)	Deficiency from 1926 level, 1930–37 (million dollars)
1921 [1]	8,927		[2] 8,300			
1922	9,944		[2] 9,000			
1923	11,041		[2] 11,000			
1924	11,337		[2] 10,100			
1925	11,968		[2] 11,000			
1926	11,480		[2] 11,400		80,360	
1927	11,616		[2] 11,200		81,312	
1928	11,741		[2] 11,300		82,187	
1929	11,941		[2] 11,700		83,587	
1930	9,454	2,026	[2] 9,600	2,026	66,178	14,182
1931	6,986	4,512	[2] 7,000	4,512	48,512	31,554
1932	5,331	6,149	[2] 5,200	6,149	37,317	43,043
1933	6,256	5,224	[2] 5,500	5,224	43,792	36,568
1934 [3]	7,000	4,480	[3] 6,800	4,480	49,000	31,360
1935 [3]	8,100	3,380	[3] 7,600	3,380	56,700	23,660
1936 [3]	8,600	2,880	[3] 8,800	2,880	60,200	20,160
1937 [3]	9,000	2,480	[3] 9,000	2,480	63,000	17,360
1938 [4]	3,500	2,240	[3] 3,400	2,300	24,500	15,680
Total		33,371		33,431		233,597

[1] 1921–1933, Agricultural Yearbook, 1935.
[2] Approximate.
[3] Estimated.
[4] To July 1, 1938, estimated.

Ratio figure showing average relationship of farm income to national income is 1 to 4.

Relationship of farm income to labor income equal for all practical purposes. (Farm and labor income varied less than a billion dollars over a 17-year period.)

In order that we may have some idea of just what this loss of $233,000,000,000 in national income amounts to, I will break it down into concrete form:

It would have paid all the farm mortgages	$9,000,000,000
It would have paid all the public debt	54,000,000,000
It would have built a million miles of paved roads at $30,0000 per mile	30,000,000,000
It would have replaced 5,000,000 condemned homes at $4,000 each	20,000,000,000
It would have purchased all the farm land, livestock and farm buildings in the United States	57,000,000,000
It would have purchased a new $1,000 auto for every laborer in the United States	40,000,000,000
Then there would be enough left over to give every farmer $1,000 cash for operating expenses	6,000,000,000
And enough more to pay off the railroad debt	17,000,000,000

WHY AGRICULTURAL COMMODITY PRICES HAVE SUNK TO PRESENT LOW LEVELS

Agricultural prices have declined to present low levels because of deficiencies inherent in the current Pope-McGill Act, viz:

First. Failure to employ commodity loans to maintain prices at a sufficiently high level. Sliding-scale loan system, gaged to size of crop, automatically limits such loans to 52 percent of parity in years of normal yield.

Second. Failure adequately to provide sufficient storage as insurance against domestic need in event of drought, war, or other form of emergency.

Third. Failure to specifically provide method for disposal of any excess supplies beyond current use and normal reserve needs.

Fourth. Failure to distinguish between domestic price and world price for those portions of crops used or stored for domestic purposes and those portions to be sold in export or diverted to nonfood and nonfabric purposes.

Fifth. Failure to render tariffs on agricultural products adequate or effective.

Sixth. Possibility that act is unconstitutional.

Seventh. Dependence upon production control rather than control of surpluses occurring in excess of domestic needs.

Eighth. Diversion of land from certain major basic crops to other major basic crops has created condition of unbalance in relationship between crops.

Ninth. Contemplates legalistic adjustments which Nature does not recognize.

Tenth. Contemplates price structure that is variable and at no time mathematically geared to farm-debt structure set up on basis of 1926 land values and earning power.

President Roosevelt in his recent message to Congress said that the national income should be brought up to $80,000,000,000 per year. It should be in order to support the present public debt and tax structure, yield an American standard of life for our people, and leave something for a savings account. On that basis, agricultural income must be brought up $12,000,000,000 per year, which is entirely possible without resort to subsidies or conflict with any principle of constitutional law.

KIND OF LEGISLATION NECESSARY TO STABILIZE BOTH AGRICULTURAL AND NATIONAL INCOMES

Legislation that will effectively regulate and stabilize farm commodity prices and therefore agricultural and national incomes and keep industry employed necessarily must be based on the following points, viz:

First. A system of prices geared to a definite index figure, logically that of 1926 when a parity relationship existed between farm products and the products of industry and labor making up the general commodity index. Prices thus geared would rise and fall as the factors involved in the general commodity index changed.

Second. The parity price thus established to apply to all farm commodities sold for food and fabric purposes in the domestic market; the open or world price to apply to stocks in excess of domestic use and reserve needs.

Third. No surplus to be declared until there has been placed in storage farm commodities up to 35 percent of a normal year's yield of the major basic crops.

Fourth. Creation of a governmental agency to act for society—for whose benefit foodstuffs and fabrics materials are produced—in handling the disposal of excess stocks, either in the world market or by subsidy to industries for use for nonfood and nonfabric purposes, such as power alcohol, road materials, plastics, and so forth.

Fifth. Importations of competitive and substitute materials should be required to pay an admission or clearance fee—tantamount to tariff—equal to the difference between the actual landed cost of such imports and domestic parity income price of products which they would displace.

Since it would be economically unwise to increase tariffs on certain raw materials to comparable levels with those applying to some industries, downward adjustments should be made in the case of some industries to afford tariff equality between industrial goods and raw materials. Too many tariffs represent the evil effects of group pressure, as, for instance, steel on which the tariff advanced from $8.14 per ton in 1932 to $14.47 per ton in 1937.

Sixth. Conservation effort should be concentrated in areas of greatest need, eroded districts and areas in need of reforestation, conversion to grass, and so forth, such shifts in land use to be subsidized during period of transition.

Seventh. The full strength of government should be employed in research and to encourage research and to develop and assist and even subsidize new industries which will utilize farm products for nonfood and nonfabric purposes and utilize crops which well could displace excessive acreages of basic crops of which there are periodical surpluses.

INDICATED REMEDIAL LEGISLATION

The Gillette-Harrington farm bill, if enacted, would yield to agriculture an annual income of approximately $12,000,000,000 per year and make possible a national income of approximately $84,000,000,000 per year. It meets every legalistic requirement listed on page 7. It is undoubtedly constitutional. It consolidates all governmental agricultural credit operations in one department, divorcing them from the purely physical aspects which properly are the concern of the Department of Agriculture. It will restore value to the $100,000,000 which American farmers have invested in the securities of the Farm Credit Administration and its subagencies. It will not interfere with any conservation program now in operation or contemplated. It will put agriculture on a sound business basis for the first time in history and supply an unshakable foundation for factory pay rolls and national income.

The Gillette-Harrington power alcohol bill would remit the Federal tax on motor fuel containing 10 percent or more of alcohol made from agricultural products—corn, wheat, barley, rye, artichokes, potatoes, sweetpotatoes, bagasse, and so forth. Such remission would make it possible for the industry to pay farmers 25 cents per bushel more than the 56 cents per bushel at which its supply of corn is bought under contract.

To supply the motors of America with a 10-percent-blend fuel would require a minimum of 800 plants of 10,000-gallons capacity daily, representing an investment of upward of $500,000,000, and which would employ, directly and indirectly, 800,000 to 1,000,000 heads of families. Since alcohol is the base for all synthetics, the potentialities of this infant industry are such that these estimates represent less than 50 percent of the possible indicated development.

New legislation to encourage and protect development of industries based on strategic minerals, manganese, molybdenum, chrome, quicksilver, ilmenite, and so forth, should be enacted to create employment, add to new wealth income, improve the military safety of the United States, and provide opportunities for capital. Manganese alone is capable of developing into a $30,000,000-per-year industry.

Parity prices, parity tariffs, full protection for American labor, land and capital, and utilization of our natural resources, substituting organic for inorganic materials to achieve conservation of irreplaceable elements, should become the paramount policy of government.

Address by Hon. Harry Flood Byrd

EXTENSION OF REMARKS

OF

HON. CARTER GLASS

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA, BEFORE MASSACHUSETTS FEDERATION OF TAXPAYERS' ASSOCIATIONS, AND LETTER TO CHAIRMAN OF FEDERAL RESERVE SYSTEM

Mr. GLASS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech delivered by my colleague [Mr. BYRD] before the Massachusetts Federation of Taxpayers' Associations at Boston, December 10, 1938, and a letter written by my colleague to the Chairman of the Federal Reserve System.

There being no objection, the address and letter were ordered to be printed in the RECORD, as follows:

The sacred responsibility of preserving representative democracy rests upon the shoulders of American citizens, because here it has flowered to the fullest perfection in freedom and in our progress and our development. Preserve it not only for ourselves and Americans who come after us but as an inspiration and encouragement to the depressed peoples in other lands who seek the blessings of the freedom we enjoy here.

Democracy must be made efficient. Democracy must be made effective to meet new conditions and new problems, but this, and all of this, can be accomplished within the framework of our constitutional Government and preserve as a continuing vital force the fundamental principles which are just as valid today as ever before.

What we need most in our country today is a program of education in the operations of government such as this splendid and nonpartisan Federation of Taxpayers is performing in Massachusetts, and then an aroused public sentiment to fortify and improve good legislation and to discard impractical theories, to demand the adoption of sound economic principles that have never been set aside since the beginning of time, and to act, not for the political aggrandizement of any one individual or of any one political party but for the true and for the best interests of all the American people. We want debate, free and unafraid, and let that discussion come from members of both political parties and be conducted utterly regardless of political consequences to those who speak the convictions that exist in their hearts.

For the past several years we have had at Washington much loose talk and loose thinking of a new liberalism which will sweep away the clouds of depression; wave a magic wand of legislative panaceas for our ills; and give a substitute for those time-old virtues of thrift, frugality, self-reliance and industry that have made our country great and given to us a progress, a freedom, a happiness, a contentment never before enjoyed by any great nation. From my own personal observation in the Senate of the United States, a modern liberal is often tested and judged in proportion to how liberal he is willing to be with other people's money. If a Senator acts to safeguard the Public Treasury, to spend the public money judiciously, and only for necessary and useful functions, some proclaimed him a "reactionary," "an economic royalist," and more recently "a copperhead."

Calling names never solved a problem or offered a solution for difficulties. For myself, how I am classified in the public life of America is of little concern to me. I am a Democrat. I have voted my convictions and owe my allegiance to my constituents of Virginia and to my oath as a Senator of the United States.

When the history of this momentous period is written, I believe the true liberals of today will be recorded as those who, like DAVID WALSH, of Massachusetts, and other Senators and Congressmen, fought the packing of the Supreme Court by the Executive, as he and others risked their political lives in defense of the immortal principle that our Government was established in three branches, each independent of the other.

Those of us who act to preserve the financial solvency of our Nation are fighting for true liberalism, because without solvency there can be no liberal government. And so it was when we voted to make illegal the use of relief funds in elections. Certainly there is nothing more unliberal and un-American than to coerce and control the sacred privilege of suffrage in a free country by commands from those who dispense relief to the destitute who are compelled to accept charity from their Government. That this has been and is being done no informed person can deny, and such action by high officials received encouragement in the defeat by one vote in the Senate of the United States of a resolution denouncing this utterly indefensible use of public funds. And again, in supporting the resolution condemning sit-down strikes, a liberal vote was cast, because the principle of the sanctity of private property from mob possession is inherent in every liberal form of government. So the classification is largely a matter of definition. But I can say definitely that good government and liberal government would be vastly promoted if the "brain trusters" from Tugwell to Corcoran would go home and if Congress resumed its constitutional duty for the initiation and consideration and adoption of national legislation.

Today the time has come to analyze, to appraise the good as well as the bad, and to pass judgment on the vast legislation adopted by the National Congress in the past 6 years. Our last election indicates very clearly that the American people intend to do this very thing, and are doing it. In this analysis let us remember that the real test of a law—the real worth of legislation—is in its practical administration and effect upon all the millions of our citizens, and that a principle enacted into law—a just and fair principle—is often defeated by the maladministration of its operation.

With much important legislation enacted in this period, I can heartily agree. I have been in accord with the foreign policies of our Government. I have supported Secretary Hull in his efforts to regain our foreign trade and to repair some of the damage of the Hawley-Smoot tariff bill signed by President Hoover. I have supported adequate national defense and will continue to do so unless national defense is used merely as a means of pump priming and public spending. I favored control of the New York Stock Exchange. I am opposed to monopolies that operate to throttle competition and fix prices. I applaud the remarkably fine work done in the reorganization of the banking system. As a member of a special committee of the Finance Committee to consider a revision of the social-security legislation I will support measures to reform and strengthen and make workable a social-security program within the ability of our citizenship to support. Social security, in one form or another, is here to stay.

In surveying recent legislation, remember that private enterprise is the foundation stone on which our Republic is founded. Private enterprise, and not the Government, must provide employment for our citizens. Private enterprise is the motor that provides the taxes for our Government to operate. If taxes become confiscatory, if governmental regimentation becomes too oppressive, if governmental competition becomes too destructive, then private enterprise can neither pay the taxes nor give employment to the workers. Remember, too, that the character of our individual citizen is our most valuable national possession, and the character of many can and will be injured, if not destroyed, by unrestricted and profligate public relief, as character comes from self-help and industry and not from idleness and thriftlessness. The very immensity of our relief expenditures has made impractical the confinement of relief to those actually in need—an obligation that all of us recognize must be met in the fullest measure—with the result that millions of able-bodied citizens now rely upon the Government for support and have ceased to exert their effort for self-help and to obtain private employment.

A grant to the States by the Federal Government is not a gift. Nothing would curb the extravagance in our Federal Government more than a recognition of this very simple and elementary truth. Actually every grant from the Federal Government in the past 5 years has, in fact, been a mortgage, and a first mortgage, on the property of every citizen in each of the 48 States. In this confederation of States, the United States of America, the parent Government has no money except such as is derived from the States by taxation. It has no security on which to borrow except the property of the citizens of the 48 States, so instead of a grant being a gift, the States are given a mortgage to pay with accrued interest, and the bureaucrats at Washington take a toll for top-heavy administrative cost, which, in some instances, as I have shown on the floor of the Senate, has equaled a full 33 percent of the sum expended.

For 9 years we have spent more than our income. Our deficit for the current fiscal year will be the largest in peacetime history. For recovery and relief we have spent $27,000,000,000 since the depression began. In addition, we have borrowed and loaned $8,000,000,000 more to citizens and corporations, much of which, I predict, will never be repaid to our Government. Our debt in 1932 was $16,000,000,000, with no contingent liabilities. On July 1 next we will owe at least $41,000,000,000 in direct debt and will have a contingent liability, which is not listed on the financial statements of the Government and of which no Government official has made announcement. This liability is just as much an obligation as the reported debt. Thirty Government corporations have been organized with authority to issue bonds, debentures, and notes to the amount of $16,229,325,000. These obligations, when issued, are guaranteed in full for principal and interest by the Government of the United States, but, I repeat, are not included in the debt you find reported in the Treasury statements. With much difficulty, I have ascertained that on June 1, last, bonds, debentures, and notes had been issued by these corporations, over three-fourths having been sold to the public to the amount of $7,940,462,000, so that our actual debt on July 1, next, will approach $50,000,000,000, and may be much more if the maximum authorization to issue $8,000,000,000 more of bonds is exercised by these Government corporations.

In these corporations the Federal Government has purchased and paid for stock to the extent of $1,983,893,000. A case in point of one of the 30 borrowing corporations is the Commodity Credit Corporation with a capital stock of $100,000,000 and over $200,000,000 of notes sold to the public and guaranteed by the Federal Government. This corporation lost in its operations 94 percent of its capital stock and received a Federal appropriation of $94,000,000 to pay this loss. And then to avoid the trouble of reporting future losses to the Congress, obtained on March 8, last, the passage of a law directing the Secretary of the Treasury to pay all losses without the formality of first obtaining an appropriation from Congress, and to automatically include such losses in deficiency appropriation bills.

Some of these vast corporations make detailed reports to Congress and some do not. Many are not accountable to the Comptroller General for control audit, such as the Tennessee Valley Authority, a corporation with over a quarter of a billion of stock and further authority to issue guaranteed bonds.

The recoverable assets, if and when realized, will be vastly disappointing and cannot be relied upon to discharge any substantial part of the indebtedness our Government has incurred. Our situation today, in brief, is this:

We have trebled the public debt in 6 years. This debt is now an average of over $1,000,000,000 for each State, and the interest, before this debt is paid, will in all probability be more than the debt itself. The Federal appropriations in this current year are the largest in peacetime history. Our tax collections for the year ending last July were the largest. Yet in the present fiscal year our deficit will be the largest peacetime deficit. In the ninth consecutive year of great deficits we are farther away—and I say this advisedly—farther away from a balanced Budget than at any time since the depression began.

The Federal Government alone is spending $23,000 every minute of every day and every night, including Sunday; and of this, $11,500 is being added each minute to the public debt.

Coincident with the rise in the Federal debt and increase in Federal taxation have come similar increases in the burdens of the States and localities. The Federal Government has demanded the same prodigality of spending by the other governmental units of our Republic, and the sovereign State of Georgia has only recently been publicly reprimanded because that State was reluctant to amend its constitution to issue State bonds and abandon its wise and frugal policy of pay as you go.

This current year, the fiscal year of 1939, the expenditures of all governments in America—local, State, and National—will be more than $20,000,000,000, or about one-third of the total gross income of this Nation, and this $20,000,000,000 is more than twice the value of all products that come from the soil and under the ground, all the products of the farm, including livestock, the products of the forests, and the products of the mines. How long can a republic exist spending one-third of its gross income and twice the value of the new wealth that comes from the soil? As ominous as are our vast expenditures for recovery and relief, the fact, too, is that by actual Budget figures the regular or ordinary expenses of the Federal Government have increased from $2,700,000,000 in 1934 to $5,700,000,000 in 1939, an increase of more than 100 percent. Some tell us that the millionaires will pay this debt and this spending. The total income of those receiving more than $100,000 last year was $974,000,000. If this income were all confiscated by taxation, it would pay the cost of the Federal Government for less than 30 days and the cost of all governments for less than 15 days. For the balance of the year the expenses would be paid "in the sweat of every man

who labors," and you know who described in 1932 our tax problem with the wisdom and accuracy of those words.

What can be done about this situation? Can we expect any leadership from the present administration for economy and retrenchment? As one who has fought for 5 years for prudent spending at Washington, I say no. As a Democrat I say it with sorrow, as my party is in power, but the Republican Party cannot escape responsibility for its share in the present orgy of spending. Mr. Hoover added the first five billions to the public debt, and a majority of the Republican Members in the Senate have voted for the huge appropriation bills.

Let me suggest a program as a goal to begin a national campaign for retrenchment.

First, thoroughly reorganize the Federal Government for economy, simplification, and efficiency.

With equal emphasis I submit there should be a cancelation of the existing authority of 30 Federal borrowing corporations which now have power to add $8,000,000,000 more to the public debt, and that such corporations, about which so little is known, should function through the Budget, allowing Congress to approve or reject future expenditures. This action would preclude at least a portion of the new enormous public debt now impending. These corporations are our "invisible" governments.

Inescapable in this program is the fact that, exclusive of relief, 30 percent of the total expended by the Government today is for activities new to the Government in the last 5 years—the Greenbelts, the tree belts, and other such dispensable activities. Let these be reduced to the minimum and further great sums can be saved without impairing the necessary functions of government.

Reasonable taxation is one of the best assurances of business prosperity. The essence of our Democracy is the conducting of our Government within the ability of our people to pay.

This program would embrace a thorough, honest purge of relief rolls, eliminating all undeserving, and reducing relief costs by stopping all expenditures in excess of providing for those in need; and this can only be done by requiring localities to bear a definite portion of the burden, thereby directing local interest to reform in the relief program. Elimination of unnecessary relief costs is vital to the preservation of the character of the American people.

This is not all that should be done, but this would be a good start and, at least, a tangible objective. But only the aroused interest of the American taxpayers can accomplish results, and in this war against waste and needless extravagance I ask for the cooperation of a taxpayers' association, such as this great audience here today, in every State and section of our country.

It is a fact that 33 States take from the Federal Government for relief only (exclusive of grants and subsidies) more than they pay into the Federal Treasury. Virginia and Massachusetts are among the 15 States paying more than the relief they draw out.

So long as the economic philosophy of those like Chairman Eccles, of the Federal Reserve Board, dominates the fiscal policies at Washington no leadership from those in high places in Washington to restore a sane Budget policy can be hoped for.

Mr. Eccles believes that Government spending should be regulated not by the needs in the functions of government but for the purpose of promoting prosperity by spending borrowed money. The more you borrow and spend the more prosperous you are; the more taxes you pay the more prosperous you are, says Mr. Eccles. This incredible statement was made by the head of our national banking system in New York last week and indicates to what depths of false reasoning we have sunk in the crackpot legislative ideas of those holding important public positions. "It is perilous," says Mr. Eccles, "to reduce public spending" and to adopt sound principles of financing after a long period of fiscal insanity. I say it is not only perilous if we do not start soon to approach a balanced budget, but it will be disastrous. What about the hardships and distress we will suffer when the pay day comes and our sweat and toil must pay for this reckless waste—not only to repay the principal of the debt but for the interest.

If Federal spending is a prop for prosperity, what will happen when the prop is withdrawn, as some day must be done, because not even the richest nation in the world can continue indefinitely to violate the basic principles of sound finance. We have primed the pump with borrowed money for nearly 9 years. The result has been a tragic failure. Our unemployment today, as just announced by the Government, is over 10,500,000, or 3,000,000 more than a year ago, and not so many less than when the depression began.

Mr. Eccles further said in New York that the recession that began in the fall of 1937 was caused by reduced public spending. The actual records contradict this statement. For the year beginning July 1, 1937, all governments—local, State, and National—spent $18,415,000,000, and for the previous year $17,516,000,000. So we spent more and not less. Mr. Eccles said again that taxes in America were 17½ percent of the national income and 20 percent in England, and cited this as one of the reasons why the business index in England is now 118 percent of the 1929 level and in the United States only 75 percent. He omitted to say that England is on a pay-as-you-go basis, and that while our tax collections this year are 17½ percent of our income, our actual expenditures for all governments totaled 30 percent, or 10 percent more than in England. Following this line of reasoning, then, our prosperity should be greater than England's prosperity, but Mr. Eccles says it is not.

To my way of thinking, Mr. Eccles paid a tribute in this comparison to pay-as-you-go financing. If Great Britain can reduce her public debt per capita, as she has done for the past 5 years, and have a relatively higher prosperity than we have, then a pay-as-you-go plan in this country may bring to us the advantages that Great Britain now apparently enjoys.

Under the pay-as-you-go plan England has reduced her per capita taxation 5 percent as compared to the levies of 1928. Our Federal Government has increased the per capita taxation in the same period by 22 percent and is paying, by taxation, only $1 out of each $2 expended.

At the last session the administration's reorganization bill was defeated because of the vast and un-American powers it conferred upon the Executive. The American people want no government by Executive decrees, but want progress to be achieved and our Government operated by the democratic method of action by Congress and free debate and decisions.

Although hundreds of millions of dollars can be saved by a reorganization for economy and efficiency, the reorganization plan submitted in the last session by the administration carried with it the frank admission that little economy or retrenchment was contemplated. In fact, three new permanent departments were to be established, two with new Cabinet heads, which would have resulted in increasing the cost of government. The abolition of the Comptroller General, the watch-dog of the Treasury, having the power to prohibit illegal expenditures, was provided. It also provided for the abolition of the nonpartisan Civil Service Commission of three and the appointment of one commissioner, removable at the pleasure of the President, and gave to the President control of the 10 quasi-legislative agencies of the Government, such as the Interstate Commerce Commission, Radio Commission, and the Federal Trade Commission.

The President was given the power to conduct the Government of the United States by Executive decree. It even extended the power to alter, amend, or abolish functions of government, all without the approval of Congress. It deprived the Senate of most of its present powers of confirmation of appointments.

It was defeated, and wisely so. But the need for reorganization for economy and simplicity becomes greater every day, and the opportunity for savings becomes more possible. In the last 5 years, 60 new agencies of government have been added. The number of employees at Washington has been doubled. In each State a miniature Federal Government has been set up occupying an office space equivalent to the floor space of an Empire State Building.

The hope for economy and retrenchment lies in an aroused public interest by you, the citizens who must sooner or later pay for these extravagances.

The vast Federal spending is entrenched in every nook and corner of America. Actually 1 out of every 80 men, women, and children in the United States is now on the regular Federal pay roll, as more than one million and a half are regularly employed by the Federal Government in its various activities, not including State and local employees. In addition, there are more than 1,000,000 Federal pensioners, and to this must be added the millions receiving Federal relief and subsidies of one kind or another. To dismantle and reduce this gigantic bureaucracy is a task of overwhelming proportions, but the reward is the preservation of sound government, preventing inflation, and keeping our country secure for our children and those to follow.

Government efficiently and economically operated is our best protection against the undermining of democracy.

National financial preparedness would be the objective of this program of retrenchment. Financial preparedness is the greatest bulwark of national defense, and it is the greatest guaranty for national security.

The letter replies to an open letter written by Chairman Eccles to Senator BYRD under the date of December 22, 1938:

JANUARY 14, 1939.

Hon. MARRINER S. ECCLES,
Chairman, Board of Governors
of the Federal Reserve System,
Washington, D. C.

MY DEAR MR. ECCLES: I have the honor to reply to your public letter to me signed as Chairman of the Federal Reserve System.

Your fiscal program, in substance, has since been adopted by the President of the United States.

THE ISSUE

You say the Budget of the Federal Government cannot be balanced except by "restoration of national income." And this you propose to accomplish by still greater pump-priming. The President says to reduce expenditures now "we would invite disaster," and sets a national income of $80,000,000,000 as an assurance for Budget balancing. We are told that when an $80,000,000,000 national income is secured, the Budget will automatically balance from increased yields from taxation, and that until an $80,000,000,000 income is gained, the Federal Government will continue to borrow and spend and increase the public debt. If not realized under the proposal we must assume the borrowing and spending will continue so long as the solvency of the Government lasts.

What you advocate is a direct repudiation of the Democratic platforms of 1932 and 1936, the economy and Budget-balancing messages, and pledges of the President of the United States, the Secretary of the Treasury, and other official spokesmen, including yourself.

In 1936 the President, in his message to Congress, said:

"We should plan to have a definitely balanced Budget in the third year of the recovery and from that time on to ask a continuing reduction of the national debt."

Only a year ago the Secretary of the Treasury spoke of the support of the administration of a balanced Budget.

You have made the new spending issue clear. I thank you for your frankness.

Before answering the strictures you make on my Boston speech and the rhetorical questions you propound, I want to clear away first the complaint in the very first sentence of your letter.

ATTACKING GOVERNMENT

I quote your exact words:

"In the course of your speech attacking the Government which you delivered in Boston on December 10 * * *."

If I attacked the Government in that speech, I did not know it. I certainly did not intend to attack the Government which I have spent much of my life defending. I did attack certain theories which you propounded and certain policies which you espouse and support. If, indeed, an attack upon your views is an attack upon our Government, then, and then only, am I guilty.

But to tell you the truth I did not know—I did not even suspect that you and the Government were one and the same. I know in Italy an attack upon Mussolini is an attack upon the Government; that in Russia an attack upon Stalin is an attack upon the Government; that in Germany an attack upon Hitler is an attack upon the Government.

But I had not quite come to appreciate your attitude of mind and your point of view. I did not quite know upon what meat Caesar had been dining.

In the early days of this Republic the Federalist Party enacted the alien and sedition laws, making it a crime for any person to "write, print, utter, or publish" certain forbidden writings against "the Government of the United States or either House of Congress or the President of the United States."

Those laws wrecked the Federalist Party and brought Jefferson and the Democratic Party into power.

I am duly sensible of the scorn with which you ridicule my devotion to "those time-old virtues of thrift, frugality, self-reliance, and industry." I do not agree with those who regard thrift as a vice or as a mistake, or who regard spending for spending's sake as the highest virtue and wisdom. I still agree with the philosophy of the late Will Rogers, repeated often, but not often enough, that "we ought not to spend money that we haven't got for things we don't need."

I do not agree, as you may, with William Trufant Foster when he said:

"In the future we must prevent the oversaving and underspending which are the chief causes of the depression."

That is also the doctrine and dogma of that erratic English economist, Dr. J. M. Keynes, who, though a prophet without honor in his own country, seems to have sold his seductive schemes of spending and borrowing to those vested with power and responsibility in this country. England rejected his fantastic fallacies of spending, borrowing, and lending, adopted a rigid policy of retrenchment and economy, reduced her capita tax and balanced her budget, and revived prosperity.

AMERICA AND ENGLAND

As to the recovery of England, according to your own statement in New York on December 1, her national income in 1937 was about "118 percent of the 1929 level." Whereas, according to your statement, our national income during the last 3 years "has been averaging only about 75 percent of the 1929 national income." You then said if the United States enjoyed the same relative prosperity as England, our income would now be $88,000,000,000 instead of $60,000,000,000. I am careful to quote your own words as to the relative prosperity of England and America. In fact, I make the comparison only because you have made it.

England met her depression in a way very different from America. England did not attempt to borrow and spend herself out of this depression. She did not pile deficit upon deficit. She did not swell her relief rolls. She did not harry and frighten business. She did not revive the depression. She revived prosperity.

From 1932 to 1938 the total income of England exceeded her expenditures. England is $400,000,000 to the good. The United States, in the same period, is $20,400,000,000 in the hole.

I ask you why, by your own statement, recovery in England from the world depression has so far outstripped recovery in the United States? It cannot be due to superior population. We outnumber the English 3 to 1. It cannot be due to superior resources. Our resources exceed theirs. I am not willing to believe that England is superior to America.

DEBTS—TAXES

Stripped to the bone, the main issues between you and me relate to taxes and debts. You think the Government can "purchase" prosperity on borrowed money. I think that genuine prosperity must come from the productive industry of the citizens of our Republic.

I realize that in entering the arena with you I come as a mere layman, while you are a noted financial expert. You are not only the present Chairman of the Federal Reserve System but you are a former president of a great company controlling 26 different banks. You are initiated in all the mysteries of high finance.

You ask me:

"Are you aware of studies made by a distinguished group of scholars under the auspices of the Twentieth Century Fund, indicating that the total of all domestic debts, both public and private, is no greater today than in 1929?"

It just happens that I am; and with due deference I will tell you what they said, and what you omitted to quote:

"The committee is convinced that our economic system would be far more healthy if debt financing were used less frequently and that measures should be taken to reduce its extent" (p. 254).

Let me tell you what else the Twentieth Century Fund said, likewise not mentioned in your letter:

"That in the long run no government can continue year after year to incur substantial deficits and to increase its debts steadily if it wishes to maintain its credit."

After invoking the Twentieth Century Fund as a financial authority you propose to continue to do what this authority declares will impair the credit of the Government.

I know, too, that this same Twentieth Century Fund, in its reports, declared that in 1937 the total government debts of all governments in the United States "are the largest that any nation has ever had," and the Twentieth Century Fund Committee said further, "that the Budget should be balanced in 1938, and in 1939 begin substantial debt reduction."

In a series of rhetorical questions you commit yourself to the proposition that it is the total amount of private and public debt that counts. You say that the total amount of public and private indebtedness is no greater today than it was in 1929, and that private debts have decreased as far and as fast as public debts have increased, and that, therefore, there is no occasion for alarm.

I challenge this theory and this philosophy. It is utterly fallacious.

I know how uncertain are all estimates of aggregate indebtedness. But let us accept as true the estimate that public and private indebtedness today is the same as it was in 1929—about $250,000,000,000.

As you say, our public and private indebtedness is as large today as it was in 1929, and yet, as you know, our national income is only sixty billions, whereas for 1929 it was eighty billions. The income out of which these debts must be paid has shrunk twenty billions. The amount to be paid remains the same. The means of paying has shriveled 25 percent. Our burden is the same. Our strength is much less. Is that immaterial?

If our private and public indebtedness had shrunk 25 percent as has our national income shrunk, then the proportion of our burden to our strength would be the same today as it was in 1929. But this may be a matter of no concern to one who, like you, believes that a national debt is a national blessing and that recovery is born of debts and deficits.

I cannot conceal my astonishment at one of your questions. You ask: "Do not the same general economic considerations apply to both private and public debt?"

PUBLIC AND PRIVATE DEBT

I did not suppose that anyone familiar with the science and principles of public finance could give his sanction to such a self-evident absurdity. About the only things they have in common are that they are both promises to pay. These promises originate from different motives and are directed to different objectives. The ends are different and the ways and means of payment are different. As respects a private debt, the person who makes the debt expects and is expected to pay the debt. In respect to a public debt, the Government makes the promise and the people, or the taxpayers, perform the promise.

A private debtor enters into the promise voluntarily, upon his own motion, and for his own interest. The Government creates the public debt, and those who must pay are compelled to pay whether they would have entered into that promise or not. The obligations of a private debt rest upon those who made it and may or may not be secured. A public debt is a universal mortgage. It is a first lien on every acre of land, on every house and home, on every piece of property, on every service that is rendered, on every transaction that is made.

My views upon this subject happen to be sustained by the National Industrial Conference Board, and I quote the following from their recent bulletin on Private and Public Debt in the United States.

"Can public debt be substituted for private debt in our economic system? Those who maintain that there is nothing alarming in the steady rise in the national debt insist that there is essentially no difference between the two. * * *

"The primary function of private long-term debt is to help finance the creation of durable goods. Private long-term debt thus bears a direct relationship to income-producing private wealth, whereas public debt does not."

One of the basic causes of the crash of 1929 still remains perilous in possibilities for another depression. Debt has been one of the main causes of every major depression we have had. How can debts continue to be increased above the 1929 level and avoid evils even more disastrous?

The following table shows our relative debts and taxes:

	1929	1937	1938
Per capita debt (all governments)	$277	$430	$459
Per capita income	$668	$540	$500
Per capita taxes	$80	$95	$103
Taxes as a percetange of national income	*Percent* 12	*Percent* 17.6	*Percent* 20.6

FEDERAL DEBT

Since the depression began our national debt has run up from $16,000,000,000 to $40,000,000,000.

The President says that on July 1, 1940, the debt will be $44,458,000,000.

When we entered the World War our national debt was about $1,000,000,000 and the interest charge was only about $20,000,000 a year. The annual interest charge now is over a billion—more than the total indebtedness prior to the war. It is $300,000,000 more than the total expenses of government in 1916.

The President's Budget shows that in 1940 accumulated spending in excess of income will reach $28,000,000,000. During the depression we added more to the public debt than we spent defeating our enemies in the World War.

Suppose we should become involved in another world war costing as much as the last. Suppose we should blunder into another depression costing as much as this one. Suppose that, by chance or mischance, we should suffer the double calamity of being obliged to finance another war and another depression. We would start, after the Budget just presented is adopted, with $45,000,000,000 of Federal debt, and not one billion, as we did in 1917.

Our public debt—national, State, and local—now averages $450 for every man, woman, and child in the country. The present generation has placed a mortgage on all the people and on the property of all the people in order to prime the pump for the present generation. We are handing down to our children a staggering indebtedness which they did not incur but which they will be required to pay (not heirlooms but chains).

As a layman, I am not willing to lose the principle underlying this discussion in a wilderness of statistics. I know that in support of your theory about debts to promote national prosperity you have the support of the very highest official authority in this country. I, therefore, invoke what I regard as equally high authority in support of my contention that you are wrong when you contend that a public debt is a public blessing.

JEFFERSON AND JACKSON

Thomas Jefferson, who founded the party which for the moment enjoys the benefit of your affiliation, said:

"I am not for increasing, by every device the public debt, on the principle of its being a public blessing.

"I place economy among the first and most important of republican virtues, and public debt as the greatest of the dangers to be feared.

"To preserve our independence, we must not let our rulers load us with perpetual debt. We must make our selection between economy and liberty, or profusion and servitude.

"There does not exist an engine so corruptive of the Government and so demoralizing of the Nation as a public debt.

"As the doctrine is that a public debt is a public blessing, so they think a perpetual one is a perpetual blessing, and therefore wish to make it so large that we can never pay it off.

"We are ruined if we do not overrule the principles that 'the more we owe, the more prosperous we shall be; that a public debt furnishes the means of enterprise; that if ours should be once paid off, we should incur another by any means however extravagant.'"

I shall now reenforce the precepts of Jefferson with the example of Jackson. Jackson, during his administration, extinguished the public debt, the first and last time that was ever done in the history of the Republic.

It was my pleasure to attend the Jackson Day banquet here in Washington a few nights ago. I witnessed the seance and heard the short-wave conversation between Andrew Jackson and the present President. I thought I overheard Old Hickory say that in 1836 he paid off the public debt in toto.

I know that in a letter dated July 4, 1824, Jackson said:

"If a national debt is considered a national blessing, then we, like Great Britain, can get on by borrowing. But as I believe it a national curse, my vow shall be to pay the national debt, to prevent a moneyed aristocracy from growing up around our administration that must bend to its views and ultimately destroy the liberty of our country."

If I may say so without disrespect, I think Andrew Jackson as great a Democrat as you or any other living personage.

INTEREST RATES

You ask: "Is it of no significance that the interest on the public debt amounts to only a little more than 1 percent of our national income?"

You failed to include the interest on local and State debts. The total interest of all public debts is actually nearly 2½ percent, and not 1 percent, of the national income of 1938. But that is not the point. Interest rates are now low because business activity is low. A debt such as the Federal debt will last very many years. Interest rates will fluctuate as the demand for money rises or falls. Quite a proportion of the Federal debt is in short-term securities and must soon be refinanced.

Now, with reference to taxes, you ask: "Have you not overlooked the fact that as national income increases, tax revenues increase, even without a rise in tax rates?" I have not overlooked that fact, but I do not derive as much comfort from that source as you do.

You state with confidence that "national income increased from less than $40,000,000,000 in 1932 to approximately $70,000,000,000 in 1937. Tax receipts of the Federal Government increased from $2,080,000,000 for the fiscal year ending June 30, 1933, to $6,242,000,000 for the fiscal year ending June 30, 1938. The country paid about $4,000,000,000 more in taxes, but it had $30,000,000,000 more of income a year out of which to make these payments."

Certainly you did not intend to say that this increase in tax income came without an increase in tax rates or the imposition of new taxes.

Your 1938 revenue figures include the social-security tax, not existing in 1932, the undivided-profits tax, increase in income-tax rates and changes in the definition of net income, increase in inheritance taxes, new taxes on consumption, such as the 1-cent-per-gallon Federal tax on gasoline, and numerous other new "concealed" taxes, all having been added since 1932.

You must know that an entirely new tax structure exists now as compared to 1932. But let us carry your theory out on your own premise.

In 1932 the Federal taxes, by your own figures, were 5 percent of the national income.

In 1937, with an annual income of $70,000,000,000, the Federal taxation was over 9 percent of the income. The increased taxes required 15 percent of the increased income. But make your comparison with 1932 on the 1938 national income, which fell off a cool $10,000,000,000 in 1 year.

This will show that for the additional $20,000,000,000 income we now have for 1938 as compared to 1932, the increase in Federal taxes equals 17½ percent of the increase in income.

I let these statistics speak for themselves.

You also ask, "Would you have the public believe that the country was better off in 1932 with lower taxes and a lower public debt than it was in 1937 with higher taxes and a higher public debt?"

That is not the point.

As a layman I think the public might well believe that they would be better off with the low taxes and the lower debts of 1932 and the higher national income of 1937.

According to your own statement, the people of England now enjoy that very situation with its undoubtful blessings.

Another word about taxes:

Mr. Roosevelt was right when he said that taxes are paid in the "sweat of every man who labors."

High taxes mean high cost of living. High taxes retard business expansion and prevent the employment of the unemployed.

In some emergency high taxes may for a brief period be necessary and advisable, but high taxes as a permanent diet is another thing. There is a definite limit to the percentage of the Nation's productivity that can be taken for taxes.

An interesting comparison of combined taxation and unemployment follows:

Year	National, State, and local tax percentage of the national income	Unemployed
1929	12	1,864,000
1930	16	4,049,000
1931	18	7,300,000
1932	21	11,400,000
1935	17	10,652,000
1938	20	10,900,000

OUR LAST DEPRESSION

You do not have to go very far back in history to disprove your theory of recovery through deficit spending.

The depression that preceded the 1929 crash was in 1921 and 1922.

The national income fell from $73,000,000,000 in 1920 to $53,000,000,000 in 1921. Severe recession. The Federal expenditures were reduced from $5,000,000,000 in 1921 to $3,000,000,000 in 1922, with a corresponding reduction in taxation. The national income then rose to $60,000,000,000 in 1922, an increase of $7,000,000,000 over the level of 1921.

In 1923 another reduction was made in spending and in taxation. The income rose to $69,000,000,000. A gain of $9,000,000,000 in 1 year on a Federal budget of nearly one-half as compared to 1921, when the recession began.

So here is a definite experience of a severe business recession met and overcome, not by spending more but by spending less, not by borrowing more but by paying debts off, not by taxing more but by taxing less.

NEED PUBLIC DEBTS BE PAID?

To the suggestion that this public debt need not be paid I respond that America has always paid her debts. She did so after the early wars of our Republic. She did so after the Civil War. After the World War nearly one-half of the debt created was paid. We are an honest people. If the Government does not pay in an orderly way its debt the citizen will not pay his debt, and financial chaos will follow.

The payment of $500,000,000 each year, as applied to the direct debt only will take 56 continuous years to pay it down to where it was when the deficit spending began.

I may not be able to read the danger signals with as much accuracy as an expert but as I see it you display a danger signal. You say "since 1937 national income has temporarily contracted due 'to a combination of factors one of which was a too sharp and too rapid reduction amounting to more than $3,000,000,000 in the Government's net contribution to community buying power in 1937 as compared to 1936.'"

This statement accentuates the fundamental danger inherent in our policy.

Have you used iron lungs upon the country so long that they cannot now be dispensed with? You say the reduced Government deficit was a major cause of the recession.

Your statement needs analysis.

I quote from the Federal Budget for the fiscal year ending June 30, 1937:

Expenditures	$8,442,000,000
Revenue	5,292,000,000
Deficit	3,148,000,000

I quote from the Federal Budget for the fiscal year ending June 30, 1938:

Expenditures	$7,626,000,000
Revenue	6,242,000,000
Deficit	1,384,000,000

So it is seen that the net deficit was about $2,000,000,000 less, not $3,000,000,000 less than the previous year.

The Federal expenditures were $700,000,000 less, but let me remind you that this difference is accounted for entirely by the payment of part of the soldiers' bonus in the Budget year of 1937. The soldiers' bonus was vetoed by the President and could have been no part of planned or "timed" deficit spending.

Furthermore, if you take the total of all expenditures, National, State, and local, the increase of 1937 over 1936 was $1,000,000,000. So your contention that the national income was reduced $10,000,000,000 from 1937 to 1938 with reduced spending as the main cause is not sustained.

INFLATION DANGERS

On March 27, 1936, you made a speech at the University of Cincinnati. You then said:

"I agree with most businessmen and bankers that a budgetary deficit if continued will create inflation."

"The reason that a continued budgetary deficit would create inflation beyond the control of the Federal Reserve System is that such a deficit financed by banks would continue to pile up bank deposits."

"We must look to a period of balanced Budgets."

"We must look in the next year or two to a balanced Budget."

"Personally I would like to see it by 1938."

Again, on March 13, 1937, you said, "Only by this process—a balanced Budget—can monetary inflation be prevented."

I do not quote you to embarrass you. In these days it is fashionable for public men to change their minds, and I freely concede to you this right. But what concerns me is that, as a banking expert and head of the Federal Reserve System, you in 1936 and again in 1937 made the definite and unqualified statement that continuous deficits will create inflation beyond the control of the Federal Reserve System; that only a balanced Budget will prevent an uncontrolled monetary inflation.

In your letter to me you say your concern is to "maintain the solvency of the Government and to avoid the evils of inflation."

What has changed your belief in the principle you asserted in 1936 and 1937 that "continued deficits" would produce monetary inflation?

Is not your present policy to continue deficits for an indefinite period or until an $80,000,000,000 income is reached a perilous one? May it not end in the evils of a currency inflation which may have dire consequences? Can you guarantee or even prophesy the year in which we shall have an income of $80,000,000,000? To me it is a peculiar method you advocate to maintain the Government's solvency and to avoid inflation.

You apparently believe the way to maintain the solvency of the Government is to continue indefinitely to increase its debt. You believe the way to avoid the evils of inflation is to embrace inflation as you yourself describe it—"continuous deficit financing through bank credit—this is what is being done—is inflationary."

You ask me: "Do you consider, as your speech implies, that Government debt is evil, whereas private debt is not?"

I never said that all Government debt was evil, or that all private debt was good. Debt in itself is not evil; it depends upon the purpose for which the debt is contracted, the ability to pay, and whether the debt is essential. A productive debt, I have known in private business may be useful and wise; I have seen an oppressive debt force good men into bankruptcy and destroy the happiness of whole families.

I say unhesitatingly that a public debt created to continue to gamble with the discredited theory of pump priming is an evil.

NATURAL RECOVERY FORCES

You ask: "Do you think it was natural forces that produced the recovery after 1933?"

The national income in 1932 was $40,000,000,000, in 1938, $60,000,000,000, a gain of $20,000,000,000 after 6 years of spending.

Our Federal taxes in 1938 are three and one-half billions more than in 1932, and this must be deducted from the gain in national income. During this period the national debt has increased more than twenty-one billions.

Public spending has become firmly entrenched in every nook and corner of America. Government extravagance has become habitual. The Nation faces the danger of greater and larger spending. Haven't we paid pretty heavily for a $20,000,000,000 increase in the national income which you say did not come from "natural forces" and is therefore artificial?

I believe that for every dollar the Government borrows and spends in pump priming, private enterprise is deterred from spending two.

Let me remind you that from March 1933 until July 1933, when our fiscal actions were sound, there occurred the greatest increase of business activity of any same period in the history of our Nation. Many men were put back to work. The Federal Reserve Board index of industrial production stood at 60 in March 1933, 100 in July 1933.

RELIEF SPENDING

You indulge a good deal of fine rhetoric in respect to my statement that many "able-bodied citizens rely upon the Government for support and have ceased to exert their efforts for self-help to obtain private employment." My statement is based on experience, observation, and the testimony of those who are in a position to know.

Here are the figures of those receiving public assistance:

1933	16,800,000
1934	18,200,000
1935	17,200,000
1936	16,600,000
1937	15,600,000
1938	18,300,000

Let me suggest that your church—the Mormon Church, the Latter-Day Saints—has had some experience in connection with relief work and relief workers. The Mormon Church, with its fine example of self-reliance, might shed some light upon the effect which our relief system has had upon the morale of certain classes of those receiving relief. It could tell you how hard a thing it is to help certain people without making them helpless. You are one of the very few who are satisfied with the present administration of relief, as indicated by your letter. Everyone knows that there are worthy citizens on relief. The real injury to the worthy on relief does not come from me in favoring a purge of the unworthy, but from those who have abused the privilege of relief for their own personal, selfish, or political advantage.

I could give you an illustration in my own State of Virginia of a county where four Federal relief administrators were appointed and solicited the citizens to go on relief. The county authorities requested the dismissal of the Federal employees, and assumed all obligations for relief in that county. This particular Virginia county never went on relief. The county cost of providing all necessary relief to those in need was less than the annual salaries of the four Federal supervisors.

A word as to your plan of "properly directed and properly timed Federal expenditures" to stimulate private enterprise:

SPIGOT SPENDING

You appear to think the public appropriations can be turned off and on like a spigot; that when the national income increases you turn the spigot off and when it declines you turn it on. Nothing could be further from the practical facts. These vast sums are spent by gigantic Government bureaus reaching into every nook and corner and manned by politicians of influence. Solomon in all his wisdom could never devise a plan of public spending "directed and timed to stimulate private enterprise" and raise this expenditure up and down in accordance with the national income and at the same time satisfy the 48 States and 4,000 communities. So this "planned economy for timed expenditures" is thoroughly impractical of operation even if otherwise desirable.

Can society lift itself by its bootstraps through continuous spending in excess of income?

In our government of checks and balances, the check on excessive spending comes from the tax-conscious citizen who can see where his tax money goes and criticize its use.

If deficit spending is practiced indefinitely, the taxpayer is not directly conscious of the burdens to be imposed later upon him.

FIVE-POINT PROGRAM

Concerning the five-point program I suggested at Boston as an aid to gradual restoration of the country to fiscal sanity, you say:

"I am convinced that your program is not only a defeatist one, a program of retrogression and not of progression, but it would jeopardize the salvation of democracy."

I confess this program, as limited as it is, is intended to be a gradual approach to a balanced Budget. In that respect it means "retrogression" and not "progression" in debts and taxes. But will it jeopardize the salvation of our democracy?

The program is:

First. Reorganize the Federal Government for simplification, retrenchment, and economy.

Second. Cancel existing authority of 30 Federal borrowing corporations and agencies to borrow an additional eight billions of dollars without further legislation and require these corporations and agencies to function through the Budget, allowing Congress to approve or reject their future expenditures.

Third. Scrutinize the new activities of government now responsible for the expenditure of 30 percent of the total appropriation, exclusive of relief; eliminate the dispensable activities and reduce others to a minimum cost.

Fourth. Have a thoroughly honest purge of relief rolls to stop all expenditures in excess of provision for those in need and through

requirement of the localities to bear a portion of the burden, direct local interest to needed reforms.

Fifth. Conduct the Government within the ability of the people to pay and regard reasonable taxation as one of the best assurances for business prosperity.

What is "sudden or drastic" about it?

Mr. Roosevelt came into power on a much more drastic economy program. Heretofore, when criticism has been made, much has been said of a lack of a constructive plan. Here is a definite program with the ultimate objective of restoring the country to sound principles of finance.

DEFICIT RECOVERY

I want to concentrate now on what I conceive to be the essential point of your doctrine. For you the important thing is not the mere magnitude of the Government expenditure but the excess of the Government's spending over its income; in other words, the magnitude of the deficit.

You explained yourself very clearly when you testified in December 1937 before the House Banking and Currency Committee when you said (p. 120):

"The way to get money into operation is for the Government to spend more than they collect. If you spend more than you collect, you create that budgetary deficit that puts money into operation."

It is the deficit that does the work of bringing about business recovery. Moreover, it is important, from the standpoint of your theory, that the Government borrowing to meet the deficit should not be borrowing from individuals but that it should be from banks, so that new bank credit will be created to increase what you call "purchasing power." What you want is a deficit, financed by expanding bank credit.

I call your attention to two ways of getting such a deficit. One is the method, apparently contemplated by you and those in the Government who think as you do, of the maintenance and even the expansion of the existing fantastically high Government expenditures. But another way, equally effective, would be a curtailment of Government expenditures, accompanied by an equal curtailment of taxes. A complete tax holiday would create even a greater deficit.

With respect to your general doctrine that a deficit will bring about business recovery, I call your attention to the fact that Mr. Hoover did very well in this matter. He had a deficit of $3,153,000,000 in 1932, preceded by a deficit of nearly a billion in 1931.

In your testimony before the Senate Committee on Finance in February of 1933 (hearings, pp. 712–713 and 720) you proposed a total of $3,000,000,000 as gifts to the States and as expenditures on self-liquidating public works as a sufficient contribution from the Government to purchasing power in that great emergency. We have expended that amount over and over again and you insist that continued and still more lavish expenditures are still indispensable to recovery, and their withdrawal will mean disaster.

I want to get business prosperity restored not by financial manipulations on the part of the Government but by restoring confidence on the part of the business community in the fairness of the Government, by eliminating needless frictions and restraints, and by freeing the enterprise of a great people, who want jobs, not charity; work, not taxes.

Nine years of deficits, very largely financed by bank credit, should shake even your confidence in the value of deficits as financial magic in making business prosperity.

I emphatically repudiate your doctrine that debt for its own sake is good, that deficits for their own sake are good, and that an expansion of bank credit for the purpose of financing deficits is good.

I believe that the general flow of purchasing power must come out of production itself, production in one industry giving rise to the demand for goods produced by other industries; that, with the proper proportion among the different kinds of industrial activity, the producers themselves will clear the markets of the goods that other producers create, and that all the financial manipulations of Government deficit spending designed to create additional purchasing power merely mess up and distort the picture.

You profess to favor the capitalistic system, but you seem to forget that the profit motive is to capitalism what the law of gravitation is to the physical universe. Private enterprise is more concerned about the "hope" of profits than the profits of the hour. This must be so, because a factory is not built for this year but for many years. It is the confidence in this "hope" of profits that is impaired by the expectation of the evils of the inevitable day of settlement.

A PERSONAL WORD

In conclusion, may I be permitted a personal word? Since I came to the Senate in 1933 I have consistently fought what I regarded as waste and extravagance in Government expenditures. At no time have I opposed what I believed to be appropriations sufficient and reasonable to provide for the needy and to finance the proper and necessary functions of Government. I mention this only because of the inference often suggested and inferred that if one opposes waste and extravagance he is willing for citizens of America to starve and freeze and suffer, and the country to stagnate because of the lack of adequate Government appropriations.

As you correctly say in your letter, these issues are too vast to be adequately discussed by correspondence.

I attribute to you a full measure of sincerity in the opinions expressed in your letter under reply.

I have earnestly endeavored to answer the inquiries you have propounded to me. I will later discuss these issues more fully on the floor of the Senate.

Very truly yours,

HARRY F. BYRD.

The Natchez Trace

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

CORRESPONDENCE WITH NATIONAL PARK SERVICE

Mr. McKELLAR. Mr. President, I ask that there be printed in the Appendix of the RECORD certain correspondence with the National Park Service concerning the Natchez Trace Parkway. This correspondence explains itself.

The bill authorizing that service was passed a number of years ago, being introduced by former Senator Hubert D. Stephens, of Mississippi. He was away on his campaign, as I recall, and he asked me to report the bill out of the Committee on Post Offices and Post Roads and have it passed. This I did. The road to be built follows an old Indian trail, running from Natchez, Miss., northeasterwardly to Nashville, Tenn. It is apparent that it runs a longer distance in Mississippi than it does in Tennessee, and it runs a very short distance through the State of Alabama.

An appropriation was given for building this road, and it seems that the first appropriation was allowed entirely to the State of Mississippi. When the appropriation next came up this fact was called to the attention of the parkway authorities, and there was a promise of correction, as shown in Mr. Demaray's testimony hereinafter quoted. It was first claimed that the State of Tennessee was not doing its part, and I herewith present an act of the State of Tennessee. Mr. Demaray then again falsely claimed that he could not get action on the part of the Tennessee authorities. Up to this good hour a parkway in Tennessee has not been designated.

The State of Tennessee is ready at any time to buy the right-of-way whenever it is designated by the National Park Service; but Mr. Demaray and Mr. Cammerer, at the head of the National Park Service, seem determined that no part of the road shall be put in Tennessee. In my judgment, they are deliberately delaying in every possible way, and Mr. Demaray has testified to misstatements in committee as to what his Department is doing about this road. I want the Senate to have the facts, and the accompanying papers show the facts. The letter of the highway commissioner of the State of Tennessee under date of January 4, 1939, shows that the Tennessee authorities "are eager and willing to obtain the rights-of-way at the earliest possible time"; but the rights-of-way has not been designated by the National Park Service, and Tennessee cannot proceed further until the National Park Service acts.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

An act to authorize the State of Tennessee to acquire the necessary rights-of-way for the construction of a highway by the United States Government to be known as the Natchez Trace extending from Nashville, Tenn., in a southwesterly direction to the Alabama-Tennessee line

SECTION 1. *Be it enacted by the General Assembly of the State of Tennessee,* That the State of Tennessee, acting through its commissioner of highways and public works, with the approval of the Governor, shall be and is hereby authorized to acquire by gift, purchase, or condemnation under the laws of eminent domain as said laws now or may hereafter exist, a right-of-way extending from Nashville in a southwesterly direction to the Alabama-Tennessee State line, to be used by the United States Government for the purpose of constructing thereon a highway to be known as the Natchez Trace, which highway will, when completed, connect Nashville, Tenn., and Natchez, Miss. The State is authorized to acquire in the manner aforesaid all necessary parkways and rights-of-way for the highway construction and for the parkways as proposed by the United States Government, which may be determined upon by the commissioner of highways and public works, with the approval of the Governor, representing the State of Tennessee, and by the proper representatives of the United States Government, the width and extent of the rights-of-way and parkways to be acquired to be in compliance with

the requirements of the United States Department of Interior, National Park Service. Payment for said property so authorized to be acquired shall be made out of general highway funds of the State.

SECTION 2. *Be it further enacted*, That this act shall take effect from and after its passage, the public welfare requiring it.

JUNE 30, 1937.

Hon. P. M. ESTES,
Life & Casualty Insurance Co., Nashville, Tenn.

DEAR PAT: Your letter of June 28 has been received about the Natchez Trace matter.

This bill was introduced in the Senate by former Senator Stephens. He was away on his campaign, and I got it through the Senate. I offered an amendment to the Interior appropriations bill providing for $2,700,000 to be expended ratably among the three States. All the money so far spent has been spent in Mississippi. The head of the National Park Service last year agreed to spend the funds ratably in Tennessee, Mississippi, and Alabama. He went back on his word, so this year I not only got an increase of $2,700,000 in the appropriation, but I had the language added that it was to be spent ratably. In other words, Tennessee is to get her share according to mileage. This is not being left to the National Park Service, which was guilty of the grossest kind of favoritism to Mississippi.

I hope the rights-of-way will be acquired immediately so that there will be no further excuse on the part of the Service.

With kind regards,

Very sincerely yours,

KENNETH MCKELLAR.

DECEMBER 20, 1938.

Mr. A. E. DEMARAY,
National Park Service,
Washington, D. C.

DEAR SIR: Your letter of December 19 about the status of the Natchez Trace Parkway project in Tennessee, received and noted.

In March 1938, on page 299, you testified as follows:

"Senator MCKELLAR. I want to know how many miles of the Natchez Trace Parkway you have built in Tennessee?

"Mr. DEMARAY. Not any in Tennessee.

"Senator MCKELLAR. The Department has been promising to do it every year for a number of years and I just wanted to know.

"Senator NYE. Why did you not have General Washington come out there? The Park Service has undertaken to build it in other parts and in other States and they are paying no attention whatever to Tennessee.

"Senator HAYDEN. Have you a contract at all?

"Mr. DEMARAY. No, sir; the surveys are now being completed from the Meriwether Lewis National Monument southward toward the Alabama State line and I believe by June (referring to June 1938) we will be able to advertise the first contract for construction in Tennessee. We are moving just as fast as humanly possible to move on that job." (Hearings, Interior Department, appropriation bill for 1939, p. 299.)

In June 1937, a year before, you testified as follows:

"Senator MCKELLAR. I want to know how much engineering or surveying has been done in Tennessee and how much in Alabama.

"Mr. DEMARAY. There has not been any done in Tennessee, Senator.

"Senator MCKELLAR. None at all?

"Mr. DEMARAY. Yes, sir.

"Senator MCKELLAR. A year ago, I think it was, you or Mr. Cammerer faithfully promised me that the engineering would be begun in Tennessee right away, and now you tell me there has not been anything done.

"Mr. DEMARAY. Well, the funds that were allotted there, Senator, were allotted for Mississippi, and we made a recommendation to the——

"Senator MCKELLAR. I took the matter up with you, the records show, on the question of Tennessee, and you promised to do the work ratably in the three States, and now you tell me all the work has been done in Mississippi. I do not have anything in the world against Mississippi, but I think we ought to have our relative share of this work. This road extends from Nashville, Tenn., to Natchez, Miss., and it is exceedingly unfair that one State should get all of the surveys and improvements and the other two States not get any." (Hearings, Interior Department appropriation bill, 1938, pp. 199–200.)

In previous hearings the following took place:

"Senator MCKELLAR. Was any part of this fund of $1,500,000 to be allotted to the Tennessee section?

"Mr. DEMARAY. Yes, sir.

"Senator MCKELLAR (reading). 'Yes, sir; we are going to expend moneys on surveys in Tennessee.'

"Now, a year afterward you come in and state that there has been no money spent in Tennessee. I do not think it is necessary to ask the question any more, and I will not do it." (Hearings, Interior Department appropriation bill, 1938, p. 201.)

Again—

"Senator MCKELLAR. This time we are not going to take any chances. We are going to direct you to do it by law and force you to do it.

"Mr. DEMARAY. We said we would do this, and we would have been glad to do it" (p. 201).

And again—

"Senator MCKELLAR. After you had made a specific promise here in your testimony, and it has been turned down, why, as a matter of common courtesy, did you not notify me as being unable to perform what you had promised to do? I am talking to you, Mr. Demaray.

"Mr. DEMARAY. Well, I had gotten orders, and so I was carrying them out, sir.

"Senator MCKELLAR. After you had made a statement to the Senate committee in the hearing under oath, or presumably under oath, especially to the Senator that was asking you the question—and you say you made a recommendation and the President had turned it down—and you allowed a year to pass without saying one word to the Senator who asked you the question, and without putting yourself right; that is, if you thought it was necessary to put yourself right before the committee. What is your answer to it?

"Mr. DEMARAY. I have to say that is correct, sir.

"Senator MCKELLAR. All right. In any appropriations this time we are going to tell you what to do about them, and if you cannot carry out the law, we will take other steps about it.

"Mr. DEMARAY. We will always carry out the law.

"Senator MCKELLAR. I think you have treated me very discourteously and very improperly." (Interior Department appropriation hearings, 1938, p. 203.)

In the 1937 appropriation bill the law provides:

"*Provided*, That $1,500,000 and any other sums received from other sources for said Natchez Trace Parkway shall be allotted and expended ratably between the States of Mississippi, Alabama, and Tennessee, according to mileage of said parkway in each respective State."

In the 1938 appropriation bill the law provides as follows:

"*Provided*, That $1,500,000, and any other sums received from other sources for said Natchez Trace Parkway, shall be allotted and expended ratably between the States of Mississippi, Alabama, and Tennessee, according to mileage of said parkway in each respective State, and said allotments shall be used for no other purpose."

You and Mr. Cammerer have disregarded both of these acts. You stated in your testimony that the work would be begun last June. In your statement over the phone to me you stated that no work had been begun to this date.

In your letter of the 19th you say: "As I told you over the telephone, no construction has been started in Tennessee to date."

You further say in your letter that it is estimated that this project will cost approximately $——, "preparing grades, bridges, and drainage structures, and this will use a major portion of the funds allocated to Tennessee," all of which is meaningless because you are doing nothing in Tennessee of any moment and have not done anything in Tennessee after two acts of Congress have specifically directed that this money be used and spent in Tennessee ratably.

I wish you would come prepared to show where every dollar of the money heretofore spent on Natchez Trace has been spent, how much you have on hand today, how much you have actually spent in Tennessee, and all such further facts as may pertain especially to these last two propositions.

In my opinion, you and your chief, Mr. Cammerer, have violated the law and ought to be dismissed from the service of the United States.

Yours truly,

KENNETH MCKELLAR.

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, January 3, 1939.

Hon. KENNETH MCKELLAR,
United States Senate.

MY DEAR SENATOR MCKELLAR: I have received your letter of December 20 and regret that you take exception to the manner in which the National Park Service has prosecuted the Natchez Trace Parkway activities in Tennessee. It is hoped, however, that a recital of the facts will show that we have acted in good faith and in accordance with the provisions of the law.

As you know, the Interior Department Appropriation Act for the fiscal year ending June 30, 1938, was the first legislation setting up funds for construction in Tennessee. The President approved the act on August 9, 1937. In October 1937 representatives of the Service and the Bureau of Public Roads began field investigations and surveys of the parkway in the general vicinity of Meriwether Lewis National Monument. A route was flagged between Meriwether Lewis National Monument and United States Highway No. 64, which avoided the mining development near Napier and came within 3 miles of Natural Bridge. Your files should contain Service letters to you of February 9, 19, and 25, and March 24, all relating to the studies and survey activities on this section of the parkway.

During April 1938 further studies and conferences with property owners developed the fact that a location closer to the old trace would be possible. In order to allow sufficient time for additional studies of this possibility, the Bureau of Public Roads survey party was withdrawn from the Meriwether Lewis area and surveys were started on section 1–J from Collinwood south past the Alabama State line. This change was made in order to begin construction in Tennessee and Alabama at about the same time.

Topographic surveys of section 1–J were completed during November 1938, and right-of-way maps showing the parkway land

requirements were sent to the Tennessee Department of Highways and Public Works on December 3, 1938. Contract plans will be ready for advertisement when the parkway lands are deeded and accepted by the United States.

In accordance with the Interior Department Appropriation Act, 1939, a statement has been prepared showing expenditures and obligations against the parkway appropriation. The attached copy indicates that $16,894.36 have been expended by the Bureau of Public Roads for plan and survey activities in Tennessee up to November 30, 1938. The grading, draining, and surfacing of Section 1–J will obligate approximately $532,000 as soon as rights-of-way are made available. Construction activities will depend entirely on the speed with which the State acquires and deeds the parkway land to the United States.

In March 1938 I testified that surveys were being completed south of Meriwether Lewis National Monument, as noted above; however, in April the survey party was moved to Section 1–J. Survey activities have been prosecuted continuously in Tennessee since October 1937 soon after the first regular appropriation expendable in that State was made available.

With regard to previous appropriations, the Emergency Construction Act of June 19, 1934, provided funds with which the old Trace was studied. A preliminary location for the parkway was found between Nashville, Tenn., and Natchez, Miss., during 1934 and 1935. The Emergency Relief Act of 1935–37 provided funds which were limited to surveys and construction between Natchez and Tupelo, Miss. As I testified on June 22, 1937, before your committee, the Department recommended that the funds be made available for work in Tennessee as well as Mississippi. A copy of the Department's letter of February 13, 1936, to the President is attached for your information.

You are assured that we desire to meet your wishes in every way, but I must point out again that, before we can begin construction of the parkway in Tennessee, it will be necessary for the State to provide the parkway lands. I may say that acquisition difficulties by the State of Mississippi have delayed construction in that State and that probably the Alabama State Legislature will have to enact legislation to permit acquisition of parkway lands in that State. There have been innumerable problems for the States, the Bureau of Public Roads, and this Service to overcome in this great undertaking. I feel that each agency has cooperated splendidly and that a great many of our problems are behind us and that we can move forward more expeditiously in the future.

Sincerely yours,

A. E. DEMARAY,
Associate Director.

THE SECRETARY OF THE INTERIOR,
WASHINGTON, *February 13, 1936.*

The PRESIDENT,
The White House.

MY DEAR MR. PRESIDENT: Reference is made to your letter of November 20, 1935, addressed to the Secretary of the Treasury, requesting the transfer of $1,500,000 to this Department for the surveys and construction of the Natchez Trace Parkway.

In order to permit the application of a portion of the funds to surveys and construction of the Natchez Trace Parkway in Tennessee, it is respectfully requested that the wording of the schedule of projects attached to your letter be amended to read as follows:

Location	Character of work	NEC No.	Allotment	Official project No.
Mississippi and Tennessee.	Preliminary survey of approximately 150 miles of the Natchez Trace Parkway, including taking topography and plotting same, preliminary design, and paper location, between Natchez, Miss., and Nashville, Tenn., paralleling generally the old Natchez Trace	331	$150,000	O. P. 5–36.
Do	Grading, drainage structures, totaling approximately 40 miles of the Natchez Trace Parkway between Natchez, Miss., and Nashville, Tenn. The preservation and development of the historic Natchez Trace; the preservation, reconstruction, marking and development of historic sites in connection with the Natchez Trace, between Natchez, Miss., and Nashville, Tenn., paralleling generally the old Natchez Trace	332	1,350,000	O. P. 5–37.
	Total		1,500,000	

Construction on the Natchez Trace Parkway in Tennessee will be contingent necessarily on that State's ability to transfer adequate rights-of-way to the Federal Government. Negotiations with the State of Tennessee regarding this qualification have been instituted.

Sincerely yours,

(Sgd.) CHARLES WEST,
Under Secretary of the Interior.

Approved:
President.

Statement of funds available and the expenditures incurred against the appropriation for the Blue Ridge and Natchez Trace Parkways as of Nov. 30, 1938

Area	Funds available	Expenditures							Unexpended balance	Unliquidated obligations	Unobligated balance

Schedule of contemplated obligations not included in above tabulation.
(a) Contract for grading and surfacing, $315,000, awarded 1939.
(b) Contract for grading and surfacing, $532,000, will be awarded as soon as rights-of-way are made available.
(c) Contracts totaling $2,430,000 will be awarded early in 1939.

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, December 17, 1935.

Memorandum for Director Cammerer.

I am enclosing advice of allocation No. 339 for an allotment of $1,500,000 from the Emergency Relief Appropriation of 1935 for preliminary survey and construction of part of the Natchez Trace Parkway.

E. K. BURLEW,
Administrative Assistant and Budget Officer.

THE WHITE HOUSE,
Washington, November 20, 1935.

MY DEAR MR. SECRETARY: By virtue of the authority vested in me under the Emergency Relief Appropriation Act of 1935, approved April 8, 1935, it is requested that the following funds be transferred from the appropriation made in said act to the Department of the Interior, National Park Service, for the purposes indicated below:

Amount: $1,500,000.

Purpose: For the construction of national parkways in accordance with the attached schedule of projects. Subject to the application of title III of the Treasury and Post Office Appropriation Act, fiscal year 1934, to the acquisition of articles, materials, and supplies for use in carrying out such projects. (O. P. No. 5—36 and 5—37.)

Sincerely yours,

FRANKLIN D. ROOSEVELT.

The Honorable the SECRETARY OF THE TREASURY.

Location	Character of work	NEC No.	Allotment	Official project No.

	Total		1,500,000	

JANUARY 5, 1939.

Hon. A. E. DEMARAY,
National Park Service, Department of the Interior,
Washington, D. C.

DEAR MR. DEMARAY: Your letter of January 3 has been received with the enclosures.

The law commanded you and your Department to divide these funds ratably in accordance with mileage among the States of Mississippi, Alabama, and Tennessee.

Your letter suggests you have flagged some routes and have made studies and some surveys but have done nothing else in Tennessee. In the meantime you are spending the money in Mississipppi. Flagging, studies, and surveys are all right, but I want this part of the road in Tennessee built.

Yours very truly,

KENNETH MCKELLAR.

DEPARTMENT OF THE INTERIOR, NATIONAL PARK SERVICE,
Washington, January 12, 1939.

Hon. KENNETH MCKELLAR,
United States Senate.

MY DEAR SENATOR MCKELLAR: I have your letter of January 5 and have to advise you that the Natchez Trace Parkway construction funds for Tennessee are being held intact in the Treasury of the United States and have not been, and cannot be, expended in either Mississippi or Alabama.

I am advised that a State of Tennessee survey party began property line surveys on December 9 under the direction of State Senior Resident Engineer W. J. Bible, with headquarters at Waynesboro, for project 1-J.

You may wish to write the Governor about expediting the acquisition of the properties involved and their donation to the United States.

Sincerely yours,

A. E. DEMARAY, *Associate Director.*

JANUARY 13, 1939.

Mr. A. E. DEMARAY,
National Park Service,
Washington, D. C.

DEAR MR. DEMARAY: Your letter of Jauary 12 has been received.

I am going to insert a full statement concerning this case in the CONGRESSIONAL RECORD, and you may note therefrom the letter I have received from Mr. M. O. Allen, Commissioner of Highways of the State of Tennessee, which refutes what you say about the matter. You and Mr. Cammerer should carry out the law or resign.

Very sincerely yours,

——— ———.

STATE OF TENNESSEE,
DEPARTMENT OF HIGHWAYS AND PUBLIC WORKS,
Nashville, January 4, 1939.

Hon. KENNETH MCKELLAR,
United States Senator, Memphis, Tenn.

MY DEAR SENATOR MCKELLAR: Your letter of December 28, 1938, was received on my return to the office January 2 after the Christmas holidays; also the letter from Mr. E. K. Burlew, First Assistant Secretary of the Department of Interior, which you enclosed with your letter.

While Mr. Burlew does not so state in his letter, one might conclude therefrom that the cause for any delay which may have been experienced was caused by the lack of cooperation from our department. For this reason, I have taken the liberty to copy from our files a considerable part of the correspondence between the various departments of the Federal Government and the Tennessee Highway Department regarding the Natchez Trace Parkway.

I believe that from reading the enclosed file you will become familiar with what has been done in trying to get this project started, and will agree that our department has cooperated in every instance in furnishing any information, etc., requested and that we were eager and willing to begin the procurement of rights-of-way at the earliest possible time.

I am returning Mr. Burlew's letter for your file. If there is any other information this department can furnish you we shall be very glad to do so.

Very truly yours,

M. O. ALLEN, *Commissioner.*

UNITED STATES DEPARTMENT OF THE INTERIOR,
Washington, December 21, 1938.

Hon. KENNETH MCKELLAR,
United States Senate, Washington, D. C.

MY DEAR SENATOR MCKELLAR: Your letter of December 20 has been received. I have read the one you wrote to Mr. Demaray on the same date, copy of which you sent me.

I am sure there must be some misunderstanding, as the Bureau of Public Roads has completed its surveys for a stretch of road in Tennessee 13.28 miles in length, and these surveys were furnished to the State Highway Commission of Tennessee on December 3. Before construction can commence, the State of Tennessee must dedicate the right-of-way to the Government. The Bureau of Public Roads is now awaiting this dedication.

Regardless of the past, I do not believe that the National Park Service can be accused of negligence since July 1, 1938, inasmuch as that Bureau promptly requested the Bureau of Public Roads to make its surveys and since they have been completed, nothing more can be done until the State provides the right-of-way. I understand that the Bureau of Public Roads suffered some delay through inability to secure personnel promptly for the work.

If you could have the State highway commission expedite the dedication of the right-of-way and turn it over to the Federal Government, I can assure you that there will be no delay in the commencement of construction.

Sincerely yours,

E. K. BURLEW,
First Assistant Secretary.

UNITED STATES DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE, JACKSON FIELD OFFICE,
1013 TOWER BUILDING, P. O. BOX 1267,
Jackson, Miss., June 4, 1937.

Hon. M. O. ALLEN,
Commissioner, Department of Highways and Public Works,
Nashville, Tenn.

DEAR MR. ALLEN: I understand that the general assembly during its recent session passed a bill authorizing the acquisition of parkway lands out of State highway funds. If the Governor has signed this bill, I should greatly appreciate having about four copies for transmission to the Washington office and for our files here in Jackson.

We should also like to know if you consider that the State is in a position to begin early acquisition of the parkway lands. As you can readily see, a considerable amount of further study must be given to our present tentative lines in Tennessee before we could give you the boundaries of the desired rights-of-way. It will also be necessary for us to secure the authorization of the Washington office before detailed surveys could be started in Tennessee. It is our understanding that no funds are at present available for such work in your State and that none could be made available until after July 1.

I sincerely hope that Tennessee will be in a position to take early action on this project.

Sincerely yours,

(Signed) MALCOLM GARDNER,
Land Representative.

JUNE 9, 1937.

Hon. MALCOLM GARDNER,
Land Representative, National Park Service,
1013 Tower Building, Jackson, Miss.

DEAR MR. GARDNER: This will acknowledge receipt of your letter of June 4, in which you discuss the matter of the Natchez Trace Parkway from Nashville to the Alabama State line.

We are very much interested in this project and desire to proceed as early as possible with the acquiring of the rights-of-way. The recent legislature authorized the Governor and commissioner of highways to purchase rights-of-way for this purpose. We are mailing you herein a copy of the bill authorizing such acquisition of land. We will be in a position immediately after July 1 to begin the purchase of the rights-of-way.

Very truly yours,

M. O. ALLEN, *Commissioner.*

JACKSON, MISS., *September 17, 1937.*

Mr. M. O. ALLEN,
Commissioner, Department of Highways and Public Works,
Nashville, Tenn.

DEAR MR. ALLEN: This office has just been notified that the Bureau of Public Roads has advised the Park Service that surveys in Tennessee and Alabama will probably be started within 6 weeks. Lack of automotive equipment has prevented extended survey

work, and the survey parties have necessarily been held close together in order to provide the needed transportation.

A locating engineer left here for Tennessee Monday morning, September 13, to do the preliminary field reconnaissance in preparation for the survey parties.

No actual acquisition of parkway lands should be undertaken, however, until surveys are completed and right-of-way maps sent to the State showing needed lands for construction sections of 8- to 12-mile lengths.

We shall let you know as soon as survey parties begin work in Tennessee. Please feel free to call on this office if we can be of any assistance.

Sincerely yours,

MALCOM GARDNER,
Representative in Charge, Natchez Trace Parkway Project.

SECRETARY OF THE INTERIOR,
Washington, October 8, 1937.

Hon. GORDON BROWNING,
Governor of Tennessee, Nashville, Tenn.

MY DEAR GOVERNOR BROWNING: In accordance with recently approved legislation for the Natchez Trace Parkway, funds totaling approximately $264,000 have been made available for construction in Tennessee. A locating engineer is already at work between Meriwether Lewis National Monument, near Hohenwald, and United States route No. 64. It is planned to have survey parties on this section within the next 6 weeks. Some 2 or 3 months will be required, however, for these parties to complete their detailed topographical surveys before right-of-way maps can be prepared and given to the State.

Please be assured that every effort will be made to expedite this work so that construction on the Natchez Trace Parkway in Tennessee can be started as early as possible.

Sincerely yours,

(Signed) HAROLD L. ICKES,
Secretary of the Interior.

OCTOBER 14, 1937.

Mr. MALCOLM GARDNER,
1013 Tower Building, P. O. Box 1267,
Jackson, Miss.

DEAR MR. GARDNER: This will acknowledge receipt of your letter of September 17. I hope you will pardon the delay in answering, but * * * etc.

It was very gratifying to learn of the sending of engineers into Tennessee for the purpose of locating the Natchez Trace Parkway. We are ready to proceed with the purchase of these rights-of-way as soon as a definite route is located.

I shall be glad to hear from you from time to time in regard to this matter, in order that we may be able to keep "pace" with the project.

Very truly yours,

(Signed) M. O. ALLEN,
Commissioner.

1013 TOWER BUILDING,
Jackson, Miss., October 19, 1937.

Mr. M. O. ALLEN,
Commissioner, Department of Highways and Public Works,
Nashville, Tenn.

DEAR MR. ALLEN: Reference is made to your letter of October 14, concerning the Natchez Trace Parkway in Tennessee.

I was in Nashville on October 13 and talked over the problems with Mr. O. E. Martin, of your office. The locating engineer of the Bureau of Public Roads has been in Tennessee for several weeks studying the section south of Meriwether Lewis National Monument. Resident Landscape Architect E. S. Zimmer is planning to be in Tennessee this week, and after a tentative route has been decided upon it will be flagged. The Bureau of Public Roads survey party will be able to begin work on that section of the line about December 1.

I am gratified to hear that your Department is ready to proceed with the purchase of the rights-of-way. We should like to have in this office a statement from you as to the status of the funds available for right-of-way purchase.

The next time I am in Nashville I shall call on you. In the meantime, if there are any questions, please feel free to write this office.

Sincerely yours,

RANDLE B. TRUETT,
Representative in Charge, Natchez Trace Parkway.

OCTOBER 25, 1937.

Mr. RANDLE B. TRUETT,
Representative in Charge, Natchez Trace Parkway Project,
Jackson, Miss.

DEAR MR. TRUETT: This will acknowledge receipt of your letter of October 19th. I am very much pleased to learn that progress is being made on the location of Natchez Trace in Tennessee.

You ask what the status of the funds is for the purchase of rights-of-way. At the regular session of the seventieth session of the Tennessee Legislature, the State highway department was authorized to acquire the rights-of-way as needed for the Natchez Trace, to be paid for out of the general highway fund. I am sure I am safe in saying that we have sufficient funds available at all times for the purchase of these rights-of-way.

Very truly yours,

(Signed) M. O. ALLEN, *Commissioner.*

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Jackson, Miss., December 1, 1937.

Hon. M. O. ALLEN,
Commissioner, Department of Highways and Public Works,
Nashville, Tenn.

DEAR MR. ALLEN: Enclosed herewith is a copy of the recently revised "Requirements and procedure to govern the acquisition of land for national parkways," which should be inserted in your copy of the parkway regulations.

It will probably be after the middle of December before Mr. Truett can get to Nashville, but he expects to see you at that time and discuss several problems relative to the Natchez Trace Parkway project in Tennessee.

Sincerely yours,

THOMAS L. HEFFERNAN,
Acting Representative in Charge,
Natchez Trace Parkway Project.

Enclosure 989793.

DECEMBER 16, 1937.

Mr. THOMAS L. HEFFERNAN,
Acting Representative in Charge, Natchez Trace Parkway Project, 1013 Tower Building, P. O. Box 1267, Jackson, Miss.

DEAR MR. HEFFERNAN: This will acknowledge receipt of your letter of December 1; also Bulletin No. 9219, in regard to acquiring land for national parkways.

We are very anxious to get some work started on this parkway, and as soon as you have definitely determined the location of this parkway we are ready to proceed with the purchase of the rights-of-way.

Very truly yours,

(Signed) M. O. ALLEN,
Commissioner.

APRIL 26, 1938.

Mr. C. R. SIMMERS,
Right-of-Way Engineer, National Park Service,
Washington, D. C.:

When can I expect prints for right-of-way survey Natchez Trace?

R. J. LOVE, *Division Engineer.*

UNITED STATES DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D. C., April 26, 1938.

Mr. R. J. LOVE,
Division Engineer, State Highway Department,
Nashville, Tenn.

DEAR MR. LOVE: Your telegram inquiring as to when you may expect prints for right-of-way survey for Natchez Trace Parkway is just received, a copy of which I am forwarding to Mr. Randle B. Truett, representative in charge at Jackson, Miss., for reply.

Sincerely yours,

(Signed) C. K. SIMMERS,
Right-of-Way Engineer.

APRIL 26, 1938.

Mr. RANDLE B. TRUETT,
Acting Representative in Charge, Natchez Trace Parkway,
1006 Tower Building, Jackson, Miss.

DEAR MR. TRUETT: Enclosed is a copy of a telegram received today from R. J. Love, division engineer, Tennessee Highway Department, Nashville. Will you please answer Mr. Love's inquiry?

Sincerely yours,

(Signed) C. K. SIMMERS,
Right-of-Way Engineer.

(Comment: No reply.)

MAY 26, 1938.

Mr. RANDLE B. TRUETT,
Acting Representative in Charge, Natchez Trace Parkway,
1006 Tower Bldg., Jackson, Miss.

DEAR SIR: Some weeks ago Mr. C. R. Simmons, right-of-way engineer for the Park Service, was in the office, discussing the possibility of placing a field party on the Natchez Trace on that section immediately south of the Meriwether Lewis Monument in Lewis County, Tenn.; however, Mr. Simmons was unable to state definitely the time at which we might receive official orders to proceed.

For your information, I might state that we have a field party organized for this work, ready to be transferred from their present duties to the Natchez Trace as soon as official notice comes through, and I will be glad to hear from you at your convenience regarding the possibility of Tennessee's activity in this construction in the near future.

Very truly yours,

(Signed) E. M. TURNER,
State Highway Engineer.

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, June 22, 1938.

Mr. M. O. ALLEN,
Commissioner, Tennessee Department of Highways and Public Works, Nashville, Tenn.

DEAR MR. ALLEN: On October 8, 1937, the Secretary of the Interior wrote Governor Browning concerning the construction proposed for the Natchez Trace Parkway in Tennessee under funds appropriated for the fiscal year 1938. The Secretary stated that location work had been started between Meriwether Lewis National Monument and U. S. route No. 64.

It has been necessary to make a revision in the location of the above-mentioned section and work has been temporarily halted thereon. At the present time the location party is completing the location of project 1–J, which extends south from Collinwood to the Alabama State line. It is planned to allocate the construction funds available for Tennessee under the 1938 and 1939 fiscal year appropriations for the Natchez Trace Parkway toward the construction of project 1–J.

Right-of-way maps will be prepared and forwarded to you as soon as the topography has been taken and the location work is completed.

Sincerely yours,

A. E. DEMARAY, *Acting Director.*

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Jackson, Miss., November 23, 1938.

Hon. M. O. ALLEN,
Commissioner, Department of Highways and Public Works, Nashville, Tenn.

DEAR MR. ALLEN: Our Washington office has instructed us to transmit directly to you advance development plans for project 1–J of the Natchez Trace Parkway, as soon as these plans are completed, the plans being subject, of course, to final approval by the Director of the National Park Service. The sending of advance plans to you is in accordance with the suggestion of Division Engineer R. J. Love during a conference in Tennessee last week between representatives of the highway department and of this office.

Resident Landscape Architect Zimmer anticipates completion of the plans with all right-of-way boundaries indicated thereon by Saturday, November 26, in which case we can have the plans in your office Monday, November 28. We expect to send you a telegram Saturday morning telling you the exact date plans will be in Nashville.

We are also advised that Right-of-Way Engineer C. K. Simmers of the Washington office can report to Nashville to spend a few days in the field with your survey party or parties in order that our departmental requirements for surveys and land maps may be clearly understood. This would seem important in view of the fact that Mississippi had to run resurveys of its first two projects because of requirements overlooked on the first survey. A copy of Parkways 1937, a revised manual of parkway requirements and instructions, is attached hereto for your information.

Please inform us by telegraph when your survey work could start and with whom Mr. Simmers should get in touch on his arrival in Nashville. On receipt of this information we shall immediately advise our Washington office the date that Mr. Simmers should be in Nashville.

Sincerely yours,

MALCOLM GARDNER,
Acting Superintendent.

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, November 26, 1938.

Mr. M. O. ALLEN,
Commissioner, Department of Highways and Public Works, Nashville, Tenn.

(Attention Mr. R. J. Love.)

MY DEAR MR. ALLEN: This service has received word from the acting superintendent at Jackson, Miss., that the State is anxious to begin land surveys on section 1–J of the Natchez Trace Parkway in Tennessee, extending northwardly from the Alabama-Tennessee State line.

Mr. C. K. Simmers, right-of-way engineer of this Service, has been instructed to proceed to Tennessee at the time the State begins the land surveys. It is understood that advance prints of the development maps showing the necessary parkway land have been sent from Jackson, Miss., to Nashville, Tenn., direct. Please advice this office when the land-survey party is organized and the point from which the party is working in order that Mr. Simmers may proceed direct to the survey party. It is thought that the requirements of this Service concerning the survey and mapping of parkway land will be better understood if Mr. Simmers arranges to spend 4 or 5 days with the party at the beginning of the surveys.

Sincerely yours,

G. A. MOSKEY,
Chief Counsel.

NOVEMBER 28, 1938.

MALCOLM GARDNER,
1013 Tower Building, Jackson, Miss.:

Quite sure survey work can start soon. Have Mr. Simmers contact Love and Peeler.

M. O. ALLEN.

NOVEMBER 28, 1938.

M. O. ALLEN,
Commissioner, Tennessee Department of Highways:
(Attention R. J. Love.)

Re tel. 28. Suggest your wiring Row Engineer C. K. Simmers direct, care National Park Service, Washington, anticipated date State will begin Natchez Trace surveys.

MALCOLM GARDNER,
Natchez Trace Parkway.

NOVEMBER 28, 1938.

C. K. SIMMERS,
National Park Service, Washington, D. C.:

Accordance Malcolm Gardner's request, Natchez Trace surveys to begin December 5, under jurisdiction R. J. Love, Nashville.

M. O. ALLEN.

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
WASHINGTON, *November 30, 1938.*

Mr. R. J. LOVE,
Division Engineer,
Department of Highways and Public Works,
Nashville, Tenn.

DEAR MR. LOVE: Mr. M. O. Allen wired this office that he will expect to begin the land survey on section 1-J of the Natchez Trace Parkway in Tennessee on December 5. Because of a previous engagement I will be unable to be in Nashville on that day. However, I will arrange to be there on December 7, arriving on the train from Chattanooga at 1: 10 p. m.

Sincerely yours,

(Signed) C. K. SIMMERS,
Right-of-Way Engineer.

COMMENT

Mr. Simmers arrived on schedule, had a very pleasant conference with Mr. R. J. Love, and set out the requirements in regard to acquirement of rights-of-way.

We had already designated Mr. H. W. Stegall to act in the capacity of contact man in securing the rights-of-way and he has been in the field actively engaged in this work since December 5, 1938.

Sharecroppers of Southeast Missouri

EXTENSION OF REMARKS
OF
HON. HARRY S. TRUMAN
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1939

RESOLUTION OF LANDOWNERS OF SOUTHEAST MISSOURI

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by landowners of southeast Missouri with reference to the so-called sharecroppers who are now on the roads there, together with two telegrams on the same subject.

There being no objection, the resolution and telegrams were ordered to be printed in the RECORD, as follows:

Whereas there exists at this time in New Madrid County and other cotton-raising counties of southeast Missouri a condition in which a large number of persons have moved from their homes to the rights-of-way of several roadways in these various counties; and

Whereas the metropolitan press and other individuals are responsible for attempting to create the impression that such conditions are a result of evictions ordered by the landowners and landlords of said section of the State of Missouri, or to other causes for the responsibility of which the landowners and landlords are all the cause, we, the undersigned representatives of the landowners and landlords of southeast Missouri, do hereby declare that these conditions have not been caused by any responsibility of the landowners and landlords of southeast Missouri: And be it therefore

Resolved, That the landowners and landlords of the southeast Missouri respectfully request that a thorough and complete investigation be made of the conditions now existing in the cotton counties of southeast Missouri, and that a hearing be held at a place which

is convenient for the inhabitants of all these counties where it will be possible for the representatives of all the people involved in this matter to be present and be heard; it is further

Resolved, That this body, representing the landowners and landlords of southeast Missouri, respectfully request our United States Senators and Congressmen and the Governor of our State to use all means within their power to bring about a fair and impartial investigation of these matters, in order that the true facts may be known, and in that connection it is respectfully requested that this hearing be conducted by representatives of the Federal Bureau of Investigation, if it is possible for such to be done, in cooperation with a referee assigned for the purpose of hearing these matters by the proper Senate committee, and a thorough report be made to the proper authorities.

It is further resolved that it is our belief that the present conditions exist not because of evictions of any sharecroppers or tenants, but due to the fact that a great percentage of the people who are now complaining have done so at the instigation of certain agitators who claim to be representatives of the United States Government and are telling the people that it is only necessary for them to move out on the highway and the Federal Government will come along and give them 40 acres of ground with the proper tools and teams to cultivate it.

It is further resolved that our information leads us to believe that fully 90 percent of those people who are now camping on the highways are nonresidents of the State of Missouri, or those who have not lived here longer than 5 or 6 months at the most, having come to this section from other States in order to pick cotton for which it is known that southeast Missouri pays a higher price than other parts of the South, and that this excess labor are not the sharecroppers of southeast Missouri.

It is further resolved that it is our information that the great majority of the people now on the said highways are there as a result of their own voluntary act, a great many having moved there from towns, and that there are very few sharecroppers moving.

It is further resolved that this committee requests a thorough investigation of the activities of one Hans H. Baasch, who is the authority in charge of the Resettlement Administration in New Madrid County, at LaForge, Mo., and one of his aides, a colored Baptist preacher by the name of Owen H. Whitfield, because the said Whitfield has been going about southeast Missouri collecting dollars from the poor people of these communities and telling them that if they would move out on the highways the Government would give them 40 acres of ground and the tools to cultivate it, and that the said Hans H. Baasch is reliably reported to have made various communistic remarks leading to this trouble, and that one of said remarks was "it will not be long before all the ground in New Madrid County will be owned by the Government and given to the poor people when divided into 40-acre tracts."

Be it further resolved that this committee representing the landowners and landlords of southeast Missouri requests that this investigation be commenced immediately and that the activities of the persons responsible for the conditions now existing in these counties be reported to the proper authorities in Washington for whatever action is deemed necessary and advisable.

Be it further resolved that copies of this resolution be immediately forwarded to the Governor of Missouri, both the United States Senators of Missouri, the Congressman representing this district, the Dies senatorial committee, the Honorable JOHN NANCE GARNER, and the Honorable Henry A. Wallace.

I hereby certify that the foregoing is a true and correct copy of the resolution which was unanimously adopted at this meeting the 12th day of January 1939 at the courthouse in New Madrid County, Mo.

J. V. CONRAN, *Chairman.*

Attest:

Stanley.

POPLAR BLUFF, Mo.

O. H. WHITFIELD,
LaForge, Mo.:

Conditions of your tenant farmers has been called to my attention and we sympathize with them and offer assistance by turning over to you for their use for 1 year 2,600 acres south of Neelyville, Mo., where you have colored schools and churches. This tract of land will take care of 300 to 400 families; will give you immediate possession and cooperate with the Negroes in every way possible. The land is in the Negro district. We also have several thousand acres that we will help your white tenants move their families on. We are owners of this land. No one needs to starve in America or camp on the highways. Just contact the right source; opportunity is knocking on your door. The land we offer will grow cotton, corn, and all varieties of crops. Wire me collect if you are interested. If so, you can bring them along and have them locate on this land.

GREAT NORTHERN LAND COMPANY,
By R. H. PURVIS, *General Manager.*

POPLAR BLUFF, Mo.

OWEN H. WHITFIELD,
LaForge, Mo.:

We are extending a far-reaching effort to cooperate with the colored farmers. There are more than 100 colored farmers in this district, which is the Horville unit. The land offered you in telegram sent today by R. H. Purvis, general manager of the Great Northern Land Co., of this city, adjoins the land recently settled by colored farmers who are members of our organization. Mr. Purvis is cooperating in every way with us. Advise me if you will meet me with your people in Neelyville.

THOMAS M. GILLESPIE,
Director, National Federation of Colored Farmers, Inc.

American Farm Bureau Federation

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

LETTER FROM AMERICAN FARM BUREAU FEDERATION

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to the President of the United States and the Members of the Seventy-sixth Congress by the American Farm Bureau Federation, through its executive committee.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN FARM BUREAU FEDERATION,
WASHINGTON, D. C., *January 10, 1939.*

To the President of the United States and Members of the Seventy-sixth Congress:

Pursuant to resolutions adopted by the house of voting delegates at the Twentieth Annual Meeting of the American Farm Bureau Federation, the board of directors of the American Farm Bureau Federation herewith calls to the attention of the President of the United States and the Members of the Seventy-sixth Congress the following matters, which are considered by the organization to be of outstanding importance to the Nation:

1. In these critical times, when lack of economic balance between groups of our people prevents normal exchange of goods and services, which in turn results in a continuing unemployment problem, we reiterate our conviction that the full power of the Federal Government must be mobilized in an effort to restore the economic balance which is necessary to enable us as a nation to regain normal volume of production and normal national income. We must put to work our billions of unemployed dollars and our millions of unemployed people.

We recognize the fact that our National Budget cannot be constructively balanced until we have attained economic balance between groups and until national income has been substantially increased. Therefore we recommend:

(a) That the Federal Government provide adequate funds to help restore agriculture, our basic industry, to parity position.

(b) That the Federal Government continue to provide employment for those who cannot secure employment in private industry.

We insist, however, that hours and wages of relief labor be modified so that private employment will be more attractive than relief employment, that every effort be made to return relief workers to normal employment at the earliest possible date, and that every effort be made to reduce overhead costs in the administration of relief.

We insist further that Federal works projects be limited to such constructive projects as can fairly be expected to increase national income and wealth, or to add to the productive efficiency of our national economy. We believe further that the Federal Government should insist on a full day's effective work for each day's wages paid out.

We are convinced that the Federal Government must continue to supply the bulk of relief funds, for the burden is beyond the present capacity of the local political divisions to handle; and we recognize the continued necessity that the Government provide capital investment funds until such time as private funds are again attracted into productive enterprise.

As a further aid to restoring economic balance, we suggest that both industry and labor refrain from advancing prices and wage rates, but that they seek higher annual income through greater volume of production and continuous employment throughout the year.

We are confident that each and every citizen is willing and eager to bear his just share of the recovery burden in order to preserve the fundamental principles of our historic democracy, provided he is assured that the public money is being expended prudently and efficiently on projects that will broadly benefit the people as a whole. All citizens must shoulder the responsibility of making our democracy work in order to maintain our system of free government.

Again we offer our complete and hearty cooperation to those charged with the responsibility of grappling with this great national problem.

2. The broad principles underlying the Soil Conservation Act and the Agricultural Adjustment Act of 1938 are fundamentally sound. This is no time to give serious consideration to substitutive programs, when the facts indicate that the present program has not yet had a fair trial. These acts should be amended only as experience clearly justifies. For some time to come the adjustment of acreages of basic crops in line with effective demand will be necessary. Commodity loans to support price levels are fully justified. Adequate provision should be made for parity payments to bring agriculture into fair economic balance with industry and labor. The provisions of the Marketing Agreements Act have proved their value beyond question, and their benefits should be extended to additional crops.

3. A joint committee of the Congress should be authorized and commissioned to study and report on at the earliest possible date the monetary systems of the United States and other countries for the purpose of ascertaining the effect of monetary policies on basic commodity price levels, and that based on such a study such joint committee should propose effective methods for achieving greater stability in basic commodity prices. Pending the completion of such a report the Congress should continue the authority of the President to change the gold content of the dollar.

4. Farmers recognize that the railroads constitute an essential transportation agency and believe that private ownership will best assure the highest degree of improved service to the public. The need for action by the present Congress is apparent. Greater freedom of action on the part of railroad management could be granted without relinquishing present safeguards to the public.

5. Changed conditions would appear to clearly warrant the taxation of the income of all Government-issued securities, therefore no more tax-exempt securities should be issued.

6. It appears extremely difficult, if not impossible, for the Administrator of the Wage and Hour Act to make effective by regulation the exemptions to agricultural trades and industries, as clearly contemplated by the Congress. Congress should amend this act to assure to farmers the full benefit and scope of the present exemptions as originally contemplated.

7. Reciprocal-trade agreements which have thus far been negotiated and which do not have the effect of reducing domestic agricultural prices below the parity price level are generally satisfactory to agriculture.

Until such time as curtailed market outlets, which require American farmers to restrict production, are enlarged all foreign-trade policies should be formulated so that the widest possible domestic and export markets may be obtained for all domestic producers at fair price levels. All imported agricultural and livestock products should be required to meet domestic standards.

8. The natural resources of soil, water, range, forests, and wildlife are basic to the welfare of agriculture and to the Nation. The future protection and wise use of these resources must be assured. Such a program of conservation should be of a national scope and should be correlated with other conservation programs. A cooperative farm-forestry program would appear to meet the problem in many areas of our country. Most land, wildlife, and forestry conservation must be carried out in cooperation with the people who live on the land.

9. The fertilizer program of the Tennessee Valley Authority, the Rural Electrification Administration, and the farm-to-market roads program should continue to be supported with adequate funds.

10. The United States Department of Agriculture, the land-grant colleges, the agricultural experiment stations, the Extension Service, the Vocational Education Service, and the regional agricultural research laboratories should have adequate appropriations for carrying on their work in the service of agriculture.

11. Since the Nation as a whole can prosper only to the extent that equalized educational opportunities are made available to all citizens, the Federal Government should provide aid to grade and secondary schools on the basis of educational need.

Since it is further apparent that preventable disease and lack of proper medical care and hospitalization in some areas cause great economic loss and human suffering, the Federal Government should reasonably extend its public-health program with respect to maternal and child health, rural hospitals, public-health services, and medical care for those unable to provide such care for themselves.

Respectfully submitted.

AMERICAN FARM BUREAU FEDERATION.

By its executive committee:

EDWARD A. O'NEAL, *President.*
EARL C. SMITH, *Vice President.*
GEORGE M. PUTNAM.
J. F. PORTER.
H. J. KING.
O. O. WOLF.

The New Congress

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

RADIO ADDRESS BY FRED BRENCKMAN, WASHINGTON, D. C., DECEMBER 17, 1938

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD a radio speech made by Mr. Fred Brenckman, the Washington representative of the National Grange. This speech relates to vital and important matters affecting the country, and especially the farmers. The National Grange is a very influential and useful farm organization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

With only a little more than 2 weeks remaining before the Seventy-sixth Congress is scheduled to convene on January 3, the eyes of the Nation are again focused upon Washington. The people of the country are particularly anxious to know what the attitude of the incoming Congress will be with reference to agriculture, industry, and business, together with the many other vital and complicated problems with which the Nation is confronted.

I believe there is justification for saying that the rank and file of the people would welcome and applaud any sign or indication that the new Congress will be more disposed than its three immediate predecessors to perform the duties with which it is vested under the Constitution, without any undue interference or coercion from the executive department of the Government. While it is necessary and right that Congress should cooperate with the Executive in carrying out any program calculated to promote the common welfare, a spirit of subservience and subordination on the part of our lawmakers is entirely at variance with the American concept of government.

Every Member of Congress who conscientiously performs the duties devolving upon him is fully entitled to all the salary he gets. But why should we pay a man $10,000 a year and give him the franking privilege, together with office space and $5,000 for clerical hire, besides printing his speeches in the CONGRESSIONAL RECORD, if he is to play the part of a mere automaton and do no thinking on his own account whatsoever? God gave each and every one of us a brain and He expects us to use it.

As the Bible aptly puts it, "In a multitude of counselors there is safety." The magnitude and variety of the questions that are clamoring for solution calls for the collective wisdom of our best minds, and it is to be hoped that Congress will recognize this fact and govern itself accordingly.

THE LUMP-SUM APPROPRIATION EVIL

If Congress is fully to regain its former prestige and independence, it must put a stop to the practice of making lump-sum appropriations, to be expended at the discretion of the Executive. Thinking people throughout the country recognize this plan of disbursing public moneys as an unmitigated evil. It compels Members of Congress to go, hat in hand, to the Executive Department to plead for an equitable allotment of funds for their respective States or districts; it makes a grab-bag of the Treasury; it leads to extravagance, demoralizes the people, and it menaces the right of free elections. In a recent address delivered in New York, Senator JAMES F. BYRNES, of South Carolina, faithfully portrayed existing conditions when he declared:

"Today the Congress collects from the people in taxes billions of dollars and gives that money to department heads to be spent at their discretion. Local officials then demand the assistance of Senators and Congressmen in getting back from the department heads for local improvements some of their money. The efficiency of the Senator or Congressman is determined by the amount of money he gets back. The more money a Representative secures from the departments, the greater is his obligation to vote for additional appropriations which will be asked by the departments."

Continuing, Mr. BYRNES said:

"The businessman and the educator will make splendid speeches about balancing the Budget. Immediately afterward one will write his Senator asking aid in securing funds for a Federal building, while the other prayerfully pleads for a college stadium."

On every hand the excuse is offered, "We might as well get ours while the getting is good, because the money is going to be spent anyhow."

Henry Clay was fond of saying that Congress was supreme, because it held the sword and the purse.

But when Congress made a lump-sum appropriation of $3,300,000,000 in 1933 to meet the emergency which then existed, it set a precedent that has done more than all the other things put together to destroy its own independence.

A search of the official records of the Government discloses the fact that from 1789 to 1933 the total blank-check appropriations of Congress amounted to only $1,687,000,000. The bulk of this went to Woodrow Wilson at the time of the World War. Since 1933 Congress has given the Executive almost $16,000,000,000 to be spent at his discretion. The power represented by these enormous appropriations has proved too much for the administration of one individual. It has resulted in waste and many ill-considered ventures.

THE GROWING MENACE OF DEBT

It has likewise resulted in swelling the proportions of the public debt to a size that would have been considered inconceivable 10 years ago. By the end of the present fiscal year our national debt will reach $41,000,000,000. This is not taking into account the contingent liabilities of some 30 Government corporations and agencies that have been authorized to issue bonds, notes, and debentures, with the Government guaranteeing both principal and interest.

Often there is jubilation when an allotment of Federal funds is made to some project or community. But in view of the fact that this is borrowed money that must be repaid through future taxation, the people should not regard it as a grant. In reality it is a first mortgage on every farm and every home in the land. One of the foremost duties of the new Congress is to take positive steps toward balancing the Budget and putting an end to this orgy of waste, extravagance, and debt.

Congress should work out its own formula for the distribution of relief, and the administration of these funds, which are secured by taxing all the people or by mortgaging their credit, should be placed on a nonpartisan basis. It must be agreed by every right-thinking person that it is wrong to play politics with human misery and to ask the people to barter their votes for bread.

The new Congress should shun and resist any attempts that may be made by our Federal bureaucracy to further encroach upon the rights of the States and to curtail unnecessarily the liberties of the individual citizen. The tendency of the Federal Government to arrogate all power to itself has gone to extremes that are incompatible with the American principle of home rule in local affairs. All this has been done in the name of liberalism and progressivism.

In former times, when kings ruled by "divine right," it was the function of liberalism to curb or hold in check the powers of the king or monarch, and it should be clearly kept in mind that the more power the Federal Government takes unto itself, the less there is left to the States and society as a whole.

The Grange believes that we will get the best results if each unit of government—National, State, and local—will stay within its proper sphere, each faithfully and efficiently performing the functions devolving upon it, and with none encroaching upon the rights and prerogatives of the rest.

THE AGRICULTURAL SITUATION

In surveying the agricultural situation Congress will be brought face to face with the fact that the farmers' cash income for this year, including benefit payments, has fallen to $7,625,000,000, which is a billion dollars less than the figure for the previous year. It is also two and one-half billions less than the average for the 5-year period from 1925 to 1929, both inclusive. In considering ways and means of improving farm conditions the Grange is of the opinion that the most helpful thing the Government could do would be to pursue a policy calculated to restore employment in private industry.

Notwithstanding that the Government has spent approximately $27,000,000,000 for relief and pump-priming projects during the past 9 years, not to mention the additional billions spent by the States, there are still about 11,000,000 unemployed people in the United States. They and their dependents, numbering tens of millions, have very little purchasing power, excepting that which is furnished by the Government itself. This is the principal reason for the low prices of farm commodities that now prevail.

In 1929 our national income was $81,000,000,000. The estimate for this year is placed at sixty billions. This means that the purchasing power of the people is 25 percent less than it was in 1929, while our population has increased nearly 9,000,000 during the interval. How could farm prices be expected to be satisfactory under such conditions?

There is an interdependence between industry and agriculture that is fundamental and inescapable. Just as the industrial worker is the best customer of the farmer, so the farmer is the best customer of the man engaged in industry. Neither can prosper while the other languishes. They both go up or they both go down together.

As every intelligent student of agricultural conditions is aware, there is no single solution to the farm problem. It cannot be solved by political magic, nor by the use of any one of the numerous panaceas that have been offered.

THE AMERICAN MARKET

The Grange regards it as a prime requisite in restoring agricultural prosperity to give the American market to the American farmer to the limit of his capacity to supply it.

We want all the foreign trade we can get under proper conditions, but we are persuaded that there is no advantage in exchanging competing commodities, nor in entering into any trade agreements that would be injurious to domestic agricultural interests.

We know that trade is a matter of give and take, but it should be remembered that the United States today has the biggest free list of any country in the world. Last year 57 percent of our imports entered the country free of duty. Under such conditions, it would seem that with the exercise of proper diligence and ingenuity it should be possible for us to find an export market for some of our surpluses among the nations whose products have been given entrance to the markets of the United States without the payment of any tariff duties.

Furthermore, the grange advocates that all trade treaties, for such they are, should not be allowed to become effective until they have been ratified by the United States Senate, according to the provisions of the Constitution. All the treaties we have made in this connection were subject to parliamentary ratification on the part of the countries with which we dealt. As an American I should not like to believe that the United States Senate could not be trusted to perform a duty which the parliaments of other nations have shown themselves capable of accomplishing.

Above all things, the Grange wants every American farmer to be secure in the possession of his birthright. It wants every farmer to be the boss of his own farm and the captain of his own soul.

Flood-Control Program in Vermont

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

ARTICLE BY DOROTHY THOMPSON IN WASHINGTON POST, JANUARY 16, 1939

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by that distinguished American journalist Dorothy Thompson, entitled "Green Mountain Holiday," which appeared in today's Washington Post. Miss Thompson, in speaking of Vermont, has voiced the patriotic sentiments of independent-minded citizens of every State in the Union. Pennsylvanians have an equal stake with the courageous citizens of Vermont in the maintenance of local rights. We may not speak as eloquently as Dorothy Thompson, but we feel the same way.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, January 16, 1939]

ON THE RECORD

(By Dorothy Thompson)

GREEN MOUNTAIN HOLIDAY

Before Secretary Woodring goes ahead with that dam that the Federal Government contemplates building at Union Village, Vt., he had better go and see Knickerbocker Holiday. Drom Broeck, the young man in that play, called himself the first American. He had a serious psychological disturbance. He couldn't bear to take orders.

His lineal descendants are not very numerous in Manhattan any more. But they have overrun Vermont. Practically the whole population of the State consists of Drom Broecks.

They are as polite, courteous, and gentle-spoken a people as you will find anywhere. But it is a mistake to try to coerce them. Because, if you do, you will find some extremely ornery creatures.

Vermonters are not accustomed to taking orders, individually or collectively. One reason for that is that more Vermonters work for themselves than do the inhabitants of most States. They are farmers and 90 percent of them own their own farms. If their daughters go out to work in the households of others, they go as "help" not as servants. You can easier persuade a neighbor to "help you out" than you can hire him.

They are extremely knowledgable about their local politics and problems. This is a State where the town meeting still is a living, functioning institution.

They are accustomed to debating and discussing every sort of problem affecting their lives and pocketbooks, not only in Montpelier but in the Town Hall in Barnard, population 200 souls.

They know all about the fight over flood control between the State and the Federal Government; they know the precise history of the interstate flood-control pact drawn up and ratified in 1937 between the Commonwealth of Massachusetts and the States of Connecticut, New Hampshire, and Vermont.

They know that this compact was made in strict conformity to the act of Congress that authorized it and in closest cooperation with the War Department—which was the only branch of the Federal Government concerned in the matter under the terms of

the act—and they know that although the compact was favorably reported by committees of both Houses of Congress, its passage was blocked by Executive interference.

And they are very, very sore about it. Not the Governor. He is sore, too. But Vermonters. All Vermonters.

The people of this State believe that the rights in the streams and valleys of Vermont belong to them; that if the Federal Government is going to take some of them it has got to consult them first, and that even then it can only have them according to the terms of a written contract between the Federal Government and the State.

They are willing to discuss things with the Federal Government; they aren't saying they won't cooperate. On the contrary, they are saying that they will. But they believe that they are a party to the terms. And they want it put in writing.

And the reason they want it put in writing is because they don't want the precedent established that the Federal Government has any claim, without specific contract, to a single acre of land—except, of course, in time of national emergency.

They want to have something to say about where dams should go and what lands should be flooded.

They believe that what they say in Gaysville, or East Craftsbury, or Newfane, will be listened to with far more interest in Montpelier than it will be in Washington.

They have an enormous and quite fierce Vermont patriotism. They care, for instance, intensely how the State looks. Nobody has been able to sell Vermonters the idea that it is good for business, and therefore for the country as a whole and for Vermont in particular to clutter up the waysides with billboards. They won't have 'em, because they don't like their looks.

And they want to consider how flood-control reservoirs are going to fit into the landscape. The reservoirs, when depleted, are a horrid, scummy, ugly sight, and the Vermonter with both a trading and an esthetic sense believes that Vermont's beauty is an asset, bringing in prestige and tourists' dollars.

That doesn't mean that they don't want flood control. They certainly do. But they want something to say about how and where.

They also want to think about their taxes before they flood lands, and about the land itself.

There isn't so much good valley land in Vermont that you are casual about it.

They think the Federal Government is extremely casual about a lot of things. They haven't forgotten yet that way back 5 years ago some of the boys from the Rural Resettlement Administration declared Vermont to be 52 percent uninhabitable and suggested the citizenry ought to be evacuated off the hill farms.

I live on one of them, and I'd like to see the Federal Government try it.

The answer of Vermonters was, "Well, it's inhabited, ain't it?" And some of them pointed out that it had been inhabited for 150 years, sometimes by members of the same family, and that the American Who's Who is pretty liberally sprinkled with some of those names.

And I regret to say that one heard the remark, "If they don't like it here, let 'em go back where they came from."

A lot of Vermonters have got queer ideas about things that constitute a "good standard of life." They'll patch up a piece of furniture until it is more new wood than old, and contribute a dollar to keep up the Burlington Symphony Orchestra in a city of 30,000 souls.

They'll stick to a farm because they like the view.

They'll spend money for paint, but they don't think you have to eat meat every day.

They are, in short, an ornery people who have a deeply ingrained and, I fear, ineradicable habit of independence.

The truth is they are spoiled. They believe in self-government. They even believe it is their right. And they believe it begins at home.

"Now, about that dam business. Don't misunderstand. We want to be reasonable. You treat us reasonably and we'll treat you reasonably—but whose State is this, anyhow?"

The Republican Victory in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN, AT NEW YORK, JANUARY 14, 1939

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a speech on the subject of the Republican victory in the State of Wisconsin delivered by me before the National Republican Women's Club at the Hotel Astor, New York City, January 14, 1939.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Madam Chairman, distinguished guests, and members of the National Republican Women's Club, I consider it a great privilege to visit with you women. Why? First, because you are the mothers and sisters and sweethearts of men. Behind every great man is the ennobling influence of some woman who carves out history using man as the sculptor.

Secondly, because you own 60 percent or more of the property of this country. You know the problems and the cares of the folks who carry the tax load.

Thirdly, you are thinkers. You use the greatest invention of all, the mind that the Master Inventor gave you. With it you see that first things come first, and that real values are things of the mind. You know that after all, they are the only treasures that will cross the river of death.

Ladies, I believe that I owe my invitation here today not merely to the fact that I am a Republican Senator but that I am a Republican Senator from Wisconsin. Since coming East the first of this month, I have been brought to realize that my eastern brothers and sisters in the Republican Party do not quite know what to make of a Republican "anything" from Wisconsin.

If you would permit, I should like to give you a little background concerning Wisconsin politics for several reasons. Wisconsin has been the home of the La Follettes—father and sons—who started out in the ranks of the Republican Party but left it to head their own party; and, secondly, Wisconsin politics for the last 6 years demonstrate how a Republican Party which had been beaten to its knees in 1932 could in 6 years, and in the face of the La Follettes and the New Deal, fight its way back to victory.

In 1936 I was convinced that the blundering and inconsistent attempts of the New Deal to strengthen our industrial democracy constituted a very real threat to that very democracy which the New Deal professedly sought to preserve. In 1938 I was even more firmly convinced, and I entered politics again as a Republican candidate for the United States Senate. The fact that I am here today evidences the success of that campaign.

Between 1936 and the campaign of 1938 our Progressive friends in Wisconsin forsook the President and the New Deal and launched the so-called Party of Our Times, the National Progressives of America. The important thing in the 1938 election in Wisconsin was not that the candidates of this new party were defeated in the State of its birth, but that the people of the State of Wisconsin, opposed to the policies of the New Deal, turned not to the National Progressive Party but to the Republican Party to voice the position of the people of Wisconsin.

After every basic change in political philosophy we have the advent of third parties. The primary reason is that the leaders of the third-party movement, either because of conviction or because of political expediency, believe that the two major parties cannot adapt themselves to the changed political picture. That is the situation today. I believe that without exception every third-party movement today is based upon the declared principle that neither the Democratic nor the Republican Party can carry through a sustained liberal program. Some of the third-party platforms are anything but liberal. When analyzed they reveal themselves as truly reactionary, because they demand in return for a "promise of economic security" the concentration of power, both political and economic, in one man or one group of men. Many of their ideas are dressed up, old outmoded dreams of Marx. We need not go abroad for our political wisdom. America is the cradle of liberty. Here is the minted wisdom of liberty and democracy.

And wherein lies the revolution in political thought today? This revolution did not come about in 1932. The seeds of the revolt were there, but even the Democratic Party did not realize it. Do you recall the Democratic platform of 1932? "We will reduce taxes. We will reduce overhead. We will reduce the operating expenses of the Government. We will cut down the tremendous bureaucracy springing up in Washington. We will take government out of business. We will provide jobs for the unemployed," etc. Those were the promises of 1932, and there is not a one which has not been many times broken.

This disregard for campaign promises would have brought defeat to the Democratic Party in 1936 had it not been that in the intervening years the vast majority of the people had come to look upon the Government as the means of obtaining certain material objectives, and the New Deal as epitomized by the President had convinced the majority of people that it, and it alone, was striving to attain these objectives.

What made necessary this recognition by the Government of its economic responsibility? Simply this: We Americans have long had a political democracy, based upon the great freedoms of speech, assembly, and press. We have justly been proud of that political democracy. We have not always been aware of the simple fact that that political democracy could not continue to survive unless we also erected as its counterpart an industrial democracy. A political democracy and an industrial democracy are mutually dependent institutions; one cannot survive without the other.

The problems of industrial democracy in America were not politically critical until American industrial progress was slowed down by the depression in 1932. With the breakdown of our economic system in 1932 we were brought face to face with the

realization that grave defects had crept into our industrial order (or that it was insufficient for the new day) and that our Federal Government has an economic responsibility as well as a political responsibility. Recognition of this responsibility by President Roosevelt is commendable. Unfortunately, the last 6 years have demonstrated that the policies of the New Deal are leading us away from, rather than toward, the objectives of an industrial democracy.

Let us recognize that the great American march toward these objectives has been halted. Our problem is to make clear to all our people what these objectives of industrial democracy are and effectuate these objectives in our national economy. Our immediate problem—unless we are Communists or Fascists—is to show how the march to these objectives can be resumed within the framework of our political democracy.

What are these objectives of industrial democracy? They are higher incomes for the underprivileged third of our Nation, security in our jobs, and security in our old age; greater production; an encouraged industry; a reinvigorated farmer class; and, in general, more of the good things of life for all our people. If the attainment of these objectives of an industrial democracy is necessary for the continuance of the American way of life, then to every person in public office is thrown a challenge—a challenge to find the way and show the way in which the march toward these objectives may be resumed.

Our economic society is built upon three fundamental processes: The process of production, the process of distribution, and the process of consumption. It is important to realize that these economic processes of production, distribution, and consumption are a necessary part of any kind of economic society, whether it be capitalism or fascism or communism.

We all know that the American process of production is the most efficient the world has ever known. It is capable of providing the American people with a higher standard of living than that of any other people. Under the American system individual firms and corporations compete against one another for the services of labor, capital, and natural resources. These services are used for the production of goods. When individual firms compete with one another for these services we know that the services rendered by labor and capital are used in the most efficient manner possible. Inefficient use of these services by a firm is eliminated by the bankruptcy of the firm. So long as decent competition exists labor and capital work together to produce maximum results.

The process of distribution has reference to the method used to distribute the remuneration to those involved in the process of production. In a society without money, capital, management, and labor would each take a share of the goods which they collectively produced. Since money is our medium of exchange, the goods produced are sold for money and that money is divided up between capital, management, and labor. In an economic system where competition has not been destroyed there is a direct relationship between a worker's income and his ability and effort. Such was the dream of the founders of our country, that every man had equality of opportunity and could go as far as his talents and his willingness to work could carry him. So long as competition exists, this dream can become a reality.

The process of consumption in an industrial democracy is essentially the same in principle as the process of voting in our political democracy. When the sum total of votes for all kinds of goods is added up, the manufacturers know what the choices of the public are. In the process of consumption, dollars do the work of the ballot in our political democracy.

It is obvious that by 1932 the process of consumption had broken down because the inherent democracy of the system was destroyed. Millions of our people had few or no dollars with which to buy. Put more directly—a few people had incomes which gave them millions of votes in the consumer market, while many others had no incomes and hence no votes in the consumer market.

This loss of votes in the consumer market constituted a real threat to our political democracy, for a free people can be regimented only under the stress of an emergency, and that emergency may be war or hard times. And when a people are compelled to regiment themselves to meet the grim necessity of finding enough to eat, they are likely to turn to any self-proclaimed messiah who promises to show them the way back to the more abundant life.

Those of us interested in working out the problem within the framework of our American system—and I believe President Roosevelt when he says he wants to preserve the American system—must find out how Government can act to restore the essential democracy of the consumption process by raising low incomes and lowering the highest incomes.

This is not a question of partisanship. The task confronts both Republicans and Democrats, not as party members but as Americans.

However, the voters choose a party to carry on the program.

I am confident that the Republican Party of 1938 is rising to the challenge of our present problems and is building slowly and surely a sound, constructive program which the people of this country will ask the Republican Party to put into operation. To me there are certain fundamental steps that must be taken.

The first step is to encourage business expansion and business spending so that those now struggling along on the subsistence wage of W. P. A. and direct relief can be reemployed in private business at a decent wage. All labor will profit by a pick-up in business through steadier employment and higher wages. However, no businessman is going to increase the output of his factory or tie up thousands of dollars in the expansion of his plant when he has every reason to expect that a vacillating governmental policy will wipe out every reason for increasing his spending. The primary need is for a consistent governmental program so that business can count on a consistent, constructive, long-range governmental policy.

A second step can be taken by eliminating the necessity of those in economic distress making necessitous bargains. An efficient trade-union is an essential instrument for the solution of this problem. While I accept the principle of the Wagner Act as being fundamentally sound, I cannot overlook the fact that it can be further improved.

Thirdly, the farmers' problem must have special attention so that the farmers will at least get the cost of production out of what they produce.

It is important to bear in mind that in our attempt to create more income for the underprivileged we do not destroy incomes for all. The power of government to redistribute income is a power that must be wielded carefully and with precision. There is no need to repeat the destructive corporate surplus tax which crippled the innocent business corporation. Nor is size alone a criterion, as Mr. Berle pointed out. Large corporations are essential to the production of many of our products. In those instances they do not destroy competition; they make competition more effective.

Our next step is to maintain and improve the efficiency of our process of production by maintaining and improving the spirit of competition. The competitive system is very largely an automatic system. The system works according to certain economic laws. But if the spirit of competition is destroyed, our democratic process of production is destroyed by the same action; and the result is governmental planning. It then becomes the function of a board of experts in Washington to decide whether the American people want this or that kind of automobile, whether they want one kind of houses or another, and so on. In addition, these so-called experts will decide not only what we want as they see fit, but they will also tell us what factories may produce the goods they decide on. Rather than receiving orders from the people as to what should be produced, our business will get its orders from Washington.

This is not a democratic process. This is "big government" gone riot.

To me such a system is identical with fascism. It destroys the freedom of the individual in a free society. It sets up a system whereby we must all become mere human cattle treading an economic treadmill. This is not preserving liberty; this is surrender.

If we are to prevent the establishment of such an autocratic society, we must not only eliminate those forces and institutions which today destroy the spirit of competition in our economy but we must fire our souls with a lofty purpose to see that an enlightened public opinion comes into being that will develop governmental machinery which will serve and not rule the people; which will enforce the law and protect liberty.

One of these institutions is the unnatural and uneconomic monopoly. Such a monopoly has its own economic empire. It does not compete against other firms for the services of labor and capital. It can keep the prices up and lay off thousands of men, who must go unemployed because a few men do not want to break the market price. It destroys competition. Such a monopoly must be removed by intelligently framed corporation laws in the spirit of our antitrust acts.

Another step must be taken. In the last 6 years a host of barriers has developed which destroy the free trade among the United States of America. When free trade among the States is destroyed, our American economic system is destroyed.

There is here no suggested specific legislation, but there is a line of conduct, which, if followed, would, I believe, lift this industrial machine of ours out of its economic bog.

This is a victory luncheon, and I know there is not a Republican officeholder in the land who would not be a willing witness to the wonderful support and assistance given him by the Republican women's organizations throughout the Nation. Yes, this is truly a victory luncheon as we compare 1936 with 1938, but I conceive it to be a victory luncheon in another sense. This, to me, heralds the fact that the Republican Party is alive to the national, to the economic, social, and humanitarian responsibilities which a modern political party must carry. Our party is drawing to it wondrous sources of intellectual power—youth, clean and strong; men and women who want to serve this Nation with no thought of personal gain—and this party also recognizes that there is a final source of knowledge and power to which we can and must turn if we are to meet the great "calls of this day." I refer to Him who gave us life, who through the great Americans of the past brought forth on this continent the American ideas of liberty, of freedom of speech, press, and worship, etc., and taught us the American way to preserve these great freedoms. At Thermopylae 2,000 years ago on bended knee 10,000 Greeks swore to preserve and transmit to their children the freedom of Greece, unmarred and unsullied.

Before us, coming from Europe and Asia, are a million resurrected false ideas and concepts of government seeking opportunity for trial on this continent.

Thank God America is becoming increasingly aware of this enemy. We are not downhearted. We accept the challenge these errors present. We will not succumb to force or false political and economic thinking.

On bended knee, with faith in the God of right, we too swear we will transmit to the America of tomorrow the freedoms of our America unmarred and unsullied.

Address by Hon. Joseph F. Guffey

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1939

RADIO ADDRESS BY HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA, ON OCTOBER 6, 1938

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by me on October 6, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Pennsylvanians, it is vitally important that every citizen of Pennsylvania know who is behind the Republican candidates who are today going up and down our State clamoring for the destruction of Roosevelt liberalism, the summary court-martialing of the New Deal, and the burning of the security measures enacted by Governor Earle and a Democratic legislature at Harrisburg.

Republican machine bosses in Pennsylvania traditionally select candidates who are "regular" and "right," candidates who will do as they are told. This year is no exception, as those independent Republicans who cast their lot with Gifford Pinchot can well testify. We must look to the bosses, not to the candidates, if we are to know what to expect from the Republican leadership in Pennsylvania.

In more than 40 years of battling for liberal democracy in Pennsylvania I have seen bosses come and bosses go. I have watched them rise and I have watched them fall—autocrats such as Penrose, Quay, and Vare, and more recently Grundy and the Mellons. Those party leaders made alliances with the railroads, the utilities, the big manufacturers, and bankers. In return for their services in breaking strikes, in granting tax exemptions, in extending favors and immunities to great corporations at the expense of the people they received generous campaign contributions.

Yet, evil as was this partnership of big business and the G. O. P., it was still an alliance with legitimate business.

In all the years that I have fought against the Republican misrule, it never entered my mind that the day would come when I would be obliged to attack the leadership of the Republican Party in Pennsylvania on the ground that it was allied with organized crime, that it was controlled by an associate of underworld figures, that it was degenerating into an instrument for the protection of gambling.

Yet that is the situation now facing the Commonwealth of Pennsylvania. The once great Republican Party today has sunk to the blackest of all depths, to the deepest pit of moral degradation, under the leadership of a man who is the kingpin of illegal pool-room gambling from coast to coast, a man who brings to the Republican Party the methods, the tactics, and the morality of the underworld.

That man is Moses L. Annenberg.

"Moe" Annenberg has a Nation-wide monopoly on race-track wire service. His income from this source alone is conservatively estimated in excess of $6,000,000 a year.

With his vast income, and with his newspaper, the Philadelphia Inquirer, which he bought for $15,000,000 cold cash, it was an easy matter for "Moe" Annenberg to seize control of the Republican organization from its aging and shattered leaders, who were demoralized by defeat after defeat at the hands of New Deal candidates. He took the Grand Old Party by default.

It was "Moe" Annenberg, and no one else, who hand-picked Arthur James as a candidate for Governor.

As early as last January, 10 months ago, the Harrisburg Telegraph, a Republican political organ, stated flatly that if James were nominated it would be "a manifestation of the power of M. L. Annenberg, millionaire publisher of the Philadelphia Inquirer, several magazines, and the New York Morning Telegraph, a horse-racing publication."

Events proved the Harrisburg Telegraph was right. Annenberg picked the Republican candidate for Governor. Annenberg nominated him. Annenberg controls him, and his running mates as well.

With brazenness characteristic of the underworld and typical of underworld contempt for the sanctity of democratic processes, this man who has seized control of the Republican Party organization is now campaigning for State-wide political dictatorship.

Even now his corrupting influence upon our public life, and his contempt for the people's highest tribunals, have become public scandals.

His candidate for Governor was taken from the Superior Court of this Commonwealth, and under "Moe" Annenberg's direction that jurist already has so forgotten his professional responsibilities that he has brazenly refused to resign from the bench while campaigning for political office—in fact, is giving curbstone political opinions as a candidate on matters yet to come before him as a judge.

As if that were not enough, Annenberg has now publicly shamed and humiliated the Supreme Court of Pennsylvania to such an extent that the court itself has ordered an investigation, and the State senate has passed a resolution to the same effect, in order to protect the integrity of that tribunal. "Moe" Annenberg, at a time when he was known to be on terms of open intimacy with at least one member of the supreme court, published in advance the decision of that court on the constitutionality of the grand jury bills. Such a publication, 10 hours before the decisions were handed down, demonstrated a brazen contempt for the dignity of the highest court in the Commonwealth.

Many think of Annenberg as a newspaper publisher, but his publishing is incidental to his traffic in gambling information, and his newspaper is nothing more or less than an instrument of political power to protect his far-flung illegal enterprise.

When I speak of Annenberg's illegal enterprise I am not saying anything more than Annenberg himself has said about it. In 1934 Annenberg's partner in the General News Bureau brought suit in Chicago for a division of the profits. Annenberg successfully pleaded that he was engaged in an illegal business, and hence the court could not step in to compel a split of the loot. Thus he openly admitted, in a formal court pleading, that his tipster service was an illegal racket.

If anyone believes Annenberg's purpose is not to use his newspaper and his political power to protect his racket, he has only to review Annenberg's record in Miami, Fla.

The bitter rivalry of two gambling services there resulted in two gang murders. When outraged city authorities closed down all bookmaking Annenberg bought a newspaper to "protect" his customers from the ban.

By the most ruthless methods Annenberg finally gained political control of Miami and put his own friends in office. When that was done his newspaper had accomplished its purpose. He had no further use for it and sold it. In his final editorial he announced that he was proud to leave the city in "safe" hands.

Within 2 months of this editorial farewell his hand-picked mayor and two other city officials were indicted on charge of soliciting a $250,000 bribe for a sell-out of the people's interests to the local electric light and power company.

Annenberg's Nation-wide race-track monopoly, operating under various names, has been named in presentment after presentment of the special Bok grand jury now sitting in Philadelphia. How far its operations extend throughout Pennsylvania only Annenberg himself could tell. How far it would extend if Annenberg were to become the political boss of Pennsylvania can better be left to the imagination.

"Moe" Annenberg has the unenviable distinction of having been one of the first persons in America to introduce gangster methods into legitimate business.

As a Chicago newspaper circulation promoter, first for Hearst and later for the Chicago Tribune, he and his associates assembled gangs of thugs and gunmen to promote newspaper sales by terrorizing newsboys. In the open street warfare that ensued it is estimated that 27 persons were killed and many more wounded. "Moe" Annenberg himself on one occasion played a prominent part in a street gun battle in Chicago's downtoon Loop.

After the circulation wars ended the Annenberg gangsters turned to other activities, so that this earliest venture marked the beginning of gang warfare and racketeering.

Having helped to inaugurate Chicago's reign of lawlessness, "Moe" Annenberg moved into larger fields.

He became an important executive in the Hearst organization, speculated in real estate, controlled a seat on the New York Stock Exchange, published magazines and racing newspapers, developed his race-track wire service.

With one exception, when he was indicted by a Federal jury in Baltimore for sending obscene literature through the mails, he has pursued his way unmolested by the courts. In fact, he has always made it a point to be friendly with the courts, even to the point of selecting judges exclusively as his personal candidates for public office.

Today this man who derives his chief income from what he admitted himself is an illegal business has a Republican judge of the Pennsylvania Superior Court as his candidate for Governor and a judge of the supreme court as his boon companion and frequent dinner guest at his Philadelphia hotel.

Ironically enough, this man whose business makes possible one of the greatest illegal rackets in the country not only assumes the cloak of respectability but also hobnobs on terms of greatest intimacy with Republican judges whose political interests he is in a position to advance.

This is the man who owns the Republican machine—lock, stock, and barrel.

This is the man who daily sings a hymn of hate against the liberal policies of the New Deal.

This is the man who has openly boasted that after he has seized political control of Pennsylvania he will dominate the Republican National Convention in 1940, and thus name the next President of the United States.

Flood-Control Dams

EXTENSION OF REMARKS
OF
HON. ERNEST W. GIBSON
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1939

EDITORIALS FROM NEW YORK TIMES OF JANUARY 15, 1939, AND NEW YORK HERALD TRIBUNE OF RECENT DATE

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the Sunday issue of the New York Times and an editorial appearing in the New York Herald Tribune of recent date, both relating to the flood-control issue insofar as it affects New England.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From New York Times of January 15, 1939]

VERMONT VERSUS ALL COMERS

In Europe such an action as was taken on Thursday by Governor Aiken, of Vermont, and his legislature would have what might be called repercussions. For Vermont not only decided to petition Congress to ratify an existing contract for the Union Village Dam and to amend an act "under which the Federal Government claims the right to take our lands and waters without our consent." It also proposed to move to "the defense of our sovereign rights."

The issue at Union Village and in the larger matter of the control of the Connecticut and Merrimac Rivers is apparently not to be met in this case by the national administration, in view of the position the New England States have taken. Meanwhile we have the picturesque spectacle of the State of Vermont feeling its sovereign oats. It is not only a legal question that was raised. A profound sentiment found expression. Vermont is not an administrative subdivision. It is a State.

Vermonters have always felt that way. Between the beginning of the Revolutionary War and their entrance into the Union they enjoyed some 15 years of independence. Once in, they were stout Unionists, as their soldiers showed at Gettysburg and on other battlefields. But they have always been conscious of their statehood, as indeed, anyone who crosses Lake Champlain, the Connecticut River, or the northern boundary of Massachusetts is also likely to be. Their very barns are not like other people's barns. Drop an exiled native blindfolded under the shadow of Mansfield and he would know by the feel, by some sixth sense, where he was. Sentimentally, Vermont is more nearly a nation than is many a principality ringed round with customs officers.

Green Mountain folk are patriotic—certainly. They will die for the Federal Government on request. What they won't do is let Washington put anything over on them. This attitude is not mentioned here by way of condemnation or of praise. It is simply a fact. Sometimes State pride obstructs a desirable national program. Sometimes it protects us against the too swift rush of reform or the black devices of reaction. Just now Vermont annoys the hundred percent New Dealers. It will not annoy the same persons so much if a reactionary administration in Washington ever attempts to suppress local or personal liberties. If this ever happens, Vermont will, one expects, be heard from in what the politicians aptly call "no uncertain terms."

[From the New York Herald Tribune]

NOT BY A DAM SITE

Something like 16 months has passed since Governor Aiken of Vermont first stepped forth into the national limelight with his championship of State sovereignty against the threats to it embodied in the New Deal program for flood control. Much has happened since then to bring the issue to a head, so we now find him no longer talking but ready with the sinews of war to take the fight to the enemy. And we have an idea that before he is through the enemy will know it has been in a real fight, perhaps the most fateful of its experience.

For both this farmer-Governor himself and his cause are charged with a moral fervor which seems not unlikely to line the country on their side, as in the case of the opposition to the President's Court-packing and reorganization schemes. Just as in those two instances, the record of the administration has been that of a devious attempt to alter, through Executive encroachment, the balance of powers fundamental to our system of government. Meanwhile last year's elections have come along to give courage to all who would stand in the way of New Deal arrogance, and especially to Vermont and her Governor, almost alone in their support of the ancient faith in 1936.

One remembers that after the passage of the Omnibus Flood Control Act of 2 years ago the four New England States victimized by the disastrous floods in the Connecticut and Merrimac Valleys entered into compacts under the terms of this act to tame these rivers. They prorated among themselves the cost of the reservoir and dam sites, the Federal Government to foot the bill for construction, and reserved to themselves "all benefits and advantages of water conservation, power storage or power development that may exist." Their treaties had the blessing of the War Department, but they failed of congressional ratification because the President objected to the clause quoted. Months of fairly bitter controversy followed, during which both sides stood firm, whereupon the President caused to be introduced into Congress and finally succeeded in having enacted a resolution authorizing the Secretary of War to walk into any State which refused to give up title to flood-control reservoir sites or to their development for power purposes and acquire the lands, easements, and rights desired.

It appears that Vermont, and specifically a minor project on a tributary of the Connecticut in a community of 50 inhabitants, has been picked for the first test of this proposed usurpation. Somehow the obscurity of the setting among poor Vermont villagers enhances the dramatic value of the principle at stake. Here is an attack on the type of local autonomy which is of the very essence of the American democracy. We shall be much mistaken if not only New England but the country generally does not rise in support of Governor Aiken.

The Constitution

EXTENSION OF REMARKS
OF
HON. WILLIAM E. BORAH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1939

RADIO ADDRESS BY WADE H. ELLIS, OCTOBER 25, 1938

Mr. BORAH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address on The Constitution of the United States, delivered by Mr. Wade H. Ellis under the auspices of the Daughters of the American Revolution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, I can think of no greater honor than to speak over the air on the Constitution of the United States under the auspices of the Daughters of the American Revolution. This organization, like a number of similar ones in America today, is doing a splendid work in stimulating popular respect for our form of government.

The Constitution of the United States owes its real origin to Magna Carta, the immortal conception of English liberty, signed and sealed by King John on June 15, 1215. The sacred spot known as Runnymede, where this great instrument was approved, is now a national park, situated on the banks of the Thames between London and Windsor, and fronted by noble monuments. It was from Magna Carta that the American people drew the immutable doctrines of habeas corpus, trial by jury, and due process of law.

The early settlers at Jamestown in 1607 looked forward to the adoption of a constitutional form of government protecting the rich and the poor, the high and the low, and particularly the individual citizen in all the rights of liberty and property; and the Pilgrims of the *Mayflower*, as early as November 21, 1620, before they left their boat, adopted what may really be called the first Constitution of the United States. Many years later the Virginia Bill of Rights, written by George Mason, of Gunston Hall, only a short distance from the city of Washington, became a real inspiration for the American Constitution adopted at Philadelphia on September 17, 1787. This great charter of freedom, which Gladstone pronounced "the most wonderful work ever struck off at a given time by the brain and purpose of man," and which Daniel Webster declared he would use every faculty in his power to prevent from being nullified or impaired, is the most sacred document in America today, and I hope will continue to be for all future ages. The "given time" referred to by Gladstone is, curiously enough, the shortest period in which any supreme law of government was ever written in the history of the world. The Constitutional Convention actually accomplished its task in 85 working days, and for all time to come it is the duty of every American citizen, whether native born or naturalized, to support and defend this splendid heritage.

The Constitutional Convention was presided over by George Washington, and among many other leaders of that day who took part in the construction of this sacred instrument were James Madison, Alexander Hamilton, Benjamin Franklin, Roger Sherman, Charles Pinckney, Gouverneur Morris, Rufus King, and others of deathless fame. It has often been said that George Washington took little part in the deliberations of the Convention, but one of the out-

standing episodes of that day was that at a critical moment when it seemed that all the work might come to naught General Washington stood at his place and exclaimed with solemn emotion: "Let us raise a standard to which the wise and honest can repair. The event is in the hands of God."

The main body of the Constitution creates the three vital agencies of government and defines their powers—the legislative, the executive, and the judicial. The terms used are the clearest of which the English language is capable, and no intelligent individual, whether lawyer or layman, from John Marshall, the greatest interpreter of the Constitution in the history of the country, to the humblest citizen in the land, could fail to understand them.

There have been 21 amendments to the Constitution and the proposed twenty-second, concerning child labor, is still pending. Of these amendments, the first 10 were in effect a part of the original instrument and constitute the great Bill of Rights of the American people. They were devised to meet objections to the adoption of the Constitution. They concern chiefly the rights of petition for redress of grievances, religious liberty, freedom of speech and the press, security against searches and seizures, trial by jury, and other inalienable needs of a self-respecting nation. The most important of the other amendments are those abolishing slavery, granting to Congress the power to tax incomes, providing for the election of Senators by direct vote of the people instead of by the legislatures of the States, granting woman suffrage, and fixing the terms of office of the President and Vice President and of the Senators and Representatives so as to make them more immediately answerable to the popular verdict of the people. If we count the first 10 amendments as a part of the original Constitution and omit the 2 amendments establishing and repealing prohibition, which nullify themselves, there have really been but 9 amendments to the Constitution of the United States in 151 years. This is a remarkable tribute to the temper and sagacity of the American people, buttressed and supported by the framers, who, by requiring that no amendment could be adopted without the vote of two-thirds of both Houses of Congress and three-fourths of the States, made it necessary that we should ponder thoughtfully before making any change in our form of government.

I have given you, my friends, a brief summary of the adoption and contents of the Constitution of the United States. My advice to every man and woman who is listening in today is to read from the beginning to the end, this great charter of our liberties, with all its splendid guaranties and all its checks and balances. This will make you prouder of your country and surer of your birthright.

In these days when there are, according to the very latest news, so many spies and conspirators spreading the dark doctrines of fascism, communism, and every other "ism" except patriotism, we need to teach all the people, without regard to race, color, or religion, that they are absolutely equal under the law, entitled to the protection of the Constitution of the United States, and that the highest duty of every individual in the land is to live an honest and law-abiding life and to use all his or her talents and industry to attain an honorable place in the world. Of course, the number of these spies and conspirators has no doubt been exaggerated, but in my judgment our first duty is to deport the aliens among them back to the lands where they obtained their pernicious theories, and any American citizens among them plotting violence should be prosecuted and sent to jail.

The most dangerous doctrine that can be taught is that the world owes every man a living. This is only half true. The world does owe every man a living, but he must work in order to collect the debt; and nothing can so destroy self-respect and all those qualities which make for peace and progress as to teach mankind that we are entitled to all the needs and luxuries of life without doing anything to deserve them. There would never have been any great invention, or any great poem or picture, or anything of usefulness or of beauty, if it had not been for the personal industry and ambition of some free, self-respecting man or woman who was not content to live a life of idleness and dependence upon others but who desired to give his or her talents to the betterment of world conditions.

The one thing most important of all to keep in mind is that it is not the duty of the Government to support the people, but the duty of the people to support the Government. Uncle Sam is not a Santa Claus. He is an umpire—the great umpire of the game of life, ready to suppress injustice and monopoly, disorder, and crime, and to see that every individual in the country gets a square deal.

I am one of those who believe that the Constitution of the United States will never be destroyed, and I want to point out one significant and encouraging fact in this connection. There is not today a single community in the United States where any man could be elected to any office on a platform advocating a change in our form of government.

At this moment when many other countries of the world are in the throes of war or revolution, or governed by cruel autocracies which suppress all liberty of speech or occupation or religion, a prime obligation is to so strengthen the Army and Navy of the United States that we may defend our country against any aggression. We ourselves will never be the aggressor in any direction, for there is not an inch of foreign territory that we want to annex.

In my judgment present doubts and difficulties will adjust themselves, and better times are coming than we have witnessed in many years. There is already positive proof of a revival in business and employment, which should encourage the farmers, the merchants, the industrialists, and the workingman. We must not get the blues any more than the "reds." What we need most of all is faith in our institutions and the courage to maintain them. Faith and courage. We live in the land of the free. Let us make it the home of the brave.

I thank you.

The Quest for Responsibility

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

ADDRESS BY CLARENCE A. DYKSTRA, PRESIDENT OF THE UNIVERSITY OF WISCONSIN, COLUMBUS, OHIO, DECEMBER 28, 1938

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Clarence A. Dykstra, president of the University of Wisconsin, delivered before the American Political Science Association at its thirty-fourth annual meeting, at Columbus, Ohio, December 28, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One hundred years ago, in Belfast, James Bryce was born. Fifty years later, he gave to the world, and to the United States in particular, his classic commentary on the American Commonwealth. This great book interpreted Americans to themselves, and thousands for the first time began to understand the meaning of our political system in the light of our history and its practices. Among other problems, he gave significant attention to that which we are to discuss tonight: What are we to do in a popular government such as ours to get, keep, and perfect a system of responsible action congenial to our traditions, our structure, and our continental and Federal setting?

Within 20 years after the publication of his book, the author was living in Washington as the Ambassador from England to the United States. He was interested in the American Political Science Association from its inception and became its fourth president. He also continued his study of political institutions, and particularly of democratic processes, while he carried on his diplomatic duties. Upon his retirement from the Ambassadorship, speaking to the Academy of Political Science, Lord Bryce said: "I do not think that any greater service can be conferred upon the world by learned men who are trying to find solutions for all the problems that press upon us than by * * * devoting themselves * * * to a scientific investigation of government, economics, administration, and what is called social science in general. You are here—in America—* * * confronted by a number of problems probably more difficult and intricate than any country has ever had to face. * * * No greater service can be rendered toward the solution of these problems than by the cultivation of patient and impartial thought. * * * The need—for thought—was never greater than now because we are apt to be carried away by popular passion. It is not merely the political problems to which I refer. I speak also of economic problems which are becoming increasingly important with the immense increase of wealth, the development of communication and transportation, and the growth of closer relations which exist between all parts of the world. I have likewise in mind what we call social questions. * * * In all that immense field there is need of the closest study of social schemes and theories and of the methods of social reform that ought to be adopted."

These words were spoken more than 25 years ago. They are as vibrant and full of meaning for us today as they were then. It may well be that we find a still fuller meaning and a still deeper challenge in his brief and summary sentence which follows his discussion on the need for action: "The difficulty is to know how to do it."

We live today in a world which is still seeking a way of responsible action, and the difficulties involved have multiplied increasingly in the last quarter century. The turn of the wheel has brought us to a series of experiments in group or collective responsibility throughout the world. We find ourselves and the world in a confusion which we do not seem to resolve—a fog which we cannot penetrate. We do not even find the time to try the Bryce formula, "the cultivation of patient and impartial thought." And yet it was never more necessary. On every hand are the witch doctors with their panaceas. On every rock sits a siren trying to take our minds captive. We ride wave upon wave of popular passion, each more threatening than the last. Classes, groups, and special pleaders clash with each other in their efforts

to control the common agents of collective action. Everywhere immediacy is in the saddle; we yield to the desires or needs of the moment. The future has no appeal, nor do we care for its promise. Today must fulfill our demands though the heavens fall. The result is that we are living recklessly and irresponsibly the world over.

We moderns attack no new problem when we set out again on the quest for responsibility. We merely use new terms for old ideas. Hundreds of generations have tried to reconcile liberty and law, authority and freedom. These same problems are posed on the oldest Egyptian tablets. Recall also that requirement in an old Greek city that whosoever desired to propose a new law should come into the place of assembly with a rope about his neck. Responsibility, you see. Justinian declared that the affairs which concern all should be decided by all.

Such illustrations may be found throughout the pages of history. Calvin and Arminius posed the problem in theological language, using the terms "sovereignty of God" and "free will." Plantagenets, Tudors, and Stuarts all grappled with the implications of the responsible crown, and with the difficulties of getting taxes without debate in Parliament. Magna Carta, the Declaration of Right, ship money, the Instrument of Government of Cromwell's day, habeas corpus, the Bill of Rights—these are all tokens of a long English struggle for responsibility in government. Jefferson and a multitude of his contemporaries on both sides of the ocean were merely carrying forward a time-worn struggle to put monarchs into some setting of responsibility. Even the devices of annual elections and of a set term for parliaments are products of the long search. Lacking only was the language or idiom of responsibility. Practice aimed at the idea, however difficult it proved to arrive at the condition.

Instrumentally, these pioneers were concerned with denying, proscribing or circumscribing the exercise of powers from which they had suffered or feared that they might suffer. They struggled to contrive forms by which powers granted would be impotent for harm, and they ran into the problem of making them at the same time efficacious for good. Their inventions were not invariably successful. Americans, fascinated by Montesquieu's misunderstanding of English polity, contrived checks and balances. But there is little evidence that the constitutional fathers had much real faith in the device. In a very real sense, those English in America in the late eighteenth century were resurrecting the philosophies and some of the formulas developed in the seventeenth century by the English in England.

We must not forget either that there were minds in England before 1640 which thought of Parliament as "the grand representative of the republic." And when the Long Parliament assumed to govern and finally put Charles' head on the chopping block it did so professing to represent "the good people of England." Even the Rump Parliament claimed to represent these same good people. Within a decade there appeared two phenomena rather new: (1) The execution of policies directly by the policy-making representative body or by its committees, and (2) the appointment of executive and judicial agents by Parliament, on the very morrow of the royal rejection of the proposal that Parliament exercise a veto on the King's choice of ministers. Perhaps experience had taught that impeachments and attainders were slow and long-drawn-out remedies. Here is the germ of the principle that power and responsibility go together. We find it again under the Articles of Confederation, drafted during our Revolution, even though power was confided grudgingly and sparingly. The delegations sitting in the Congress of the Confederation were emissaries under instructions and subject to recall within their yearly terms. The device was imperfect, as experience showed, but the idea was to get responsible and responsive representatives.

The attempt to get responsibility by negation of power failed during those days which Fiske called "the critical period." Thoughtful men learned there and then that negations cannot be adapted successfully to fields in which government must act on occasion, but in which arbitrary, needless, or ill-advised action may be highly injurious. The trouble with post factum responsibility of detached agents by way of impeachment or removal, or even by nonreelection after the expiration of an arbitrary term, is that the mischief cannot be fended against before it happens. It may even be that responsiveness is at times an enemy of responsibility. Responsiveness may become a mockery in a maelstrom when confusion of opinion reaches an extreme or when the power of public opinion is captured temporarily by a mountebank. The concept of responsibility, like that of fundamental law, is a rock underlying the history of freedom. Neither is a weather vane which swings to every wind on a single pivot. Each admits of every change in form and policy which is chosen pursuant to reason and to full consideration, but not to gusts of passion.

Here and there in the debates on the Constitution we find the framers struggling with the idea inherent in the words "responsible" and "responsibility." The idea was not dissected, however, apparently on the assumption that it was something as familiar as it was requisite and did not need examination. Had they probed it, they might have been astonished to discover how little they articulated it with the structure, which, by the way, they settled by compromise. Franklin's idea of a responsible single-house legislature had to yield to the compromise between the large and small States. In the debate on the Executive, Rutledge and Wilson felt that "a single man" would feel the greatest responsibility, and Sherman argued for his selection by the legislature. Randolph asked for an Executive of three "to support its independence," apparently of the legislature which was to appoint. Mr. Dickinson wanted the Executive removable by the Legislature, but Gerry feared that appointment by the legislature would lessen his independence. Wilson continued to press for a single Executive. Said he, "In order to control the legislature, you must divide it; in order to control the Executive, you must unite it." Hamilton insisted upon an Executive chosen for life, for then he would have no "motive for forgetting his fidelity." He indicated in his plan that life meant "during good behavior," and then he proposed that such an Executive should have the sole appointment of the heads of departments without provision for the consent of the Senate. On July 17 action was taken by the Convention unanimously that the Executive should be chosen by the legislature and not elected by the people. Further debate on the question of eligibility for more than one term, and Paterson's later suggestion for a college of electors, developed a new solution for the election of the President. Implicit throughout this debate is the fear that the Executive may not be independent enough of the legislature and the desire to make him responsible to the people only in a post factum sense as by impeachment or nonreelection. As late as August 24 delegates voted down the proposition for electors and in favor of legislative choice, and so it was not until 10 days before the signing that choice by electors was finally agreed to—the device that really pleased no one. And since they anticipated few electoral majorities, they provided that the failure of electors to elect should reduce its votes to nominations with the eventual election in the House of Representatives.

This running debate on the setting up of the Presidency explains in some part how the members of the Convention struggled within the confines of a check and balance complex (shall we call it) to find some nonparliamentary way of imparting a character of responsibility to the Executive. The argument for the independent Executive finally prevailed, however, and the method of choice was frankly a compromise. Thus were set up admittedly independent and separate functionaries in the field of legislation and the execution of law. Because of this decision we have vacillated throughout our Presidential history between those we have chosen to call constitutional Presidents and those who have tried from time to time to exercise congressional leadership. We have also differentiated between the functions of a President as party leader and as Chief Executive. We have likewise been confused in our use of the terms "executive" and "chief administrator." Insofar as we have discovered that in modern government there are management problems of great magnitude, we have been made aware of the fact that we have not as yet determined the place that the Presidency occupies in the American system or just what powers it is safe to allow a President to exercise. We are still in quest of responsibility in its many aspects. And meanwhile the tasks of government continually become more complicated and burdensome.

In this day of governmental action and State intervention, it may be worth our while to pause the while to examine and reexamine the challenge of this problem of responsibility in its several aspects. There is a simple way of beginning, and it cuts right through all of the talking and writing of 2,000 years. If we assume, to begin with, that responsible government is desirable, and we must, we should inquire: For what and to whom shall it be responsible? We should know further who actually will be shouldered with responsibility and whether responsibility can be achieved by structural devices. We must discover also whether there are other realities involved that must be considerd when such questions are raised.

It seems obvious that government eventually will be responsible for such undertakings as those who control it declare to be in the general interest and for the general welfare. There is little possibility of doing what so many have tried to do—classify and pigeonhole so-called governmental functions, setting them down as more or less hard and fast judgments eternally applicable. Such attempts have merely added to the confusion of thought which is everywhere prevalent. Doubtless we can all agree that there are some functions necessary to government, functions which if not performed leave us without government. There are some also which cannot be performed by government. Even the English statesman who declared that Parliament has power to do anything did reserve one little matter—the power to make a man of a woman. The attempt to enumerate functions between these extremes, whether in universal terms or as related to a particular time or place, invites contradiction and disagreement from every quarter of the compass. In a very real sense, therefore, each student of the problem and each practicing statesman or politician makes his own list. This is the reality which we need to face when we approach other aspects of the problem of responsibility. Not to do so is to hide our heads in the sand. There are no boundaries which are beyond dispute between the extremes. There is no agreement within the mean. Particular governments at particular times and under particular circumstances discover particular things which must not be left undone if there is to be a government and an orderly society. Again these same governments find that certain things cannot be done if revolution is to be avoided. Evidently this is no place for "the dialectic," self-styled statesmen to the contrary notwithstanding.

Moreover it is to be noted that the problem is not entirely within the control of any existing government, or of peoples, or even of dictators. What governments can do at all, or what they can do without injury, or even what they can do better than some other organization or individual, or permit to be left undone, or do badly, depends often upon the state of the arts, upon the processes of mechanization and of organization, and on natural resources

which are available. One has merely to revert for a moment to the current world problems of the nations known as "the haves and have-nots" to illustrate this difficulty.

There is the further difficulty, of course, which we face when we grapple with what we call "the will of the people" and its decision in the field of function. Some act of will, whether of the people or of a dictator, must answer the question for a particular government. Just what this is gets us into the question of how government can become the instrument which faithfully reflects the concurrence of individual wills in preponderant numbers. In a very real sense, therefore, this problem of function as it bears on responsibility has a relation to structure, to public opinion and its possibility of expression, to popular leadership, to general intelligence, and to the current economic scene. How to create a system of responsibility which is continuing and controlling, and at the same time in a public interest which is determinable and enduring rather than transient, is a challenge that faces popular government everywhere. It cannot be met by a theorist's attempt at classification. If a categorical answer be required, there can be but one—time and circumstance will give us the answer. The fact we must reckon with is that governments must do, if they can, what is demanded of them by those who control them. In this determination certain things have weight; the inevitable, the impossible, the state of the arts, the nonhuman resources, the will and genius of the people, and its leadership.

The whole problem becomes even more complex when under a popular government we venture into the field of control. Insofar as government is a device for doing certain things, it cannot be responsible to itself alone. As an organization of human beings, as a personnel, if you will, it should have within itself certain characteristics of responsible action. But the whole history and import of the struggle for self-government assumes that constituted governments are responsible to those who create them. In this sense, responsibility runs to the people, or the quality of popular government is impaired.

It is the reciprocal of popular control. If the governing agent becomes the tool of some individual—a dictator, political or economic, an interested class or domestic faction, or a foreign master—we no longer have the substance out of which popular government is conceived, and we have made a mockery of responsibility. In modern times, this control finds its mechanism in the voting process, as yet a crude instrument of popular action. For our electorates are asked to resolve complex situations about which they have a minimum of information, for the most part inaccurately reported to them. They are subjected to disturbing appeals to irrelevant or traditional emotional attachments. They are not presented with simple choices which are clear to them. Moreover, they may be forced into choices by economic imperatives, or even by the appeal to fear. Besides, there are multitudes of conflicting interests which must yield to compromise, to adjustment, and to integration. The genius of self-government is indeed a hard taskmaster.

Because of the many difficulties involved in self-government, there are many who, in despair, seem willing, at least at times, to give up the struggle for the democratic way. It is only when we contemplate the possible alternatives to an ultimate control by the people themselves, operating as voters in whatever way they can, that we reassure ourselves of the validity of popular sovereignty. Lincoln was doubtless right when he said that all of the people cannot be fooled all of the time. Dictators, of course, always claim to act for the people, or in their interest, but none professes to act in a relation of responsibility to the people. They are responsible either to themselves alone or to some class or person not identifiable as the people. This, it seems to me, is the essence of irresponsibility. The history of freedom warns us to beware of those who pretend to act in behalf of the people. It supports the declaration of Justinian that affairs which concern all should be decided by all. No doctrine is a safe one for the modern world that does not accept as inevitable that government, whatever its form, whatever the scope of its functions, must be genuinely responsible to the people as a whole.

Insofar as it is true that the more or less amorphous public is not prepared for self-government, we in this country must find our greatest challenge and our inescapable responsibility. It is in point here to ask ourselves as educators what we are doing to implant in our people from the kindergarten up the requisite qualities for self-government. Here would appear to be our never-to-be-satisfied obligation. We have had 100 years of public education in this country. In just what degree has this been a public education, save that the public has paid the bills? Do we develop the public person or the private individual? That there is a difference no one will deny. Nor can it be gainsaid that the education of a private person in certain ways may easily result in the development of the nonpublic person. We give lip service at all times to the doctrine of education for citizenship. Just how effective has this service been in the making of intelligent participators in our public processes? We dare not make great claims to success in this field. The time has come to face this problem realistically. Democracy and its perpetuation may all too soon prove to be an American obligation. To what extent do we contribute to increase the number of those who can at once think for themselves, and see the reasons of those who differ? Who can assess matters in their true proportions and so arrive at common agreements on aspects of major pith, sacrificing perhaps their honest differences about minors and nonessentials? The fathers of 1787 did that. To what extent are our citizens able to differ with conviction and yet compose differences and live in peace and order? To what extent is it possible for a minority among us to accept the decisions of a majority, without submission or surrender to an autocrat? We can never be perfect in this regard. We cannot long keep responsibility in our governments unless we maintain an unremitting campaign for its preservation and extension. All of the agencies of education and communication will be required for this service—schools, the radio, the screen, and the press. We who teach government and the social sciences should summon them to our aid. For we must develop a people to whom it is possible for a government to render responsibility. Here is perhaps our greatest obligation as political scientists.

We have a tradition in the United States that what we want is to attain that ideal expressed by the philosopher as "a government of law rather than a government of men." To this we revert when we lose patience with the personnel which operates our governing mechanism. And yet, since the processes of government are not automatic, we must put men in charge and hold them responsible for carrying out the popular will. We come, then, to the generalization that "representatives of the people's own choosing" will carry the active burden of responsibility. It is difficult to believe that modern peoples, with the current mechanisms of intercommunication at their command, will be satisfied to give up for long periods the habit of choosing representatives to act for them except as they use the more direct methods of initiative and referendum. At the moment many cross currents in world opinion and practice might seem to invalidate such a generalization. But all whirlwinds blow themselves out. Therefore no short-time philosophy or short-time procedure can be considered as anything but variants temporarily in control. Long experience in many places teaches us to hold fast to this principle of representation and to take such chances as are necessary with the device of popular choice. It teaches us further that responsibility has little relation, if any, to the quantitative approach to the election problem. The short ballot and the pointing up of policies to be voted for and against are the important items in popular voting.

There are those who teach that responsibility in government is, in some degree at least, bound up with or perhaps nullified by form or system. Woodrow Wilson believed sincerely—certainly through most of his life—that the way to some measure of governmental responsibility for the United States was to add to article I, section 6, four words, "other than a Cabinet," thus making the section read: "No Senator or Representative shall * * * be appointed to any civil other than a Cabinet office," etc. This addition would give Members of the Congress the right to hold Cabinet positions. Such a device, he thought, would break with our tradition and give us a parliamentary or cabinet government and, he assumed, "responsibility." Said he in 1884: "The only hope of wrecking the present clumsy misrule of Congress lies in the establishment of a responsible cabinet government." This was Wilson's formula for bringing the executive and the legislature closer together and escaping the sterility which he saw as the result of breaking through the check-and-balance system. He wanted some link, some bond of connection, between these two great branches of government to neutralize their antagonisms and harmonize their interests. He asked that the executive agents of government should stand at the ear of the legislature with respectful suggestions of the needs of the administration, and that the legislature give heed meanwhile, requiring of them obedience and diligence in the execution of its designs. He argued that changes in our form of government involved in his proposal are surely worth making, and in the most forthright fashion demanded the institution of the English cabinet form for the United States. However, there seems to be no evidence that after he left the classroom Wilson still urged this formula to attain responsibility. On the contrary, he stressed the need for Presidential leadership rather than a system which eventually would have made the President a figurehead. In his critical analysis of Wilson's point of view, D. F. Houston, for 8 years a member of the Cabinet, concluded that Wilson's solution was too academic and overlooked the life of the Government and the temper of our people. It is an interesting and penetrating comment on the implications of responsibility.

The Cabinet suggestion is but one of those proposed by those who seek further responsibility at Washington. Some would limit the Presidential term to 6 years, some call for the item veto, some would give Congress further powers, and some would take power from the President. All of these enthusiasts fail to see that they are expending a good deal of energy on more or less barren devices which at best could no more than neutralize or counteract some of the consequences of the check-and-balance system. The contrivance that cures one defect in such a structure is almost certain to give it another of equal virulence.

This faith in form or structure is as old as ancient Greek philosophy and as persistent as our American belief that checks and balances will produce responsibility. Forms, however, are no more than the ways which have been developed in diverse places for doing the things that want doing. And doubtless there are always more ways than one of doing these things.

There must be certain realities behind governmental forms which touch upon our problem and which are the determining factors that need to be illuminated in any such discussion as this. These relate to the character of peoples, their experiences and experiments, their capacity for self-control and understanding, their education, and their status as civilized human beings. Long ago Boutmy, the French publicist, uttered a warning to his countrymen which is still challenging to us all. Said he, "Constitutional mechanism has no value and efficiency in itself, independent of the

moral and social forces which support it or put it in motion." On this subject Bryce said, "To anyone familiar with the practical working of free governments, it is a standing wonder that they work at all. What keeps a free government going is the good sense and patriotism of the people, or of the guiding class, embodied in usages and traditions which it is hard to describe, but which find, in moments of difficulty, remedies for the inevitable faults of the system."

Of course, the fundamental reality behind any system of responsibility is the capacity of a people for self-government and their competency as individuals. We were fortunate that this capacity appeared early in American history. Any summing up of our American advantages would seem to indicate that no nation ever embarked on its career with happier auguries for the success of responsible popular government. Here was an excellent racial inheritance. Natural resources were abundant for an ample existence. Here was security from external danger such as threatened the peoples of Europe. All of the conditions for a peaceful and prosperous political life were present. There was neither prince nor pauper. There was a passion for liberty and a spirit of self-reliance. The environment made for a belief in equality and equal rights, and these, in turn, for an acceptance of the idea of popular sovereignty. Put together, however, all these bred a suspicion of remote control and an attachment to local self-government and local responsibility. It is not to be wondered at, therefore, that difficulties appeared when the attempt was made to transfer some responsibility and power to the new plane of national organization. Evidence of this is found all through the debates of the Convention of 1787. Even so, the problem of the organization of a national life and a governmental symbol to represent it seemed to many to be solved by the adoption of the Constitution.

But the possession of a favorable character does not of itself guarantee that a people will devote its first attention to the development of responsible systems of government. In the conquest of a continent other problems appeared that seemed to most Americans more immediate and important than the perfecting of a national system of responsibility. To them these problems seemed preponderantly those for which the individual himself had to be responsible, and, insofar as they were social and political—well, there was the local government. The fact that our system was federal, and the legally separatist position of the States within the federal system, confirmed the opinion that public functions which transcended in scope local government boundaries were in the keeping of a geographical political entity—the sovereign state. National problems took on a sectional aspect at most, certainly until the Civil War. This was a country dedicated in spirit to individual enterprise, and, so far as government was concerned, to a wide variety of State and local experimentation and responsibility. Our history, our environment, and our State systems of constitutions and laws worked against the idea of national unity and a national government.

We must not fail to understand, therefore, that the Federal character of our enterprise was an experiment full of real difficulty for a people who were scattered far and wide in a continental area of diverse geographic and economic sections. We should remember also that this same Federal principle which was such a necessary part of the experimental establishment of 1787 did survive, and doubtless was the indispensable condition for the continuance of our representative political society as a single national state. Without such a device the United States could not have happened or persisted. But we need to realize that the impediments to an achievement of a responsible national government have been magnified and multiplied because of it. No unitary state ever faced such complications.

The achievement of responsibility in any society postulates a natural and harmonious flow of forces and ideas. Here we had conflict and its political consequences. Neither did we have in our Federal Union at any time, nor is there yet, an accepted or agreed-upon division of the field of power as between general authority and the local units autonomous within their spheres. Ideally such a division should so far as possible reflect fundamental principles operative in the society. Let it be ill-adjusted, or the subject of quarrels among parties without understanding or devotion to principle, and much more than the current public service will suffer. For in that situation the short-sighted will attempt for their fancied advantage to alter the Constitution to their own ends by seducing words out of their meanings, by distorting sense, and overreaching principle, and by subterfuge and blandishments. Whatever the temporary outcome of such a course, the political integrity of the people suffers and the substance of responsibility is dissipated.

We have had just such difficulties in the United States, and we are still at sea as to a proper division of powers. Our twilight zone is still a broad band of half light and shadow.

It would be a tempting undertaking to suggest at this point what might be done with our system by way of redividing or redistributing powers to the national advantage. Our literature is full of suggestions for such an enterprise, many of which have merit. A study of the current scene by as competent a body of men as made up the Convention that drafted the Constitution would doubtless result in suggestions for change which might seem as revolutionary as did the instrument of 1787. Suffice it to say in this connection that we are in dire need of adopting an orderly habit of ascertaining and altering the dividing line in conformity with genuine changes of situation and with the pace of general opinion. It is at once the task and condition of responsibility to keep that line corrected. Not to do so may mean in time an altering of the political map, and even perhaps some new secession problems. In any event, it seems clear that if there is to be responsibility within the structure of a Federal system there will have to come some generally accepted agreement in principle concerning the dividing line which separates local from national authority. Studies under way in the field of our duplicating and overlapping tax systems indicate that we are making a gesture toward the study of this problem. Even more fundamental would be an inquiry into the problems of commerce and the police power.

Some changes and accommodations will come inevitably and in some cases unconsciously, perhaps, by muddling through. They cannot be made overrapidly, for it is a major premise in any discussion of governmental forms and procedures that any national or local pattern for organizing a political society must be related intimately to, and grounded in, the history and habits of that society. Political institutions do not readily survive transplanting into uncongenial soil nor thrive under hothouse conditions. They must, so to speak, grow in the wild—they must, insofar as possible, be indigeous or of long adaptation. For the purposes of this discussion it is sufficient to suggest that we must find our own answer—an American answer—to the problem of so organizing our political society that we will be able to determine without revolution or violence what services it wishes to undertake through public agencies and how these can best be administered. It is a difficult business. Montaigne pointed this out long ago when he declared that nothing is more dangerous than to touch a political order once it is established. "For," he said, "who knows whether the next will be better?" It was his conservative opinion that we should not disturb settled political processes which are the result of custom and tradition on the strength of private opinions which express all too generally only moods, humors, or even prejudices.

And yet no more important problem faces us in America, or other peoples in distant places. It is a universal problem, as the history of the last 30 years the world over proves beyond question. It is a quest for a proper and stable division of labor in the area called by political scientists "politics and administration." The problem was not invented and has not been solved by our most recent political innovators—Nazis, Fascists, or Communists. They did not even state it. They found it completely unsolved and profited because of the failure of their predecessors to attack it successfully. It would seem to us who believe in the democratic process that these new parties which have taken over in the European scene have actually contributed nothing in the democratic sense and have succeeded only in establishing a new type of governmental tyranny. One thing they have done for us, however: They have challenged us to find a solution within the orbit of the representative system. They have announced with reverberating and thundering finality that democracy cannot find the answer. Democracy is through, they say, and, as Spengler puts it, "The day of Caesars has arrived." Let us remember for our consolation that time and time again throughout history that day has arrived and miserably ended.

Of course, there are millions of Americans who believe sincerely and completely (1) that there is no problem of responsibility in Government haunting us and (2) that if there is, we must not do very much about it. Time and chance will work us out of any difficulty if only we give them opportunity. These millions will not recognize the fact that we are a profoundly different people, with very different environmental challenges, from those early builders of experimental political institutions in a vast wilderness of far-flung frontiers and unrestricted economic opportunities. Responsibility remains for them a completely individualistic conception. For the student of political theory, however, there is comfort in the fact that of recent years some political leaders have recognized that there is a problem and that it is worth doing something about, viz, the accommodation of political institutions to a changing environment.

The World War interrupted programs that promised recognition of the need for institutional changes to fit a different America. Moreover, it turned our attention outward and stifled rather than stimulated any immediate recurrence to the problem of recasting our domestic polity. The idealism which had been aroused during the war dissolved as we became a creditor nation and as a hollow prosperity urged us to beat the cymbals to celebrate a new economic era which had no use for an analysis of internal political problems. Secretary Hoover's study of unemployment stood idly on the shelves. Then came the crash of 1929 and the years of the early thirties. Millions of minds were shocked into some recognition of the fact that we are an interdependent political society in need of instruments of public action which move swiftly and effectively on a national scale when the occasion demands.

We have just experienced an era of Government action new for its swiftness and comprehensiveness in American history. We developed new governmental authorities with an almost complete disregard of all principles of design or of responsibility. Because of this experience and its disappointments in so many directions many have come to see that our governmental establishment does require some accommodation. We now can understand why certain men who met in convention in Philadelphia in 1787 to draft a constitution were interested in establishing a government adequately powered and equipped to deal with national problems. We realize, too, that our assumption that that work was done for all time is quite erroneous. The fathers did the best they could for their day and age, but they could not foresee all of the problems

which would face their successors in a rapidly changing world. They, however, gave us formulae of great daring and great possibilities which we have ignored and have been unwilling to utilize. The set of our minds and our absorption with other concerns have brought it about that we have used our mechanical proficiency and ingenuity in meeting other than public problems—and often, perhaps, even to find ways to defeat any attempts to bring about an experiment in solution.

Tradition in the United States has insisted on a comparatively colorless public service. Occasionally, as in 1933, we have broken with that tradition. But the agencies of public opinion, whether the party or the press, have frowned upon and even scorned any attempt on the part of those who tried seriously to adapt the forms and functions of government to new conditions and needs. Experiment and modification have been discountenanced as such and not upon any appraisal of resulting evils and benefits. There has been that fear and suspicion of strong and able public leadership, no matter in what place or office, no matter how hedged in responsibility or how consecrated or disinterested. Always we have retired behind that delusively comfortable rampart known as the check-and-balance principle, behind which responsibility has been dissipated and disintegrated. Power was always to be checked or nullified rather than controlled and made to serve.

Under the conditions surrounding us in this modern interdependent world this situation cannot continue if democratic institutions are to survive. Politicians—and there are many more good ones than we are willing to admit—and civil servants or administrators, as the case may be, must find that division of labor which allows each group to function to the best advantage of the whole people. The proper controls to keep each group in its place must be established if we are to have the necessary equilibrium for a government which functions rather than marks time. And there seems to be no place in the modern world for a government that merely marks time. Recent experience the globe over has proved this beyond question. There must be deliberation to whatever extent is needed for making decisions in the light rather than by guess, and then, without loss of precious time, action must ensue. Opportunity there must be for the voter, without compulsion or pressure, to replace the ins with the outs. But once the general will is freely and emphatically expressed, action should ensue or cease according to that will. From the point of view of the student of popular government, sound administration waits today upon the establishment of the principle and fact of responsibility. This is true for all levels of government—National, State, and local—within the orbits of their competency and jurisdiction. To no inconsiderable extent satisfactory service waits upon agreement on these divisions of authority. It is most immediately imperative on the national level, because our most baffling problems have become national in scope.

The proper relation of Congress and the Presidency call for accommodation even more insistently than ever before. In a simpler time (1897) Woodrow Wilson declared in an address to the Virginia Bar Association: "If you would have the present error of our system in a word, it is this—that Congress is the motive power in the Government, and yet it has in it nowhere any representative of the Nation as a whole. Our Executive is national * * * and yet it has no originative voice in domestic national policy." To those who will reply immediately that Wilson's analysis has not been true for our recent history, it is only necessary to say that for a brief period during an emergency of fearful proportions we did have Presidential legislative leadership in certain directions. It is also true that at no time in American history has that leadership been under such general fire as in the last 2 years. Moreover, never before has it been so clear that the office of the Chief Executive needed strengthening in its administrative or managerial aspects. In the recent "management bill" controversy we had the interesting spectacle of a Congress which refused to take responsibility in at least one small field and at the same time would not let the President have it.

This incident is but illustrative of the difficulties that there are in any attempt to uncover a responsible agency which can act for the people under modern conditions. In recent years, Congress and our legislative bodies have become less and less competent to plan and take the leadership for intelligent and comprehensive programs in the public interest. This is not because these bodies are less intelligent or less devoted than they used to be, but because the problems confronting the Nation are so much more complicated and baffling. Somewhere the experience of those who know best the natural and human situations that need accommodation must be brought into play if we are to have balanced programs of action; and these individuals or groups are unlikely to be in legislative bodies. They are accessible, however, and should be at the call of those who are responsible for the development of public programs. Probably the best that any legislative body can do is to debate the general merits of comprehensive programs and then declare for or against them. To emasculate them or bog them down with individual opinions crystallized into amendments, to make major changes or to call for an alternative emphasis, will distort the balance which is required if we are to attain realized responsibility. The presentation of public programs, indicating objectives, policies, and priorities, is the essence not of dictatorship but of responsible leadership. It is both political and administrative, and it straddles both the legislative and executive departments of any government. The British, of course, meet this problem through the use of a legislative committee chosen to be the executive. We in America have no such agency, doubtless because we have as yet no general recognition of the fact that there is such a function which needs to be implemented. We have isolated bits of equipment in secretariats and advisory boards, rudimentary budget bureaus, and baffled planning commissions or committees. Even the most ambitious of these, the National Resources Committee, is as yet for the most part merely tolerated by Congress. Jealousy is rife in a capitol where cooperative undertaking is imperative. Any leadership that emerges, whether Presidential or legislative, is quickly eroded and dismantled, even though no alternative to such leadership is presented. This is the constant and inevitable consequence of a structure which sets up a division of the indivisible. This is also one of the reasons for the repeated failure of our parties to present to the voters a simplified choice of alternative policies which can be registered in a simple vote. The Gallup polls do better than that.

We succeed under our system, then, in producing at elections a spectacle in which Americans must vote their resentments for their parties, equivocate on issues, and adopt the mere strategy of adding together the opposing interests to gain places of power without responsibility. This scheme of things merely parallels the typical American process of rolling together the demands of district representatives into one barrel for a lump vote—a little for everybody rather than something worth while for all. We have no clear-cut and responsible way, apparently, of pooling executive, administrative, and legislative experience for national action. Hence forces too often are set in motion, as in pension or mortgage legislation, which grow with the years into the possibility of national bankruptcy.

We are thus faced with a very real dilemma. We can equip our Government to meet the manifold tasks which we force upon it, and thus develop responsibility, or take the position that no matter how urgent or necessary public action may seem to be, we dare not allow the Government to undertake the responsibility. If we are going to trust government, then there are certain possible courses for us to take.

We can increase the discretionary power of the Executive—a kind of return to the Tudor theory, in which the strong executive served as a national instrument of balance and control over contending interests. This would leave the Legislature a mere discussion agency and the recruiting ground for public leadership. This, it should be noted, was the popular solution in post-war Europe, when parliaments and parties refused to accept responsibility for formulating and defending policies. The American people are just now in reaction against such an idea, and inevitably will be so long as our irresponsible establishment remains unchanged.

We might have the President and his Cabinet deliberately seek closer relations with the legislature by frequent informal caucus discussions and create a continuing round-the-year joint legislative policy cabinet. If such a device could be formalized into the fabric of interdepartmental relationships to give it constancy and stability, it might point the way, at least, down the trail of responsibility. Something like this may be developing in certain of our States which have set up legislative or executive councils.

Some still favor the proposals of Woodrow Wilson made 50 years ago. Eventually, under such a change, the Presidency might take on the character of the French Presidency or the English Kingship without its trappings. But there is an opposite possibility, and as we consider what is going on under our eyes in France and England, and with our long tradition to be overcome, this seems an unpromising immediate solution.

In despair we might dismantle the functions of government to such a point that public duties would be few and unimportant and thus relatively easy and simple to administer. Such a program is no real program but under modern conditions is an approach to anarchy.

Some even propose to hand back our problems to the States for solution. It seems that in so doing we would produce 48 headaches instead of 1 and would not solve the original problem. Moreover, the States have problems of responsibility within their own jurisdiction which remain highly perplexing.

Facing some of the implications here set forth, the President's Committee on Management was organized to study the administrative and managerial aspects of the Presidential office. It undertook the task of finding and suggesting instruments which would aid the President in exercising his administrative powers, at least, and by the same token, his administrative responsibility to the people.

Before the President's message to Congress, which recommended that the committee's suggestions be made law, could have any real consideration by Congress, however, both houses were involved in the bitterest debate of 20 years—that on the President's Supreme Court proposal. All of the fury aroused by that debate made sane discussion of the reorganization report almost impossible. The legislation drafted as a follow-up to the report was almost immediately dubbed "the dictator bill." The fact that the President wanted it was all that his enemies needed to know. From that moment on both he and his propositions were under bombardment. Moreover, on at least one of these suggestions—the post- and pre-audit devices—the experts immediately differed. One group of political scientists (the committee) came to quite different conclusions from those economists and political scientists representing the Brookings Institution. The debate on the President's measures went far afield particularly in the House. By and large most of it was not illuminating except to show that Members of the

Congress were unwilling or unable to discuss the place or possibility of responsibility in government.

The great misfortune in this controversy does not lie so much in the fact that Congress and the President did not get together in 1937, as in the fact that the real issues were not made clear to the public either in the debates and hearings, in fireside chats, or in the press. Had the proponents of the bill been able to advance the various suggested changes within the frame of a responsible government, they might have brought forth almost irresistible arguments for most of them, and they might have discovered how the others could have been modified so as to draw less fire. In the actual situation, however, the arguments for change did not take account of the whole problem which the National Government faces. Perhaps it was impossible to do so. The opponents were in a no less happy situation. By all their lights they believed they were justified in their course; but they were fighting in an unreal light. As the lines were drawn, the debate was of little profit to the public because too little attention was given by the Congress to the place or possibility of responsibility, and particularly administrative responsibility, in government. It was called a Presidential plot and that was enough to damn it. Debate often turned on parts of the report which were not recognized in the bill. Moreover, as it turned out, a constitutional question involving the veto and the two-thirds vote was raised in connection with the President's authority to give an Executive order as one of supreme importance.

It would have been difficult to get farther away from the real problems of administrative organization. Yet there was the issue as large as life to each side. On the heels of the President's Supreme Court proposals and in a scheme of government with no seat of final responsibility, the bill touched off a footless strife which, when once started, made impossible a discussion of pertinent problems. Moreover, the President's forthright statement that he had "no inclination to be a dictator," though a natural retort in the heat of a political battle, did not help in bringing back the debate into the realm of a discussion on responsibility. The whole struggle emphasizes once more a fact which students of government have pointed out repeatedly, that our Congress has an attitude toward executive machinery which is quite unique. It insists upon elaborate legislative restriction on the Executive through the mechanisms of statutory controls, and thus gives the President an alibi at all times for poor administration. It would be a more powerful influence for responsible government, and would represent the people better, if we had a tradition that the task of Congress is to bend its energies much more exclusively to a clear formulation of public policy and a vigorous and controlling scrutiny of administrative results. It is a short-sighted policy that fears the exercise of any executive discretion, for the final result of such an attitude on the part of the legislature has too often meant the downfall of popular assemblies through the coercion of events. With all of the experience of recent years before our eyes, it is time to recognize, in our fear of dictatorships, that events themselves have a way of becoming the most real dictators of all.

Now that the happenings of the last decade have focused the attention of the American people upon national problems and the handicaps under which the National Government labors in planning and coordinating its measures to meet them, it may be possible to bring into the open some intelligent discussion of the whole problem of responsibility within our democratic system. We are engaged on many fronts just now in defending democracy against attacks from within and propaganda against it from without. It is entirely possible that the democratic idea is fighting for its life in this generation and, because of certain economic determinants, against great odds. Other peoples have forsaken the democratic mode upon the theory that it was failing to meet the crisis as a responsible agency of the people should.

Let us face this challenge squarely and ask ourselves whether here in the United States under modern and ominously complex conditions we can develop a de facto responsible Government to act for the American people, as a representative and effective instrument of their will. It is time for thoughtful men to give attention to our situation. Without question there must be certain and continuing responsibility located in our Government at Washington. It should be clear, for instance, that the President needs a better staff organization and the advantage of the best administrative techniques. It is clear also that Congress has to act within the limitations imposed upon it by its size and the local character of its membership. It is certain that there must be developed at Washington some provision for a kind of career service which in a very real sense straddles both the legislative and the executive departments. Our check-and-balance system assumes that the Executive is responsible directly to the people. Somehow in times of great stress the Nation as a whole does exert itself and it tries to determine public policy by giving unusual attention to the election of a President. For a time while the President retains his popularity there seems to be realized responsibility.

But Congress, too, is directly responsible to the people, and it wishes to be on the ground floor also. Before long the meshing of legislative and executive experience and responsibility which should be the result of a party election seem to fail and the gears begin to clash. Programs, variously initiated, often excellently conceived, do not have a decent trial or become reasonably effective for they are not administered by those who are experienced in governmental organization and procedure and existing facilities and personnel for such administration are not called in. In other words, the career service and the loyalties which it represents are not drawn upon in planning as well as in executing policies. The responsibility which theoretically we thought we had provided for does not work out as we supposed it would under the traditional American system.

In any program for the development of a more responsible Government, it would appear that the President will have to take leadership. Perhaps under present conditions and traditions we somehow expect it even though we do not provide for it. With an adequate Budget Bureau staff set up on a career basis, and with a real Cabinet of the general planning and coordinating type—which, of course, he can have if he wants to appoint it—and with rather permanent under secretaries as a part of the civil service it will be possible to develop carefully prepared national programs which the people need and want and which will have some chance of success if soundly administered. Given a proper staff organization if the President could have an experienced coordinator and general manager as a deputy administrative president, perhaps as a Cabinet officer without portfolio, he would be still better armed. If, further, this deputy by tradition could become a nonpolitical and nonpartisan agent, we would be on the way toward the development of administration as an art in the National Government. The American world of business and industry has done this as have many local governments in many States.

Many years ago, David F. Houston, who occupied two Cabinet posts with Woodrow Wilson, made some such suggestion in these words: "It is a question in my mind whether the President can long continue to be the formal head of the Government, the chief of his party, and the leader of Congress. It may be a task too great for any human being to stand up under; Congress will resent his attempt to lead it. He must at least have the Presidency better organized. He should have as his first aide one of the ablest men in the country and under him three or four men of exceptional ability; one to see that the problems affecting a number of Departments are dealt with promptly and in the right fashion; one to establish the necessary contacts with Congress and the public, including the press, and the other to supervise the executive offices. The President should ask Congress to authorize him to do this and to give him money enough to pay a respectable salary to each of them." Why should the Congress or the American people fear such a development? Under such a set-up Congress would have the opportunity to become a real reviewing agency of responsible administrative operation. It could give proper attention to well-planned programs of public action. In so doing it would inevitably develop political leadership on the basis of national needs and policies. In that case it need not fear or suspect administrative discretion and action for it would review and criticize rather than try to check it. Moreover, it has the purse strings.

Among other things we need just now is a widespread understanding of the fact that under our traditional check-and-balance system and with the shifting that is going on in the field we call the division of powers in our Federal system, it is extremely difficult to the point of being impossible to get and keep any national responsible leadership in a legislature chosen as is ours. Only through such an understanding can we ever work out some alternative for a parliamentary system which will give us what the English seem to have. That we need more responsible governments, national and local, few thoughtful men will deny. The fathers doubtless believed that they were inaugurating a system of national responsibility within a limited sphere. Our trouble is that the orbit of our national life has been extended enormously and our minds are still imprisoned by attitudes which were sound in the days of a simpler economy. We must get a new look at the whole problem of responsibility as it is affected by the development of the field of function, of democratic control under actual conditions as we find them, of structure as it hampers action when action is necessary, and in the light of the present attack upon democracy itself. To allow the drifting process to have its way in the kind of world in which we live is highly dangerous. To allow suspicion and the clash of economic or political interests to prevent our Government from making the necessary accommodations to meet modern situations is to risk too much. We owe it to the future as well as to ourselves to give as genuine attention to our national political problems as did the men of 1787.

The debates of 1787 indicate that the fathers deliberately turned their backs upon what might have become the parliamentary system, fearing to establish an all-powerful legislature. They established instead a Congress and an independent Executive each presumably representative of the whole people. Congress, however, fails to be a representative national body or a responsibly functioning institution. So far as the electorate can see, the Presidential office seems to be the one national responsible position immediately related to the whole electorate. The core of that responsibility centers in those functions of the President which have to do with political leadership and his relations with Congress. These need development and implementation so that the President and Congress become a government in the technical sense. Meanwhile the President's administrative functions might well devolve in much larger measure upon some more permanent administrative establishment which will provide the basis for long-time planning and the balancing of programs as well as the day-to-day operation of the National Government. In this way we would bring our national career service into a closer relationship with both the President and the Congress and have a real reviewing agency of

administrative acts particularly in connection with the debates on the Budget.

Responsibility in modern times and in a democracy must include the power to act for the people when action is necessary. To distrust or fear the grant of power is to deny validity to the whole process of modern government and to encourage anarchy. It must be remembered that more than ever before liberty is coupled with efficient government exercising power in behalf of the people. The people themselves can make this power responsible only through governmental action which represents their will. To distrust a controlled and responsible government means that we leave the use of power in hands which are not responsible to ourselves. This is not the way to freedom but to a new kind of serfdom in our world as now organized. A responsible governmental establishment is more necessary today than at any time in human history for much more is at stake than ever before. A paramount question which the world faces is whether responsibility can be achieved and maintained through the Democratic process. Our country can furnish the best proving ground for such a test. We have ample physical resources and therefore no imperialist designs, we have discovered that many races and nationalities can live happily side by side, we have a system of public education that provides wide opportunity even into the realm of higher and professional instruction, we still have faith in elections and in the electorate, and we have an almost universal use of the most effective devices for intercommunication. Moreover we still suspect military establishments. We are thus in position to achieve responsibility and maintain democracy if we can set up goals to which we can give a common allegiance. If we can do this our loyalties will suffer no strain and the tendencies toward disintegration need not appear.

The dictators have taught us at least two things: That there are no guaranties worth while in the modern alternative to democracy and that people are willing to make great sacrifices—yes; even their immediate freedom—for announced desirable economic and social goals though their attainment may take many years. Meanwhile dictators, too, use what appear to be the methods and trappings of democracy in order to pose as popular choices. And they cultivate patience in the multitude even while they whip up passions of various kinds to cover up their own failures to perform in the arena of domestic polity.

There can be no question that democracy today is being asked to take a responsibility for which originally it was unadapted. The concrete institutional goals for which our early democracy crusaded had to do with personal freedoms and guarantees against governmental interference. It assumed that responsibility for the general welfare could run to the people themselves without much common political action through governmental mechanisms. Today the general welfare and even those individual rights to life and the pursuit of happiness depend in a much greater degree on cooperative efforts through the only agency which is common to all the people, their political establishment.

To perpetuate democracy and responsible Government we are faced with certain imperatives.

First. We must discover and proclaim a social and economic program which will provide for Americans the essence of economic security and the personal freedoms which were inherent in our earlier system of democratic opportunity and as we supposed guaranteed by a responsible constitutional government. Political democracy must have its base in economic democracy today as it did 100 years ago or it will disintegrate. Here is an integrating principle which should furnish a concrete goal for which a whole people can make common sacrifices.

Second. We must accept the principle that the common agent of the popular will—the people's government—will be forced to undertake as public functions what the common need requires. The state of the arts, the distribution of natural resources, the organization of our economic life, work opportunities, and the accepted standards of living all will play a part in the determination of what this common need is.

Third. We must make a conscious and continuous attempt to adapt the structure of our Government to the changing environment in which political institutions work. No governmental forms are sacred. They are subject to the same laws of adaptation as are other structures, organic or institutional. If simple checks and balances fail, let us discover accommodations which may allow them to succeed.

Fourth. We must recognize that, in spite of theoretical divisions of the field of governmental power, many of the problems facing our people have become national in their scope and they must be met in some large part by a national attack. No amount of rationalizing or reasoning from precedent will change this fact.

Fifth. We must promote an understanding of the democratic method and its implications. Self-government is impossible without a responsible citizenship. Any people which is uninformed, ignorant, short-sighted, inattentive to ideas or events, which has no capacity for independent decision, which has no defense against emotional contagion, which is fickle and gullible, is not prepared for the hard task of self-government. It lacks the stuff from which responsibility can spring. This the fathers recognized, and they determined that Americans at least should be armed for self-government through education. Today we are still even more dependent on the educational process. And it needs to be much more persuasive throughout our whole population.

Sixth. Most important of all, in its final implications we are faced with the youth problem and its relation to responsible democratic institutions. For how shall youth glory in a democratic process which fails, at least for the time, to open their door of opportunity? Youth the world over for generations fought the democratic fight. Just now youth everywhere listens to and in many places has followed the siren song of the dictator and the power state. Youth wants work, wants a home and family, wants to be heard in popular assemblies, wants a decent standard of living, and wants those freedoms which are understood to be an American heritage. But youth now waits after leaving school an average of 2 years before finding a job, which on the average is, after all, but temporary. Youth dares not establish a home or undertake family obligations until there is some semblance of secure employment. Youth faces the fact that the modal age of criminals in this country is 19 and that our crime bill is computed as $13,000,000,000 a year. Everywhere the growing dependence on force as an instrument of economic and political advantage is in evidence. And so youth asks what the democratic method is doing in any responsible way to work out answers for his problem or to help him find his own. In some very real sense, then, our enduring quest for responsibility continues as a challenge to youth in each new generation. It goes on and on from age to age showing its various facets, its changing aspects, its new and sometimes disturbing imperatives. Youth needs to believe in the democratic way if democracy is to be maintained.

To those, then, who maintain the faith, to those who still believe in representative government, I suggest that the American people are at this moment in dire need of a social goal to which they can aspire with confidence, a governmental structure which can meet the strains and stresses now and in the future to be put upon public agencies, and a citizenship which can be trusted to act responsibly in the premises. The quest for responsibility is a process of education, long, hard, and continuing. Men have followed this quest through the ages. It is our peculiar American obligation to carry on, with hope and confidence, so that our heritage may descend, strengthened and buttressed, to our children and our children's children.

Jackson Day Address

EXTENSION OF REMARKS
OF
HON. M. M. LOGAN
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1939

ADDRESS BY HON. GOLDEN W. BELL AT JACKSON DAY DINNER, SIOUX FALLS, S. DAK., JANUARY 7, 1939

Mr. LOGAN. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a speech delivered by the Assistant Solicitor General of the United States, Hon. Golden W. Bell, at the Jackson Day dinner at Sioux Falls, S. Dak., on January 7, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, it is exhilarating to find myself in this "land of the Dakotahs" at the falls of the Sioux River where in 1856 or 1857 your intrepid agricultural pioneers first attempted a permanent settlement. I have read that it was abandoned some 6 years later because of fear of the Sioux Indians after the Minnesota outbreak, but this beautiful city belies the historian and demonstrates that the people of this, the "Sunshine State," understand as little about quitting what once they begin as did Andrew Jackson. That is a diversion likewise completely unknown to our present Great White Father at Washington. Happily the G. O. P. Co. long ago acquired a permanent monopoly on the art of doing nothing, and we do not question the efficiency with which the officers and directors of that company have continued to carry on that business since Woodrow Wilson.

It was with elation that I began my journey to the West where my life began and for the greater part has been lived. Indeed, I can lay some claim to South Dakota as an ancestral home, since once it was a part of the Territory of Wisconsin, where my mother was born, where my father, brought in infancy from Ireland as Fremont was penetrating to Devils Lake, grew to manhood before treking across the Plains to the land's end in the year Dakota became a Territory. I am deeply appreciative of your warm hospitality and it is a privilege to speak to so large and loyal a group of Democrats gathered to pay honor to the memory of one magnificent warrior statesman who symbolized the spirit and temper of the free American people of his time, Andrew Jackson; and to render richly deserved tribute and gratitude to another, who in our generation so cheerfully, so valiantly, so relentlessly battles that we of this day may not forfeit through our own apathy, through the schemes of frustrated leaders of discredited domestic parties, or

through the arrogant arms of foreign autocrats our dearly bought, immeasurably precious, precariously held, heritage of freedom—Franklin D. Roosevelt.

How boundless the horizons of those frontier days in this domain, how apparently limitless the lands for settlement. Boundaries of territories were described expensively—reminiscent of the cavalierly sweep of the grant by the English Crown to the lords proprietors in 1663 of the Province of Carolina, a little more than a century later to cradle Andrew Jackson: Bounded on the north by the Province of Virginia, on the south by the Spanish possessions, and extending from the Atlantic Ocean westwardly to the South Seas. Lewis and Clark, in 1804, a year after what is now South Dakota came under United States ownership through the mighty Thomas Jefferson's Louisiana Purchase, passed up the Missouri on their way to the Rocky Mountains, when Andrew Jackson was about to leave the Supreme Court of Tennessee, where he had sat since resigning as United States Senator. In 1810 Lord Selkirk built a fort at the present location of Pembina, supposing it to be part of his purchase from the Hudson Bay Co. Two years after Old Hickory fought the battle of New Orleans, Framboise built a fort near where now stands your present capital. Six years before the first steamboat ascended the Missouri to that site, Andrew Jackson received in the campaign of 1824 the largest number of popular votes cast for President of the United States, though lack of an absolute majority in the Electoral College resulted in the choosing of Adams in the House of Representatives.

Thomas Jefferson, having entrusted to this other giant the philosophy of democratic government to be translated into action, died in 1826. By 1828 the frontiers in the East had expanded beyond the Alleghenies and a generation matured under new social and economic conditions in that new West recognized Jackson as a man of the people, one after their own hearts, and elected him President. Small wonder that they reelected him in 1832; the thousands who had fled from the hard labor conditions in the East, seeking new homes in the West, knew the straightforward fighter of Tennessee as one of their breed, and his outspoken defense of the underdog won him as friends throughout the land those deprived of justice and opportunity. Here was one whom they understood, who understood them, who thought and fought for them—why should they not return to office the first real President of the people.

Was it ominous, perhaps, of things to come that then, while he was battling the powerful Biddle Bank, the American Fur Co., owner of the steamboat that voyaged to the site of Pierre where it built a fort in 1832, had monopolized the Missouri River fur trade—a natural resource of that region that, however inconceivable at that time, was to be exhausted by 1856? Was there a stir of alarm along the banks of that great river at the money powers as a growing peril to democracy? Had rumors perturbed the ears of the hardy frontier folk of ever-increasing fears of political leaders toward the sunrise that a privileged industrial and commercial class had arisen to rob them of their free life, to turn them into economic dependents on the leavings of the prosperity of others? Did they comprehend that the mighty blows their great Commander in Chief was dealing against the great bank, State nullification and foreign powers were to preserve to them, the free American people, their right and opportunity to participate in their own Government? I am confident they did; and that as the colossal and beloved champion of their destinies, his party strong, perfectly organized, his titantic task finished, surrendered to—perhaps welcomed as a friend—the only conqueror he ever knew, they took new courage in their mourning.

Beyond their imaginings they were to have need of fortitude, for the years to come were portentous of disaster, sometimes to be worked by the elements, sometimes by men, and always tragically enough, when the people were leaderless. They were to learn that the West, vast as were its territories, did have limits, that always "The old order changeth, yielding place to new," that they must adjust themselves to ever-changing conditions of life, fight new invisible foes, and not indulge vainly in nostalgic yearnings for the return of the old frontiers.

Not even Jackson's spirit could bridge the gap of years to Abraham Lincoln, and the fire of democracy that had been burning for 30 years flickered and almost died, to be fanned to life by Lincoln, in fact both in thought and purpose a Democrat, who as a youth had caught inspiration from Andrew Jackson. But the days of the Civil War were too congested, Lincoln's life too tragically brief; and so, with him, the revived light of democracy went out until in 1885 another uprising of the people resulted in Grover Cleveland. In the interim the Republican Party grew as the tool of the special interests, the servant of monopoly. After Cleveland there stretched another time arid of liberalism until the appearance of Theodore Roosevelt to whom the trend of his party and its leaders became so odious that 4 years after he left Washington he led the revolt that brought forth Woodrow Wilson. He lifted once more the beacon to light the ways of average men; but after him began the uncaptained rout to the greatest economic catastrophe in the history of this Nation. I prefer to characterize those dire years in the words of Kipling:

"Yea, though we sinned—and our rulers went from righteousness
Deep in all dishonor though we stained our garment's hem
O, be ye not dismayed.
Though we stumbled and we strayed,
We were led by evil counselors—
The Lord shall deal with them."

Before undertaking all too inadequate comment on the stupendous accomplishments of Franklin D. Roosevelt, let me turn the clock back for a few moments and look to what was happening to the people of your State over the long years after Jackson.

Although the brothers Verendrye, who in 1743 had wandered from Manitoba into the Black Hills looking for the "western ocean" were disappointed because they didn't find it, the men of Custer's expedition experienced no such emotion when a century and a quarter later they there discovered gold. Such a rush of gold hunters followed that by spring of the year in which your present apparently inexhaustible Homestake Lode was located, the town of Custer had become overnight a city of 6,000. Three years later began what is called the great Dakota boom that took you to separate statehood, to continue until 1889, the year that Grover Cleveland's first term expired. During that time something like 42,000,000 acres, almost half the area of South Dakota, were homesteaded. The population increased from less than a hundred thousand in 1880 to over 260,000 in 1885, almost 330,000 by 1890, and the 60 miles of railroad of 1878 were expanded more than twentyfold.

Then two afflictions were visited upon you, the Republican Party and drought; I know that this distinguished and unbiased gathering will agree that of the two the former was decidedly the greater. Immigration came to a standstill, there was widespread destitution, and many homesteaders left the State. That depression the Republicans willed to Cleveland, just as they made Franklin D. Roosevelt the heir of the mess which they so successfully brewed when last they were in office. It was too much to expect Cleveland to complete the job of restitution of the ruin he had inherited, even in two terms, particularly as it was accentuated by constantly recurring droughts. He made great progress, however, and in 1896 increasingly satisfactory conditions prevailed, so that what the Republicans received back a year later was not the sick State growing worse they had left on the Democratic doorstep but a convalescent on the way to recovery.

The patient thus revived and restored under Cleveland continued to improve notwithstanding Republican administrations—but it is to be borne in mind that for a part of that time in Theodore Roosevelt the patient was under the care of a physician not so reactionary, whose prescriptions were more modern than those usually kept in the G. O. P. drug store. I sometimes think that the stock of that institution is limited to anesthetics and narcotics that have the effect not of curing, but only of producing temporarily imaginary improvement. Anyway, when that Roosevelt would serve no more as his party wished, there happened what might have been expected from the old medicine—the patient under Taft suffered again the complications of real Republicanitis.

Again the Grand Old Party's doctors were fired and Woodrow Wilson was called in. Unfortunately he was succeeded again by the school of doctors that practiced in an outworn age who raised the patient's blood pressure so high there was such an explosion that again the Democratic physicians were summoned to call him back to life.

A year after the present administration took office the droughts of the preceding years culminated in an exceptional crop failure and since that time lack of rain along with too many grasshoppers have made it difficult to make the headway with the inherited muddle that otherwise would have been accomplished. They have been difficult years indeed for you, but the administration did not bring them about, although there are those that prefer to fix upon it the blame for all evil. That human quality of never taking blame to one's self and fixing it on others accounts, I think, very largely for the temporary reverses in your recent election. Don't feel too badly about that; my State of California threw out a Republican Governor and elected a fine, forward-looking Democrat in his place—and look what happened in your neighboring States of North Dakota and Wisconsin.

Now the Democratic Party does not pretend to bring rain to all places at all times that it is needed—though you will remember that our President frequently helps even the weather. But when we can't make rain we don't sit down as does the elephant and let human beings take their course in the consequent destitution to their ruin. As he took hold of the banking crisis when he first came into power, so when the great drought of 1934 struck you, Franklin D. Roosevelt, man of action, like Jackson, acted, and acted fast. He promptly threw into the breach all the means at his disposal and he has not stopped. He has been holding the Federal Government in the breach in your economic life ever since.

I understand that you in this part of the State have not been as hard hit as those in other parts of it—but all of you have taken it on the chin. Drought, dust storms, insect pests, all of them together, however, have not been able to defeat you. When you were groggy through ruined crops you didn't go down; when that blow was followed by low prices when crops were better you were still there. That is always the dilemma of the rancher; if crops are good, prices are low; if prices are good, there are no crops. Here is what Andrew Jackson, according to a biographer, had to say about a dilemma: "Jackson was not in the least afraid of a dilemma. He was ready at any time to meet a dilemma more than half way and spit in its face." Of course, the kind of pounding you people have been enduring hasn't been easy to stand. It isn't only the shock of the blows as they come one after another over what seems an endless time, it is the cumulative effect, your reserves give out. Then others, your families, are involved, and you fight harder than ever because you feel the wall at your back weakening. Not for a moment do I mean to indicate that you

have been taking the punishment without hitting back. That's the kind of fighter the President loves. And you can continue to bank on it that he will see that the wall of your reserves doesn't go down and will go the limit in helping you to win the war. One of Old Hickory's retainers was asked whether he thought when his master died he would go to heaven. He scratched his head and after some thought replied, "Well, sah, if he done make up his mind to git there, ain't nobody is goin' to stop him."

No more is anybody or anything going to stop F. D. R. when he has made up his mind, and you can rest assured that he has unalterably resolved to see you through the battle to the economic freedom which was your heritage, for which you are fighting so hard. He knows that if you had been weaklings you wouldn't be here to be helped; that the same dogged determination that kept your ancestors here when the Indians didn't think they should stay will make it impossible for you to lose. That is the spirit of the old West and it hasn't changed a bit; the only difference is that then they fought physical Indians and you now fight the more elusive and intangible enemy of economic coercion. You need different weapons against that foe and the President is going to continue to see that you get them and the ammunition you require to use them. He loves to help those that help themselves, and it is a trait of westerners that they don't like to have things done for them; they like to do for themselves. All they need are the weapons with which to do it.

Perhaps you remember that when Andrew Jackson said in South Carolina nullification days that he was going to hang the first man violating the law to the first tree he could find, it was said, "When Jackson begins to talk about hanging, they can begin to look for the rope." Franklin D. Roosevelt knows that you are set on hanging "Old Man Adversity," that you have found the place to string him up, and you can count on him for the rope.

In contrast to what this administration has been doing to help you and with what, let me assure you, it will continue to do, look at what the Grand Old Party didn't do in the crises of the past. I am perfectly willing to concede that that party has made promises; indeed, that it will keep on making them until even its voice is gone. It is the greatest promiser, I warn you, in all history, and it is also the greatest breacher of promises. It was too much for Theodore Roosevelt and he left the party. Your late Governor Norbeck, nationally known and recognized as an agricultural leader, couldn't stay on the G. O. P. reservation, so he openly endorsed Franklin D. Roosevelt in 1936. Both Theodore Roosevelt and Governor Norbeck were progressive men of the West who loved its wide-open spaces, its hearty ways, its hospitable people, their iron will to freedom; both know that as a matter of physics neither planets nor men, oddly enough, can go in two opposite directions at the same time; that's why they couldn't go along with a party that promised one thing while at the same time it did another.

When I left Washington the ringing message of the President to the Congress was in my ears and his words have continued to follow me as I have come West. Since he has so well, so inspiringly, spoken there is little left for me to say, and in a few moments we shall be privileged to have his voice reach us here. His recent utterances have given rise to a perfect bedlam of howling from the Republicans and they are beating their war drums in desperate abandon. They are in a frenzy at the idea of national spending. As I came through Chicago I read an editorial in one of the city's newspapers in which the suggestions of the President for protecting our homes from foreign aggression were laid to the necessity of doing something abroad to distract attention from what he is doing at home—actually placing him along with Hitler, Mussolini, and the Japanese Emperor as a dictator.

Now, on the first count, if there is any logic prohibiting the benefit of national funds to you because they are acquired largely from the taxes collected from the great industrialists of the East, whose automobiles, whose farm machinery, and whose innumerable other products you buy, so contributing to those industrialists their generous profits on which they pay their taxes, I don't know what it is. I don't understand why industrialists should be considered entitled to subsidies, why the merchant marine should be entitled to subsidies, but the farmer entitled to nothing. What would happen to the industrialists, where would be their profits, where would be the taxes collected from them by the National Government, if the farmers were to shut up shop and not buy their goods? And, on the second count, I deeply deplore that any American newspaper, that any group of citizens who call themselves Americans, that even one American citizen, though I freely concede them the right of free speech, should place our President in the category of all or any one of the foreign dictators—it's so silly and so cheap.

The Republicans underrate your intelligence, but let them not forget that your State is famous for the excellence of its educational conditions—then perhaps they will talk sense. I understand that even now they are promising the farmers cost of production, high prices, and unrestricted planting. That is ideal—and you know just as well as I do that it just isn't good sense. Until, as we are doing, we rebuild our lost world market for wheat, I, for one, am glad that we don't have to accept world prices for it—just about half as much as we are guaranteed by the administration and better still it is a case of heads I win, tails I win, because if world prices go up we get the benefit of them. As to your corn, I will bet that the only people in the State who are disgruntled are those that didn't sign up with the Government; and that those who did are patting themselves on their backs while they keep their own corn sealed and buy that of the nonsigners to feed their hogs.

I am not going to attempt to go into the details of the administration of the farm program; I am just pointing out to you that to me it seems founded on good horse sense. I believe that the great majority of your wheat raisers and your corn producers are going along under it—as I should expect people to play ball together, the name of whose State is "Dakota," signifying "ally." You remember the old story in McGuffy's reader about the father who gave to his sons the bundle of sticks to break—it was only when the sticks were separated that it was possible. So as long as you continue to proceed as a unit you are safe, and neither man nor weather can break you. I predict that next year better things are ahead in wheat and corn; and I only hope that the great amount of livestock that you will produce won't run away with you.

As a nation we are impervious likewise to destruction so long—but only so long—as we go forward together, all citizens allied, all groups of citizens allied, all States allied—as "Dakotas." When you become intolerant of my race, be it black or white, or of my religion, whatever it may be, or of my freedom to vote as I please, or of my right to speak as I think by word of mouth or through the press, then there yawns before us such an abyss as I shudder to contemplate. Let us beware of any who may attempt to persuade us in the slightest to the contrary. Let us repel as we would repel a rattlesnake any proposed substitution of doctrine from abroad for our democratic system, our equal way of living.

So long as we are permitted to continue let us continue as a nation of good will and peace, but let us not be blind:

"The earth is full of anger,
The seas are dark with wrath."

Let us therefore rearm by air, by sea, and by land that we on this hemisphere may not be assailed in our sleep as some have been; resolved that as we do not desire to take away from any other one foot that does not belong to us, so no other shall take away one foot that does belong to us.

Let us not forget those stupendous stone faces—Andrew Jackson's massive among them—so imperturbably, so endlessly looking out from the Back Hills over the Nation, established and kept free by those whose images they are, serenely confident that their great successor in the White House in this generation will preserve from enemies within and without what they builded; let the colossal likenesses of those titans ever watching over their sublime handiwork and the people they loved so well inspire us, in the solemn words of that other friend whose sculptured countenance towers in that mighty company, to "highly resolve that those dead shall not have died in vain."

New York State Constitutional Convention

EXTENSION OF REMARKS
OF
HON. JAMES M. MEAD
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1939

REMARKS OF THE PRESIDENT DELIVERED OVER THE RADIO FROM THE OVAL ROOM OF THE WHITE HOUSE, SEPTEMBER 17, 1938

Mr. MEAD. Mr. President, I ask permission to have inserted in the CONGRESSIONAL RECORD the remarks of the President delivered from the White House on the occasion of the Constitutional Convention in New York State, September 17, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is with deep personal disappointment that I find the affairs of the world such that I cannot be with my neighbors in Poughkeepsie today.

That my great-great-grandfather, Isaac Roosevelt, sat in the little old courthouse here 150 years ago and cast his vote with the slim majority in favor of ratification of the Federal Constitution is a family tradition of which I am proud.

There are two words in the English language which in the heat of political controversy are often forgotten or abused—the words "faith" and "confidence." It is well for us to remember that a very large minority of the inhabitants of the Thirteen Original States were opposed to the adoption of the Constitution. They had witnessed the complete failure of government under the Articles of Confederation—yet they were opposed to a real union because they believed those leaders who viewed with alarm any effort to think and act in national terms instead of State and local terms.

And, believe me, the viewers with alarm, the patrons of ghosts and hobgoblins in those days had little to learn from the professional fear mongers of 1938.

I wish that all of you might read the dusty newspapers and pamphlets and handbills of 1788. Feelings ran high. Vituperation and invective were the rule. The State of New York would cease to exist and its people would be squeezed to death between the cold-blooded Yankees of New England on the one side and the passionate aristocracy of the South on the other—if you believed one type of publicity. The people of the State of New York would be ruined by interstate tariffs and as a weak independent nation would be reconquered by George III, if you read the publicity of the other party.

Washington, Adams, Hamilton, and Clinton were labeled traitors and dictators.

In the midst of these diatribes this Constitutional Convention in Poughkeepsie was faced with the problem of saying "yes" or "no." Then, as now, there were men and women afraid of the future—distrustful of their own ability to meet changed conditions; shortsighted in their dog-in-the-manger conception of local and national needs. They were afraid of democracy; afraid of the trend toward unity; afraid of 13 States becoming one nation.

As the weeks went on and an insufficient number of States had approved the Constitution to put it into effect, its opponents at this Convention, realizing more and more that the very existence of that paper organization known as the United States of America was at stake, and that public opinion was swinging against them, narrowed their opposition to the fact that the Constitution contained no Bill of Rights.

They held a slim majority against ratification, but at that moment a small group of delegates, in which I am glad to say Dutchess County was well represented, came forward with an appeal to the "faith and confidence" of the Convention. They agreed that a permanent Constitution for the United States should contain a bill of rights, and they proposed ratification by the State of New York "in full faith and confidence" that a bill of rights would be promptly submitted to the several States by the first Congress to meet under the Constitution.

You and I know today that it was this proposal which won final adherence by a small margin; and more than that—that this proposal of "full faith and confidence" was in fact carried out by the Congress of the United States when it assembled.

I do not know that it is necessary to elaborate on this parable or text. It is perhaps sufficient for me to say that when in almost every generation between 1788 and 1938 the American people have been faced with similar decisions, they have in the long run expressed their "full faith and confidence" in the integrity and safety of the national concept.

It required great patience between 1783 and 1788 to bring home the realization that 13 separate Colonies, become 13 separate States, could not survive as 13 separate nationalities. Leadership toward the thought of a united nation had to be patient and was. Perseverance of leadership combined with patience has always won.

Once ratified, the Constitution presented the outline of a form of government. To become a workable instrument of government its words needed men in every succeeding generation to administer it as great as the men who wrote it.

And the greatest of them have been the men who have sought to make the Constitution workable in the face of the new problems and conditions that have faced the Nation from year to year.

Yes; the greatest of them have been those who have not said, "It will not work; it cannot be done; it must be changed; but, rather, those who have applied to the Constitution of the United States the spirit of "full faith and confidence" which has come down to us from the Convention which met here in the summer of 1788.

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, AT BOSTON, MASS., JANUARY, 7, 1939

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from Massachusetts [Mr. WALSH], at the Jackson Day dinner in Boston, on January 7.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We meet tonight as Democrats for the first time since the elections of November 8, at which time, we must admit, the Democratic Party fell short of the endorsements given it by the electorate in the three previous national elections. The result is by no means an occasion for discouragement. It does suggest a study of the election returns, and therein to find, if possible, the reasons for the attitude the electorate has expressed.

It is inconceivable in a democracy like ours, with the complexities of problems confronting the Government at this time, that we could expect to retain indefinitely the mountainous majorities given our party in 1936. Inherent fear on the part of Americans of overwhelming one-sided party control, their belief in checks and balances, and the general opinion that democratic institutions function best when a substantial minority functions to restrain the excesses of the majority, these reasons alone and of themselves would be sufficient to bring about the recession of last November. In my opinion, the majority of the American people still believe in the objectives of the present national administration and have no present intention to register general disapproval of its achievements.

A study of the election returns will indicate scarcely any objection to the many measures of reform; at most they indicate a possible restlessness toward the speed with which recovery has been attained. This is natural and we accept and welcome the peoples' right to impress upon our party their anxiety to have normal prosperity restored as soon as possible.

The election returns do indicate that the Democratic reverses were due either to local conditions which is clearly the situation in States like Connecticut, or dissatisfaction with the local and Federal bureaus administering certain reform and relief measures which, though generally approved, have, however, in execution sometimes been attended with bureaucratic injustices and public irritation.

The election returns, therefore, serve notice upon our party to correct and modify some overreaching methods of administration and possibly some modification of certain remedial laws. There is no indication anywhere of a general repudiation of President Roosevelt's program. As a matter of fact, Republican candidates, where successful, have generally approved of his objectives. Republican attacks are not toward the administration's principles but the methods of administration.

In accepting the mandate of the people, let us proceed to polish and perfect the long record of reforms we have made which, of necessity, had to be done in haste, and which in operation would inevitably show defects and possible injustices. Our party must now prove that it is capable of performing this task, and we should do it with as much harmony and cohesion as is possible without asking any Democrat to surrender his individual and intellectual integrity upon some particular phases of legislation or administration.

If we have the constructive ability to recognize that we may have made some mistakes in administration and method—any other attitude would indicate a claim to be superhuman—we may, emphasizing and consolidating the gains made, go forward with renewed vigor and confidence to future victories.

The post-World War depression, commencing here in 1929, focused direct attention upon the social and economic conditions under which the people had been living. Changes were demanded. The people were aroused and angered at the inequities and inequalities which, with Government sanction, were allowed to exist under the old order. Changes were demanded. In Russia the people turned to communism for the solution; in Italy and Germany to dictatorships. In America President Roosevelt and the Democratic Party were made the instruments of reform. We accepted the challenge to use our inherited democratic institutions to assure the people that they were capable of eliminating old wrongs and abuses; that they were capable of gratifying the aspirations of the people for a better world to live in. Three prior administrations of the Government sat motionless and indifferent to what was taking place in the social and economic order since the World War.

The program was twofold—reform and recovery. We insisted that the time had come to uproot old evils, to correct the errors of the past, to lay the foundations for a more equitable distribution of what we call social justice. That job has been well done. We have restored to the individual citizen the consciousness that his Government is more interested in the conservation of human beings than the conservation of natural resources—more interested in the preservation of human rights of the masses than the special rights of powerful organizations, represented by organized industry and selfish capitalists.

To those whose concept of government was a policeman, whose principal task was to protect property from direct and illegal assault, opposition to social reforms was to be expected. Our administration has demonstrated the real democratic concept of public service, which is that the Government's responsibility to the people transcended the proposition of mere protection of life and property; that a government of the people must be vitally concerned with the social aims of mankind; that the individual must be protected against exploitation of his labor, of his savings, of his home, against destitution for him and his family in his old age and in financial depressions for which he was not responsible.

Since 1932 we have moved rapidly and effectively to perform this service to our fellow men.

"Let justice be done" became our policy. Thus began that long record of wise legislation, the objectives of which no one seriously challenges today—reactionaries may, but not Republican candidates seeking votes. The regulation of the stock exchange; the safeguarding of the people's savings by rigid bank regulation and insuring of bank deposits; the protection of the worker against sweatshop wages; securing for the employee his inalienable right of collective bargaining; a reasonable living wage to unorganized

workers; more jobs for the unemployed through Government edict lowering sharply the weekly working hours; generous Government loans that private banks rejected to industries in financial difficulties; industry freed from sweatshop competitors; decent living homes for people of meager incomes; sectional advantage in industry abolished by uniform hours of employment and uniform minimum wages in all parts of the country; to the aged, the orphaned, the crippled, and the blind a guaranty against pauperism through social-security legislation; unemployed youths, millions of them, trained in C. C. C. camps and through agencies of the National Youth Administration; food, clothing, shelter, and employment to the needy. These achievements mark a new era in our political and national life. Where is there a voice raised to repeal any single one of these reforms?

But this is but a partial summary of what the Democratic administration has endeavored to do to end economic abuses and to help the American people overcome the difficulties and trials of a social order that had brought discontent and uncertainty.

What is the alternative offered by those who object? Apparently nothing except criticism. They cherish the vain hope that in some miraculous way the admitted social and economic abuses will correct themselves and that economic conditions will improve.

Other skeptics say we have moved too fast. Must a government wait for the crisis in dealing with human suffering and economic injustice? Crises move fast. Look to Europe. Speed in such times as these ought to be in the lowest category of political sins. In emergencies our national defenses are speeded up to the limit. Why not speed up in dealing with the destructive weapons that cause suffering, despair, and injustice to human beings during economic disasters?

Again, they assert it is not democratic objectives but the execution of them that is wrong. "Let us do it and we will do it better" seems to be the new cry. Previously, they cried out in alarm, "Look what they are doing!" What we really did was to help tremendously to save a nation of 130,000,000 from the national transition—that we still see in a world of radical change.

Let us not delude ourselves with thinking that sound political and economic reforms alone can by themselves bring permanent success to our party. Sound political and economic reforms are, of course, indispensable to even deserve success—just as economic fallacies will surely destroy a political organization.

But recovery reforms cannot function effectively or command success unless they are attended by an understanding of the eternal values of integrity, truth, and honor. Without these standards, just as indispensable to success in politics as in personal affairs, confidence and trust upon the part of the electorate will be wanting.

We must cease taking for granted that because we believe our philosophy of government is the best, therefore our political organization is the best. We must prove it. While we point with pride to our commendable objectives, we must cease contemplating with unconcern our failures. We must stop using the privileges of membership or leadership in the Democratic Party for purely personal, selfish, and gain-seeking ends. In and out of office, every Democratic leader should take pride in the opportunity that is his of being associated in a great political movement whose greatest joy, far from being selfish, is the betterment of one's fellowmen. As individuals with responsibilities of leadership, we must prove that the Democratic Party has the capacity, the ideals, the moral courage, and determination not only to justify itself in the eyes of those in our own party who look to us for direction but in due time to convince those who question or doubt our sincerity and integrity that they are wrong. To fail in our personal responsibility as leaders is to deny our deep concern with those conditions about us of life that relate to opportunity to work, food for the needy, security in old age, and like social-justice problems which move every truly human heart, and which must always be the unfaltering concern of the Democratic Party. The struggle for social justice to which our party has and must continue to dedicate itself cannot be won by words or promises or party pledges but by crusaders.

"A time like this demands
Strong minds, great hearts, true faith, and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy."

May I take this occasion to make another suggestion. The public is not moving backward. It has little patience with those who would retard or destroy the progress that the individual citizen has achieved, step by step, for himself as a result of the fierce political struggles of bygone days. Certain policies of government, he rightly assumes, are secure and permanent and he will turn with wrath upon those leaders and that party which retard the forward movements of today for economic justice by undermining the ground already held. The individual citizen takes it for granted, as he should, that the protection of life and property are assured; that the merit system in a democracy like ours means equality of opportunity for himself and his children in government employment; that the means of communication, of transportation, and all utilities are strictly regulated in his interest; that money appropriated for welfare relief will be efficiently and impartially administered, and that in its administration the only test is one's need, not class nor party. In a word, the private citizen assumes as primary to his freedom that his public servants are men and women of integrity, capable and conscious of the great trusteeship bestowed upon them. To fail him in these essentials he rightly considers not only a betrayal of trust but the undermining of his faith in democracy.

In conclusion let me suggest a message from this Jackson Day gathering of Massachusetts Democrats to our national leader. I have never sympathized with the popular notion that worthy servants of the people should expect only criticism during life. At death, and then only, we pour out our real, true, unbiased estimate of man's service to his fellowmen. I close by saying now what I believe every American, however sharply he may differ in his political opinions, can in future years say of Franklin D. Roosevelt and which we voice in unison tonight.

Carlyle said that in Dante "10 silent centuries found a voice." In Franklin D. Roosevelt, millions of distressed and discontented people have found a voice—a voice that thrills, a voice that touches, a voice that pleads for the underfed and unsheltered—a voice that brought light and life to those who have no alternative in life other than ceaseless toil or dark destitution.

Tribute to Senator Wheeler

REMARKS
OF
HON. GEORGE W. NORRIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1939

EDITORIAL IN BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN'S MAGAZINE, JANUARY 1939

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the Brotherhood of Locomotive Firemen and Enginemen's Magazine for January 1939 on the public services of the senior Senator from Montana [Mr. WHEELER].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Enginemen's Magazine of January 1939]

KNOW YOUR FRIENDS IN CONGRESS

Senator BURTON K. WHEELER, State of Montana, was born in Hudson, Mass., February 27, 1882. He was educated in the public schools and graduated from the Hudson High School in 1900.

Leaving Massachusetts, the place of his birth and the home of his people for over 150 years, he went to Michigan where he entered and worked his way through the University of Michigan, graduating with a law degree.

His next move was to Montana, where he was admitted to the bar of that State in 1905, and started the practice of law in the same year at Butte. Independence of thought and action marked his career; in him workers found counsel upon whom they could depend in their action against the omnipotent copper interests.

He was elected to the State house of representatives in 1911 and served until 1913. His liberalism, new to Montana, identified Senator WHEELER when as a youthful leader he led a brilliant fight in the Montana House of Representatives to elect his future colleague, the now deceased Senator Tom Walsh.

Upon recommendation of Senator WALSH, he was appointed United States district attorney by former President Woodrow Wilson in 1913. After 5 years of exceptional service, largely because of his pronounced views against war, he resigned from that position.

Elected to the United States Senate in 1922, at a time when liberalism was not so popular, and progressives in the United States Senate were scarce, Senator WHEELER joined what few there were. He was reelected to the United States Senate in 1928 and 1934.

Senator WHEELER has served on the Interstate Commerce Committee of the Senate for the past 16 years, and for many years has been chairman of that committee.

The various studies and investigations conducted by Senator WHEELER in past years relating to the railroad industry and its financial practices, enabled him as a witness to present real facts to the emergency board during their recent hearings on the proposed 15-percent wage reduction for all railroad employees.

In the course of his testimony before the emergency board he gave facts that proved a wage cut was unnecessary and unwarranted. He brought out facts which were convincing and of utmost importance, and paved the way for a victory in favor of the railroad employees.

Senator WHEELER's many investigations have led to amazing revelations. He has shown great courage during his public career, and the vigor and intelligence displayed during his many activities since becoming a United States Senator have made of him a national figure.

He has always fought for the enactment of legislation designed to improve conditions for the common people. He introduced in the

Senate resolutions which led to investigation of the conditions under which coal miners in the North and textile workers in the South were compelled to labor. These two investigations had a tremendous influence on public opinion.

His consistent liberalism and his unwavering progressive views led the greatest of modern liberals, "Old Bob" La Follette, to tender him an invitation to be his running mate in the 1924 Presidential campaign.

Though defeated in the election that year, though indicted and tried on palpably false charges, though compelled to pay for his progressive views, Senator WHEELER continued his fight for liberal legislation on all fronts.

Back in 1932 Senator WHEELER was found "beating the bush" for Franklin D. Roosevelt. He was the first Member of Congress openly to pledge his support to the President. Senator WHEELER's friendship for the President did not deter either his liberalism or his characteristic independence.

Profound and exhaustive studies now being conducted under his able leadership by the subcommittee of the Senate Committee on Interstate Commerce, and the knowledge derived through this intensive investigation of railroad finance, unquestionably will result in legislation during the coming session of Congress that will aid materially in the rehabilitation of the railroad industry.

Senator WHEELER is an outstanding example of real patriotic leadership in America. He has always fought for progressive legislation in the interest of all the people, and has kept clear from the dictates of the few who would rule through corrupt legislation of their own making.

Men of such character and ability are a godsend to the country, and in him, along with other great progressives in Washington, lies the hope that the Nation may be led to a greater prosperity than has ever been realized in its history, and eventually, to a lasting peace and understanding amongst ourselves and with the rest of the world.

The people of Montana may well feel proud of their senior Senator in Washington.

Murphy Aided the Sit-Down Strikers—Did Nothing to Stop Riots in the State's Capital

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1939

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a letter written by Frank Murphy while Governor of Michigan, which shows his misconception, to say the least, of the situation which prevailed at Flint, Mich., during the sit-down strikes which occurred there during the early part of 1937.

The Governor in this letter warns "against the propaganda and misrepresentation of those who resent my refusal to turn the guns of Government troops against workers seeking to assert rights guaranteed to them by the law of the land."

In the first place, the sit-down strikes which occurred at Flint were not, in their inception, brought about by the workers in the plants. The C. I. O., with the aid of outside wrecking crews, brought about those strikes, the seizure of those plants. By force and intimidation they compelled local workers to join their organization. They were not asserting constitutional rights. They were violating the constitutional rights of the local Flint workers, in that they drove them by force from their jobs. They were not striking because of working conditions, hours, or wages, but to secure the privilege of forcing all employees to join the C. I. O.

The Governor of Michigan, Frank Murphy, protected those lawless wrecking crews, and by his policy aided them in their violent attacks.

No one asked him to turn the guns of Government troops against workers. He was asked to take a firm stand, to make an unequivocal declaration, that those invaders from other States and those few residents of Flint, who, in violation of constitutional rights, had seized property and were depriving workingmen of their right to work, would not be permitted to continue in their unlawful activities. This Murphy refused to do.

He says he was against mob violence. He has since said that he was against the sit-down strikes. But on last Friday, when before the Senate committee, although he had been asked to state when and where he had warned the strikers to get out of the plants, he failed to cite a single instance, except that he said that on the night before the strikes were settled, which would be February 9, he wrote a letter which he read to Lewis and a copy of which was directed to Homer Martin, who was in charge of the strikes, but which was never delivered, in which he told the strikers in substance that they would have to vacate the plants.

If Murphy was sincere, why did he not openly, through the public press, call upon the strikers shortly after they had seized possession of these plants to vacate them? Why did he wait for more than 40 days to make known his desires, and then do it secretly?

In this letter the Governor further said:

I do not propose to deny workmen their fundamental rights on the thin excuse that their efforts to do so constitute "mob violence."

What workingmen were being denied fundamental rights? What fundamental rights were denied to any man, except those men who wanted to work? What fundamental rights were denied to any of the sit-down strikers? The Governor cannot point to one. Read his letter to Mr. Carson, and Carson's reply.

The Governor's letter follows:

STATE OF MICHIGAN,
EXECUTIVE OFFICE, LANSING,
October 21, 1937.

Mr. ROBERT N. CARSON,
1920 Grand Avenue, Davenport, Iowa.

MY DEAR MR. CARSON: Your message of October 8 has been brought to my attention and I regret to know that you believe me guilty of partiality to the "C. I. O. and mob violence."

In view of your apparent assurance, it will probably avail little to say that the statement is not the truth. I would, however, like to leave with you a word of warning against the propaganda and misrepresentation of those who resent my refusal to turn the guns of Government troops against workers seeking to assert rights guaranteed to them by the law of the land. I am as much opposed to mob violence as are you or any of the hysterical few who last winter demanded that blood be shed, but I do not propose to deny workmen their fundamental rights on the thin excuse that their efforts to do so constitute "mob violence."

Peace will not come to industry through the use of force—whether it be by the Government, by labor, or by the employer. It can be achieved only if we insist on settling our disagreements reasonably and sanely as intelligent men should.

Sincerely,

FRANK MURPHY.

Mr. Carson's reply reads in this manner; it is a complete answer to the hypocrisy of Governor Murphy:

1920 GRAND AVENUE,
Davenport, Iowa, October 26, 1937.

Hon. FRANK MURPHY,
Governor, Lansing, Mich.

MY DEAR MR. MURPHY: In reply to my post card of October 8, I am in receipt of your letter of October 21, postmarked the 24th.

Let me here and now inform you there were no persons, and certainly not the writer, demanding blood be shed in Michigan or in any other strike area. Those demanding that law and order prevail (and your oath of office required you to comply with the law) represent the type of citizens who are not only an asset to any community but to our American form of government.

As a representative of the people you can show no partiality to C. I. O., or to any other group, when they ignore the law, and this situation certainly existed in Michigan as well as in other sections of the country. The sit-down strikes are unlawful and you should know this.

The C. I. O. and their Communist following are now "coming to their milk" because public opinion everywhere would no longer tolerate their mob violence and racketeering methods, interruption of the United States mails, etc. This organization in your State defied the law in many localities, however, elsewhere were finally subdued.

You refer to the hysterical few who last winter demanded that blood be shed to preserve law and order. There was nothing then or now hysterical in the demand for law enforcement. Mob violence and defiance of the law are hysterical.

The writer has lived for over three score years, during which time he has carried a union card and has been an industrial executive. You state peace will not come to industry through the use of force. When industry uses unlawful methods as did the C. I. O. then force is compulsory to protect society and property and you certainly as a State executive must realize this by now, if not previously.

Very truly yours,

ROBERT N. CARSON.

It is more than passing strange that the Governor, when Friday before the Senate committee, said nothing about the labor holiday at Lansing That there may be a little more

light thrown on that subject I will include herein an editorial taken from the Grand Rapids (Mich.) Herald of June 9, 1937:

WHOSE GOVERNOR?

"No injustice will be done to you in Michigan while your Governor can prevent it."

Thus spoke Frank Murphy to the mob which ruled Lansing all day Monday. "Your Governor" he said. Not the Governor of the State of Michigan and all its 5,000,000 people. Just "your Governor," the Governor of the mob which set aside all government, seized the State's capital, ruled by force while the recognized authorities of the law sat supinely by to watch anarchy reign in Michigan.

When Murphy took his oath of office last January 1, did he swear to abide by the Constitution and laws of all Michigan or by the unwritten laws set up on the spur of the moment by a mob? Whose Governor was inaugurated last January 1? Was it a Governor of a whole State or a Governor merely of law violators whom he has encouraged almost from the day he took office?

And he said to this same mob, "I am sorry you have been having trouble." Who had been having trouble? It was the law-abiding men and women of Lansing, the businessmen who were not permitted to conduct their regular affairs. It was the city officials and the State officials and the county officials and the courts who had been having trouble. Was Murphy "sorry" for them? Apparently not. He was "sorry" for the mob whose Governor he boasted to be.

What led to the trouble?

First, strikers, in violation of the law, picketed a concern with whom they were having a dispute.

Second, these same strikers violated the law and the orders of the court by refusing to cease picketing when ordered to do so.

Third, the court having no other recourse, ordered the arrest of eight of these law violators. It was as much the duty of the court to order their arrest and as much the duty of the officials to make the arrests as if these eight had been guilty of stealing automobiles, picking pockets, or in any other manner violating the law. So for the third time the strikers violated the law by seizing the government of the Capital City.

And what did Murphy say further, still addressing those whose Governor he professes to be?

"It is not necessary for you to use tactics as unreasonable as some people in authority have used against you."

Then, according to your Governor, it was unreasonable for the courts to order that the law be obeyed. It was unreasonable for the court to seek to enforce its orders. It was unreasonable for the law-enforcing officers to make the arrests ordered by the court.

And what has been the result of it all The Capital of Michigan was in the hands of a mob for 1 whole day. All law and all order and all government ceased. Your Governor ordered the release of men properly under arrest. Your Governor consulted with the rulers of the mob rather than with the law-abiding citizens and in the end forced the courts, the law-enforcing officers, government itself, to recede and yield to the demand of the mob.

Whose Governor was it who was inaugurated last January 1? Your Governor, the Governor of the mob. Not the Governor of Michigan.

Our National Defenses

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1939

RADIO ADDRESS OF HON. JOSEPH B. SHANNON, OF MISSOURI, AT KANSAS CITY, MO., NOVEMBER 17, 1938

Mr. SHANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on November 17, 1938, at Kansas City, Mo., under the auspices of the Citizens' League:

I am asked today to answer the question, "Should our national defenses be strengthened?" I assume that I have been called upon to answer that question as a Member of Congress and a representative of the American people. In that capacity I answer without hesitation, "Yes." Not only should every avenue of defense be strengthened from a mechanical standpoint, but every loophole of unnecessary involvement in foreign wars should be guarded against.

In the early days of our Government the famous patriotic sentiment was expressed, "Millions for defense, but not a cent for tribute." The tribute then in the public mind was a financial subservience to foreign military aggression of powers preying upon our commerce. I reecho this challenge with one qualification, "Millions for defense, but not one American boy's life for tribute on foreign soil."

I am willing to go the limit in protecting our shores and our Nation from invasion. I am not willing to contribute one American life to defend the concerns of any European or Asiatic nation.

I realize the gravity of the duty that is confronting this Nation today from the encroachments of murderous nations abroad, mad with lust for power, crazed with a frenzy of destruction to gain their ends, fanatically engaged in killing women and children and noncombatants with a beastly cruelty and a disregard of human instincts unknown even to the savages of jungle days. In that sort of warfare, in that sort of dinosaur destruction of the weaker peoples, in that sort of savage program of conquest, America has no place.

All Americans should thank the Creator who in His wisdom placed the United States in this hemisphere, with its shores washed by two great oceans, in a position to keep itself forever a refuge for the enjoyment of freedom from tyrannical rulers, from war-mad powers, a spot of earth where humanity can enjoy the blessings of peace, freedom, and the pursuit of happiness.

Europe was once referred to by Thomas Jefferson in his own day as a continent of devouring nations. "The cannibals of Europe," he said, "are again eating each other." Russia and Turkey were at war then, and almost every nation over there was involved in war. They were crude in their methods, with little regard for the victims. But, at that, their wars were conducted on more humane principles than those of today. Soldiers fought against soldiers. But today the bombing planes hurl death and destruction on peaceful homes, on children in the streets, on women carrying babies at the breast, on peaceful unarmed citizens. The strains of the cannibals are still abroad in the countries of Europe and the "Frankensteins" of war are abroad in the land, crushing underfoot their innocent victims. With that sort of warfare, America has no part. We founded our country to escape tyranny; it grew up and was fostered in the ways of peace; its culture and its genius were opposed to all the ideals of conquest in which Europe was nurtured. So let Europe and Asia run mad as it will, America must stand aloof.

Of course we should follow the dictates of wisdom. When wild animals are hovering near and threatening our shores, we should be prepared to defend ourselves. We must realize that no dictates of humanity, or reason or common charity will afford us any protection against the war lords of Europe. The lust for conquest, when it is sated abroad, when its blood hunger finds over there no fresh fields to ravage, may well be turned in our direction, and we must not blind ourselves to the idea that we can remain secure. We must protect ourselves.

I am in favor of every safeguard against foreign invasion. Congress should vote billions if necessary to prevent any foreign intruder from ever setting a belligerent foot on American soil or possessions. The bombers have no mercy. Our cities, our homes, our women, and children must be given every protection. We cannot delude ourselves with a false security. The navies of the air know no limits of land or ocean; they are the monster hit-and-run savages of the air, and it would be insanity on the part of our Nation not to take steps to guard against every threatened danger. We must face power with power. We must be ready to defend ourselves in every way.

But there is one phase of this question which I would be derelict in my duty as a representative of the people if I did not call to your attention. The United States must not merely be prepared to defend itself against foreign enemies; it must be on guard against the foes within. There are agents and parasites of that Old World with us today. There is a subtle diplomacy, so-called, that slyly and sometimes with an insidious eloquence urges a gospel of alliances with foreign powers. It is an insidious gospel. It must be guarded against as vigilantly as we shall guard our shores with mechanical defenses.

We are a democracy. We must maintain our ideals. "Millions"—yes, billions—"for defense" if necessary, but not one lead quarter, to put it in vernacular, for America to pull the chestnuts out of the fire for any foreign power. We want no entangling alliances to save the investments of a Morgan, or any money lord with holdings outside of America. Let us remember always the warning of our founding fathers—"no entangling alliances"—and let us hope the day will never come to America when American boys will lie beneath the white crosses of a foreign battlefield.

Cuban Reciprocal-Trade Agreement

EXTENSION OF REMARKS

OF

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1939

STATEMENT OF HON. PAT CANNON OF FLORIDA, JANUARY 4, 1939

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

statement made by me before the Committee for Reciprocity Information on January 4, 1939:

Mr. Chairman and members of this honorable Committee, my purpose in submitting this statement is to supplement briefly the various briefs now on file before your honorable committee and to call your attention particularly to the problems of that part of the State of Florida lying along and adjacent to the southeastern coast of Florida, which includes a large portion of the fertile glades area as well as the fertile coastal section running from the Indian River area through the Florida keys, comprising my district.

In describing the effect of the Cuban reciprocal-trade agreement as respects the above area, I feel it only fair to consider the benefits, if any, as well as the more obvious detrimental effects which have arisen as a consequential result of the operation of the trade agreement now in effect and under discussion. I am advised that several years ago and prior to the operation of the present arrangement farmers in my district were protected because of the tariff then in effect; but that more recently that tariff on Cuban agricultural products has been lowered, so much so in fact until the farmers in the above-described area who I represent, have found it most impractical to compete with Cuban farms and farmers where vegetables and foodstuffs are raised virtually with peon labor, thereby causing Florida farmers to compete in their own markets; that is, the markets of the United States, with Cuban farmers, which seems to me a deplorable situation.

I am definitely of the opinion that this treaty or any similar treaty stimulates trade and creates good will among peoples of the world; but I am nevertheless thoroughly convinced that Florida, and particularly the Fourth Congressional District of Florida, has been called upon in the past and is now being called upon, to carry this whole burden and detriment. It is true that by indirection, Florida, as a sister State in these United States, receives and definitely enjoys a general benefit from any arrangement involving the several States looking toward good will and trade stimulation. It is, however, just as true that Florida stands in a peculiar position in that we are blessed with climate conducive to the raising of crops into maturity at a time when such and similar crops elsewhere are not ready for consumption. That being true, we stand as an institution as a State, ready and willing to bear our share of the detriment connected with any arrangement kindred to the one which I discuss. But, because of our territorial limitations and more particularly because of our virtual isolation from the central and eastern markets of the United States, we find that the present tariff arrangement discourages farming and renders the utility of our fertile farm lands of no avail; that, despite the vast amount of money already invested in Florida farming and farm lands.

As to the benefits derived from the arrangement under discussion insofar as Floridians are concerned, I am frank to say after a fair and comprehensive study, I find nothing tangible in this respect and while I do not attempt to speak for this country as a whole, and I am indeed mindful of the rights that other States may have and of the arguments which representatives of other States may have, I do feel that since my territory as above stated is found in a most peculiar situation, that we are entitled to at least the consideration I have outlined briefly. We feel that since our territory is quite limited and since our lands are indeed so useful, we therefore are entitled to unbridled marketability of our products in home markets. Not for one moment do I underestimate the good will that Florida generally has enjoyed and the United States as a whole, as the result of this Cuban arrangement. I find, however, that this single benefit is far outweighed by the extreme detriment which we in the Fourth District of Florida have suffered and shall continue to suffer just so long as we labor under the burden in question.

I deem it quite unnecessary at this time to burden this honorable Committee with facts and figures already available to you, but I think it indeed important to determine whether or not the resources of this country—that is, the finance of this country—is used to exploit Cuba and its farming, thereby defeating the very effect of the so-called reciprocal-trade agreement. If it be true, therefore, as I am advised, that Cuban labor still suffers a low wage scale, if it be true that funds from the United States are used in Cuban farming for the sole and express purpose of enjoying the advantages of producing foodstuffs at a minimum wage, then, therefore, this agreement is most vicious and nefarious.

The figures released by the Department of State reflect unquestionably, I am advised, that the balance of trade with Cuba has been steadily increased and that this balance of trade in favor of Cuba is much greater now than prior to the trade agreement in question.

The Committee has already received an abundance of evidence of the detrimental effect that this agreement has had upon Florida agricultural products. I do not attempt to speak for the Nation as a whole, but insofar as the Fourth Congressional District of Florida is concerned, there has been very little reciprocity in the reciprocal-trade agreement with Cuba.

In keeping with this discussion, I think it quite proper to call this honorable Committee's attention to the deplorable situation in which Florida finds itself as respects her great sugar-production and cane-raising facilities. I am advised that the State of Florida consumes much more sugar than she is permitted to produce under the Sugar Control Act; that at the time of the creation of the said Sugar Control Act, Louisiana and Florida and their territories were embraced as one insofar as the administration of the act itself is concerned and that the reason that Florida is bridled in her efforts and throttled to a minimum in that respect is because at the time of inception of the act our sugar industry and cane raising was in its infancy. Therefore, being a new industry, our production was far beneath that of Louisiana, a State long known for that agricultural endeavor. Therefore, one may plainly see that we as Floridians are hindered in our agricultural expansion in this connection, and we are of the opinion that surely we should be permitted to produce at least the amount of sugar which we consume ourselves.

It is my express hope that this honorable Committee may see fit, in its wisdom, to consider seriously the report of the United States Department of Agriculture released by the Bureau of Agricultural Economics, treating of the Florida winter-vegetables industry and the trade agreement with Cuba, to the end that Florida, in its peculiar and unique situation, may be given the full expression that we desire for the reasons above mentioned and the reasons embodied in the document referred to, and for the additional reasons that we in Florida are called upon to entertain not only the people of the United States annually but the people of the world, and that were it not for the existence of our State and the prosperity that we may be permitted to enjoy, he who would rest and play would be called upon to give vent to that expression in foreign lands, thereby denying us, as American citizens, the visitation of those who seek a climate like ours. Then, again, we are unique in that we have 3 scant months of productivity in Florida, whereas most of our sister States enjoy a year-round prosperity in their various endeavors.

Business, Government, and the Rights of the Individual

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1939

ARTICLE BY HON. JOSEPH C. O'MAHONEY, OF WYOMING, IN INVESTOR AMERICA, JANUARY 1939

Mr. MALONEY. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD an article by the senior Senator from Wyoming [Mr. O'MAHONEY] published in Investor America for January 1939 on the subject of Business, Government, and the Rights of the Individual.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Investor America of January 1939]

BUSINESS, GOVERNMENT, AND THE RIGHTS OF THE INDIVIDUAL

(By JOSEPH C. O'MAHONEY, United States Senator from Wyoming)

The whole world is seeking security. Peoples and nations, sensing the inability of the individual to stabilize his economic existence in the face of forces which seem not to be understood, are seeking a solution of their troubles through government.

This is the explanation of the strange development of our times, that within 20 years after the war which was fought to make the world safe for democracy every vestige of democracy has been abolished in three of the principal nations of Europe, and the democratic foundations of even France and England seem almost to be endangered.

It seems to me that the play of economic forces in our own land cannot be understood unless we first clearly see what has transpired in Europe to bring about the current rise of dictatorships. Fifteen years ago no one would have dreamed of predicting that the day was almost at hand when the doctrines of individual freedom would be overthrown in favor of the doctrines of arbitrary force. The regimes which dominate Russia, Germany, and Italy are frankly founded upon force and the denial of every principle to which our country and our people have been and are now dedicated.

The American concept of government is that of a social order in which the merit and ability of the individual shall be free to develop without fear of repression by any artificial group, faction, or individual, and that the Government shall be the spokesman not of any part of the people but of the whole people. Americans still adhere to the doctrine of the Declaration of Independence that the just powers of government are "derived from the consent of the governed."

To my mind, one of the most encouraging signs of the times is the fact that it is coming to be more clearly understood by all elements of our population that this fundamental principle of Americanism is under attack and that if democracy is to survive in the world, it must be justified in America. In other words, it is for Americans to make democracy work, and since all governments and all societies are established for the primary purpose of enabling the masses of men to support themselves, it becomes clear that the

principles of democracy must be made to work in the economic system.

Because I believe this to be necessary, I am wholly in sympathy with any movement upon the part of investors, for example, to make sure that they shall not be subjected to arbitrary controls by Government or from any other source. If one were to attempt to explain the economic and political history of the United States during the last 50 years in less than 50 words, I think it could properly be said that our people have been guided by two principal objectives:

First, they were determined that business and government should not be dominated by accumulated wealth. Second, they were determined that business and government should not be dominated by concentrated political power.

It was to carry out the first objective that Congress enacted the Sherman antitrust law in 1890, and it is because the people believe that this law tends to keep business free and independent and out of the hands of government that there never has been any serious proposal to repeal it. On the other hand, it is because many of the people believe that government regulation of business has the effect of turning the control of enterprise and initiative over to the discretion of political appointees that there has been so much opposition to the extension of the so-called regulatory laws.

It seems to me now that there is gradually emerging a comprehension upon the part of most of our people that no particular element of society can be intrusted with so much power as to make it possible for that element to dominate the rest. That is why we find a growing tendency for agriculture and industry, for worker and business executive, for consumer and investor to find the common ground upon which all may stand in defense of the fundamental need of all individuals to protect, foster, and encourage free private enterprise in the United States.

If I understand the present situation correctly, the people of the United States, having for 9 years endured a wholly unnatural condition under which millions of men and tens of millions of dollars are unemployed, are now seeking the way whereby, through the cooperation of all groups, they may cure this economic disease. The desire for exploitation by one group at the expense of the others seems to be passing.

Labor wants steady employment in private business at good wages with an opportunity to improve through saving.

The consumer wants a high quality of goods and commodities at a fair price furnished in a convenient manner.

The investor wants the safety of his principal with a steady, even though small, return and an opportunity for new investment.

Into the category of new investment would naturally flow the savings of labor and of the consumer. If this condition could be brought about, we should have industrial peace and without question we should have prosperity. Obviously, no one of these three groups may make progress at the expense of either of the others.

To bring about this desirable cooperation, it is essential in the first place that there should be a common understanding of the reasons why it has been so difficult for this cooperation to develop.

The tendency to expand Government "control of business," as it is called, has kept pace with the development of the corporation. There was no demand for the exercise of Federal power over business until business grew to such proportions that local government was no longer able to cope with it. There never was a time in the history of the United States when it was not recognized that Congress had the power to regulate commerce among the States. Indeed, one of the primary reasons for the formation of the Union was the desire of the businessmen of 1787 to have a more stable Central Government in order that business conditions in the Thirteen Original Colonies might be better regulated. The Constitution of the United States was ratified chiefly through the concentrated efforts of the businessmen of that period.

Regulation, it is true, was always kept at a minimum; but when, after the Civil War, the corporation began to assume greater and greater importance in the field of industry and commerce, and business outgrew its former local boundaries, the people gradually began to turn to Washington for a greater and greater degree of regulation. It was because the railroads had grown so great in importance and in extent that the States were no longer able properly to regulate them in the public interest that the Interstate Commerce Act was passed in 1887.

Following that act have come others giving to the Central Government broader and broader powers of regulation.

The problem is always to define the line between that which is necessary and proper and that which is dangerous. Few will dispute the propriety of Federal regulation of the railroads. Few will deny that the development of aviation brought a new problem of necessary Federal regulation. In the domain of communication, also, there arose a new need for Government supervision. Naturally, however, with such expansion of enterprise came the question of the degree of regulation which should be exercised. My own thought has always been that the rule which would fix this degree of regulation was best stated by Thomas Jefferson in his oft-quoted doctrine, "That government is best which governs least."

This is the principle which allows the maximum development of the individual and in turn offers the best prospect of social improvement. Every step which the human race has won in the steady advance of civilization has been as the result of the contribution of some individual. It is of the utmost importance, therefore, to maintain the freedom of the individual at all times from any restrictive power, by whomever or whatever exercised.

We are sometimes, however, slow to comprehend that an individual may be as helpless in the hands of an economic organization as in the hands of a political organization. It was the fear of aggression by economic organizations which brought about the passage of the Sherman antitrust law. Continued expansion of economic units in power and wealth inevitably brings about a comparable expansion in the powers of government. He who seeks the explanation of the modern dictatorship will find that economic concentration was the primary cause.

We fail to realize that the modern corporation is sometimes more powerful than the State. When thousands of stockholders contribute their capital, frequently in small amounts, to a central management, they place in the hands of that management a powerful economic instrument which affects not only the interest of the investor, but also the interest of the worker, the interest of the consumer, and the interest of the entire public. When a corporation is owned by thousands or tens of thousands of stockholders, as many of them are, it loses its private character altogether and is just as much a public institution as a city. Indeed, both of them are corporations created by law, have no existence without the law, and affect the lives of great segments of the population. Into this category fall scores of business corporations, the great bulk of the stock of which is owned by individuals who hold 100 shares or less. One may take as an example the Standard Oil Co. of New Jersey. According to figures made available by the American Federation of Investors, Inc., it has 120,630 stockholders of whom 96,106 own 99 shares or less. This company, with a total of 120,000 stockholders, has almost 50,000 employees. It conducts a far-flung business which is carried on around the world. It is a private corporation only in the sense that it does not exercise any governmental powers.

Such an organization, brought into existence only by the grant of some government, is very different from a natural person. Kings and constitutions, governments and corporations, are the creatures of man. Man is the creature only of divine Providence.

We may safely contend that man should be completely free, but we shall be endangering his freedom if we clothe the creature corporation with the privileges which he possesses.

Gradually there is emerging a clear concept upon the part of modern business management that it occupies the position of a trustee toward all the factors of society which are affected by its operations. It has always been a fundamental principle of government that, in the words of Grover Cleveland, "Public office is a public trust." The union of these two ideals, and only such union, will bring about substantial and lasting prosperity. This is the cooperation which at one and the same time can liberate the people of America from arbitrary financial control and arbitrary political control.

W. P. A. Appropriation

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. WOODRUM of Virginia. Mr. Speaker, the House has completed consideration of the joint resolution appropriating funds for the Works Progress Administration for the remainder of this fiscal year. The President's estimate, as sent by the Budget, was $875,000,000. The House of Representatives, in my judgment, very wisely reduced this amount by $150,000,000 or to $725,000,000, and continued in operation the so-called Woodrum amendment, which requires the funds to be spread over the entire period provided in the appropriation. In addition to reducing the amount, Congress made the following provisions relative to relief:

First. Inserted a provision barring aliens from participating in relief.

Second. Inserted a provision preventing the payment of salaries to W. P. A. workers or officials who attempt to influence another politically.

Third. Required the Works Progress Administration to eliminate wage differentials of more than 25 percent. The evidence showed that in some Southern States common labor was paid as little as 18 cents an hour while in some of the Western and Northern States the same type of labor, doing the same kind of work, was paid as high as a dollar and ten cents per hour. This inequality is therefore eliminated.

Fourth. Inserted a provision preventing the establishment of hosiery mills in competition with private industry.

Fifth. Inserted a provision preventing the placing under civil service the administrative personnel of W. P. A., numbering more than 30,000.

Sixth. Removed a restriction or policy under which W. P. A. was dismissing from its rolls aged persons and widows with dependent children.

Seventh. Defeated a proposal to prevent a reduction in the theater, writers and artists projects, which had been accused by the Committee Investigating Un-American Activities as being communistic.

I feel very much gratified that, after a somewhat stormy session, the House followed the suggestion of the committee and made these reductions and changes in the bill. It is a hopeful sign. The fund appropriated, if properly administered, will provide a sufficient amount to take care of the real needy cases, but at the same time should be an encouraging sign to business and industry and to the taxpayers of America that the legislative branch of the Government has resumed its prerogatives and that it may be depended upon to scrutinize most carefully all requests for appropriations. The reduction should also cause the relief rolls to be purged, which is badly needed.

The vote on a motion to increase the amount from $725,000,000 to $875,000,000 was as follows: For the increase, 137; opposed to the increase, 226. The vote on the final passage of the resolution was as follows: For its passage, 397; against the passage, 16.

It is interesting to note that just when the Senate is about ready to start consideration of the joint resolution just passed by the House, the unemployment committee of the Senate, presided over by Senator BYRNES, of South Carolina, has filed its report, which not only is a most interesting and informative review of the whole relief picture but which makes some very constructive suggestions on the subject.

The Byrnes committee's report proposes:

First. A coordinated system of relief, based primarily on extended and improved unemployment insurance benefits, on increased aid for the aged, the blind, and dependent children, and on a consolidated public-work program, handled by a department of public works.

Merged in the department of public works would be the Works Progress Administration, the Public Works Administration, the Civilian Conservation Corps, and the National Youth Administration.

Second. A formula for allocation to the States of Federal funds for public works, based on (a) the population of the States, and (b) the number of unemployed in each State.

Third. Stringent provisions to prevent use of relief funds for political purposes, including the Hatch amendment, defeated at the last session of Congress.

Fourth. Payment of benefits under the existing contributory old-age insurance system shall begin in 1940, instead of 1942 as now provided by law.

It is doubtful that these suggestions will be considered in connection with the present deficiency item, but certainly they form the basis for a comprehensive study when we are ready to consider the 1940 relief program. The time is at hand when Congress should go into this matter very carefully and endeavor to reach some conclusions on a permanent fundamental policy which will meet our obligations to those in need and yet be consistent with our financial ability.

Activities of W. P. A. Workers During Flood Emergency in Connecticut

---

EXTENSION OF REMARKS

OF

HON. J. JOSEPH SMITH

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1939

RADIO ADDRESS BY HON. FRANCIS T. MALONEY, OF CONNECTICUT, NOVEMBER 3, 1938

Mr. SMITH of Connecticut. Mr. Speaker, under leave to extend my remarks I include the following extracts from a radio address delivered by Senator FRANCIS T. MALONEY, of Connecticut, over station WTIC and other stations on November 3, 1938.

The portion of the extract which I ask to be published relates to the high quality of men engaged on the W. P. A. programs, and makes a reference to their accomplishments under the very trying conditions following the hurricane in my State.

May I now call your attention to another incident of this campaign period that was distressing to me, as I am certain it was distressing to thousands of other people in the State of Connecticut. It was not seriously harmful to anyone, but seemed to me an outstanding example of the careless comment of those so bitterly opposed to the efforts, purposes, and accomplishments of President Roosevelt. It was a statement made by a man who has reassumed leadership of the Republican Party, and was made the outstanding spokesman of the Republican candidates in the Connecticut campaign, Mr. Herbert Hoover, the same Mr. Hoover whose vision was pitifully blurred in 1930 and 1931 and 1932. It was a statement made by the same Mr. Hoover who was so dazzled by the blazing grandeur of 1928 that he was officially almost sightless during the clouded era which came upon America and the American people in 1929.

The day following Mr. Hoover's Hartford speech, which consisted principally of ridicule and caustic condemnation, and nothing more constructive than a suggestion that the Congress and the Nation "take the next 2 years to stop, look, and listen," Mr. Hoover held a press conference in Hartford. He was interviewed by a group of newspapermen; and it appears that he answered their questions freely and frankly. The conversation and interview finally came to the serious subject of the devastating hurricane and flood that had swept over Connecticut less than a month before.

I want to quote to you from a newspaper story appearing the following day in the Hartford Courant. I quote: "A suggestion from a newspaperman that most of the digging out is being done by W. P. A. workers was challenged by the former President, who said he did not imagine 2 percent of the work is being done by W. P. A., but rather done by people who live on the spot." That is the end of the quotation.

Is that statement not a gleaming example of the breadth of imagination of the former Republican President? Doesn't it portray in an almost perfect word picture a reminder of his viewpoint and vision and imagination during the period of his early political bewilderment, when he imagined that prosperity was just around the corner, and that the proper governmental policy was to stop and look and listen?

The statement was distressing to me because I had been familiar with the rescue and rehabilitation efforts of tireless W. P. A. workers during the terrorizing hours of the flood, and immediately in the wake of the destructive hurricane. Sharing honors with the American Red Cross but assuming about all of the danger, and later a great share of the drudgery, W. P. A. workers sweated through the day and night to fortify Hartford and other places against damage and danger, and to protect large industries of Hartford against tremendous financial loss, and their employees against lost employment.

In spite of the dangers of broken wires and fallen trees, forgetful of the hazard of an over-swollen river, willingly neglectful of their own health and comfort, this army of the W. P. A., many of them men who had held a seemingly secure position, and some of them high places, up until the Hoover administration, remained away from their own families during hours that were their own, because they were aware that immediate action was imperative, and that delay meant destruction.

Their activities were not confined to Hartford and one neighborhood. They penetrated many danger zones, and despite the reported isolation of Norwich they reached there with food and medical supplies; all in spite of a risk to their own well-being, and at the expense of worry to those within their own homes.

We of Connecticut who felt the hurricane, and observed the losses of friends and neighbors, have a feeling of appreciation and owe a debt of gratitude to the W. P. A., and to all of those other agencies that worked with them, in the terrific and stunning storm. And once more we are regretful that Mr. Hoover is not gifted with a more liberal outlook and a greater imagination.

The W. P. A. may have been but 2 percent efficient and effective in the imagination of Mr. Hoover, a man who is endowed with many splendid and outstanding characteristics, and good intentions; but his opinion in this matter will fail to find sympathetic acquiescence among the management, the stockholders, and the employees on the side of the Hartford dikes made safe by the sweating self-sacrifice of men employed in the ranks of the W. P. A.

It is partially at the expense of these willing and able men that certain well-intentioned but temporarily thoughtless people demand an immediate balancing of the Budget. What matter the needs of their children and the needs of the business firms and professional men, dependent in part upon their continued employment? What matter the social values maintained by keeping them at work? What matter the billions of dollars in material values created in the way of parks, playgrounds, roads, and schools, and other governmental structures too numerous to mention now? What matter that the jobs have kept local tax rates from climbing to unbearable heights? What matter that the work they do will save the taxpayers of every city and village in

the land from heavy and otherwise unavoidable expenditure for many, many years to come?

I approve the loans to railroads and financial institutions under the administration of Mr. Hoover, and I haven't a doubt in the world of the nobility of his intentions and purposes. I do wish, however, as do millions of other Americans, that he had a sufficiently expanded imagination to include within his range of view and action the other 98 percent of the Americans, along with the unintentionally but especially favored 2 percent.

Election of Presidential Electors

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1939

Mr. SUMNERS of Texas. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a very brief statement with reference to the necessity of changing the date for the election of Presidential electors.

It would not be too strong a statement to say that under conditions which now obtain a President of the United States could be elected by fraud and nothing could be done about it through any procedure with which we are familiar. That is a statement that ought to startle us, but I have been making it now for 6 years, ever since the "lame duck" amendment was passed, and nobody has yet paid any attention to it. This condition arises out of the fact that whereas prior to the passage of the "lame duck" amendment, we inaugurated the President on the 4th of March we now inaugurate on the 20th of January, a month and a half earlier, without any corresponding change, any change at all in the election date. Prior to the "lame duck" amendment there was not too much time between the time when the electors were elected and the time they met to cast their votes, to determine questions of fraud in the election. But when we moved the time for the inauguration of the President from the 4th of March back to the 20th of January, and left the other end of the arrangement, the election date, as it had been when we were inaugurating the President the 4th of March, we created an impossible situation. We cut down the intervening time in which the question of fraud could be discovered and something done about it, by about 54 days, leaving, as I remember it, only 41 days, on the average, between the time when the electors are elected and the time they meet to cast their votes.

There is not a single State in the Union that can gear up its judicial machinery fast enough to try the issue of fraud in a Presidential election in 41 days. The Houses of Congress might act; I have not examined as to their power; but even if they possess it, its exercise would be dangerous for many obvious reasons.

Having shortened the intervening time, as I have indicated, I see nothing that can be done about it, short of a constitutional amendment, except to move back the time when the election of the electors is to be held. The necessity to do that was fixed when the "lame duck" amendment was adopted, moving up the inauguration of the President and Vice President from March to January.

I drew the bill which changed the method of bringing up the returns from the old method of bringing them up by messenger to the existing method of bringing those returns up by registered mail. It was more or less an experiment. Well, I can hardly say that, but there were some experimental features about it.

I was very careful in drawing that bill fully to protect the record of the determination of the electors. I believe that law can be redrafted preserving the safeguards, and we can gain about a week by revamping that bill. That would give about 48 days. Then if we would move back the time of the general election from the first Tuesday in November to the first Tuesday in October that would give us 30 days more. It would give us time to have a fair chance perhaps to determine the issue of fraud. We do not have any now. We cannot afford to leave ourselves exposed to the impossibility of trying that issue by ordinary judicial procedure.

I have introduced a bill to correct this condition each Congress since the passage of the "lame duck" amendment. I have endeavored to call the attention of my colleagues and the country to the gravity of the situation. I am simply repeating what I have been doing for the last 6 years. The matter does not come within the jurisdiction of the Committee on the Judiciary. It is a matter within the jurisdiction of the Committee on the Election of President and Vice President, a committee that does not frequently meet. What I am saying is not in criticism of that committee in particular. I am not bragging on what it has done about it, however. Now, when we can do this thing in a deliberate way, we ought to do it; and we ought to do it very quickly, because a serious situation might develop. Possibly some other method could be worked out, but it is certain it is not going to work itself out. It requires no great imagination to visualize what might develop in a close election when feeling was running high with a belief that wholesale fraud had been perpetrated in one or more pivotal States with no possibility of a final judicial determination prior to the time for the inauguration of the President and Vice President. I do not go so far as to say that nothing could be done about it, but I do say that nothing could be done in a way calculated to preserve either confidence or harmony. That is a mighty serious condition, especially when we consider what may be in front of us.

The Egregious Gentile Called to Account

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1939

EDITORIAL BY GROVER HALL IN MONTGOMERY ADVERTISER

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial by Mr. Grover Hall, published in the Montgomery Advertiser of Sunday, December 4, 1938.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EGREGIOUS GENTILE CALLED TO ACCOUNT—CLINICAL NOTES ON HIS LACK OF GALLANTRY AND SPORTSMANSHIP, HIS BAD MENTAL HABITS, HIS TACTLESSNESS, HIS LACK OF IMAGINATION, HIS POOR DISCERNMENT, HIS FAULTS AS CITIZEN AND NEIGHBOR, HIS GULLIBILITY AND AROGANCE

(By Grover C. Hall, Editor, the Montgomery Advertiser)

This article will not be taken, I trust, as a defense of the Jew, he that has been defended in a million and one articles and books. Fortunately he does not stand in need of defense. But I can think of one hundred reasons why his gentile brother, usually ignored by critics, invites and deserves arraignment before the bar of his own conscience.

The Jew has spent his life as a race under a microscope designed and held by the gentile. His blemishes stand out in bas relief on a canvas made by the same gentile neighbor. His virtues are in the picture to be sure, but they stand obscurely in the background. The effect of the portrait is that of a vast, libelous caricature made by a thick-fingered, unimaginative artist. The Jew has been either too charitable or too circumspect to retaliate in kind. He holds no microscope over the gentile to paint a character study of the most incredibly irresponsible of all the despots.

The earth swarms with men who think they are experts on the Jew. Nobody attempts a critical estimate of the gentile as a gentile. Nobody audits his balance sheet. Nobody invites him to give an account of his long and unbroken stewardship as the undisputed master of the human race. The gentile has more power and has held it longer than any other vested interest in history. He has escaped critical questioning and comment longer than any other.

I, for one, marvel at this escape of the gentile from accountability and justice. I marvel that his meanness, his pettiness, his arrogance, his snobbishness, his ill manners, his ungallantry, his poor sportsmanship, his bogus humanitarianism, his sheer blindness to

extend my remarks I include the following extracts from a [illegible] work they do will save the taxpayers of every city and village in

his own higher interests, have not been brought more sharply under notice. It would surely do the gentile good to have his character plumbed in his peculiar relation to the Jew, however satisfactory his character may seem to be in other relationships. If the gentile could but bring himself to face his own microscope, held in his steady, ruthless hand, the experience might indeed save him from the possible disaster which his demeanor invites.

Surely a citizen may claim the right to protest against the folly if not the vice of those who may injure him by thoughtlessly encouraging, in various ways, both subtle and gross, the ever-present rogues and fools in society to violate the ideals that fixed the pattern of this federation of neighborhood democracies, the republic of the oceans.

We think we do no harm to ourselves and our common institutions when in individual social relations we patronize the Jew. We think we are shrewd, discerning fellows when in contemplating a citizen and neighbor who happens to be a Jew we think of him and discuss him first as a Jew and then as whatever else he may be. We attribute virtues to him as a class that are characteristic only of individuals; we attribute vices and frailties to him as a class that any man of sense should know are peculiar only to individuals, whether Jews or non-Jews.

Thus we hound the Jew while imagining ourselves to be his friends—meaning by "we" those of us that comprise the majority of Americans and would not consciously injure the Jew. Our great transgression is that we do not measure our demeanor to make it conform to our responsibility. We forget that the fools who form our mobs may be influenced profoundly by the manners and prejudiced deportment of people of their own kind above them in the scale of life. Every ill-considered act or word of the influential gentile is food and drink to the passions of the lower order of man, who once inflamed to madness by bitter fortune, having nothing of his own to lose, acts to destroy the things that are dear to others. Grave anxieties in this connection are warranted, as we shall presently see, if we will but take a long enough view of the story of man's inhumanity to man, even in our own most-favored country. If this be true, let us, then, fix the responsibility.

Experience and personal observation over a period of years have taught me the only lesson that my faculties, being what they are, could receive, that often we have reason to deplore the thing that makes one a gentile and does not at the same time make him an adequate humanitarian, an adequate neighbor, and an adequate citizen.

Now, I personally do not mind being a gentile and I have no disposition to low rate the status of the gentile. There is a distinct advantage now as ever in the past in being one. We gentiles are now, and have been throughout history, in the majority, the great majority—so much so, indeed, that the gentile has since the bright dawning constituted the greatest single vested interest known to time and space.

Our political and social position is more secure. We make more money than the Jews. We control the earth and we know nothing of the bitterness that flavors the acrid cup of a helpless minority group. Indeed, we as gentiles have been so long in possession of the earth, so long in undisputed power politically, economically, and spiritually that we have never had any opportunity to know whether in facing an invincible oppressor of our kind we would be brave. If there were only 15,000,000 of us today as against 1,985,000,000 Jews in the world, how would our wits and instincts stand the test if our dignity as a group should be affronted?

We gentiles suffer mostly in this world from our own folly, not from the sins of others, for all our occasional unsporting readiness here and there in our invulnerable empire to attribute some of our misfortunes, great and small, to those who, while birthing a God, never followed him. Whenever gentiles in difficulties make the Jew their scapegoat they seem infantile.

We gentiles sit on top of the world and rule it. I as a gentile know that if I wish I can lie, steal, murder, get drunk, burn a house, loot a government, or commit any other of the known indecencies, and that while I may be duly punished for my offense, I, instead of my kind, will be put on trial. In no circumstances would I hear the taunting phrase, "Gentile! Catch him!"

And so I do not mind being a gentile. It is profitable, it is pleasant, it is safe. There is nobody to oppress me or offend me for being one. Notwithstanding that I'd rather be a martyr than anything else except a millionaire, I like the all-Aryan rug that warms such a lowly bug as I on damp, chilly days. I am a gentile and nothing on Yahweh's earth can alter that fact. That fact means security for me in every storm that does not ruthlessly strike down all peoples, regardless of race or creed.

In fine, we gentiles will be the last to succumb in any circumstances. I am sitting pretty, primarily because of the accident of birth and geography, but also because of the obtuseness if not the dullness, the smugness, and the arrogance, if not the sheer ungallantry of my compeers in Aryanism.

Naturally, the violent, brutal anti-Semite is revolting to me, even as he is probably revolting in ordinary circumstances to 90 percent of my fellow American Aryans—but I am not at this point thinking of the Vulturebund. I am thinking rather of the type of American who while he says and no doubt believes he would fight to protect the Jew's civil rights, nevertheless is an awkward, lumbering fellow in his relation to the Jew. He may be free of conscious malice, nevertheless he fails either to cultivate or feel the need of genuine talent for living the day-by-day life of the good neighbor to all who are worthy of neighborliness. He is not sensitive, not intuitively understanding and gracious. He is outwardly kind to Jews, but only because of the practical discipline of memory, plus a sense of expediency. He is tolerant only because of political axioms he has heard and likes to taste and roll in his mouth when he has an audience. He is often patronizingly tolerant, his good will is a synthetic product, not a delicate flowering of the human spirit.

And so at the moment I am not thinking of the more vicious and aggressive anti-Semite who outrages the majority of gentiles in this free American atmosphere, but of Aryans who merely pain and sadden me. I have in mind rather the ox and the ass of Aryanism, particularly many, but not all, of the some-of-my-best-friends-are-Jews boys and girls. Of the vicious fanatic more anon.

Now, of course, there are many unpleasant Jews—but they pain and grieve the men and women of good sense and good instincts who are of their kind. Even so, it seems to me that there is a higher proportion of Nordic gentiles who habitually jar the sensibilities of well-disposed people. There is a higher proportion of Nordics whose principles are not lofty, whose manners are crude, whose good taste is low, whose pride is a kind of juvenile vanity rather than the mark of innate dignity of character; in other words, they are just chimpanzees with clothes on. These are rendered the more ignoble because they are conscious of their overwhelming strength so long as blood, geography, and tradition give them sanctuary.

In Nazi Germany I should probably be accounted eligible for all the current benefits of citizenship. My line must have been purged soon after the panic in the Garden of Eden. I am Anglo-Saxon-Pict-Celt-Welsh, out of an interminable line of deep-water Baptists. In my boyhood I broke furrows, planted crops, and went to school in a rural Alabama county. It was 9 miles from my home to the nearest railroad. My forbears on both sides "Lindberghed" in a lumbering leisurely manner across the Atlantic, the biggest ocean then known to them; and some of them later became involved in the American Revolution. I am assured that my body cells have been exposed to disease and other misfortunes in every war that has been fought by our country except the Indian riots before Paul Revere buckled on his saddle. All of my boyhood associates and acquaintances were gentiles and Protestants and, with the exception of the blackamoors around about, all of them were Nordics. At the time I left home in 1905 my county had never been the home of a football player, a Harvard graduate, or a Roman Catholic. Only three or four Jewish families resided in it. One Jewish merchant at the county seat was rather celebrated for his readiness at physical combat. In his day he licked a good many men who affronted him. He was game, and that is a virtue that even a Nordic bounder can respect.

In due time I became what is euphemistically known as a substantial citizen, otherwise the editor of a daily newspaper. I achieved a satisfactory place in life. I married; I reproduced. When my family became ill we called doctors. Sometimes these doctors were Jews, sometimes Nordic Aryans. I had Jewish neighbors along with Catholic and Protestant neighbors, but that was after—or maybe it was how—I came to know that Jews were people like other people, a part of the warp and woof of the same country that had nurtured my ancestors and me, and not bearded patriarchs and merciless Shylocks. Indeed, as a youth I had scarcely been conscious of the contemporaneous existence of Jews—they were not a part of my little world. I was neither for nor against them. If the Jew was a cunning menace to my world or a marked man to be tolerated only with suspicion, the fact had not lodged in the consciousness of the boy who at 19 arrived in the chief city of his State of the deep South to seek employment as a printer. In need of a boarding house, I found shelter in the home of a pleasant, rather pretty, old Jewish lady, who spoke broken English. I remained in her home for only a week, but I left it with a vivid impression of the charm of that small circle that lingers in my memory today. The old lady mothered me in about the same way that my own mother would have cared for any strange youth under her roof. From all I could see, despite their lowly, obscure state, these people were living this life as wholesomely and pleasantly as any Aryans in like circumstances that I knew. In this my first intimate personal contact with the children of Israel, I, a Nordic, Christian country boy could discern no characteristic quality in them except their speech to differentiate them significantly from other people of their rank and importance. I have often since compared them in my mind to the modest diffident, self-effacing Aryan bounders who in my part of America are as commonplace as short-leaf pines, dogfennels, and leaking roofs. * * * I have often recalled how far removed from the status of "rich Jews" my friends were.

My second intimate contact with a Jew was at a boarding house in another town. He was a huge, absurdly fat man, an improvident tailor, a student of books and the perfect village atheist, the first I had ever encountered. He was too poor to buy all the books he wanted, but his love of learning impressed me, his boldness as a thinker was not lost upon me.

As responsibilities grew, my contacts with Jews multiplied. I came to know Jewish teachers in our public schools, Jewish physicians, Jewish workingmen and workingwomen.

I came early to see that there was no fundamental difference between Jews and gentiles as such.

The difference always was between individuals, always between human beings.

Now, I would not be regarded by cosmopolitans as a sophisticated person, since I am untraveled, having spent all of my life in a

State that once was ruled by Ku Kluxers. But either I was born tolerant or I learned tolerance and acquired rather broad human sympathies after I came face to face with the basic realities of this life—at all events I came early in my days to like minorities and to distrust majorities with regard to all questions involving delicate human relationships and prejudice.

Certainly I have learned by simple observation of my fellows that a "sorry white man" is a sorry white man, whether he be Semitic or Nordic gentile. Blatant, obnoxious human beings run true to a more or less fixed pattern everywhere at all times.

But if a "sorry white man," or a blatant, obnoxious white man happens to be a Jew, gentiles, my brother gentiles, I must sorrowfully report, are prone to notice first that he is a Jew and last that he is an objectionable human being.

If he be a gentile it is remarked only that he is an objectionable human being.

It is never noticed that he is a gentile.

Take annoying idiosyncrasies of personality in the cruder sort of man or woman. There are Nordic gentiles who use a table napkin for a kerchief on cold days, who eat peas with a knife, who violate all the rules that polite people value. Sometimes they are rude and offensive in their personal relations. Sometimes their conduct is revolting, esthetically and morally—they rob, they swindle, lie, and abuse whatever power they may have over others. But those whom they offend never think to say: "Gentiles! * * *."

Let a frustrated Jewish thinker turn Communist and we instantly hear it said by uncritical gullible gentiles, "Communism is a characteristic Jewish doctrine." But in the same country it is the "international Jewish banker," often an economic tory, by all accounts, who has the mark of Cain upon him. It would appear from current literature here and in Germany that the Jew is at once the evil genius of communism and the designing, sinister pillar of capitalism—at once the money-hating Marxist and the money-lending Shylock. Numerous writers have pointed out that there is something wrong with this familiar picture, a picture that is made all the more grotesque when it is remembered that no American Jew has ever acquired a personal fortune comparable to that of Rockefeller, a Harriman, a Schwab, a Sage, a Du Pont, or a Ford. Barney Baruch, he of an old-line South Carolinian family, and the Strausses of an old-line, genteel Georgia family, have probably come nearest among American Jews to acquiring riches on such a scale. Mr. Baruch and the Strausses are and have been "liberals," neither dangerous radicals nor wicked Tories. The alien-born Otto Kahn was a multimillionaire Jewish banker—and an international banker at that—but he was harmless socially and politically. He was merely obsessed with a desire to lead all Americans, Jews and gentiles, into noble music halls, where their souls would be cleansed and refreshed.

The Rosenwald Foundation is no menace to anybody; it is, on the contrary, the hope chest of millions of underprivileged Negro children.

Rabbi Stephen S. Wise is, to be sure, a pulpit rebel, but no more so than John Haynes Holmes, the expansive Nordic prophet, and but little if any more so than Harry Emerson Fosdick, the Nordic Baptist pastor of John D. Rockefeller, Jr.

Again disavowing any intention of special pleading for Jews, it is only proper to say that, despite studied discrimination against them and contrary to the prejudiced impression of the more shallow-minded purged Nordics, Jews have had a distinguished military record in recent American history—a record which, in truth it must be owned, is slightly better than that of Aryan Nordics. The record shows that a smaller percentage of Jews than others have landed in jail. I say nothing of the admitted cultural eminence of Jews.

Now, why this appalling deficiency in human juices by which 1,985,000,000 mortals regard the frailties and virtues of 15,000,000 mortals as characteristic of their racial group? It is assumed of the 1,985,000,000 gentiles that they have no uniquely characteristic frailties and virtues, but are just run-of-the-mine folks, some of whom are good, some bad, some gifted, some stupid, some healthy and strong, some weak, some prosperous, some poor, some backward, some advanced.

The Jew does naught to make this heterogenous mass of 1,985,000,000 people seek to attain solidarity but the 1,985,000,000 have by their ungallantry, their unsportingness, their lack of sensitiveness and insight, compelled 15,000,000 to seek solidarity in sheer self-protection. This makes for introspection among Jews, it tends to bottle up in them the rich juices of the ages, thus depriving all mankind of the full measure of its inheritance in genius and grace.

It seems that in the relatively friendly social political atmosphere of our country Jews already have shown a tendency to lose their identity and their race consciousness in exact ratio to their personal happiness as citizens and neighbors.

Here where prejudice is ordinarily passive and obscure our instinctive readiness to utter the proper noun "Jew" instead of the common noun "man" nevertheless is a blemish of personality to be deplored, a blemish which should be a reminder of an ever-present malady that once the tone of our social system is lowered may become virulent.

To be sure, the historical circumstances (not nature) which made the Jew a tradesman and a financier have had their subtle influence in distorting the picture of this minority as put on canvas by an unchallenged, untroubled, arrogant, unfeeling majority.

The tragedy of it! Our American children romp together, go to school together, unconscious of any issue between them, as classes. One day a veil descends noiselessly between them. Those who yesterday were just children unaware of the great heritage now are grown, and so are Jews and gentiles, with the exception of a minority in each group.

The Jewish parent sooner or later must face this searching, stabbing question from his child or her child, "Why am I different?"

When that question is raised and answered, that moment the insidious seeds of cynicism are planted in the mind of that child, citizen of the republic, heir to this federation of neighborhood democracies.

The child may be of high birth and gentle rearing, it may even have genius to contribute to the common treasure chest of the race—but one day it must hear from the lips of mother or father that it is in some obscure way "different" * * *.

Gentiles did that!

Now, if in time of common travail for our people such, for example, as we have lately experienced a bestial demagogue should find it in his heart to stir the passions of the foolish and dispossessed against the children of Israel, how could my son and my nephews and my nieces look into the anguished faces of their Jewish comrades next door, as they stiffened their backs to resist the surge of passion rising against the children of a small race that has given civilization so much of its flavor?

Be the explanation of this gentile obtuseness what it may, it is but another contributory factor in the insidious malnutrition of the groping human spirit, a disorder that has handicapped mankind since the beginning of experience and contemplation. Now, if the Nordic gentile's reputation for acuteness, good manners, and chivalry were all that is at stake in his awkward blundering, his insensate assertion of self-righteousness at the cost of happiness in others might be dismissed with a shrug.

Unluckily, however, this is a practical world, in which all our virtues derive from practical need, all our vices consist of disloyalty to practical values. If virtues had no practical value, they would not be virtues; if vices did no practical harm, they would not deserve the stigma attached to them.

If Henry Ford's anti-Semitic aberration had befallen him after October 1929 instead of in the golden age that was the Harding-Coolidge era, when even the poor man's dough was relatively thick and sweet, we might have had a pogrom somewhere in these United States. Impossible? Don't be ridiculous! An American mob is as violent, as cruel, and as blindly unreasoning as the mob of any other country. We have only to stir its passions to the bottom. We mobbed Tories and looted them in the days of the Revolution. We mobbed Copperheads in the North in the sixties; we mobbed Unionists in the South. There were southerners who given the chance would have dismembered Abraham Lincoln. There were northerners who would have hung Jeff Davis to a sour apple tree. Coxey's army would have slaughtered J. P. Morgan. In the black nineties there were Populist fanatics in Kansas, Nebraska, Georgia, and Alabama who at a hint from Tom Watson would have welcomed an opportunity to lynch Grover Cleveland, William McKinley, and Mark Hanna in a row. In the delirium of World War fever even the calmest of us looked with suspicion upon any citizen bearing a Teutonic name and we shrieked ominously at all dissenters against war. Ku Kluxism cut a long and tortuous trail of perfidy and stupidity in the twenties. Luckily for the Jews Ku Kluxism's hate was directed primarily at Roman Catholics, who felt the full force of the stuffed hoods, but Jews, Negroes, and "foreigners" did not by any means escape. At another time, under other conditions, Jews might easily be the chief object of the American mob's hatred. But for the mob's anti-Papal obsession in the early twenties, and but for the people's sense of economic security and well-being, Henry Ford's incredible blunder might have led to physical, economic, and political persecution of Jews unparalleled in the history of American fanaticism.

Had this calamitous depression begun in 1920 I shudder to think what ghastly consequences to our people might have accompanied a crusade of so powerful and popular a man as Henry Ford was at that time. That the amiable, well-meaning Mr. Ford himself would have been appalled and sickened at excesses, physical or political, does not lessen the probability of excesses. In that event the Republic would have been maimed for life. No other helpless minority could ever again have expected peace, security, and the right to pursue happiness.

The American Jew today is fortunate that no Nordic scalawag and demagogue, with the wit and boldness to release a pestilence, has risen to identify in the minds of the dispossessed and the despairing the Jew and the devil as one and the same.

The common sense and patriotism of the majority of the American people would no doubt be equal in the end to repressing such a mob, but not until after irreparable harm had been done. We have to remember that in the twenties a relatively mild form of Ku Kluxism swept like a plague through every State in this Republic.

Put the American mob in rags and feed it on the crumbs that fall from the table of the man who still has an income, convince it that Israel's hosts are at its gate, and it will pick up its flaming torch and march. The war that this mob fought in the early twenties with the Holy Roman Empire would fade into historical insignificance. For man, I regret to report, loves bread more than he loves God.

Chasms between groups in a democracy require more emergency bridges than the citizens of that democracy can afford to build,

more than they are technically capable of building, however affluent, however resourceful they may believe themselves to be. The measure of a democracy's greatness and beauty is in the chasms it has closed by uniting sections of the good earth.

The hardened categories into which social, racial, and religious and political prejudices have forced the peoples of most of the older countries are matters entirely familiar to us. We have been taught to regard them as storm signals.

But if we have been taught the grim lesson, we have not yet learned it well enough. We have learned its rudiments and memorized all the catch phrases, to be sure, but we are plainly deficient in the advanced courses. We seem slow to learn that we gentiles as the indomitable majority are short-sighted and unimaginative. We think we've done enough when we cite the Jew's acknowledged civil rights as evidence of the scope of our democracy. We think we have met our opportunities and obligations if now and then we compliment the Jew for his loving kindness and generous philanthropies. We are willing enough to exploit him everywhere as a valued economic convenience and to salaam before him politically in communities where he is strong. It does not seem to occur to us that we owe it to the thing inside ourselves that makes us proud to do better than that, and so set a wholesome example to the natural haters and potential firebrands that we should know infest every community.

If we are to coax the Jew out of his acquired but inevitable group consciousness and natural sensitiveness, and if we are at the same time to sink the fuel that feeds the leaping flames of passion and prejudice and at last burn down the lovely pillars of civilization, we shall have to purge ourselves.

That striding Colossus, known as the Nordic gentile, must be born again. He must hit the sawdust trail singing, Just As I Am Without One Plea, lest on some dark tomorrow his tongue cleave to his mouth as he stands aghast at the wreckage of precious things all about him.

Construction of Superhighways in Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1939

EDITORIAL FROM WASHINGTON HERALD OF JANUARY 15, 1939

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news article from the Washington Herald of January 15, 1939, concerning the construction of superhighways. This article tells of the activities of the Pennsylvania Turnpike Commission, of which Mr. Walter A. Jones is chairman. The P. W. A. has made a grant of $26,100,000 for this work, and the Reconstruction Finance Corporation has loaned $35,000,000. This will be a toll highway. Government engineers are in charge of the project. Mr. Jones informs me that employment may be provided for from 20,000 to 25,000 men, with activities in areas where unemployed coal miners and factory workers will have an opportunity to rehabilitate themselves.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Herald of January 15, 1939]

SUPERROADS PLAN VISIONS RECOVERY—EXPERT WOULD APPLY PENNSYLVANIA THEORY TO CURE NATION'S ILLS

Unemployment virtually ended * * * factories, mines, and mills once more operating at capacity * * * a brighter outlook for labor.

This picture could become a reality—without additional Government spending—if the Nation undertook a vast program of construction of superhighways crisscrossing the country, believes Walter A. Jones, industrialist of Pittsburgh and Washington.

NOT IDLE THEORY

This is not just an idle theory with Mr. Jones. As chairman of the Pennsylvania Turnpike Commission he is at present engaged in making it come true in Pennsylvania, where he is directing construction of a superhighway, 162 miles long, which will connect the State Capitol with the Pittsburgh industrial center.

The new all-weather highway will follow the old roadbed and tunnels of the abandoned South Penn Railroad, which was started as a competitive line with the Pennsylvania Railroad in the 1880's. The project was dropped after an expenditure of $10,000,000.

Mr. Jones' proposal, based on practical experience gained in financing and supervising the huge Pennsylvania project, is simply to apply on a national scale the principles already employed in Pennsylvania.

EMPLOYS 25,000

Construction of this 4-lane divided express route will employ some 25,000 men for a period of 2 years. Hundreds of workers, all employed by private contractors, already are at work on about 30 miles of the highway. Unestimated thousands will be engaged indirectly in furnishing materials and supplies.

"The P. W. A. has estimated that for every man employed on the Pennsylvania project an average of three and one-half men will be employed indirectly," Mr. Jones said. "This means that approximately 112,000 men will be gainfully employed both directly and indirectly in building this highway."

Construction work already has brought mild booms to small towns scattered along the right-of-way. Carlisle, Shippensburg, Somerset, and other communities have been benefited by corps of engineers since district headquarters were established, over a year ago. And now construction gangs have poured into the mountains; and hotels, restaurants, and other businesses are doing a rush business.

NO COST TO STATE

All these jobs and pay rolls are being provided without any cost to the State. Tolls to be collected from users of the highway will be applied to amortization of bonds issued for the cost of building the road. The turnpike commission created by the 1937 legislature to construct, finance, and operate the toll highway borrowed $35,000,000 from the Reconstruction Finance Corporation and obtained an outright grant of $26,000,000 from the Public Works Administration. Bonds paying 3¾ percent interest will be issued to the R. F. C. as security for its loan.

The R. F. C. sold the first issue of $10,000,000 to a New York banking house which has since redistributed the securities to the public. The first block was oversubscribed by $6,000,000.

SOLVE EMPLOYMENT

"Pennsylvania points the way to a practical solution of the Nation's unemployment problem," Mr. Jones said.

"Construction of a national network of superhighways on terms similar to those worked out between our turnpike commission and the R. F. C. and P. W. A. would employ literally millions of men without strain on the Federal Treasury or on the various States.

"Since the Government would actually be lending only its credit, the national debt would not be increased, and since the needed workmen would be hired by private contractors, the W. P. A. and the relief system would be unnecessary.

"I propose creation of a Federal authority with power to cooperate with the various States in financing and constructing a carefully planned system of superhighways to serve the Nation and to put people to work.

FINANCES AND TOLLS

"I propose that this work be financed by the sale of Government-guaranteed bonds, to be amortized over a period of years by tolls low enough to attract the volume of traffic required.

"Several proposals for construction of national highways to relieve unemployment will be introduced in this session of Congress. It is my hope that a system similar to the one I propose will be the one adopted to reduce Government spending and employ private capital.

"This is important not only to meet our pressing immediate problems, but also because there is a direct relation between our national prosperity and the extension of our transportation system."

Mr. Jones roughly estimated that one transcontinental highway, built on a scale comparable to the Pennsylvania Turnpike, would employ nearly 500,000 men directly, and about a million and three-quarters more indirectly. The effect on unemployment by construction of three east-west and three north-south express highways would obviously be multiplied.

MANY BENEFITS

"The boon to employment, both directly involved in construction of the highways and indirectly through the manufacture of materials and equipment, is a strong economic argument in favor of this proposal," Mr. Jones said. "In no sense could this be considered a job of 'made work,' for far-reaching benefits of employment will naturally accrue.

"We have in addition the incentive to industry in the form of this great new market. Turning loose $61,000,000 into the stream of Pennsylvania's economic life will have the same effect as dropping a huge stone into a pool. Its waves will stimulate our entire economic structure.

"There is no question that new business many times over the original expenditure of $61,000,000 will result from the Pennsylvania undertaking. Business will flow all the way from the wages and payments for supplies right on down the line to the butcher, the grocer, the clothing maker, the landlord, and even the tax collector."

MILITARY GAINS

Tremendous military advantages will be gained by a network of superhighways, Mr. Jones pointed out. And foreseeing this important bearing on the Nation's defense program, Mr. Jones already is studying the feasibility of extending the Pennsylvania route, upon its completion in June 1940, an additional 112 miles to the Navy Yard in Philadelphia. This would completely connect the east and west boundaries of the State.

Maj. Gen. E. C. Shannon, commanding the Pennsylvania National Guard, describing difficulties encountered in transporting food and supplies across Pennsylvania during the World War days, said:

"All east-west highway routes through Pennsylvania carried trucks and truck-trains of food, supplies, and war materials from our Midwestern cities to the coast for shipment overseas. All-weather road surfaces were few, and none too good to carry the heavy traffic, particularly during the winter months, and it was only by the untiring and patriotic effort on the part of State highway officials from the highest to the lowest, through long days and nights, that these caravans got through at all."

ABOVE FLOOD LEVELS

Similar demands arise in times of peace as well as in war, General Shannon also pointed out, citing the disastrous floods of 1936, when most of the main highways in Pennsylvania were under water. The Pennsylvania superhighway will be above flood levels for its entire distance.

More safety at greater speed will be possible on the new superhighway in Pennsylvania. Two lanes of travel each for opposing traffic will be separated by a planted strip, eliminating the danger of head-on collisions. Clover-leaf intersections will prevent a cross-flow of traffic. Eight tunnels will obviate the dangerous climbs over the Allegheny Mountains.

Mr. Jones pointed out the climbs involved in a trip over the present routes represent a total vertical height of 13,880 feet. On the new route this total will be only 3,940 feet, a reduction of nearly 10,000 feet.

GRADES REDUCED

The present maximum grades of 9½ percent will be cut to 3 percent and this obviously will greatly curtail the dangers of skidding and other accidents in sleet and snow. Curves will be limited to 6° with a radius of 995 feet.

With higher and safer speed enabled, Mr. Jones estimated that motorists will save at least 2 hours by using the new route between Harrisburg and Pittsburgh. Truckers will average a saving in time equivalent to one round trip weekly.

Tolls to be collected will range from $1.50 for passenger cars to $8 for trucks using the entire road one way, with a reduction for round trips.

"The financing of the Pennsylvania project was made possible by the vision of President Roosevelt and the cooperation of Secretary of the Interior Ickes and Chairman Jesse Jones, of the R. F. C., all of whom believe in its necessity," Mr. Jones said.

Direct Buying at Private Stockyards

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17, 1939

LETTER FROM D. M. HILDEBRAND

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from D. M. Hildebrand, of Seward, Nebr., president of the United States Live Stock Association, to the editor of the Omaha World-Herald, calling attention again to the destructive market effects of direct buying at private stockyards not subject to Federal regulation, as are the public markets.

I desire to call attention particularly to the following statements in Mr. Hildebrand's letter:

During the first 10 months of 1938 the average actual cost to the packers per 100 pounds of hogs was 21.2 percent less than for the same period in 1937, despite the fact that total imports of hog products were 32.7 percent less during this period; and exports of hog products, exclusive of lard, increased 58.8 percent, while lard exports increased 76.1 percent.

Mr. Hildebrand also states that increases in hog buying at the public markets have been very slight compared to purchases at private yards.

I express the hope that this session of Congress will enact legislation to bring these private yards under regulation, as the public markets are, for the protection of the hog raisers of the United States.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECEMBER 31, 1938.

EDITOR WORLD-HERALD,
Omaha, Nebr.

DEAR SIR: A member of our association has directed my attention to an item which appeared in your column, As the Public Pulse Beats, Tuesday, November 22, 1938, over the signature of Mr. Wesley Hardenberg, department of public relations and trade, Institute of American Meat Packers.

Mr. Hardenberg, apparently speaking for the Institute of American Meat Packers, endeavored to justify recent downward trends in hog prices, pointing out that Department of Agriculture quotations were about 13 percent lower than those of a year ago. He contended that hog prices follow the trend of wholesale meat prices, which had also declined, according to his statement, due to greatly reduced consumer buying power and because of a steady increase in the number of hogs marketed.

While Department of Agriculture statistics do show an increase of 14½ percent in the total number of hogs slaughtered under Federal inspection during the first 10 months of 1938 as compared to the same period in 1937, it should be noted that for the first 10 months of 1938 the average actual cost to packers for 100 pounds of hogs purchased was 21.2 percent less than for the same period in 1937, despite the fact that carcass dressing yields were better in 1938 by about one-half of 1 percent.

Prices of slaughter hogs are based on public market quotations, so that consideration should also be given the fact that during October 1938 packers, according to Department of Agriculture figures, materially increased the volume of their direct purchases of hogs in the country ahead of public price-determining markets, increasing in parallel degree the extent of price control which could be exerted through direct buying operations.

In other words, the total increase in the number of hogs purchased by packers during October 1938 over the same month in 1937 was out of all proportion to the comparatively small increase in the number of hogs purchased at public markets during that month. The figures show that federally inspected slaughter of hogs for October 1938 increased over October 1937 by 593,000 head, while the increase of purchases of hogs at public markets as between the same months amounted to only 126,000 head.

Mr. Hardenberg refers to greatly reduced buying power, but the December issue of the Agricultural Situation, published by the Department of Agriculture, shows only a 7-point decline in national income index numbers for October 1937 as compared to October 1938. Moreover, Mr. Hardenberg fails to mention the fact that total imports of pork products for the first 10 months of 1938 were 32.7 percent less than for the same period in 1937, while at the same time total exports of pork products, exclusive of lard, increased 58.8 percent, with lard exports alone showing an increase of 76.1 percent.

Since packers have consistently refused to grant the Secretary of Agriculture right of access to their records showing prices received for their meat and animal products, livestock growers and feeders have no alternative but to accept, at face value, Mr. Hardenberg's statement, unsupported by official statistics, that 75 percent of the wholesale meat dollar is paid the livestock producer for his meat animals.

Nevertheless, hog producers will continue to question that they are receiving their fair share of the consumer's meat dollar, so long as they know that in 1916 the processing and distribution margin between the average price of hogs at Chicago and the United States average price of pork chops amounted to 13.1 cents per pound, and that in 1937 the margin had been widened to 26.3 cents per pound, or just double the average margin for 1916.

Hog producers should, insofar as possible, be given all the facts.

Yours very truly,

D. M. HILDEBRAND,
President, United States Live Stock Association.

Inaugural Address

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1939

INAUGURAL ADDRESS OF HON. FRANK M. DIXON, GOVERNOR OF ALABAMA, MONTGOMERY, ALA., JANUARY 16, 1939

Mr. GRANT of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following inaugural address of Hon. Frank M. Dixon, Governor of Alabama, delivered at Montgomery, Ala., on January 16:

To me as I stand facing this great throng of my friends on this my inaugural day there comes, more definitely than any other, the realization of a tremendous responsibility. The satisfaction of a long and hard fight won, of course, is there. But

I find that satisfaction secondary, unimportant, as compared to that other feeling. For as your Governor, I follow a long line of able men, representative of the best there is in our people, and the heritage left to me is one of duty done.

My obligations are to all of our people, not to any class or group or creed. To none more than to any other is this inaugural due. The rich and the poor, employer and employee, those who live on our farms and the dwellers in our cities, all can come with the assurance that there shall be no preference or favoritism shown, and the doors of the Governor's office will swing as wide open to the humble toiler as to those who sit in the seats of the mighty. For even had there been any other thought in the mind of anyone, any thought of any obligation owed to this or that group for political help, that thought must disappear in the face of the overwhelming vote by which our people, from every walk of life, chose me as their Governor.

The problems which face us are many and varied.

In the operation of our State none of us wants to go backward. None of us wants our schools to be closed, our roads to remain unpaved, our welfare work to cease, our essential governmental services to our people to falter for lack of funds. All of us are willing to pay, and pay until it hurts, for a modern State and all that that term means to a people. For we are proud of this great State of ours, proud of its heritage, proud of the banners our people have carried in peace and in war, and we want it always to face the rising sun.

ENLIGHTENED, KINDLY, TOLERANT

We want always for the world to think of us as enlightened people, sensitive, kindly, and tolerant; to think of our State as one in which humanitarian principles are placed first in the category of things, in which there is a deep-seated recognition that we who live today are trustees of an inheritance given to us by our fathers, temporarily ours, to be passed by us unsullied to our sons and daughters. We want our State to be known as one giving to its citizens all that we can of those governmental services essential in the modern relationship of a forward-looking State to its people. This we are in large measure doing today.

But our people are paying heavily out of their meager resources for these services. They have the right to demand that their hard-earned money shall be carefully spent, that their Government be efficiently run, that for each dollar spent there shall be a dollar's return in benefits to them. The load of taxation, whatever form that load may take, whether income, license, sales, or any other taxes, rests in the last analysis on the shoulders of the poor, and in a State with low per capita wealth, by the very nature of things, the obligation to conserve the resources of the people is rendered more binding, the trust more sacred. The resources available must be wisely, efficiently used. It shall be my aim to see that this is done. To that end I shall propose certain changes in governmental forms, a modernization of our machinery, not with the idea of change alone, not with the purpose or effect of uprooting the good things of the past, but with intent to recognize the growing burden of taxation and to render the utmost of return for the taxes asked and received.

Our problem is not only State-wide. Since 1865 there have been burdens unfairly placed upon the Southern States. The discrimination of the tariff is well known, with its failure to protect our products of farm and factory. We have been taxed for many years to pay the pensions of the soldiers who defeated us. The system of freight-rate discrimination, which has received the able attention of our retiring Governor, was installed and has operated to prevent the economic expansion and prosperity of our region. Now we face the operation of a wages and hours bill which, if it be unfairly administered, can destroy our industries. All who have studied the problem of the welfare of our people recognize a primary necessity of bringing industry to our State, thereby achieving a better-balanced economy, increasing our taxable wealth, lessening our tax load, increasing the income of the citizens of our State. Prevention of the coming of industry to Alabama, possibly under the present law, presents a danger comparable to reconstruction, a danger of which we must always be keenly aware.

EYES ON WASHINGTON

It is necessary, if we are to prosper, not only to attend to our local affairs but to keep our eyes firmly fixed on Washington.

Where can we be effective? Only in the National Democratic Convention. Once the party has chosen its nominee, we in Alabama must follow its lead. How can we be effective in the convention? Only by acting in combination and in concert with other Southern States. Divided we fall, as divided we fell when the two-thirds rule was abolished. A united stand would have prevented that disaster. But what is done is done. By a united stand we can in the days to come be heard in the councils of the Nation, and only in that way can we remove those economic barriers to the prosperity of our people. And I am speaking of what will be in 1940; of the future, not of the past; of the quick, not of the dead, and I am drawing lessons from the past solely to chart our course in the days to come.

Much work has already been done toward bringing about a concert of action by Southern States in defense of the South. We must prevent any division. We must commit ourselves to no candidate in advance, since then we would be powerless to help in the fight. And if in this we stand in the way of any man ambitious for his own advancement, then he must yield to the common good. For the future of the people of Alabama is of infinitely more importance than that of any man.

A great and good man stood in this place in 1861, in this fine old southern city, and took his oath of office as leader of the Confederacy. Our people, yours and mine, followed him through years of struggle and sacrifice, through a bitter and hopeless war. In him there came to be personified the hopes of a great people. That lost, and we, their children, are still paying the bill for this defeat.

ALL THAT WE ASK

Today we have no thought of anything save playing our part, loyally, within the structure of these United States. We represent a generation blooded in the fields of France in the armies of our country. All that we ask, all that we demand, is that there be a cessation of unfair attacks upon us—that we be allowed to live and to prosper in the degree allotted to us by a beneficent Providence, without the artificial barriers placed in our way by partisan politics or sectional interests.

Why should I interest myself in this and consider it of sufficient importance to record in this address? As your Governor I can do much to help in bringing our own house in order. But if I can be of help in removing these discriminations against us which have kept our people poor these many years, I will be contributing to a cause even more effective for our ultimate prosperity than can come from any administration of the affairs of our State. Remove the load we unfairly carry and I will guarantee prosperity to Alabama.

Alabama is going forward. God has been good to us. He has blessed us with these great rivers, with an abundant rainfall, with fertile lands, with a long growing season, with a great mineral wealth, with homogenous people, with the tools out of which can be forged every element of a worth-while life.

Industry seeks to come. We welcome it, since it will give us the balanced agriculture and industry with which our wealth will increase. Industry now here seeks to prosper; it shall be given every fair encouragement. Our rural schools for the first time in our history are running their full 7-month terms without further debt; we will increase that term. Our wildlife and valuable timber resources will be conserved. Insofar as we are able we will increase our help to the unfortunate. The road-building program will continue. All of those varied activities of our Government which mean services to our people will continue, strengthened. The planned development of our State, materially as well as spiritually, will go on, to the end that this wonderful heritage temporarily entrusted to us shall be accounted for tenfold to our children.

In the administration of the affairs of a State there can be no meeting of minds and agreements on all points. Men and women are human with minds of their own, with hopes and ambitions and convictions the result of the thought and environment of a lifetime. In all that I do or try to do there will be the purpose to serve our people—from you, my friends and neighbors, I ask an objective point of view. Where we disagree let it be in friendliness; where we agree let us unite with redoubled vigor, gird up our loins, and follow with singleness of purpose the straight road into the future, making the good of our people the pillar of cloud by day and of fire by night to guide us out of the wilderness into happiness and peace.

The Proposed Puget Sound, Grays Harbor, Willapa Harbor, and Columbia River Canal

REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

ARTICLE PREPARED BY THE PACIFIC NORTHWEST WATERWAYS ASSOCIATION

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert an article prepared by the Pacific Northwest Waterways Association describing the merits of the proposed canal connecting Puget Sound, Grays Harbor, Willapa Harbor, and the Columbia River.

The article is as follows:

A DIGEST OF FACTS CONCERNING THE PROPOSED CANALS CONNECTING PUGET SOUND, GRAYS HARBOR, WILLAPA HARBOR, AND THE COLUMBIA RIVER—A PROJECT OF VITAL IMPORTANCE IN THE INTEREST OF COMMERCE, INDUSTRY, AND NATIONAL DEFENSE

FOREWORD

(By Rear Admiral Luther E. Gregory, C. E. C., U. S. Navy (retired))

The proposal to connect Puget Sound with the Columbia River by ship canal is not a new idea. This was first proposed by Jefferson Davis, while Secretary of War, about 1856. It was suggested as a military measure, as well as an aid to commerce.

From time to time the proposal has been revived, only to be pushed aside, as the magnitude seemed to be too great as compared with the needs of commerce. Until this year no real study has been made of the project. Some calamity was required to bring it to the fore. That has come in the form of serious unemployment and therefore extreme losses in the industry of the southwest part of the State of Washington.

That action was necessary is indicated by the passage of the canal act by the 1933 session of the legislature of the State. A commission was appointed to study the economic feasibility of these canals. It submitted a favorable report on June 7, 1933. The Governor of the State, the Honorable Clarence D. Martin, approved this report July 6, 1933. It has at the present time, therefore, the status of an approved project to be constructed as soon as the financial arrangements can be made.

This waterway is a necessity if Washington is to regain her prestige as the principal source of timber and timber products for the United States. Other resources will continue to be locked up until a cheaper method of transportation is provided than is now available.

Read the important message conveyed in this article and give it serious thought.

LOCATION AND ROUTE OF THE WATERWAY

There are three sections, as follows:

Puget Sound to Grays Harbor Canal: Leaving Puget Sound at Olympia by way of Budd Inlet, thence by way of Percival Creek through Black Lake, Black River Valley to the junction of Black River and the Chehalis River, thence down the Chehalis River Valley into Grays Harbor. Length about 50 miles.

Grays Harbor to Willapa Harbor: Leaving the channel of Grays Harbor at South Bay, passing in a general southerly direction close to the foot of the bluffs, and on the westerly side thereof, for a distance of about 9 miles, entering Willapa Harbor on the northerly side of the Tokeland Peninsula.

Willapa Harbor to Columbia River: Leaving Willapa Harbor near Bakers Slough, thence in a general southerly direction along the easterly edge of the bogland and close to the foot of the bluffs for about 5 miles, thence in a general southeasterly direction, entering tide water at the northerly end of Bakers Bay.

The routes and locations were surveyed and determined by the Canal Commission of the State of Washington.

SIZE OF CANALS

The commission recommends the construction of a lock canal from Puget Sound at Olympia to Grays Harbor with locks of not less than 60 feet by 600 feet; a depth of 14 feet over upper miter sills, and having a total lift of approximately 90 feet above mean sea level; minimum bottom width of canal section to be not less than 90 feet for light-draft seagoing ships and capable of future enlargement as tonnage develops.

The Grays Harbor to Willapa Harbor and to the Columbia River Canals are recommended on a sea-level basis, with a minimum bottom width of 120 feet for light-draft seagoing ships drawing 13 feet in salt water and capable of future development as tonnage increases.

FAVORED BY UNITED STATES ARMY ENGINEERS

The Corps of Engineers for rivers and harbors in their report to Congress recommending 1,600 projects, totaling an estimated cost of $8,000,000,000, have included this canal project as meritorious.

COST OF CANAL

Careful calculations of various factors to be considered, with full allowance for the requirements of the act creating the canal commission, which declared its purpose to provide the greatest amount of individual employment, results in an estimate of $33,921,638 as the cost of the entire project.

ESTIMATED REVENUE

Studies made by the canal commission indicate a present and prospective annual revenue from tolls for the two coastal canals of $464,000 with a reasonable forecast of increased tolls to $682,000 within a period of 10 years. For the Puget Sound to Grays Harbor Canal the immediate prospective toll would be $1,585,000 with a reasonable increase to $2,560,000 within 10 years.

METHODS OF FINANCING PROJECT

By terms of the legislative act creating the canal commission the waterways cannot be paid for from State funds.

It is the purpose of the sponsors of the canal project to have it adopted as a Federal project and paid for by direct Federal grants of money. It is the policy of the Federal Government to assume the entire cost of waterways as development work necessary for national welfare and defense. All waterways are now owned, operated, and maintained by the Federal Government.

Revenues to be derived from tolls (as mentioned above) should in time pay the entire cost of the waterway project. These revenues will accrue to the National Government, as it is the purpose of the association to have the Federal Government take over the entire project from start to finish.

The law of the State forbids any tax levy. There can be no cost to the taxpayers of the State for this construction program; yet the benefits to be derived will be theirs directly.

BASIC PURPOSE OF THE WATERWAY

To connect the inland waterways of Puget Sound and northern waters of Alaska to the inland waterways of the Columbia and Snake Rivers. The present barrier to inland waterway communication from the Snake River to Juneau is the natural obstacle the canals would remove, creating the greatest inland waterway in the world.

BENEFITS ASSURED BY THE PROJECT

Construction of the waterway as outlined will provide at once the greatest amount of diversified employment, especially for skilled craftsmen, offered by any project now before the Federal Government, excepting possibly the Tennessee Valley operation.

There will be about 60 miles of extended and correlated workings, exclusive of dredging, which will offer a job for every type of workman.

A brief outline of the tasks provided would be about as follows:

Concrete locks would employ about 2,000 concrete workers, laborers, carpenters, steel workers, hoist and pump engineers, and allied craftsmen.

Spillway construction, mostly concrete masonry, would employ an equal number of the same type of workers.

Excavation would employ large numbers of ordinary labor and men who live by the various types of water-front activity—tugboat and launch men, riggers, loggers, swampers, pipe handlers, firemen, ship carpenters, and deck hands.

Simultaneously several thousand men would be employed in clearing rights-of-way, building temporary roads, crossings, and relocating logging roads, and preparing piling and cribbing of many kinds. The formation of canal berm and the subgrading for roadways along the canal would employ many teams and tractors. The bridges to be erected constitute a major operation, employing at least another 2,000 men. A vast amount of hand labor would be used in the riprapping and protective work on the canal banks. Supplementary road building would utilize the labor of many hundreds of men.

In addition, as many more men would be indirectly employed in industries supplying steel and concrete, lumber and machinery, and other materials and equipment needed in the canal project, it is not exaggerating to say some 20,000 men would be given work, directly and indirectly, during the period of construction.

Northwest farmers would benefit directly by the project, for requirements of foodstuffs for the multitude of persons working on the project would stimulate the demand for eggs, butter, meats, flour, and produce. Clothing supplies, medical and personal needs of the workers would also be supplied by Northwest firms in large amounts.

Supervision and direction of all these workers would absorb large numbers of technically trained persons now unemployed.

It is evident that unemployment continues to be a menace to society's welfare. This project is so located near to centers of population that many men could work on it and still be home part of the time, their homes undisturbed, and their families intact. Simple camp accommodations will be sufficient for men at work. This project is needed to relieve unemployment; the country needs the completed canal to join two great waterways. The money paid out in wages will go into circulation rapidly, stimulating trade and industry in the Northwest.

PROTECTION FOR LIGHT-DRAFT VESSELS

There are about 30,000 craft of various classifications registered at ports along the Northwest waters—Puget Sound, Grays Harbor, Willapa Harbor, and the Columbia River.

There are more than 10,000 fishing vessels, many tugs and barges, light-draft cargo vessels, and thousands of pleasure craft which will use the waterways for business and pleasure. In time of bad weather the fishing fleets will find a safe passage through the canals.

NAVAL AND MILITARY USES

The naval forces at the Puget Sound base are at present limited to the Straits of Juan de Fuca for ingress and egress. The proposed waterway would permit more than half the commissioned vessels of the Navy to enter and depart by the canal, declares Rear Admiral Gregory, who also says that the two lower canals would accommodate three-fourths of the registered ships of the Navy with the tide at mean sea level.

Plans are completed for a submarine base located on the Columbia River. The sea-level canals would allow the submarines to operate from that base through either Grays Harbor, Willapa Harbor, and Puget Sound, in addition to the Columbia River entrance, and come to the relief or support of any naval unit engaged in battle at the straits. Vessels moving from Puget Sound would have three other exits into the ocean if the canals were constructed. The navy yard at Bremerton is becoming a principal base for construction of cruisers, destroyers, and such craft, and for fleet repairs. The proposed waterways would enhance its value to the Nation.

One of the largest military bases on the west coast, Fort Lewis, is being developed as a principal center of military concentration. The safe and rapid transport and transfer of heavy ordnance and munitions between defensive points along the coast is now impeded by highway bridges of light capacity and highways which are inadequate.

The Boeing airplane factory at Seattle, one of the largest such plants in the country, produces large numbers of fighting ships for the Government. This industry deserves the extra protection a canal would give.

At Dupont is situated one of the largest powder plants in the country, and Hogum Bay, near Olympia, is a storage plant of the Giant Powder Co. These industries will provide huge war supplies in case of conflict, supplies which can best be moved by

water transportation. With the canal completed, transportation would be facilitated.

The cost of one battleship would build the canal, and in the time of national danger the existence of the new waterway might easily be worth a fleet of battleships in its strategic value.

COMMERCIAL ADVANTAGES OF THE WATERWAY

Effect on tariffs and transportation was developed before Colonel Sturdevant, United States district engineer, when it was shown that for a 20-mile haul by rail the cost per thousand feet of logs is from $2.50 to $3, depending on weight. The same haul by water would be from 30 to 75 cents. Comparative tariffs on general freight would show similar contrasts. With an annual package and merchandise movement of 450,000 to 500,000 tons flowing between Columbia River and Puget Sound points, the readjustment of tariffs would result in a big saving to shippers.

Prospective traffic through the waterway will be greatly increased as the opportunities of water shipment increase. Vast undeveloped natural resources of adjacent regions will be developable with cheap water transportation available. Known deposits of manganese, iron ore, and phosphates in the Olympic Peninsula, coal regions all along western Washington, logging, lumbering, fishing, and similar activities now existing will all respond to a cheapening of transportation when the waterway is completed.

It is proper to assume that limestone, coal, fuel, ores of all kinds, fish and fishing vessels, sand, gravel, and cement, pulpwood, pulp, and paper, logs in rafts and on barges, sulphur, phosphates, and acids, pleasure craft, tugs, scows, and mixed-cargo vessels will use the new waterway as an inside passage in preference to the outside route. For many products present high transportation rates prevent development and exploitation.

Grain transportation from the interior to the coast by way of the Snake and Columbia Rivers, along the new waterway to Columbia River and Puget Sound ports, will be increased as the waterways are improved. The records show 3½ million tons of grain moved from the inland basin territory of Oregon, Washington, and Idaho to the coast in the 10-year period just closed. In the opposite direction would move a continuous flow of coal and other fuel, seacoast products and commodities, and imported goods to Oregon, Washington, Idaho, and Montana at greatly adjusted and cheaper transportation rates.

Canadian Government subsidized carriers are helping to build a great port at Vancouver, B. C., through cheapening transportation of grain and other products from the interior to the coast. Anything that can be done to remove obstacles to transportation and commerce between United States cities will iron out inequalities between cities and sections and will bring growth and prosperity to west-coast cities of the United States.

The use of any improvements for navigation in the Columbia Basin will be denied full value until the obstructions between the Columbia and Puget Sound are overcome. With the proposed canals built, and not before, will the waterway from the inland empire to Alaska function as a whole.

Improvements on the Columbia are going forward, through construction of the Bonneville and Grand Coulee Dams. The proposed canals are the connecting link between the Columbia and Puget Sound, necessary for the movement by water transportation of products from the inland empire to Northwest cities.

Log and timber movements will be facilitated. Logging is increasing in cost, due to limited and controlled logging roads. In addition to merchantable timber there are vast stands of pulpwood timber around Grays Harbor and Willapa Harbor, with pulp mills operating to both the north and south. The canal would make interchange of logs and pulpwood easy and cheap. Logs from this area could move to Puget Sound and Columbia points cheaply, without the danger of towing by sea or costly rail shipment. The canals will provide the needed safe and cheap means of transportation of these raw products to mills.

Coal and iron deposits would be developed with the waterway furnishing cheap transportation. The only hard-coal deposits in the Northwest which compare with eastern anthracite are found easterly of Bellingham. The gas coals of Washington are being used all along the coast. The coking coals produce the highest percent of coke per ton of coal for any State in the Union. If these fuels are to be made available, along with high-grade soft coal of the Bellingham and Seattle territories, cheap transportation must be provided. The proposed waterway is the answer to this need.

Industrial development will follow the construction of the canal. The Bonneville and Grand Coulee power dams will furnish an abundance of electrical energy at low rates for industrial uses. Raw materials in abundance are to be found in the area reached by the waterway. Where cheap transportation and raw materials abound and cheap power is available, industry develops. It is no dream to say that in the immediate future, with the canal connecting Alaska and the Inland Empire, the development of multiple industries in this area will be certain.

THE CHALLENGE OF TODAY

No more opportune time for construction of this waterway could be found. The Nation is spending billions to provide work for unemployed, to wipe out hardship and privation, and to prevent starvation.

There is no question of the economic need, no question of the vital part the waterway would play in Pacific Northwest development. Capable engineers have found the project feasible. As a work-making project it is unequaled in the Northwest, for actual construction would be started in a few weeks and thousands could be given jobs almost at once.

The progressive development of the Northwest demands the canal. Industrial centers now established, and other certain to spring up in the territory when the waterway is completed, will furnish work for thousands, markets for vast quantities of products, and bring renewed life to west-coast activities.

The canal can and will be built if sufficient enthusiasm is raised in State and National circles to overcome the inertia that hampers every great project. Action in Congress is the prime need to bring the canal into being. Congressmen and Senators are sensitive to public demands. A concerted demand for the canal made upon the congressional representatives of this State by all canal supporters cannot but have its effect.

The clarion call of opportunity is sounding, calling men to action. The future of the Pacific Northwest sways in the balance. With the waterway removing natural barriers to free and easy movement of trade, there must come more prosperous days. The objective is worthy the steel of fighting men—the spirit of the pioneer stirs in answer. The Northwest wants and will have this connecting link in its great inland waterways.

Harry L. Hopkins

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

ARTICLE BY HEYWOOD BROUN IN WASHINGTON DAILY NEWS

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I am pleased to include what seems to me a most timely comment by Columnist Heywood Broun concerning the recent appointment by the President of Mr. Harry Hopkins to the position of Secretary of Commerce. It is one of the fairest and most intelligent comments concerning Mr. Hopkins that I have seen.

[Washington Daily News]

IT SEEMS TO ME

(By Heywood Broun)

It is my hope that Harry Hopkins will increasingly become better known to the American public, now that he has been made a member of President Roosevelt's Cabinet. It seems to me that Mr. Hopkins is one of the most useful and able young men who have come into governmental leadership in some time.

Curiously enough his capacities are not widely known. Hopkins is far from being a recluse. He is and will continue to be good newspaper copy. But this very fact has tended to obscure the salient factors in his mental and emotional equipment. For instance, a good many columns have been written about the fact that Harry Hopkins likes to go to race tracks and make a mild and timid wager in an effort to knock down the favorite. I have written two or three of those light essays myself. My intention was friendly, because I have an enormous admiration for Hopkins.

But, in collaboration with other columnists, I realize now that this sort of stuff has been somewhat punishing. The picture of Harry Hopkins, the regular guy, has thrown a shadow across the more important picture of a zealous liberal who is a tireless worker. Not by any stretch of the imagination could Hopkins be called a radical. He is not dedicated to revolutionary changes in the political and economic structure of America. I assume that there may be opposition to his appointment on the ground that he is one of the Washington wild men.

As a matter of fact, this particular group has no existence save in the mind of conservative and highly imaginative newspaper commentators. Nor is there any support at all for the rumor that Harry Hopkins has done a persuasive and subtle job in leading Franklin D. Roosevelt to the left.

The story has gone the rounds that Harry is allied with Thomas Corcoran and Benjamin Cohen in an effort to change the Democratic Party overnight into a Socialist regime. Nothing could be more silly. Roosevelt, right or wrong, has run his own show from the beginning. He has listened to many counselors and heeded the advice of a few, but on the whole the major trends and decisions of the New Deal have been in line with his own thought and policy.

Indeed, I would venture the guess that Franklin D. Roosevelt has been on all important issues slightly more radical than any of his advisers, with the possible exception of Eleanor Roosevelt. The Nation has been told by now that the President takes scrambled eggs instead of "grilled millionaire" for breakfast. The tasty side dish which the Chief Executive eschews will not be placed on the

platter of Harry Hopkins, now that he has become the Secretary of Commerce. Businessmen will not be bitten by the new member of the Cabinet.

It is my notion that Harry Hopkins is not going to truckle to anybody, but he is a good listener and an understanding person. He is sincere and forthright. Among public speakers I would rank him high, because he speaks with deep feeling and utter simplicity. He will carry no lugs with him into the Cabinet. Harry is a reformer. The tag "social service worker" still clings to him, but he is one of the least ministerial persons against whom this phrase has been ever flung.

His devotion to American democracy is complete and uncompromised by any reservations. To sum it all up, a strong, able, and progressive person comes into the President's official family. Those who don't appreciate Hopkins yet will learn to do so rapidly.

It has always been my feeling that newspapermen are keen in being able to differentiate between the regulars and the phonies in public life. I know that Hopkins is universally respected by the Washington correspondents. And, speaking as a New York newspaperman, I am delighted that the Cabinet gets a recruit who knows a story when he sees one and will come out freely and candidly on any issue which is brought before him.

And so, saving the cost of stamps or telegraph tolls, I'd like to say to Secretary Hopkins, "Merry Christmas, Harry!"

Southern Problems

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

RECOMMENDATIONS OF GROUP OF CITIZENS FROM SEVERAL SOUTHERN STATES

Mr. PACE. Mr. Speaker, last week there was a meeting in Atlanta, Ga., of a group of interested citizens of the South from several different Southern States, including representatives of capital, labor, the press, and other interests.

I invite the attention of every Member of Congress to their recommendations and trust the same will receive sympathetic consideration, as follows:

As a group of southerners representing varied interests and areas, we have studied the report to the President of the United States by the National Emergency Council concerning the South. Whatever our reactions may be, we must accept that report, drawn by southerners, as an essentially true diagnosis of economic conditions in this area. Our effort in this meeting has been to try to determine some of the steps that may be taken by both Federal and State Governments looking toward a remedy.

All of us feel that since our conditions are products of a long-existent economy, remedial action will require a relatively long period of time. Consequently, we have approved the projection of a council of southern regional development, which we hope will become an active, well-staffed, well-financed agency coordinating the work that is being done by a number of agencies already in existence in the South. The council will devote itself to long-range planning for the South.

But there are immediate objectives which should be sought—objectives which lie within the spheres of Federal and State action. In addressing the Federal Government the South is not in the position of a mendicant; she asks nothing to which she is not entitled; she asks nothing which is not for the ultimate national good. But so much of her economy is the result of national policy that the remedy must largely lie in the national treatment of fundamentals which underlie her economy.

AMERICAN TARIFF POLICY ASSAILED

Failure to adopt a national policy looking toward reconstruction of the Southern States and the rehabilitation of almost half her population after the War between the States fastened upon her the one-crop system, the share-cropper system, and the credit "furnishing" system, all of which have proved, for three generations, an unmitigated evil, producing agricultural insecurity, low wages, and poverty and all their attendant evils, such as illiteracy, physical deterioration, and economic waste.

The policy of the National Government in levying tariffs has inevitably meant that the industrial sections of the country drained off the capital and reserves of the agricultural sections. Only twice prior to the reciprocal agreement efforts of Secretary Hull have tariffs been lowered; whether the cotton farmer got 5 cents a pound or 25 cents a pound for his cotton he bought his goods in a protected domestic market and paid for them with the proceeds of sales in an unprotected world market.

BECOMES FEEDER OF RAW PRODUCTS

The policy of the National Government in permitting the development of the regionalized freight-rate structure meant inevitably that the South could not become much more than a feeder of raw products to the manufacturing areas. Because of freight differentials approved by the Interstate Commerce Commission we are unable to build an industrial economy comparable in any respect to the favored areas of the country, although we possess, according to the National Emergency Council, more natural resources than any other region. We must continue to ship our raw products out, have them manufactured elsewhere, buy them back as finished products, and pay the freight bills both ways.

These things are all directly instrumental in national policy. The harvest of these policies and of our own shortcomings may be found in the eroded lands of the South; in the dispossessed tenantry; in a people who have too high a percentage of pellagra, malaria, hookworm, and other such diseases; in homes, more than half of which are below decent living standards; in inadequate grade schools and no adequate provision for institutions of higher learning; in the lowest percentage of home and land ownership in the country, and in the lowest per capita incomes in the country. It is perfectly true that the South has failed to legislate adequately in economic fields, but it is also true that the Nation's treatment of the South has been that generally accorded colonial possessions. The South does not ask a preferred status; what it asks is equality of opportunity within the Union. There are things which we must do through our own initiative and our own legislatures, but there are measures which we have a perfect right to ask the Federal Government to continue and others which should be initiated to repair the ravages of national policy and to achieve the ends of democracy. We herewith set some of them down:

RURAL HOUSING IN SOUTH URGED

1. The southern agricultural situation is not the product of immediate depression; it requires a program of long-term revision rather than temporary relief. We therefore urge continued expansion of the rehabilitation work of the Farm Security Administration to place farmers in the lowest income group on the agricultural ladder, and to provide the authorized appropriations for the Bankhead-Jones Farm Tenant Act to offer further opportunities to farmers of more advanced qualifications. Basic to the success of both of these efforts is a general program of soil restoration, which should include land purchase for forestation, for resettlement, and other uses.

While recognizing the importance of the continuance of our urban housing program, we wish to emphasize the urgent needs of rural housing in the South. Rural rehousing should be separated from urban, with equivalent appropriations provided. We recommend relating the agricultural rehousing effort to the farm-planning activities connected with the agricultural programs.

ADEQUATE PRICE STRUCTURE VITAL

We recognize that the success of both the rehabilitation and of the tenant purchase programs depends on the maintenance of an adequate agricultural price structure.

2. The problem of public health is acute in the South. Malaria alone affects 2,000,000 southern people annually, causing an economic loss estimated at $500,000,000 a year and a reduction by one-third of the industrial output of the region. Hookworm, pellagra, syphilis, and tuberculosis alone take a heavy toll, all closely associated with a low standard of living.

Considering that the tremendous financial loss caused by disease justifies the expenditure of money for widespread preventive work and medical care, we endorse the program of the National Health Conference in its provisions for Federal cooperation with States and counties to extend medical and public-health activities, and we believe that special consideration should be given to rural areas high in medical needs but low in financial resources.

EQUAL CHANCES FOR EDUCATION

3. Following the plan adopted by several States in appropriating funds to provide more nearly equal educational opportunities for the children in their several counties, we recommend that the Federal Government make appropriations that will make possible the equalization of educational opportunities in the several States of the Union. The principles governing the appropriation of these funds should be equitable distribution between the races and democratic distribution among the States according to the economic ability of the States and the number of children per adult population, with State control over administration and curriculum.

A few facts will demonstrate the need for this action. In 1930 the farm people of the United States received 9 percent of the Nation's income and supported 31 percent of the Nation's children.

The average wealth per school child in the United States is $10,200, while the average wealth per school child for the Southern States is $4,000. The average annual income per school child in the United States is $2,171, whereas in the Southern States it is $872.

SOUTH PAYS HIGHER PROPORTION

Despite the fact that the Southern States pay a higher proportionate part of their incomes for education than the Nation as a whole, the average annual expenditure per pupil in daily attendance in the South is $25.11 as against $74.30 for the United States as a whole. Southeastern farm people with approximately 4,250,000 children received 2 percent of the national income, while northeastern nonfarm people with approximately 8,500,000 children received 42 percent of the national income. While these facts illustrate

the educational condition of the South, it should be remembered that this situation constitutes a national problem. An economic social and cultural lag in any part of the country is an economic social and cultural menace to all parts of the country.

Forty percent of the young people 10 to 20 years old on farms in 1920 were in cities in 1930, and 60 percent of this net migration was from southern rural areas. The equality of the education in these rural areas is therefore a matter of vital concern to the industries, the cities, and the people of the whole country.

FEDERAL GOVERNMENT ONLY CAN HELP

The Federal Government is the only agency which can redress this economic and educational imbalance between the metropolitan areas of the greatest concentration of wealth and rural areas of the greatest concentration of children in relation to adult population. Since all sections, all resources, and all the people combine to produce the wealth concentrated in the great centers, and since all the people as consumers help pay the taxes on this wealth, it is just that a small part of the income from this wealth should go back to the States whence it came, as Federal aid to education, for it is in the poorest States that is found the largest proportion of children whose equality and quality of education will determine the future of democracy in America.

4. We believe in the rights of labor as guaranteed by the legislative and administrative program of the Federal Government in recent years, and we favor the continued application of the fundamental principles on which the program is based. We believe that the fair treatment of labor, which includes adequate wage standards and the principle of collective bargaining, are essential to the economic health of the South. We believe that the Government in awarding its contracts should take cognizance of whether the bidder has observed national labor legislation in good faith.

FREIGHT RATES UNEQUAL TARIFF

5. The South has a vital interest in the promotion of economic opportunity throughout the United States and in the freest possible flow of commerce among all sections and regions of the country. The freight rate differentials imposed upon the South constitute a tariff against southern goods as discriminatory as the tariff against the goods of a foreign nation.

Since it is the constitutional responsibility of the Congress to remove all arbitrary barriers and restraints which impede interstate commerce, we favor the passage at the session of the Congress of a bill to amend the Interstate Commerce Act for the purpose of equalizing rates by eliminating any undue or unreasonable preference or advantage to any region, territory, subregion, or subterritory which has the effect of hindering the development of other regions. This measure would benefit the consumers of the entire Nation and is absolutely essential to a balanced economy for the South.

State of the Nation

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

Mr. SPRINGER. Mr. Speaker, in making some observations respecting the "state of the Nation" we find the subject of such discussion to be a very weighty one and the various problems now confronting the people to be veiled in doubt and filled with complex solutions. However, in discussing a very small part of those gigantic problems we must approach them in the light of the present, the age in which we live, and not in the spirit of antiquity, and certainly not in the spirit of the unknown and far-distant future.

The discussion of some of the very important doctrines of this day causes us to look to precedents already established and to analyze the suggested plans in the view of the cause and effect of those "already tried" policies. Therefore it is enlightening to search the record and from that source obtain the present state of our Nation and to ascertain, if possible, where we are and whither we are going.

We have experienced almost 6 years of the "Passion Play" under the New Deal, and the people have reached the point of questioning the things that "are" and they speculate much about the things that "are to be"; the disturbed and confused people really wonder what is next, they wonder what the next tax will be, and they ponder much over the question of their ability to pay it, so great has become the burden upon them.

We vividly recall the accusation of the President, when he said of Mr. Hoover and his administration:

I accuse the present administration of being the greatest spending administration in peace times in our history * * * it is an administration that has piled bureau on bureau, commission on commission * * * bureaus and bureaucrats, commissions and commissioners, have been retained at the expense of the taxpayers.

Yet this administration, under the guiding hand of the President, has so far exceeded the spending of the Hoover administration that the old comparison of the mountain and the mole hill reasonably fits the conditions. And the same comparison reaches the appointment of bureaus and commissions, and the recognition of bureaucrats and commissioners.

Then we heard, again, that same magnetic voice of the President, when he said:

I shall approach the problem of carrying out the plain precept of our party, which is to reduce the cost of current Federal Government operations by 25 percent.

The result following that attractive promise has been the greatest orgy of spending this Nation has ever known. We have witnessed spending of every kind under every guise and pretense. The very foundation of our country is trembling under the weight of the national debt, and the heritage of posterity is encumbered by debt and mortgage of staggering proportions, and the shocking attempt to continue such spending program is ever apparent. Therefore, the people do fear—and they have just cause to fear—their country is at stake.

We quite well recall that on another occasion we heard the voice of the President when he said:

The only thing we have to fear is fear itself.

Not many years ago two bullies of a small town met and decided to determine the supremacy between the two; the fight started, and finally one knocked the other down, jumped upon him, and pummeled him severely—broke his nose, cut his face, split his ear, and almost killed him. Whereupon the fellow who was so completely victorious shouted to his half-dead opponent, saying, "Now tell me you are not afraid of me."

The people of this country have been knocked out by the extravagant waste and spending of this administration. We are standing at the brink of the precipice of national destruction. We are engulfed by debt, by attractive promises, many of which are unfulfilled, by engendered class hatred, and a distorted citizenry. We are afraid, and that fear is not exploited by imagination—it is real fear. The people fear the Nation will not survive if this wild orgy of Federal spending continues.

Let us as a people buckle on the armor of patriotism. Let us join in the crusade for the preservation of American institutions and ideals. Let us build for the children of today who will become the leaders of tomorrow, and continue the fight for sound and economical government, all to the end that our Nation may in the future reflect more gloriously than ever before the ideal cherished that there may be a greater America tomorrow and that the children of the ages may greet their heritage with confidence and with joy.

Development of the White River

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

LETTER TO UNITED STATES ARMY ENGINEERS

Mr. ELLIS. Mr. Speaker, the New Deal has brought to many sections of the country vast major developments that will contribute for all time to the happiness and prosperity

of those people—but not to Arkansas. Arkansas, hardened to discrimination since the Civil War, has stood by, even in an administration more friendly to the South than others of recent years, and has watched without murmur the gigantic long-range development of the Tennessee Valley on her east. She watches today the construction barely across the line on her west of two great flood-control hydroelectric and navigation projects in the Grand and Red Rivers. All these mean lessened flood losses, lower freight rates, cheap electricity, attractive recreational centers, and new industries—to other people but not to mine.

On January 10, 1939, at Harrison, Ark., there was held by the United States Army engineers, under the direction of Lt. Col. Stanley L. Scott, a hearing on the White River to determine, among other things, whether the people favor its development, whether flood-control navigation power dams could be justified, and whether there is an available market for the potential power. One thousand and fifty people, including city, county, State, and Federal officials from all sections of the White River Basin attended. All were anxious for the anticipated construction. None were opposed. Much valuable data was placed in the record.

Mr. Thomas Fitzhugh, chairman of the State utilities commission, hit one of the keys when he stated:

Arkansas now depends on outside resources for electrical power with a half billion kilowatt-hours imported annually.

Furthermore, he said:

Seven thousand miles of lines have just been constructed by rural cooperatives to serve 22,000 farm homes and before a dam could be constructed 50,000 additional farms will be ready for electricity in Arkansas.

And Dr. Blalock of the commission stated:

Our demand for power is growing at the rate of 60,000,000 kilowatt-hours a year.

The demand in Missouri is equally pressing.

Dr. George C. Branner, State geologist, stated:

The development of Arkansas' abundant mineral resources depends upon the production of a cheap power. The processing of bauxite alone would consume 42,152,000 kilowatt-hours a year.

Under leave granted by unanimous consent of the House I include in the RECORD a statement which I submitted by mail at the hearing of the engineers:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 7, 1939.

Lt. Col. S. L. SCOTT,
United States District Engineer,
Hotel Seville, Harrison, Ark.

DEAR COLONEL SCOTT: I regret my inability to be present at the hearing you are holding on January 10 at Harrison to obtain the views of local interests on the advisability of constructing reservoirs in the White River Basin for flood control, power, and other water uses. My interest in seeing a suitable development of this river basin undertaken as soon as possible arises from an exhaustive study of the proposed development over a period of several years, my intimate personal knowledge of the area affected, my firm belief in the material advantages that will accrue to the people of this region, and a full realization of the flood-control and other benefits that will be felt by communities many miles distant from the White River Basin.

FLOOD CONTROL

The White River rises in the Ozark Mountains of northwest Arkansas, flows north into Missouri, and then southeast through Missouri and Arkansas, a total distance of 690 miles before entering the Mississippi River just above the mouth of the Arkansas. It drains a total of 28,000 square miles, or more than two-thirds the amount of the area drained by the celebrated Tennessee River. Seven thousand square miles of this area is in the alluvial valley and constitute the finest farm lands in the world, except for the ever-present flood hazards.

The average annual rainfall in the basin is nearly 4 feet; the average fall of the river above the lowlands is 4 feet to the mile, but in the lowlands it is barely more than one-third of a foot per mile, with the result that the floodwaters frequently come down with tremendous volume and speed and cover the entire alluvial valley, with the loss always running far into the millions of dollars.

At the height of the 1927 flood the White River discharged 440,000 cubic feet of water per second into the Mississippi, and for the period from April 23 to May 5 of that year its discharge averaged over 300,000 cubic feet per second. During the 16 highest floods of the past 50 years the White River has contributed flows that synchronized with the Mississippi floods, ranging from 50,000 cubic feet per second to 440,000 cubic feet per second, and averaged about 160,000 cubic feet per second for those floods. When the levees fail to hold, as is frequently the case, these floodwaters never reach the Mississippi at the mouth of the White but flow behind the levees and inundate vast regions of still other fertile lands. Furthermore, the floods contribute to the disaster all the way down the Mississippi from the mouth of the White to New Orleans, inundating vast other regions in Mississippi, Arkansas, and Louisiana.

During the record flood of 1927 approximately one-fifth of the floodwaters of the Mississippi below the mouth of the White were contributed by the White River.

Effective flood control by these reservoirs would enhance the value of farms thus protected by several million dollars.

I believe that sizeable reservoirs can be constructed in the upper basin of this river at a cost well justified by the benefits that may reasonably be expected. Factors tending to reduce their cost over similar ones being constructed and planned in other sections of the country include: Excellent power sites, good foundations, no highway nor railway relocation, no towns to be moved, and no expensive lands to be acquired in the reservoir areas—for the proposed power sites are all in the mountains.

POWER

More than two billion kilowatt-hours of electricity can be developed annually on the White River and its tributaries without interfering with a systematized program of flood control. At the current rate of electricity in the White River Basin this power would sell for more than $100,000,000 annually.

A cheap power is seriously needed in this region. As reflected by the reports of the Federal Power Commission, the power rate in Arkansas is the third highest in the Nation—only the States of Louisiana and New Hampshire having higher rates. This may be due partly to the fact that, as reflected by the figures of the State utilities commission, more than one-half of the power used in Arkansas annually is imported.

It is my firm belief that with a power rate similar to that now enjoyed in the T. V. A. region the power consumption of this area would double in 12 months. Our rate now is from three to five times higher than in the Tennessee Valley. For instance, 25 kilowatt-hours a month under the T. V. A. retail rates cost 75 cents, while the Arkansas Power & Light Co., which operates in this territory, charges us for 25 kilowatt-hours the sum of $2.50.

Many of our municipalities are now producing their own power because of the exorbitant rates. My town of Bentonville, with a population of 2,500, is one of these. The city of Conway, with a population of 5,000, is another. All of these cities stand ready and anxious to avail themselves of a cheap power from the White River. More than 8,000,000 people live within easy power range of these proposed dams on the Northfork, the Buffalo, and at Wild Cat Shoals, and Table Rock. This area includes several larger cities that likewise are anxious to avail themselves of cheap power from the White. Kansas City, with a population of 500,000, is one of these.

Rural electrification lines are being constructed throughout the region. These cooperatives will use many millions of kilowatt-hours annually, and all are anxious for the low rate. This power can be produced as a byproduct of flood control at around 3 mills per kilowatt-hour.

We have vast mineral deposits in the White River Basin and within power range—lead, zinc, silica, sulphur, phosphate, manganese, iron, commercial clays, coal, limestone, marble, bauxite, and many others, most of which are practically untapped due to the high power rate and high freight rates in this region. With a cheap rate untold millions of kilowatt-hours of this power would be utilized almost immediately in the development of these minerals. A silica plant at Rogers, Ark., for instance, has been forced, because of high prevailing rates, to install equipment recently to generate its own power. Even so, local production costs several times the amount that power could be produced for on the White.

The rougher regions of the Ozarks are covered with hardwoods, the development of which depends largely upon cheap power. The average year-round flow on the several tributaries of the White insure adequate storage for power purposes. Markets for all the power that can be produced on the White River now exist within easy power radius. The sale of power will help repay the cost of the reservoirs and thus reduce the output for flood control, navigation, and recreational benefits.

Furthermore, in line with the recent suggestion of the President of the United States, it is well to observe that this construction would aid materially in overcoming a possible shortage of power in the event of war.

NAVIGATION

The White River can be made navigable as far north as Forsythe, Mo., without interfering with the development of flood control and power. It is already navigable the year around to Newport, Ark., and part of the year to Batesville—thanks to Government locks already constructed. A regulated river flow will aid materially in navigation below the dams.

Many small industries are ready now to avail themselves of water transportation. Batesville, Ark., for instance, is noted for its production of marble and limestone, both of which lend themselves to river transportation. Freight rates in this area are 20 to 70 percent higher than outside the South, and a water rate into this fertile region would aid materially in its development.

RECREATION

The Ozarks and surrounding region have long been recognized as a recreational center, but the construction of vast reservoirs outside of this territory in recent years has diverted the tourists elsewhere. Construction of these reservoirs will not only restore the

tourist trade but will go far toward developing the wonderful recreational advantages.

The White and its tributaries above the alluvial plain are noted for their clear water and splendid fishing. These are benefits which we well may take into consideration in attempting to arrive at the value of this vast improvement.

PUBLIC WORKS

It is well to observe also that there is a vast need for the labor that will be provided in this region by this construction, there having been no major development whatever in this territory during the whole period of New Deal construction.

CONCLUSION

I am convinced that the benefits to be derived from the construction of these dams would many times exceed the cost. I would appreciate it if you would place this letter in the record of your hearing as a brief summary of the reasons prompting me to place my wholehearted support behind the efforts of the people of the White River Basin to obtain prompt recognition of their request for this great development.

Yours sincerely,

CLYDE T. ELLIS,
Member of Congress, Third District, Arkansas.

Spirit of the Seventy-sixth Congress

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1939

Mr. LANDIS. Mr. Speaker, everyone must realize that work relief must exist until we can transfer these people into private industry.

I have received many discouraging letters from the State of Indiana complaining about politics in W. P. A. Many other Congressmen have received complaints from their States.

Before passing the appropriation bill in the House, it was decided to earmark the bill in order to eliminate the abuses in the W. P. A.

Two of the best amendments that passed the House, in my estimation, were:

[1] *Provided further,* That no money herein appropriated shall be used to pay the compensation of any supervisor, foreman, or other official who attempts to influence the political opinions of workers under his direction or supervision.

[2] *Provided,* That no requirement of eligibility for employment under such Emergency Relief Appropriation Act of 1938, as amended, shall be effective which prohibits the employment of persons 65 years of age or over or women with dependent children.

Good amendments that failed to pass the House, in my estimation, were:

[1] *Provided further,* That all employees under the Works Progress Administration shall hereafer be paid weekly.

[2] *Provided further,* That no part of the money herein appropriated shall be expended for the employment of persons not in need of relief.

I voted for the amount asked for by the President because I knew at first hand the condition of the needy in my district. This failing, I next voted for the $725,000,000 appropriation, and it is my sincere hope that this fund will be so administered that not a single man, woman, or child needing relief in our district, State, and Nation will be slighted.

The Rearmament Program and the Budget

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1939

RADIO ADDRESS BY HON. OSCAR YOUNGDAHL, OF MINNESOTA, JANUARY 16, 1939

Mr. KNUTSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following radio address delivered by Hon. OSCAR YOUNGDAHL, of Minnesota, on January 16, 1939:

Ladies and gentlemen of the radio audience, I have been asked to talk to you a few minutes tonight on that part of President Roosevelt's message to the Congress dealing with national defense and on his second message to the Congress dealing specifically with the rearmament program and Budget.

At the very outset of my remarks, may I state that I yield to no man in my insistence that America must have adequate national defense. But America's armament must be adequate for the defense of America, not armaments for the policing of nations 2,000 miles away nor the enforcing of sanctions and boycotts across the seas.

No sooner had the President whipped the country into a frenzy of war hysteria with his message to the Congress than the American people witnessed the beginning of subtle efforts of the administration to keep alive that hysteria.

Ambassadors Kennedy and Bullitt were called in behind closed doors to tell a select few of the situation in Europe and how it menaces America.

If that situation is a menace to the peace and security of America, then these Ambassadors, paid to represent the American people, owe their information to the American people; not to a select group behind locked doors.

If war is imminent in Europe and the possibility of our being drawn into it is strong, then these men owe their advice and counsel to the public.

Why did they give their testimony behind locked doors?

All this secrecy and undercover testimony only served to whip up further frenzy, to write more scare headlines in favor of the President's huge rearmament program.

I doubt that America has ever been freer from danger of attack than today. The totalitarian nations which the President referred to in his address have their hands full at home. They are occupied and will be occupied for many years with their own affairs and haven't the slightest idea of making war upon us or disturbing Latin America.

Right now we have the most powerful Navy we have ever had, and with improvements and additions already authorized it will be 50 percent larger than the Japanese Navy and three times the size of the German Navy.

We are already spending a billion dollars annually for defense—a sum never before equaled in any year of peace.

Our land and air forces today are stronger than ever before during peacetime.

In the last 5 years we have spent $2,000,000,000 on improving and maintaining the Army.

In just a few years our annual expenditure for air defense has doubled.

Mr. Roosevelt's program proposes to start from an already unprecedented expenditure for armaments.

The 552 millions asked for by the President in his special defense budget is only part of the program. The smallest part—if you please.

The President is asking the Congress to appropriate a total of $1,661,558,000 to build up his so-called defense program.

I say to you that is not armament for defense. That is armament for war.

Still, I have no idea that the President intends to wage a war of aggression.

For 6 long years America has watched the executive branch of our Government, aided and abetted by a rubber-stamp Congress, throw billions of dollars around as one would throw peanuts to the squirrels.

They have watched billions and more billions poured into a well to prime a pump that never gave out any water.

They have seen 6 years of spending and spending and always more spending.

And today not only business and industry but the home owner, the small taxpayer, the farmer, and the small merchant is fighting to save his home or his business from the tax collector.

Yet despite a Budget that grows increasingly out of balance, despite a national debt that has already reached undreamed of heights, despite an already staggering tax burden that neither we nor our children can ever pay off, the President wants to continue his mad orgy of spending.

Six years of spending, and 10,000,000 are still unemployed; business is still handicapped and hamstrung at every turn. Six years of spending, and we are still in the depths of the depression.

Nevertheless, the President would keep on spending, pushing us deeper into debt, piling up our tax bills, and postponing the day when America can once more return to work with all her energies and resources because the depression has been left behind.

I believe the President has seized upon American patriotism, upon America's love of democracy, if you please, upon which to build a smoke screen of war hysteria and armament spending to cover up the failures of the administration to provide employment, to hasten recovery, or to add to the prosperity and security of the American people.

Nothing to my mind so completely demonstrated the failure of the New Deal and its policies as the fact that the President in his message to the Congress had no more white rabbits in his top hat; no cotton up his sleeve waiting to be plowed under; no wheat fields hidden under a handkerchief ready to be whisked off the market at the firing of a pistol; no recommendations for new W. P. A.'s with which to play politics.

All the New Deal millions and all the New Deal billions had not put the humpty-dumpty of business revival together again, so Mr. Roosevelt turned his spending program to national defense.

Along with the President's enormous defense-spending program goes his program for industrial mobilization.

Ever since 1932 there has been, and there still is being carried out, a very definite centralization of power in the Chief Executive.

Rights and prerogatives of Congress have been appropriated to the Chief Executive.

Rights and duties of States to provide and care for their own relief problems have been centralized in bureaucracies under the direction of the Chief Executive.

Even the right of the judicial branch of Government has been challenged and its decisions questioned—yes, even its right to exist as a separate and distinct branch of Government attacked.

The President, in public addresses, has demanded that the three branches of Government—executive, legislative, and judicial—should pull together like three plow horses. But such was never the intention of the democratic form of government. The three branches of Government were set up for the express purpose of acting as balance and check, each upon the other. Destroy that and you have destroyed democratic government.

Since 1932 we have witnessed the greatest regimentation of individuals that America has ever seen. True, beside the regimentation practices of the dictators of Europe it is seemingly slight, but to liberty-loving America it is a warning of what might come.

Under the industrial mobilization plan of the present administration the declaration of war, or a state of war, would create overnight a Chief Executive with all the power to regiment industry that any dictator of Europe holds today.

I am absolutely opposed to the granting of any further powers to the Chief Executive. I am absolutely opposed and will fight to the end any further attempts to centralize government in the hands of the Chief Executive or any other one man or small group of men.

Be it for regular peacetime administration of our Government or for wartime emergency, I am opposed to any further centralization of power.

Even under the disguise of patriotic national defense, such a program must be closely scrutinized.

But with all his demands for defense, for great armies and navies and flying forces, the President fails to say one word about defense against the enemies within our ranks.

Billions for defense against an imaginary enemy 2,000 miles away or against the radio's conception of an invasion from Mars but not one penny for defense against those enemies who are sapping at the very blood stream of America with their propaganda and their insidious infiltration into the very Government itself.

With all the billions asked for a defense against some foreign invader, why not a few thousand to drag out into the open the efforts of communism, fascism, nazi-ism, and all the other foreign "isms" that are a far more real and immediate danger to the democratic form of government in this country than all the imaginary threats of foreign powers.

There is before this Congress a bill appropriating $150,000 to continue the investigations of the so-called Dies committee. But the President's defense program, all-embracing as it is, with its cost of a billion and a half dollars, fails to provide one penny for a defense against these known and very real enemies not only of America but all that America loves and holds dear.

Mr. Roosevelt's newly appointed Attorney General lost no time in announcing that he proposed to launch an investigation into the same subjects being covered by the Dies committee.

The administration would welcome such an investigation by the Attorney General's office. Such an investigation would cover only subjects determined by the administration. Evidence presented in such an investigation would be such as the administration desired. And above all, evidence made public and given to the American people, would be only such evidence as the Attorney General's office and the administration choose to be made public. The administration has no appetite for further investigation by the Dies committee.

Let's strip this smoke screen of hysteria and secrecy from the defense program.

If America is in danger of being embroiled in a world conflict, let's bring that evidence out into the open.

If totalitarian government contemplates a war of aggression against America or Latin America, let's give America the evidence.

Let America unite in putting an end to these waves of war hysteria and propaganda. Let's keep our feet on the ground and refuse to be led into any extravagant spending scheme, just for the sake of spending. Public opinion, and public opinion alone can stop this spending. America's demand, made known to Congress, can stop such extravagance.

If America needs bigger and better air forces to equip her for defense, let's build them. But let the building be for defense not for war.

If calm and deliberate study, upon advice from the chiefs of the Army and Navy, not without their knowledge, show the need of improved land-sea forces, then let's improve them.

But also if investigations show, as they have shown, enemies within our own ranks, enjoying the privileges and the rights of American residence while they attempt to tear down our democracy, then just as surely let's get rid of them.

Let's build for defense. Defense of America from any enemy of any hue or any brand.

Let's have adequate national defense of the right kind.

Let's have adequate national defense to protect America and the American way.

Thank you.

Dedication of Pennsylvania Farm Show Arena

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

RADIO ADDRESS BY HON. J. BUELL SNYDER, OF PENNSYLVANIA, AT HARRISBURG, PA., JANUARY 16, 1939

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me at the dedication of the Pennsylvania Farm Show Arena, Harrisburg, Pa., Monday evening, January 16, 1939. This arena is the largest building the United States has dedicated to agricultural pursuits—larger than Madison Square Garden in New York. Last year 405,000 people attended the farm show during the third week in January and it is expected that this week will bring together more than half a million Pennsylvanians to participate in the largest farm show in the United States:

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is, indeed, an honor and a privilege to participate in the program dedicating to agricultural pursuits this magnificent building.

A state or a nation is prosperous only in proportion to the prosperity of those who till the soil. The great American Commoner said, "Burn down your cities and they will spring up as if by magic. But destroy your farms and grass will grow on your city streets."

My fellow Pennsylvanians, the erection of this stately edifice is sufficient proof that grass will not grow on the city streets in Pennsylvania because this building is concrete evidence of the fact that the farmers of Pennsylvania are going to build better farms for the generations yet to come, and thus make Pennsylvania a better place in which to live.

I think it is only fitting at the outset that we pay tribute to all those who in any way contributed of their services in making the erection of this building possible. To the Governor of the Commonwealth, George H. Earle, and his cabinet; to the farm units that really supported the idea; to the State legislature, and especially to the genial and efficient, hard-working secretary of agriculture, J. Hansell French; to these the people of Pennsylvania owe a deep debt of gratitude.

For some reason most people find it hard to realize that Pennsylvania is one of the Nation's great farm States. That is true, not only throughout the country but even among many of us right here at home.

Probably the great richness of the State's other resources—our coal and our oil, our steel mills to the west, our great centers of general manufacturing and commerce in the east—is the reason why Pennsylvania's farm industry has been overshadowed.

Four or five years ago I got together the important statistics on our State's agriculture and had the material inserted in the CONGRESSIONAL RECORD. A colleague from Kansas later stopped me in the hall to express his amazement. He said he never had realized that Pennsylvania was one of the leaders in agriculture and had a diversity of farming enterprises that far exceeded those of Kansas. The picture has not changed since then. A few days ago the United States Department of Agriculture issued figures of farm income for the first 11 months of 1938. The income for Pennsylvania was almost as big as that for Kansas—$219,000,000, as compared with $229,000,000.

Fortunately, the importance of Pennsylvania agriculture is better known than it used to be. We might take a minute or two to review some of the facts on Pennsylvania's place in the national farm picture. Most of this information is based on official figures for the year 1937.

Take wheat, one of this country's great crops. We here are far removed from what is spoken of as the Wheat Belt. Wheat is grown in 40 States, and Pennsylvania ranks thirteenth, with a 1937 production of twenty-three and one-half million bushels. It is one of the important wheat States of the country.

All of the 48 States grow corn. In 1937 Pennsylvania ranked twelfth, with a production of nearly 63,000,000 bushels. As for some of the other grains, our State was tenth in oats, eighth in rye, and second in buckwheat.

Pennsylvania also is well removed from what generally is regarded as the Tobacco Belt, yet of the 19 States which grow tobacco, Pennsylvania ranks eighth, with nearly 29,000,000 pounds. In the same year—1937—our State was fourth in commercial production of apples, and fifth in potatoes with a production of more than 25,000,000 bushels.

Potatoes, of course, are another of the country's important cash crops, and in potatoes the production figures don't tell the whole story of Pennsylvania's ranking. Maine is famous as a potato State, and it is true that while Pennsylvania farmers were producing about 25,000,000 bushels of potatoes, their neighbors from Down East were raising 48,000,000 bushels, but our farm price for potatoes that year averaged about twice the Maine price, so that the value of our potato crop, which was around $15,000,000, was half a million dollars larger than the farm value of the Maine crop.

Pennsylvania farmers are active along practically all lines. In 1936 Pennsylvania was ninth in the number of dairy cows, with 870,000 on farms, and ranked sixth in milk production, with over four and one-half billion pounds. In other words, the quality of Pennsylvania dairy herds is well above the national average.

During 1937 Pennsylvania farmers received nearly $260,000,000 through the sale of principal farm products and Government payments. Those payments, incidentally, amounted to less than two and one-half million dollars of the total. Compared with the farm incomes of the other States that year, Pennsylvania ranked thirteenth, not a bad showing for a State which many people think of as chiefly industrial, especially when we remember that many of the States that were below us in farm income were in what we think of as the real Farm Belt.

We must maintain our position as a great farm State, and go ahead and improve the situation of the thousands of families who make farming their way of life.

The farmers in Pennsylvania have made a fine record through hard work and through the use of the best farming practices. Sound crop rotations were used here almost from the beginning, in contrast to the wasteful methods which have been followed in many other regions. As a result, Pennsylvania agriculture is on a firm basis today; and the soil, although far too much has washed away, is better preserved than the farm-land soil of many other States.

These accomplishments have been made through industry and through a progressive attitude. I don't believe there is a farmer here who is using exactly the same kind of equipment today that he used 20 years ago, or even 10. In this age of rapid change farmers need the same progressive attitude in working with each other that they need in cultivating their fields.

As an example of the new, cooperative spirit, we do not need to look further than this very building which we have come to dedicate—the largest farm show building in the United States, a building to be used by all farmers for the general benefit of the State's agriculture. I know that I am speaking for everyone here in saying that this farm show building is a source of pride to every Pennsylvanian.

I believe that this building is important not only for itself, but as a symbol of a growing desire and willingness of farmers to work together for their common good and for the welfare of the whole Nation.

Today, as we look around us at tangible proof of State cooperation with Pennsylvania farmers, I want to discuss with you some of the aspects of Federal cooperation and its part in the development of agriculture in our State.

Federal cooperation, of course, has been going on for a long time, so long that we are apt to take many of the older phases for granted. Through land-grant colleges and other agencies, the United States Department of Agriculture for generations has worked with Pennsylvania farmers to work out better farming methods, to develop better strains of plants and livestock, and to study and prevent plant and animal diseases.

Later the Bureau of Agricultural Economics and other agencies began to supply valuable information on farmers' crops and markets. These new services were the answers to a new need for help in marketing, which farmers or local groups of farmers were not able to supply for themselves. Then the Extension Service began its cooperative work along nearly every line of farming and farm life. This also filled a new need. In the meantime, the older services continued for American farmers still needed to know more about the science of production, and no one group, not even a State-wide group, had enough resources to do all of the job alone.

In recent years a whole new group of services has been added. Roughly we might call them the action agencies in contrast to the older research and teaching agencies. They include the Agricultural Adjustment Administration, the Soil Conservation Service, and the Farm Security Administration. Each of these agencies, and the other new ones too, were answers to new needs which had been developing for years but which many people had not noticed until the years following the war.

Agriculture became more and more unbalanced as we lost many of our foreign markets, yet kept on growing as much as we had in the past. Great surpluses piled up and farm prices went down. Interest rates did not go down though, and neither did the prices of most of the things farmers had to buy. More and more families lost their farms through foreclosure. Many of those who held out were able to buy fewer and fewer of the things they needed. For several years this serious depression seemed to affect only farmers, but by 1932 the whole Nation was in the grip of a depression, and one of the principal causes was the fact that so few farmers had the money to buy manufactured goods. At the same time tenancy increased, and families with the natural ability to take care of themselves were knocked so flat that they were not able to make a fresh start without assistance. Also, erosion by wind and water each year carried away more and more good farm soil. Accelerated erosion, resulting from clearing of forests and tilling of land, had, of course, been a problem ever since cultivation began, but the rate of loss increased as low prices forced farmers to put more and more land in cash crops and deprived them of money they needed to care for their land.

Now, some of you may ask what all that had to do with Pennsylvania. With our balanced agriculture and large amount of pasture land, we have taken better care of our soil than many other States; we are not a one-crop region with great acreages of surplus corn, cotton, or wheat, and tenancy here never has been the problem that it is farther south. But if we look back to the early 1930's, I believe we can remember that most of us felt the effect of low incomes to an uncomfortable degree and that many of our farmers also shared in the need for security and soil conservation. In regard to prices, it was only natural that our wheat and corn and dairy farmers felt the effects of large surpluses in other areas, even though we ourselves were not responsible for the major part of those surpluses.

Beginning in 1933, through the new services of the Department of Agriculture, began the job of helping farmers bring a new balance to agriculture and to put farm land in order. I am glad to report that as your Representative in Congress I have had some part in making the new tools which farmers acting together need just as much as individual farmers need the most up-to-date farm equipment.

In so doing I have directly served the interests of the Commonwealth of Pennsylvania as well as of the American people as a whole. The world we live in has become so complex, and events move so fast, that it is practically impossible for one man, or one State, to go his own way and work out his own salvation. By this I don't mean at all that hard work and skill and character aren't needed to bring success in farming just as in any other job. They always have counted the most and always will. But this present task of ours—that of bringing equality to agriculture, so that agriculture and capital and labor can go ahead to make our country a better place to live in—is such a large one that it requires the best efforts not only of individuals but of people working together in county, State, and National groups. In Pennsylvania, as in other States, Federal funds, and the technical assistance of Department of Agriculture agencies, can't do the whole job by any means. They are just one contribution to a piece of work that will take all the ingenuity and cooperation and patience that we are capable of. With constant application of effort we may be able to make the many adjustments that we need if we are to pass on to our children a soil as rich as that handed down to us and to assure farmers of a fair share of the national income.

Federal cooperation is by no means the only factor; it is an important factor. In every case the Federal Government works with the State agencies and does not step in to do any independent job. Under the direction of Secretary Henry A. Wallace, the ablest Secretary that ever filled this office, the Department of Agriculture has continued and improved all of the older services and has developed the new ones of which we have been speaking.

Suppose we take a brief glance at the extent and nature of Federal cooperation with Pennsylvania agriculture in recent years. In terms of money, expenditures of the Department of Agriculture for work in Pennsylvania during the 5 years from 1934 through 1938 totaled about $106,000,000. The amount of the annual expenditures ranged from about $10,500,000 in 1934 to more than $29,000,000 in 1938.

Suppose we take 1938 as an example. That was the year Federal expenditures totaled about $29,000,000. Over eighteen million of that total represented Federal-aid grants for road construction and maintenance in Pennsylvania, including elimination of grade crossings. Now, highways that link them with their markets are important to farmers, and since the beginning the Department of Agriculture has administered the granting of Federal aid to States. But since roads are increasingly important to all of our State's population, and since the other activities of the Department of Agriculture affect farmers more exclusively, suppose we concentrate on the uses to which the rest of the money—amounting to about $10,500,000—was put.

More than $600,000 represented Extension Service expenditures in cooperation with the Pennsylvania State College. About one hundred and ninety thousand was used for payments to the Pennsylvania Agriculture Experiment Station. More than $800,000 was used in valuable work of the Bureau of Animal Industry; the greater part going toward elimination of tuberculosis and Bang's disease in cattle and in experiments in controlling diseases of cattle.

The work of the Forest Service, including reforestation, improvement of forests, and fire prevention, represented approximately $133,000 of the total expenditure. The activities of the Soil Conservation Service, including research in erosion control, demonstration projects, and watershed and conservation surveys represented well over $700,000. Expenditures of the Triple A, in administering the agricultural conservation program in Pennsylvania, amounted to $3,700,000. The work of the Farm Security Administration, so ably managed by our own Carson F. Mertz, in making rehabilitation loans and grants and otherwise aiding farm families in distressed circumstances, accounted for over a million dollars.

These projects, and the others, represented the Federal Government's contribution to Pennsylvania agriculture. The projects were carried on in cooperation with State and local groups, and in nearly every instance were administered by local people.

I wish I had time to talk with you about the details of this work. I believe I will at least take time to say just a little about what is being done by two of the newer agencies—the Soil Conservation Service and the Triple A.

THE TRIPLE-A PROGRAM IN PENNSYLVANIA

The agricultural conservation program, administered nationally by the Triple A and locally by State, county, and community agricultural conservation committees, aims at helping farmers improve and conserve their soil and at helping them bring better balance into the supply of cash crops. I know that most of you are familiar with how that program works—by voluntary cooperation with individual farmers who are making a living from their land. The national program, as adapted by the State committee to fit particular needs in Pennsylvania, offers a schedule of soil-building practices, such as use of lime on hay and pasture land, new seedings of grasses and legumes, planting of forest trees, and the like. Payments sufficient to cover part of the cost of using the practices are offered to farmers who carry them out properly. Payments also are offered for staying within acreage allotments of certain soil-depleting cash crops, such as tobacco and potatoes. The purpose of this part of the program is to stabilize acreage, and the payments represent the possible sacrifice involved in foregoing surplus acreage of cash crops. Each farmer who participates can choose the soil-building practices which he particularly wants to carry out on his farm.

This program began in 1936, but the results already can be seen—better hay and pastures and fewer slopes exposed to the washing which results when too steep land is in clean-tilled crops. It is an encouraging sign to see the use which already is being made of this newest tool for improving farm land and farm income—to watch thousands of Pennsylvania farmers taking hold of the program and actually making it work on the land. Of course, like other of the new aspects of the national farm program, I cannot claim, and do not wish to claim, that it has been 100 percent perfect. The new tools still are crude. Some are about 90 percent effective, some perhaps only about 50 percent efficient. But something real was undertaken at a time when new action was necessary, and under intelligent national leadership that work is becoming more and more effective.

In 1937, for instance, which is the last year for which figures are complete, about 56,000 Pennsylvania farmers took part in the Triple A program. Among other things accomplished with the aid of the program, they applied half a million tons of lime to their hay land and pasture, and over 55,000 tons of superphosphate. They established new seedings of legumes on half a million acres, and did other basic work to put their farm lands in better order.

The Triple A conservation program has been developed to apply to all active farm land. It is not primarily concerned with the specific problem of checking soil erosion. That latter job is the work of the Soil Conservation Service. Here is a brief survey of what that Service is doing.

THE SOIL CONSERVATION SERVICE IN PENNSYLVANIA

Activities of the soil-conservation service in Pennsylvania include the conduct of five watershed demonstration projects, the supervision of seven C. C. C. camps assigned to soil-conservation activity, the preparation of run-off and water-flow retardation surveys to provide basic flood-control information, the conduct of research, the operation of a nursery for the propagation of erosion-resistant vegetation, and the purchase and development of submarginal lands.

Demonstrations

Demonstration projects of the service include all or parts of the following watersheds: (1) Crooked Creek in Indiana and Armstrong Counties; (2) the West Branch of Octoraro Creek in Lancaster County; (3) Little Antietam Creek in Franklin County; (4) Beaver Run in Westmoreland County; and (5) the Sacony-Kistler area in Berks and Lehigh Counties.

The seven C. C. C. camps operating under service supervision are located in Jefferson, Westmoreland, Franklin, Clarion, Indiana, York, and Lancaster Counties.

Altogether, approximately 1,500 Pennsylvania farmers whose holdings and operations extend over more than 160,000 acres are cooperating with the Service in demonstrating modern soil- and water-conservation measures in the watershed projects and areas adjacent to C. C. C. camps. As provided for in cooperative agreements between these farmers and the Service, some 20,000 acres are now being tilled on the contour as a means of retarding surface water run-off and controlling soil erosion. Some 15,000 acres have been strip-cropped and soil-conserving rotations established on almost 60,000 acres. Approximately 15,000,000 trees have been planted as a means of safeguarding 14,000 acres of steep, rough, or broken land from erosion. Other activities include the control of hundreds of active gullies, the retirement of more than 14,000 acres of cultivated land to uses less conducive to erosion, and the treatment of approximately 25,000 acres of pasture.

Soil-conservation districts

The most encouraging aspect of the demonstration program is shown by the manner in which Pennsylvania farmers have begun to organize for positive action in the field of soil and water conservation.

Under authority of a State soil-conservation district law enacted in 1937, farmers in four large watersheds have voted in favor of forming local districts for the purpose of conducting cooperative attacks on soil erosion and other evils which arise from the use of land.

Such districts, organized on a purely democratic basis involving the use of petition and referendum, reflect a definite concern on the part of farmers themselves and also reflect their willingness to take active part in cooperative programs of soil defense. The way in which farmers have registered their approval of this type of action is significant.

In Clarion County, farmers voted 399 to 14 in favor of forming the Clarion soil-conservation district covering approximately 385,000 acres. In Lancaster County, the vote was 238 to 97 in favor of a 294,000-acre district. In Indiana and Cambria Counties, only 53 out of the 258 farmers voting, opposed formation of the 200,000-acre Blacklick Creek soil-conservation district. All the above districts have received certificates of organization from the Secretary of State and will undoubtedly receive technical and other assistance from the Soil Conservation Service.

Another large district in York County is in the final stage of organization at the present time. Farmers have voted overwhelmingly in favor of its creation. Local supervisors will soon be selected. Farmers in Jefferson County are now preparing to vote on a proposed soil-conservation district there.

Research

At State College, the Service in cooperation with the Pennsylvania Agricultural College, is conducting widespread investigations into various aspects of the soil-erosion problem and developing practical control measures adapted to particular conditions of the State and region. The Service is also conducting intensive studies into the economic aspects of soil conservation in search of those techniques which offer the greatest degree of physical protection and at the same time provide adequately for economic needs. This type of research assures the economic practicability of erosion-control programs and at the same time provides basic information regarding the value of soil conservation as a means of insuring agricultural stability.

Nursery activities

To supply adequate planting materials for use in watershed project areas and C. C. C. camp areas, the Service operates a nursery in Carter County with headquarters at Milesburg. Nursery activities include tree-stock production, the quantity collection of grass, tree, and shrub seed, and the assembly and observation of all types of plants, both native and exotic, which might have superior merit for erosion control.

Survey activities

In Pennsylvania, as in other States, all field activities of the Service are preceded by a thorough examination of the physical factors which might influence the success or failure of field programs. In the watershed and C. C. C. camp demonstration areas complete surveys of areas are made prior to the start of active operations. Subsequently detailed surveys setting forth the kinds of soil, topography, drainage features, erosion conditions, current land use, and other physical factors are prepared for each cooperating farm.

In addition to surveys of this type the Service in cooperation with the Bureau of Agricultural Economics and the Forest Service, with offices in Somerset, is making a thorough examination of the large Youghiogheny watershed in southwestern Pennsylvania to determine what part upstream waterflow retardation and soil-erosion prevention can be expected to play in minimizing downstream flood crests. Information obtained through this and other similar surveys will be used as the basis for making flood-control recommendations. Such survey data will also be made available to State and local groups engaged in flood-control activities. Preliminary surveys relating directly to the problem of flood control in Pennsylvania are also under way on parts of the Susquehanna and Allegheny watersheds. A similar survey will be started soon on the Codorus Creek watershed in York County.

Purchase and development of submarginal land

Over considerable areas in Pennsylvania the use of submarginal land for certain types of agriculture constitutes a hazard to adjacent good land, increases the burden of public responsibility, gives rise to high costs of local government, tends to lower living standards, increases flood dangers, and often leads to the ultimate ruin of areas that could be retained as community and State assets through proper land use.

To correct this maladjustment the Soil Conservation Service, in cooperation with other Federal and State agencies, is directing a coordinated land utilization program involving the purchase and development of submarginal land areas. Two projects of this kind, one involving parts of Bradford, Tioga, Perry, and Franklin Counties, and the other involving parts of Huntington and Bedford Counties, are now under way in Pennsylvania. For the most part, the submarginal tracts purchased are being restored to forest cover.

In talking about the uses which are being made of Agriculture Department funds in Pennsylvania, we have been talking in terms of the figures for the 1938 fiscal year—that is, the year which closed last June 30. For the most part, the break-down of funds in the 1939 year would be about the same, except for possible new activities. I want to mention at least two new phases of the work which have taken shape recently. One is Federal crop insurance for wheat, which will begin with the 1939 crop. The other is the regional

laboratory which is to be built in the Philadelphia area. It is one of the four experimental centers provided for in the Agricultural Adjustment Act of 1938 for the benefit of farmers in all parts of the country. The laboratory in Philadelphia is to be the research center for the Northeast.

Conditions Affecting Producers of Oils and Fats

EXTENSION OF REMARKS
OF
HON. SAM HOBBS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1939

Mr. HOBBS. Mr. Speaker, at this time I wish to ask the attention of my colleagues in the House, particularly those representing the districts in which cotton, corn, peanuts, swine, and cattle are important crops, to the present serious condition of the producers of the oils and fats from these sources. This is an important branch of agriculture, and it is in critical condition due to low prices. The figures show that a larger part of our population is engaged in the production of oils and fats than in any other industry.

The prices of cottonseed and cottonseed oil concern every farmer in the district I have the honor to represent and in practically every district in the Cotton Belt. These prices are so low and remain so low that grave concern has become prevalent among the producers and the businessmen who look to cottonseed for their early fall business.

Yesterday an outstanding businessman of the South told me that, because of conditions which are within the reach of corrective measures, the farmers of the South received at least $15 a ton less for their cottonseed last fall than it should have brought.

This, I am sure, is a fact. It has cut down the volume of business in every city, town, and village in the Cotton States. The money from cottonseed is the lifeblood of early fall business in the cotton country; $15 a ton taken out of the cotton farmer's income means no shoes, no new clothes, a lower living standard—in many cases no normal business, much unemployment, and deprivation.

There are 231,176 cotton growers in Alabama, for instance. Each one of these should have received practically twice what he did get for his cottonseed. Conditions in this industry are responsible. I am talking about conditions, not about individuals.

Oilseeds, vegetable oils, animal oils, and fats are not surplus crops in this country. They are among our most important farm products, and there are not enough of them produced to supply our domestic requirements, either for food or for industrial uses. We imported over 2,000,000,000 pounds of fats and oils in the last year of record. If we had great surpluses of these products, this would be a different story.

Our Government is doing something about the problem of surpluses.

But these oil crops are not surplus crops. Yet the prices paid for them leave the producers in distress—worse off this winter than should be permitted to continue. This distressed price is not limited to cottonseed and cotton oil. It extends to other fats and oils all along the line.

We use in factory production of oils products for food and for industry, in the United States every year from four and one-half to five billion pounds of these products. In 1937 the exact figures were 4,964,000,000 pounds. This does not include butter nor the oils used in liquid form as salad or cooking oils which have not been processed after the first production. This is a very large, a Nation-wide, industry.

But, note this carefully, of this enormous usage we produce in the United States everything included, only from three to three and a half billion pounds of oils used in the factories. The census report of factory consumption in 1937 shows the use of 1,686,000,000 pounds of foreign oils. In that year we imported much more than that quantity.

With this shortage in domestic production, in view of all our land, labor, and capital available to produce them, I assert without reservation, first, that we have been neglecting important agricultural opportunities; and, second, that our policy is wrong when we permit, as we now do, the volume of imports to so depress our domestic markets that our cotton farmers can be paid for their cottonseed a price which is at least $15 a ton less than a fair price for that cottonseed. This meant this season $15 a ton on one average crop of probably 500,000 tons of cottonseed in Alabama alone, or $7,500,000.

You may ask why this figure of $15 a ton is set as the measure of this loss. I do not know how my informant figured it, but he is one who knows. However, I can check it from some official figures. In 1934 the average price of cottonseed in Alabama was $34 a ton. I feel sure that this last season it was not over $19 a ton. Oil made from the 1934 crop averaged about 10 cents a pound. Oil today is down around 6 cents a pound. In other years the discrepancy is even greater.

A major cause of this present situation is clearly excessive competitive imports. And cottonseed is only one of many domestic products which are suffering.

While we were using 1,686,000,000 pounds of foreign oils in 1937—I quote 1937 figures because they are the last full year available—we were importing 1,755,000,000 pounds of manufactured oils and in addition 816,000,000 pounds of oil-bearing seeds, not including flaxseed, which alone totaled over one and one-half billion pounds. We imported over a billion pounds that were not needed and not used.

This has resulted in large stocks of cheap imports. These large imports—which might have been prevented—these cheap prices of imports which are within our control through action that can be taken in this Congress, seem to be the real cause of this price depression in all domestic oils and fats. Alabama's loss of $7,000,000 within the last 4 months is only one of the drops in this bucket.

I hope to discuss this matter in more detail in the near future and from time to time. I do not think we should sit here and do nothing while our cotton and peanut growers and the cattle and swine farmers of this country suffer from 6-cent cottonseed oil, 5-cent tallow, and 6-cent lard. The problem is not a surplus problem. It is a problem of turning our markets over to imports which rob our farmers of their birthright—fair prices and reasonable prosperity.

John Nance Garner

EXTENSION OF REMARKS
OF
HON. MILTON H. WEST
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1939

ADDRESS BY HON. ROY MILLER, OF CORPUS CHRISTI, TEXAS, DELIVERED AT DETROIT, TEXAS, DECEMBER 6, 1938

Mr. WEST. Mr. Speaker, it is my proud privilege to serve a district which for many years was represented in the Congress by a great Texan and a great American, who is now Vice President of the United States. I regard it as no overstatement of the facts to say that no living American has to his credit a finer or more enviable record of distinguished, constructive, and truly patriotic public service than JOHN NANCE GARNER.

In order that Members of the Congress and the American people as well may have an opportunity to know more about this great American, his typically American background, his interesting career, his plain, simple, practical political philosophy, with permission of the House I include in my remarks an address delivered recently at the Vice President's birthplace in Red River County, Tex., by Hon. Roy Miller, of

Corpus Christi, a lifelong personal friend of Mr. GARNER and a well-known Democratic leader of our State.

The address is as follows:

Mr. Chairman and friends, I am deeply sensible of the great honor conferred upon me by your invitation to participate in this remarkable and unusual assembly. JOHN NANCE GARNER, the Vice President of the United States, in whose honor we are here, has been my intimate and personal friend for more than a quarter of a century. I first met him when I was a youthful newspaper editor and he a fledgling Member of Congress. A mutual interest, the progress and development of a vast but sparsely populated area which he represented in the Congress of the United States, brought us together in an intimate relationship which through all the years has been to me a priceless possession. I have watched him grow from a young, green Congressman, humorously dubbed the Chaparral Statesman, into the full stature of one of America's greatest statesmen of all time.

It is therefore not only a personal pleasure but a deeply appreciated privilige to be permitted to join with his friends and neighbors of earlier years in paying to him this tribute of respect, admiration, and affection.

There is much that can and doubtless will be said about JOHN GARNER before this meeting adjourns and its purpose appropriately proclaimed in written resolution. At the outset, however, it should be made entirely clear, and with all possible emphasis so that the world may know, that JOHN GARNER is not now and never will be an active candidate for the Presidency of the United States. I assume to make this statement because I think I know the thoughts and motives which actuate him at this very moment. He seeks neither position, place, power, nor influence. He desires only to be of service to his country, to his party, and to his fellow man. His motives and his objectives are solely and purely patriotic. Knowing him as I do, however, I have every confidence that he, as long as he lives, will never fail or refuse to accept any call to duty which may come to him from his party or his country.

No man who would become an active candidate for the Presidency of the United States, in my opinion, would be worthy of it. It is the most exalted office in all the world. While men with all propriety may seek positions of minor trust, the office of President of the United States, the greatest, richest, and most powerful Nation in all the world, should seek the man.

It is, therefore, entirely fitting and proper and within our rights as American citizens that we who know him well and have such admiration for and confidence in his superlative talents, should here today direct the attention of our fellow citizens to the outstanding qualifications of this great American for the high place of President of the United States. In doing so, we utter no word of criticism or disparagement of any other man. We offer no complaint concerning the public acts or official record of anyone. We do, however, plant our feet firmly upon Democratic and American tradition in respect to terms of service. We believe devoutly that the future safety of the Republic depends upon our adherence to the old landmarks in precept as well as in tradition. Therefore, recognizing the responsibility resting upon the great Democratic Party to select one who in 1940 shall carry forward to greater triumphs the victorious banner of a militant democracy, we say proudly to the American democracy and to the country that in our humble judgment JOHN NANCE GARNER is the best qualified American to succeed Franklin D. Roosevelt as the President of the United States.

Time does not permit a complete cataloging of the many virtues and qualifications of our candidate. His long record of public service speaks for itself. For nearly 40 years he has devoted his unusual talents almost exclusively to the service of his community, his State, and his Nation. From county judge of Uvalde County as a young man in his early twenties, through a two-term period of conspicuous service in our State legislature, through 30 years as a Member of the Congress, including the Speakership of that body, through more than 6 years as Vice President of the United States, JOHN GARNER'S record of public service is without blot or stain, a matchless record seldom equaled and never surpassed in the annals of American history.

What are the essential and basic attributes of the splendid character of this remarkable man? If I should be asked to appraise them I would place first on the list his passionate patriotism for America. In all of my intimate associations with him for more than a quarter of a century, I have never known JOHN GARNER to perform a public act or cast a vote which he did not think was in the interest of the American people. Doubtless you will recall the intimate relationship which existed for so many years between JOHN GARNER and the late Nick Longworth, onetime Republican leader and Speaker of the House of Representatives. From the standpoint of background, environment, social tastes, and political philosophy there was little in common between these remarkable men, and yet they were both great patriots and that was the tie that bound them in intimate friendship. On one occasion, after he and I had been visiting with Mr. GARNER for some time, Nick Longworth expressed to me his feelings about his friend "Jack," as he called him. He said, "As you know, about 90 percent of the business of Congress is nonpartisan and nonpolitical. Of course, occasionally we have to create a political diversion for home consumption, but when it comes to a question involving the welfare of the American people there is no man living whose judgment I would rather accept than that of JOHN GARNER."

This, of course, is high praise, but coming from a great leader of another great political party, it represents and typifies the high regard in which JOHN GARNER, because of his passionate devotion to the public weal, has always been held by his colleagues in Congress, regardless of party, for more than 30 years.

Next on the list I would place honesty among JOHN GARNER'S outstanding characteristics. And it is not just the ordinary kind of honesty. It is the rugged, spontaneous type. Many times have I been present in his office when individuals or committees, advocating or sponsoring this cause or that, would call on him to ask his support. While other Members might follow the easy course by promising "careful consideration" or remain noncommittal, not so with JOHN GARNER. He always states his views frankly and openly and no one ever called on him for an expression of his opinion and left without knowing exactly where he stood. And he says "no" just as easily as, and possibly more forcefully than, he says "yes." He does it courageously, fearlessly, and without regard to political or personal consequences.

There are many other things about JOHN GARNER'S remarkable make-up which might be cataloged. He is, of course, loyal first, last, and all the time; loyal to his convictions, loyal to his party, loyal to his friends, and loyal to his country. Loyalty, indeed, with him is but a synonym for patriotism, and his patriotism is in no sense partisan. I do not know that he has ever been called upon to choose between party and country, but if that time should ever come the country may rest assured that it will take precedence over any party or political consideration.

One, if not the most remarkable, of Mr. GARNER'S remarkable talents is his quick and keen insight into public questions and public problems. Probably no man in America knows more about his Government than does he. His long years of service as a member of the Ways and Means Committee has made him a master of revenue, tariff, and taxation. His gift of leadership is innate and natural. He is probably the most expert parliamentarian that ever served in either branch of the Congress. A fast thinker and a hard hitter, he has had few equals and no superiors in debate on the floor of Congress.

The only question which has ever been raised concerning JOHN GARNER'S qualifications to fill the high office of the President of the United States has been in the matter of his age. Well, he did celebrate the sixty-ninth anniversary of his birth only a few days ago. And yet he possesses all of the mental and physical vigor of men 20 or more years his junior. Everyone knows that age is not a question of years but purely a personal matter. Today JOHN GARNER is at the peak of his mental and physical vitality and, unless all signs fail, will continue to be an active factor in the life of America for many years to come.

Sometimes I think the time has definitely arrived in America when important positions of trust and responsibility should be placed exclusively in the hands of the elders. There is no substitute, either in public or private life, for experience, and experience, of course, comes only with years. As a matter of fact, the only thing that is old about JOHN GARNER is some of his political philosophy. He still believes in the old-fashioned virtues of economy, thrift, and self-reliance. In other words, he believes in the old-fashioned, fundamental principles of democracy, and no man in America, in both his public and private life, exemplifies those principles to such a degree as does this great man. While achieving high place politically, he has made substantial success of his private life, and it is his proud boast that he owes no human being a thin dime. He believes in the pay-as-you-go system, and what a blessing it would be if that system could be applied to America today.

Lest I be misunderstood, let me say here, with all of the emphasis I can command, that JOHN GARNER is no reactionary in his political philosophy. Indeed, he is not even a conservative, if the term should be applied with the meaning with which it was clothed in years gone by. JOHN GARNER is a liberal and a great liberal. He was a liberal Democrat practicing liberalism many years before some of the most vocal present-day sponsors of liberalism were even born. But there is no tinge or taint of radicalism in the liberalism of JOHN GARNER. His liberalism is that which would guarantee to every American citizen the right and opportunity to work out his or her salvation with the least possible interference upon the part of the Government. Therefore, he believes in all necessary legislation and regulation to protect the weak against the strong, the poor against the rich, the owner of property against those who would destroy the ownership of property; in short, equality of opportunity for every American citizen. He believes in Democracy and prefers to be known as a Democrat in the old-fashioned interpretation of the term without qualification, prefix or suffix.

JOHN GARNER is the man of the hour. In his vivid personality, in his wide experience, in his broad knowledge, in his rugged honesty, in his fearless courage, in his human simplicity, in his abiding love of country, he combines all of the qualities and qualifications which the times demand for the high office of the President of the United States.

In such an atmosphere as this, I think we find the real soul and personality of America. From such humble surroundings as these, typified by the lowly log cabins where JOHN GARNER and his sainted mother were born, have come the truly great in America's glorious history. They knew, as he knows, what America is, what America stands for and how and why our American system of government was conceived. They knew, as he knows, what it means to toil and strive and work. They knew, as he knows, that there is no substitute for self-reliance and individual initiative, and that any system of government which takes from the individual these fundamental tenets of liberty cannot long endure as a democracy of freemen. They knew, as he knows, that for men to be free they must be guaranteed only freedom of opportunity to work out their own

destinies, and that the highest purpose and duty of government in a democracy is to assure to every citizen an equal chance with his neighbor. This is the essence of JOHN GARNER'S political philosophy.

I have no patience with those who would seek to analyze the percentage of one's Americanism. It is not a divisible thing. It is not something that can be broken up into parts and appraised in its constituent elements. Either one is an American or he is not. Nevertheless, I cannot help but feel that there never was a time in the history of our beloved country when the need for the leadership of those whose Americanism is beyond all peradventure of doubt was so essentially and vitally necessary to the preservation of America and American institutions.

Here in Red River County, where JOHN GARNER'S widowed grandmother with her six fatherless children came from Tennessee almost a hundred years ago, built yonder log cabin and joined the ranks of valiant pioneers who blazed a trail for civilization and laid deep and broad the firm foundations of Imperial Texas, may we find indeed the soil from which true Americanism is generated and born. Here in this community, plain, homelike, typically American, is the birthplace of a great American who, in my humble opinion, has been marked by the hand of destiny to become the President of the greatest, richest, and most powerful nation of all time, the United States of America.

Existing Conditions in the United States

EXTENSION OF REMARKS

OF

HON. J. WILL TAYLOR

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

VERSES BY A. D. ALBRIGHT, OF KNOXVILLE, TENN.

Mr. TAYLOR of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following stanzas of blank verse composed by a very distinguished constituent of mine, Hon. A. D. Albright, of Knoxville, Tenn.:

TO THE CONGRESS OF THE UNITED STATES

What is this spirit that pervades our land,
This creeping, paralyzing chant of hate?
What is this cankered growth that takes command,
And feeds upon the vitals of the State?

Whence came this strange ferment of teaching
That Freedom lives and thrives tho man be slave?
Who are the prophets of this poisoned preaching
That Liberty shall die, and dying, save?

Where is the breeding-place of this damned weevil,
This spawn that reeks with tyranny and shame?
Who propagates this devastating evil,
Impinged on all that has an honored name?

All but the simple-minded know the answers:
A mongrel breed, a mercenary horde,
Has spread the virus of these hellish cancers,
Conceived and cultured by an alien lord.

But, once again, how comes this lethal stupor
That dulls and nullifies our people's sense?
They heed not sign, nor shout of flying trooper;
They see no foe, hence need of no defense.

Could these things be if those whom we confided
With seats of power were true to Faith's demands?
For ships on stormy seas may yet be guided,
Whose rudders feel the grip of loyal hands.

There is an antidote to this infection,
Soon, soon too late, too late to be applied;
Ye men who know, with power to make injection,
What worth your wit if Freedom shall have died?

Relief Appropriation

EXTENSION OF REMARKS

OF

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

Mr. CANNON of Florida. Mr. Speaker, I feel at this point that I must say something regarding relief generally, despite the fact that I am a new Member of this honorable body. I particularly come from a district in south Florida where W. P. A. relief is indispensable. That, in all probability, is a position which any Member of this House might be forced to take for the reason that W. P. A., in my opinion, has been a lifesaver of upwards of 3,000,000 of people in this country. I think it well to remind this honorable body that in my district we have no smokestacks to speak of, in that our industries are quite limited. The district being a haven blessed with climate and facilities for those of our citizenry who would rest and play, and who, in the absence of Florida facilities, might be called upon to vacation in Cuba or some other foreign country. Therefore, it may well be said that the people whom I represent serve as hosts to the peoples of the world. The season during which we enjoy prosperity is a comparatively short one, being only approximately 90 days during the winter months. Being situated as we are we have found by experience that many people visit with us and become permanent residents who are incapacitated physically to survive in other parts of our great country. Consequently, the unfortunate ones among those people become relief subjects, either because of their physical infirmity or because our district is not industrial enough and large enough to absorb such cases. I am, indeed, happy our country affords a place like Florida in order that the persons referred to may enjoy life to its fullest extent. It is true that the W. P. A. facilities do little directly to assist the class of persons referred to, but it is nevertheless true that it and similar relief measures have made this country relief conscious, without which no man can presume what our status would be. As most other Members of this House, I subscribe to the theories and recognize the necessity and the utility of the W. P. A. and other forms of relief in the interest of mankind generally.

Much has been said today to discredit the W. P. A., those having it in charge, and its administration generally, to which I cannot fully subscribe. I am not in accord with references made to the effect that the W. P. A. organization is vicious in that it is a political football used by the Democratic Party to further its own cause. My experience, as a Democratic Member of this House, is that I do not know whether or not any member of the whole W. P. A. organization or any of the recipients thereunder voted for me. Insofar as I know, no W. P. A. recipient or executive stands charged with having regimented votes for any Democratic candidate in the primaries or in the general elections. I do not know nor has it been told me that any recipient or executive has contributed to any political party or candidate, nor do I know of any exactions having been requested. If the recipients and executives supported me, I am indeed proud. If they did not, nevertheless I am interested in the relief program and I do not feel that those who voted against me should be penalized because of my election. It is my opinion that I represent all of the people of my district, regardless of how any of them may have voted; and I believe that is the opinion of the Democrats generally in Florida. Relief to my district is indispensable at this time, and that is of paramount importance, subservient to nothing. Representatives in Congress may come and go. We in Florida have always been blessed with good and active Members and there is no reason why we should not so continue. I am not as interested in personnel as I am interested in the welfare of the constituency.

A few amendments to the committee report have been offered here today which, in my opinion, are most vicious. Particularly do I refer to those amendments that, had they been passed, would have struck at the constitutional rights of executives and recipients of the W. P. A. in that they would not have permitted those persons to have been active for any candidate or political party. The passage of the amendment to which I refer would have not permitted anyone connected with the W. P. A. to have mentioned any candidate or political party to his coworkers, however lowly or dignified may have been his station. I am firmly of the belief that most of those on relief are just as good citizens as our great country affords, and I likewise believe that they should not be denied

any right that our Constitution affords them simply because they find themselves in a most precarious position. I hope that in the near future the relief program now in effect will render our people back to normal citizenry. In the meantime it is my sincere conviction that we are not to scar society and human beings generally by discriminating against those who have met with adversity. There are those possibly on relief who would not work if the opportunity presented itself. In behalf of those people I do not speak, but I am vitally interested in those who have families and dependents to support, who have always worked at every opportunity. No plan could be so big and so perfect that would not embrace in it certain of our undesirable citizenry. Therefore, I do not indict W. P. A. nor any other relief program because we find such citizens receiving its benefits. A good deed is done, in my opinion, when most of the people on relief actually deserve it. Again, just so long as funds are distributed throughout this country and put back into trade channels, just that long we are looking toward normal prosperity. In my opinion it makes very little difference what one does to earn money under the W. P. A. since it is more important that the money be sent into the districts for circulation. It is much better, of course, that the recipients under the W. P. A. be engaged in some constructive community building program, but that, I assure you, is secondary, since the purpose of the program itself is to supply a buying power long since lost, the enjoyment of which is almost forgotten.

Now, I would like to say a word regarding rumors that all of us have possibly heard as respects the W. P. A. organization. I have had numerous conferences with W. P. A. workers who have called at my office on many occasions, some of whom have had grievances. They dreamed that they had been wronged; that they had been discriminated against; that they had been treated unfairly. And, although I am not given to dissension nor have I an open ear to those who criticize destructively, I do defend the people to whom I now refer on the theory that it is my opinion that when one, through adversity, arrives at a point where he must receive alms and be an object of charity, so to speak, his pride has been scarred and society, generally speaking, has been injured, both of which forces renders one a bit irrational. Those forces, together with his economic status, prey on his mind, and with all the sincerity of his heart he believes that something should be done to further relieve him. Also, there enters into this proposition the general dissatisfaction of man, and were it not so our Nation would have long since crumbled, particularly if each of us were satisfied to go along following a staid course without any hope or desire for betterment.

Returning to our immediate problem, we are to vote today on how much money, if any, will be appropriated to carry on the W. P. A. relief program. Our great President, in his opening day speech, told this Congress that the country needed $875,000,000 to carry on its W. P. A. activity. The committee having the measure in charge reported a joint resolution in the amount of $725,000,000 in lieu thereof, thereby reducing the President's request in the amount of $150,000,000. A very distinguished Member of this body introduced an amendment to the joint resolution, which amendment and the committee resolution were debated ably by both sides. I supported the amendment, which was an attempt to appropriate the $875,000,000 that the President asked for for this program. I supported it because the President of the United States and his advisers instituted this program and it is their brain child.

I am thoroughly convinced that the President and those having this program in charge are in a better position to know the financial need of the program itself than anyone else. There is not one man connected with the W. P. A. now or who has been connected with it in the past in whom I do not have implicit confidence. Therefore, in the interest of the people of this country, I voted for the amendment. I saw no basic reason why the $725,000,000 amount was reported, particularly since none was advanced. Therefore, the report was, in my opinion, arbitrary. I voted for the amendment which carried the $875,000,000 in preference to the reported appropriation bill in the amount of $725,000,000. Unfortunately, the President's amount and the amendment supporting it was lost. I then was called on to do the next best thing and supported the relief bill in the amount of $725,000,000, but I desire to go on record here and now as being favorable to voting for an additional amount in the future if, as, and when the same is needed to carry on this great program.

In closing, I would have it recorded that I will vote favorably on any relief program more far-reaching and useful to the American citizenry generally if, as, and when one is produced by the critics of the W. P. A.

I am, indeed, thankful to you, Mr. Speaker and Members of this House, for your indulgence.

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

ADDRESS BY VINCENT M. MILES AT JACKSON DAY DINNER, LOUISVILLE, KY., JANUARY 7, 1939

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Vincent M. Miles, Solicitor of the United States Post Office Department, at the Jackson Day dinner at Louisville, Ky., on January 7:

It is delightful to be talking to Democrats on Jackson Day. More, perhaps, than anybody in our history, Old Hickory typifies the party of the people.

Some of our bright newspaper feature writers have once or twice said that they hoped the future would bring forth a Democratic speaker who would fail to drag in the name of Jefferson and Jackson. While these remarks create a smile, they demonstrate a levity toward the search and fight throughout the ages for the highest type of government.

I am not here to give you a lesson in American history, but at the outset we must recall certain obvious reasons for honoring the memory of Andrew Jackson and turning back to the early days of our Republic.

However true or untrue may be the assertion of the Declaration of Independence that "all men are created equal," or that of George Mason's Bill of Rights that "all men are by nature equally free and independent" as to the individual man, it is certainly true that nations are not by nature free. Nor have they been created equally free and independent. Freedom has been in the history of mankind the result of generations of growth, of development, of training, and of heroic struggle.

Nor is it the form of their government which determines the political condition of a people as to whether they possess the priceless boon of civil liberty. A government which is in form that of an absolute numerical majority—in name and frame a pure democracy—may be and in the recent experience of mankind has been a grinding despotism.

It is the substance, not the form; the fact, not the theory, which determines the real character of the political institutions of a country.

It is well that citizens and patriots should never forget the aphorism of John C. Calhoun. That great thinker in his Dissertation on Government, which Mr. Gladstone pronounced to be the ablest discussion of that subject which had come from the mind of man, declares "That which corrupts and debases the community politically must also corrupt and debase it morally."

From the earliest ages this study of government has enlisted the attention of the master minds of the human race. Moses, Solon, Plato, Aristotle, Socrates, and Cicero among the ancients and after them philosophers and statesmen in all ages have devoted to it their profoundest thought. But it was left to the men of our own race on this continent during the past 180 years to discover the true principles upon which good government rests. Thomas Jefferson was one of the leaders in the formulation of the principles and after a slight loosening of those principles Andrew Jackson was called upon by the people of our democracy to restore them to their original form and so call them to the attention of the electorate that we would have a known pattern to guide us.

In the century since Old Hickory the voters have called to the Presidency four men who were thoroughly imbued with this set of principles. They are Abraham Lincoln, Theodore Roosevelt, Woodrow Wilson, and our present great leader, Franklin D. Roosevelt.

Whenever any man takes the lead in a government devoted to the welfare of the average man and woman instead of those who have a personal and selfish interest in government there is at first an acute and bitter situation when epithets and charges of all kind fly thick and fast.

When Jackson went after the Biddle Bank dictatorship, his countrymen were warned that he was aiming at the destruction of American enterprise and was bent on getting such power over American capital as to make him a dictator. He met the storm gaily and won for us the present banking system that has worked for us a century until his great present-day successor had to give it a holiday to clean its linen.

Back a hundred years ago, Jackson was described as an anarchist, a mad man from the uncultured West. His enemies did not say that he had no mind and was run by brain trusters and New Dealers, but they did say that he had no mind and was run by a kitchen cabinet and that the charming Peggy Eaton used to sit on his lap and tell him what to do to the people.

It was not long, however, until his fellow countrymen were erecting monuments to his memory and the policies he reestablished were recognized as the principles of our Government.

Both President Jackson and President Roosevelt have many common traits, which make these times great in which to live and face the situation. It was Mr. Longfellow's idea, as I recall it, that "when the great clock of destiny strikes Now" everyone should sit up and take notice.

Our trouble has been that the leaders of the Republican Party have tried to regulate their affairs by the hourglass that was performing "when Homer smote his blooming lyre."

In the economic and social anarchy which was the legacy left by the Republicans to the Democrats in 1933, finance and industry were among the very first to be given attention. But for the bold and swift action of President Roosevelt and Congress in support of the banking system, the whole complicated financial set-up would have crumbled into ruins and billions of dollars in savings would have suffered enormous depreciation or disappeared altogether.

The whole course of the administrations of President Roosevelt has been in line with the democracy of Jackson and the principles of the party. Every step, every proposal, has been in the direction of curbing fraud, of preventing exploitation, of assisting the unfortunate, of abolishing injustices, and of spreading the blessings and benefits of this fruitful country more equitably among all its citizens.

Nowadays, many of our people are prone to forget the terrific task that confronted our great President when he took office 6 years ago, so they do not appreciate the courage and brilliancy with which he assumed and carried that burden. Nobody contends that every phase of the New Deal has been perfect. It is easy to view from our present position of comparative comfort where this item or that of the vast program could have been done in some other way, but when the disaster was at its height our country demanded results and could not wait for development of perfect processes. The only fair way of estimating the New Deal is to balance the state of affairs 6 years ago with today.

For example, the big industries then were dismayed because profits had vanished and complete ruin threatened. Today their concern relates to whether profits will be larger next year than they were this year. Six years ago those same industries were wondering if anything could be saved out of the apparent wreck.

Today they are fretting over how much of their surplus profits they should be permitted to put in a reserve and how much should be disbursed in dividends. Then the banks were beleaguered by crowds seeking to get their deposits out before the banks closed their doors. Now the same people who made up these crowds are wondering how they can best invest the savings they have accumulated and which, by the way, total $52,000,000,000 in bank deposits.

I do not mean to say that the present-day problems are not acute and important. Of course they are. Every businessman, big or little, is right to feel concerned about everything that affects his prosperity. It is his job to cultivate his markets, extend his plant as opportunity offers, and get his money to work. It is his attention to the problems of industry and commerce that has made America great, that has resulted in the marvelous development of our economic system that has made us the wonder and envy of the world.

It is an evidence of how far we have progressed on the road to prosperity that our business people are taking up these questions instead of wondering if there would be any business at all, as they were doing a few years ago.

Let me impress upon you that the triumph of the past few years has been a triumph for the Democratic Party. The political organization to which we belong was able to meet the challenge of a new day and a changing social order because it kept pace with the times and because it had not sold its soul to a single powerful economic group. The party was free to work for the best interests of the Nation as a whole, and every worth-while measure adopted during the past few years was enacted into law bearing the stamp of democracy upon its face.

It is ironic to recall the stubborn resistance raised in Congress by the opposition party to the adoption of constructive reforms. And it is not only ironic but amusing to witness the efforts of this same opposition party to claim a share of credit for the adoption of the measures that were so bitterly opposed by its own leaders. We are told that the Republican Party has at last seen the light, that under the pressure of public opinion, the G. O. P. has decided to abandon its blind opposition to progress in favor of a more enlightened attitude toward modern problems.

The conversion is welcome even if it comes a bit late. A conversion born of expediency instead of conviction seldom endures, and judging by recent happenings within the party itself, perhaps those who felt that the Republican Party had mended its ways were a bit premature. In any event, I think it is fair to say that President Roosevelt has had more to do with shaping the present-day modification of the viewpoint of the Grand Old Party than any of its so-called leaders. The party has decided to embrace his philosophy of government at least in part, not because it likes to, but because to do otherwise would condemn it to quick and final oblivion.

The most convincing testimony to the worth of what the Chief Executive is trying to accomplish is this belated and grudging acceptance coming from the ranks of the opposition. They know President Roosevelt is right and they have finally arrived at the sensible conclusion that to continue fighting everything he proposes for the welfare of the country will result in nothing more than political suicide. Hoping to avert that unwelcome calamity, they have decided to ride on the President's coat-tails. Who ever dreamed a few years ago that the conservative leaders of the Republican Party would be trying to outdo the Democrats in providing security for the aged and infirm? Who ever imagined that these very Republicans who denounced the social-security plan as a menace to American institutions would be entering gingerly into an alliance with Dr. Townsend, ostensibly to help the old folks, but in reality to catch votes?

In the comparatively calm and peaceful atmosphere of other years, it was a simple matter to outline the basic creed of the Republican Party. Under the firm grip of a reactionary inner council, the party was committed to the fundamental doctrine that its major purpose was to protect and promote the financial interest of those who owned and controlled the national wealth. It was a practical application of Alexander Hamilton's theory that if the wealthy and well-born prospered, then a measure of prosperity was bound to trickle down to those below. I wonder what Quay, and Hanna, and Penrose would think if they could be here today to witness a grandson of the reactionary and austere Senator Henry Cabot Lodge publicly embracing the heretical doctrines of Dr. Townsend.

We hear Senator VANDENBERG warning his fellow workers in solemn tones that the party must return to the ways of the past, and then we hear the equally impressive voice of Senator MCNARY telling his colleagues that the party must heed the lessons of the present or else perish.

The split in the ranks of the Republican Party is so deep and the implications so ludicrous that a temptation naturally exists to discuss it only in terms of banter and ridicule.

But this situation does not relieve us of our duty to continue to keep alive the principles of our party. I want to thank you all for coming out tonight. After my efforts you may feel entitled to a 90-percent refund, but we also gathered tonight to help our national committee. We have duties to perform before the next general election. The Democratic Party has substantial majorities in both Houses of Congress. The business of government is a continuing process and the task of safeguarding the country against future economic storms and rooting out social maladjustments must go forward in all its vigor. President Roosevelt has defined a goal, and he has persisted on the course for 6 long years now, despite the constant obstruction of those who look to the past rather than the future. We must see to it that his hands are upheld in the great battle to preserve and extend the boundaries of human rights.

So let us look at the next election. You will recall I said a moment ago that after Old Hickory's death the people built monuments to him. It begins to look as if our present great leader need not wait so long to be acclaimed. It may be because of the radio and present means of communication they may become informed much sooner of the value of public service, but, regardless of the cause, there are signs that his Jacksonian qualities are being more and more clearly recognized. The bitterness in 1933 and 1934 grew out of the demands for the right of the worker to a fair wage and collective bargaining; for straight and open dealing in business and banking; for the recognition of the responsibility of the Federal Government in the social field. These things have now become so well established within the last 2 years that the converts are increasing daily and but few irreconcilables are left.

Of course, we may expect continued opposition to the policies recommended by President Roosevelt. A great many people sincerely dislike the idea of making government an instrument of human progress while a great many more dislike change simply because it is change. Yet the significant fact is that most of the social reforms of the past 6 years are now looked upon as integral parts of the American system. Their worth is now recognized so generally that even if a reactionary administration came into power—a very unlikely possibility—there would be no attempt to undo the basic acts written onto the statute books by the Roosevelt administration.

For example, the die-hards shook their heads in disapproval a few years ago when the Social Security Act was under consideration in Congress. They said it was a step toward socialism; they denounced it as an intolerable burden on industry and a menace to the continuance of free institutions. Today, in the light of experience, a move has been started to revise the social-security measure in the belief that it can be improved in many essential respects. The Republican leadership is anxious to take a hand in the revision, but there is no suggestion that the plan has proved a

failure and should be repealed. On the contrary, it is almost universally agreed that in future years the social-security program should prove to be a tremendous factor in stabilizing the national economy, in addition to providing old-age security for millions of worthy citizens.

The same may be said of many other Roosevelt reforms. The original passage of the Securities and Exchange Act was bitterly contested. The claim was made that it would stifle free enterprise and halt the flow of capital into new industries. But time has worked on the side of those who believed that it would be little short of a national calamity to permit without restriction or regulation the continued issuance of stocks and bonds and the formation of giant financial combines. Those unsophisticated souls who believed that the era of frenzied finance was washed away finally and forever in the great speculative orgy which ended in 1929 must have had a rude awakening if they read the daily newspapers during the year just ended. We know what the Securities and Exchange Commission has been able to accomplish in rooting out fraud and brazen dishonesty in the handling of other people's money; it would take a hardy soul, indeed, to venture a guess on how many crooked schemes of like nature failed to see the light of day because their would-be promoters were afraid to take the risk.

The sweatshop has disappeared and now the fight is centered on the question of the character of the wage and hour law we shall have and the proposed changes in the National Labor Relations Act and not on the question of whether we should have either of them at all or not.

I was particularly impressed at the temper of the resolutions adopted at last fall's annual meeting of the National Association of Manufacturers, an organization previously controlled by those who believed that the highest form of patriotism was to pass a resolution condemning the President of the United States and all his works. He was supposed to be a kind of Lucifer against whom perpetual warfare had to be waged. The resolutions adopted by the Manufacturers' Association last year recognized the spirit of the times and plainly stated that it was the duty of industry to cooperate with Government in the work of stabilizing employment and helping to raise the standards of living. The association also recognized the fact that labor has a right to bargain collectively through the representative of its own choosing. Instead of condemning everything undertaken by the Roosevelt administration to promote the common good, the manufacturers took the sensible viewpoint that a solution for the complex and difficult problems confronting the Nation must be accomplished by a policy of mutual understanding and good will. This refreshing spirit of cooperation is in line with the attitude taken by Mr. Myron Taylor, Mr. Gerard Swope, and other enlightened leaders of industry, who have been striving since the beginning to find a satisfactory meeting ground for business and industry. You may feel assured that the Roosevelt administration is ready to do its share in promoting understanding and in encouraging the adoption of those measures that will advance the prosperity of business.

So we realize that by following the principles upon which the Government has lasted as a democratic republic we are progressing under a great leader. Jefferson and Jackson demonstrated in the beginning what these fine principles of government meant by putting them in operation.

Tonight we are privileged to hear the voice of a great captain who has followed so magnificently along the course of free government marked out by his illustrious predecessors.

Undaunted and unafraid, President Franklin D. Roosevelt has planted the standard of human rights above the ramparts and he has kept it flying in the breeze against the constant assaults of strong and resourceful enemies. He has kept the faith and, as good soldiers in a great cause, it is our duty to keep faith with him.

Additional Facts About So-called Tenant and Sharecropper Uprising in Southeast Missouri

EXTENSION OF REMARKS

OF

HON. ORVILLE ZIMMERMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

Mr. ZIMMERMAN. Mr. Speaker, on last Monday Senator TRUMAN, of Missouri, placed in the RECORD a resolution adopted by the landowners of southeast Missouri at New Madrid, Mo., on January 12, 1939, relative to the so-called tenant and sharecropper uprising in that section. A reading of this resolution will disclose that the reported exodus of tenants and sharecroppers from the farms of southeast Missouri to the highways, as depicted by the metropolitan press of the country, is not supported by the facts; that the camps erected along the highways were composed in the main by nonresidents who had come to this section to pick cotton and who resided in towns and villages, and that a relatively small number of the occupants of these road camps were bona fide sharecroppers or tenants; and further, that the landowners are not responsible for this much-publicized demonstration.

Mr. Speaker, in order that the Congress and the country may further know the facts about the highly colored and distorted stories which have been published about our section of Missouri and its people, I am placing in the RECORD the following resolution which was adopted by the farmers of Mississippi County, Mo., at Charleston on January 12, 1939, and mailed to me:

Whereas there are now known to be 99 families on Highway 60, Mississippi County; and

Whereas it has been reported in the press that these people have been forced to move by their landlords; and

Whereas the condition of these people has been investigated and the following facts determined: That the people now on the highways fall in the following classes—56 sharecroppers, 1 leaseholder, 32 day laborers, 4 W. P. A. workers, and 6 moved out of town; that 25 percent of these sharecroppers had contracts with landlords and farmers to be retained on the farm in 1939; that 1 had legal notice to vacate and 5 with letters asking them to move; that 87 moved, giving no reason for vacating; that all refused to tell why they moved to the highway and who instructed them to do so; that it was clearly determined that a great majority of the landlords had nothing to do with their moving from the farms and nothing to do with their moving to the highway; and

Whereas the farmers of Mississippi County in joint meeting held at the county courthouse in Charleston on January 12, 1939, determined there are approximately 4,200 tenant farmers and sharecroppers in Mississippi County; and

Whereas the number now on the highways is less than 3 percent of the total tenants and sharecroppers of the county; and

Whereas that is less than the normal moving from farm to farm each year; and

Whereas it is definitely known that numbers of these people had farms rented and crop contracts for 1939 and part of the land prepared for crops: Therefore be it

Resolved, That this movement to the highways of this county is the result of unscrupulous and scheming agitators who have been deceiving the Negro tenants and sharecroppers by making them believe that they were going to be given property and money by the Government and that they will not have to work; and be it also

Resolved, That it would be to the best interests of Mississippi County that Government relief and charitable agencies refrain from encouraging this movement by giving aid and assistance for the reason that landowners and farmers are in a position to take care of them in 1939 by giving them crops and labor; and be it further

Resolved, That it is the opinion of this body assembled that the statements made that the landowners and farmers of Mississippi County are dispossessing their sharecroppers for the purpose of receiving all the Government crop payments are absolutely false and made for the purpose of deceiving the press and public; and be it further

Resolved, That landowners and farmers of this county will welcome any investigation of the facts pertaining to this situation and will cooperate with any properly authorized investigating agency to determine such facts; and be it further

Resolved, That copies of this resolution be forwarded to Hon. Bennett Champ Clark, Hon. Harry S. Truman, Hon. Orville Zimmerman, Hon. J. C. McDowell, Hon. Dan O'Bryan, Hon. Henry A. Wallace, and Gov. Lloyd C. Stark.

E. A. STORY,
Chairman, Resolutions Committee.
REECE B. GILLOOLY,
Secretary, Resolutions Committee.

Mr. Speaker, under the laws of Missouri a landlord is required to give notice to a tenant if he is to be moved the following year. For years it has been the universal practice among landlords and farmers to give the tenants notice to quit at the end of the year, even to tenants who have been on the land for as long as 10 or 20 years. All understand this practice and there has never been any disturbance in our section because of this action by farmers and landlords, since as a rule only undesirable tenants are ever asked to move. With a few exceptions, as will be found everywhere, the farmers and landlords of southeast Missouri have always been solicitous of the welfare of the families living on their lands, and a healthy, cooperative relationship has always existed between these groups. As shown by the above resolution, there was less moving this year—and many changes are always made with the beginning of each year—than usual.

Mr. Speaker, we all know that a community and its people can be libeled by overzealous reporters who are looking for good stories for their papers. I know personally the high character and integrity of the men who adopted the above resolutions, and I ask the Congress and the public to consider their statements before passing judgment upon our section of Missouri and its people.

Broad Revision of Patent Laws Seen Probable

EXTENSION OF REMARKS
OF
HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1939

ARTICLE BY BARTON A. BEAN, JR., OF BUFFALO, N. Y.

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Barton A. Bean, Jr., of Buffalo, N. Y.:

BROAD REVISION OF PATENT LAWS SEEN PROBABLE—CHILDREN WILL STICK THEIR FINGERS INTO THE BLADES OF ELECTRIC FANS AND OLDER CHILDREN WILL THROW MONKEY WRENCHES INTO THE ROTORS OF GENERATORS BECAUSE THEIR EYES CANNOT SEE THAT THOSE PARTS ARE IN MOTION

(By Barton A. Bean, Jr.)

It is understood that the National Economic Committee is considering recommending to the Congress a sweeping revision of the hundred-year-old patent laws. This seems to be based upon the conception that anything that is a hundred years old must be archaic and should be changed. It is the same spirit that moves unthinking people to cut down rtately elms or monuments of that age and substitute spindling saplings that may or may not survive. It is confusion of thought that anything a hundred years old cannot be modern. Even the most casual investigator can think of at least 10 laws (generally known as Commandments) that are as vital and alive today as they were at their promulgation several thousand years ago.

When one gets down to the nub of the carefully prepared and guided hearings of the National Economic Committee in Washington one is faced with the fact that the only thing that is said against the patent laws or the administration of them is that in the case of the glass-container industry one company may have achieved a monopoly that has gone perhaps beyond the original intent of the patent laws and statutes.

Our patent laws and statutes have been responsible for the growth in this country of the greatest industrial civilization in recorded history. They have been responsible for the development of machines and processes which have enabled our workmen to earn in 1 hour in usable commodities and goods what it takes workmen in other parts of the world, for example, in Russia, up to 26½ hours to earn.

According to some reporters, the only thing that the hearings have developed so far is that one concern in one industry has been able to combine patents in contravention of our antitrust laws so as to utilize not the patents themselves but the combination of patents in restraint of trade. As we understand it, the Department of Justice, which is directing this inquiry, admits that there is probably power under the antitrust acts to restrain such combinations.

Any informed person knows that there have been no substantial prosecutions under the antitrust acts in set-ups involving combinations of patents for the past decade. It looks as though the admission is that they have plenty of snowballs to throw at these persons or combinations to defeat them, but that they want snowballs with stones in them before they start the battle. With plenty of remedies already available to the informed or observing, one is forced to think of the experience of the sick child, whose parents, unable to find a duly qualified physician, finally called in the town veterinary, who, unable to diagnose the trouble, finally said, "Well, if I could just throw her into 'fits,' I can cure fits." Now we, who have some idea of what our patent system has done for this country, do not want it thrown into fits.

Can the presentation, so far, justify any tampering with basic patent law when the fault, if any, is, by admission of the parties concerned, laid at the very door of the Department of Justice for its lack of prosecution under the laws that we have? It would seem to anyone other than a child, who would have no sense of fear in approaching the seeming stationary blades of a rapidly rotated electric fan, or an older child, who would see no motion at all in the rotor of a busily humming generator, that it would not do to disturb on such slight evidence the patent system that has produced the benefits for all of us that Thomas Edison contributed; the benefits of the telephone, the telegraph, and flying machine, and the benefits of plastics and the hundred and one things in the chemical fields, because some one concern in the glass container field may be violating the antitrust acts in an illegal extension of a proper monopoly. The fault, if any, is not in the monopoly granted by patents, but in the extension of that monopoly by acts of the party concerned, and certain of the antitrust laws are directed against that very thing.

Fortunately we have had a liberal patent policy in this country and that patent policy has resulted in the creation of millions of inventions. We would be foolish and silly to adopt any laws or procedure that would stifle the bringing forward of these inventions. One can always find malcontents with a system; a certain proportion of those who fail are always ready and willing to say that they would not have failed had it not been for greater opportunity on the part of those who are successful, but we know that that is not sound judgment. We know that those who have failed would have failed no matter what the rules of the game were, and in our opinion it is a striking tribute to the whole patent system and endeavor when only one combination of patents can be pointed to as being charged with having a deleterious or wrongful effect upon our economic system. Is there any other field of endeavor in this country, or in the world, where after careful consideration and analysis only one isolated case can be pointed to as constituting an injustice under the rules and regulations there pertaining?

Our patent system is sound. It has stood the test of time, and any pointing of the finger to it with a comment that it has stood the test of a hundred years does not impute any weakness to it, but, in fact, imputes strength and integrity to it.

Our patent system rests and has been administered very fairly on one basic principle or precept, and that is, if an inventor will disclose his invention to the public, he will be rewarded with a monopoly for a limited period of time. We who have the best opportunity to observe these things know that this system works to benefit all of us; that we could not have had the industrial development that we have without it; that we would not have the thousand-and-one creature comforts and advantages that we have in this age without that system. Those who have traveled in foreign countries know how far behind us those countries are in so many of the mechanical advantages of our present civilization, and we know that the holding out of the monopoly to the individual inventor is the thing that makes and has made him rush in to invent, develop, and disclose, and that nothing else will suffice. We know that certain established industries, which are enjoying, perhaps, the ease that comes with accomplishment, would rather envision a system wherein the individual inventor would not be rewarded, because they have a practical monopoly in their hands by means of their large manufacture and control of distributing outlets, so that it is practically impossible for any newcomer to break in upon them. We also know that when that satisfaction with their then position becomes solidified it impedes forward progress and action; that the concerns so intrenched have the feeling that they have reached the ultimate in technical performance. This has happened before in the history of our inventive development, but always individuals have come along under our existing patent laws and upset the "aplomb" of these prophets of perfection. Continued advancement along scientific and technical lines do not exhaust the resources of science, but in fact only broaden and widen the frontiers along which the men in science and industry may explore and develop. Every step that is taken in development opens new avenues for further development, and it is essential that no impediment be placed upon the footsteps of the men proceeding along these paths.

It is an acknowledged fact that our country has outstripped every other country in the world in its mechanical and scientific development and in the translation of that development into better living for each and every citizen in this country. No one can quarrel with that. Why, then, hastily and without due forethought, embark upon some course that might restrict or impede that development, due to what is stated as one abuse in a system that has contributed so much to our progress and comfort?

The America I Want

EXTENSION OF REMARKS
OF
HON. FRANCIS H. CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1939

ADDRESS BY HON. KARL MUNDT, OF SOUTH DAKOTA, DELIVERED IN NEW YORK CITY, JANUARY 14, 1939

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. KARL MUNDT, of South Dakota, delivered at the annual luncheon of the Women's National Republican Club, New York City, January 14, 1939:

Madam Chairman, fellow Republicans, it is a double pleasure for me to have the opportunity of addressing the ladies of the Women's National Republican Club in this room today. In the first place, it is always pleasureable for a speaker to address a company including so many beautiful ladies, and this pleasure becomes a veritable riot of delight when he realizes that he is speaking to that select group of femininity represented by Republican womanhood.

And to make my happiness complete today—I am here at your invitation to speak at a Republican victory dinner following one of the most remarkable political come-backs ever staged by our party and at a time when such a return to the fundamental doctrines of American life was the only alternative to a complete loss of the governmental ideals and political philosophy which have made America the lodestar of people the world over who are interested in the maintenance of the rights of self-government.

In the 20 years since the conclusion of the so-called war for democracy, the world has written more rapid history and made more astounding changes in the technique of government than in any like period in recorded time. The restoration to national sanity in government following the international insanity of war has been exceedingly slow and its path is marked by the crushed hopes of people in every land who had hoped for improved conditions following the conflict, but who have lived to see liberty slipping further from the grasps and to see ante-bellum tyrannies replaced by a post-bellum despotism which beggars all comparisons.

During this time America, unhappily, has not been immune from the dementia of the times although the innate soundness of our people and the record of our unequaled success in self-government have thus far happily resisted any total break-down of liberty and self-rule in this great country.

But even our American democracy has lost much of its vigor and has hearkened too attentively to the siren call of those urging the doctrines of un-American "isms" as substitutes for orderly self-government in this country. For the first time since our early history we find men high in American political life preaching the Tory tenets of centralized control and evidencing by precept and by preachment that they have lost faith in the ability of common people to govern themselves and to correct their weaknesses through the simon-pure operation of self-government.

Masquerading under the misnomers of "liberals" or "progressives" or "moderns"—most of them can be grouped under the heading of the collective noun "new dealers"—these Tories of today are as sincerely and as significantly opposed to the idea of letting the people govern themselves as were the Tories of old, who felt that King George, of England, should exert such a strong centralized control for the good of the people that even the colonials living in the peripheral empire called the American Colonies should not be trusted to manage their own affairs.

While the language of these new Tories has changed, and while they have become artists of illusion in the game of conscripting all the attractive political terms for their own usage, their technique is as ancient as Nero's and their handbook of practical application reads about the same. The formula is as obvious as it is antique; it simply calls for the concentration of all power in the central government and the focusing of such power in the hands of one man or one branch of government as rapidly as raids upon the traditional institutions and policies of government will permit.

TRUMPED-UP DANGERS FROM ABROAD

The fact that these drives for power are made in the name of justice for labor, or equality for the farmers, or recognition for the common man is no more novel than the newest New Deal technique of sugar-coating them in the name of a strong national defense or as protection against trumped-up dangers from abroad, and they should prove no more disarming to us than if they were couched in the language of the more direct and less subtle French King who simply said, "The state—it is I" and let it go at that.

NEW DEAL BECOMES NEW DEMENTIA

And the further fact that our chief apostle for taking power from the people and giving it to the politicians does so persistently in the name of liberalism does not alter the fact whether that philosophy is expounded in a message to Congress or a Jackson Day dinner, both of which have become so patently political in nature that only the occasion for the speech tells us which is which; the content of both talks follows the same general outline by which the New Deal, originally proposed to help the common man, has become the new dementia, now operating to transfer the political heritage of the common man to a select coterie of Governors who promise him much but first demand full payment by forcing him to give up rights and liberties which have always protected him in the past.

And unless history is to be inverted entirely, this concentration of power in the hands of politicians and the break-down of traditional rights of self-rule is a far cry from liberalism; it is, in fact, reaction of the first water and escapes being dubbed conservatism only because it is so much more reactionary than traditional conservatism that the term simply does not apply.

The evidence of fireside chats and Presidential proclamations, by testimony of Executive messages and attempted legislation, by proof of projected plans and past performances, I think we can now define the basic philosophy of the New Deal, and then, after having defined it, we should be in a better position to subscribe to its tenets or to reject them.

NEW DEAL DEFINED IN FIVE WORDS

I believe that in five words I can describe the basic objectives of the New Deal, and I do not think we have to attribute insincerity to those in control in doing so, although to be honest with myself—and I would not speak in any other language—I must say that I do have to attribute a doubt to their logic and their wisdom.

In five words, I believe the New Deal believes in unrestricted Government authority over business. I think it is honest in that belief. I think it has lost confidence in business. I think it has lost confidence in the people. But that unrestricted Government control over business crops out in so many places on the highway that it seems to me we must recognize the direction in which we are traveling. And it has been done in the name of liberalism. It has been done in the name of progress. Those who oppose it are asked this question: "Do you want to go back?" And they pick out some ugly date in 1932 or some melancholy morning in November of 1929 and say: "Do you want to go back to that?"

My theme is The America I Want, and with this theme in mind I am going to answer that question this noon; and as far as I am concerned, the answer is, "Yes; I want to go back. I want to go back to sound American principles of government." I want to go back in the same sense that a driver in a car who is lost on a detour wants to go back to the highway, so he can make progress once again. I want to go back like an invalid, without money, who wants to regain his health so he can get a job and have money once again. I want to go back like an explorer who has lost his way and has become bewildered and disturbed and wants to go back for a new start once more.

DIFFERENCE BETWEEN GOING BACK AND STAYING BACK

There is a vast difference, my friends, between going back and staying back. I want to go back for a new start the American way, which will let America forge ahead in the future as we have always forged ahead in the past.

WHAT A LIBERAL IS NOT

Well, am I a reactionary? Is this young fellow from the Dust Bowl a Tory or a conservative? I deny the allegation. What is a liberal? Let us try and define and figure out if we can first of all what is a liberal. Whether or not any White House spokesman, whether or not any paid propagandist says otherwise, history teaches us what a liberal is and what a reactionary is, and we can turn back to the pages of history and find written there so plainly and so clearly that all who dare to read can easily know the fact as to what it is to be a liberal.

A liberal, first of all, is not a fellow who believes in spending generously the public's money to build a partisan political machine for himself. That is not a liberal. A liberal is not a man who would liberate a worker from his steady job or tax his employer out of existence. That is not a liberal. A liberal is not a man who says to the farmers in my State, for instance: "We would import an abundance of farm products to liberate you from doing your chores because it makes farming so unprofitable that you cannot make money on the farm."

I say, in simple honesty, in my conception, the New Deal does not have a single semblance of genuine liberal governmental philosophy, and that the Government in its activities today is as devoid of liberalism as a Scotchman in a crap game.

WHAT IS A LIBERAL?

What does liberalism mean? True liberalism is a language which we all can understand, in a language that nobody can deny, means to believe in placing more and more of the powers of self-government in the hands of the common people. I know a lot of liberal Republicans. I know a lot of liberal Democrats. There is nothing partisan about that. One of the greatest and one of the earliest of American liberals was Thomas Jefferson, who believed in the particular philosophy of government that the people should be their own rulers. That is what liberalism means in the science of self-government.

Liberalism means to protect the common people from the dangers of monopoly, whether that monopoly be a commercial or a political monopoly. To be a liberal means to want to protect the people from tyranny. To be liberal means to want to protect the rights of the common individuals as contrasted with the profits of the politicians. And thus the liberal believes in government by the consent of the governed and does not believe in government through coercion by the government. That is the fundamental difference.

APPLYING THE TEST OF THE RECORD

Looking at it, then, taken from that standpoint, is the New Deal liberal? Are those who criticize us as Tories and reactionaries right when they do so? Let us consider a few of the major New Deal measures, not on the basis of whether they are good or not but on the basis of whether they are liberal or reactionary, because I propose to show that the New Deal today is the most reactionary government that ever existed in Washington. That is a strong statement. Let me give you argument in its behalf.

Take the N. R. A. Was it a liberal activity? The N. R. A. would take from the people the right to run their business, and insofar as it gathered together control and gave us centralized authority in one man in Washington it was reactionary, because the reactionary governments of the world have always been the one-man governments of Europe and Asia. As we study the history of despotism and of tyranny we study one-man control, and should we revert to control by a man, or a department, that is by all that is good and holy, reactionary, and you cannot say that those who oppose it are Tories.

The Supreme Court packing attempt was a second illustration of mistrusting the common people, doubting their ability or their willingness to amend the Constitution to achieve a certain goal.

So by centralized power the Supreme Court would have been packed, history would have been changed, and liberalism would have taken a long step backward.

Then came the reorganization bill, which once again manifests a distrust in the common people's representatives in Washington, doubting their willingness or ability to reorganize the Government sufficiently, and stating it must be done by a centralized department. Once again that reverts back to reactionary teachings of history. The antiliberals have always held that power should be placed in the hands of one man or one official family or an oligarchy.

On the basis, then, of the first three major experiments there is no evidence of progressivism, no evidence of liberality, no evidence of placing more powers in the hands of the common people.

Then came the Hatch amendment. Do you remember the Hatch amendment, when the relief bill was passed?

Senator HATCH, a good Democratic Senator from the Southwest, proposed an amendment which would have stated that it be a felony for any relief official, big or small, to use his position as a dispenser of relief to influence, to browbeat, or bribe the vote of the poor hungry fellow who needs relief. I wonder if there is a person listening today who dares to say that that was not a good American amendment? I wonder if there is a man in official Washington who dares to engage in debate with a tongue-tied mummy in a museum on the theory that it is not good Americanism to say: "You shall not permit the fellow in control of public funds to influence the man with starving babies in his home and tell him how he is to vote before he is given a chance to feed his little family."

You know the Hatch amendment, which would have been a second emancipation proclamation, which would have been a declaration of independence for those on relief in America, by a roll-call vote on the orders of the Chief was defeated, and I say to you in common Midwestern candor, that that roll-call vote was the most disgraceful vote ever taken in the United States Senate. And that can never be called liberalism.

The purge is next. Certainly the purge was not a manifestation of liberality. The purge said to the people of several different States, "You are not quite smart enough; you are not quite keen enough to select the representatives which you should have. You should take this man, or that man, or the other." That is another indication, I believe, which we can encompass in a bit of proof to show the New Deal, good or bad, is reactionary. I am not condemning it this noon. I am just insisting that those who attempt to fool Americans by calling such actions liberal or progressive have not studied the first pages of history; that is what I am trying to show, and leaving all conclusions as to the merit of the New Deal up to you.

Talk about wanting to go back. The New Deal wants to go back. It wants to go back beyond the American Constitution. It wants to go back into the darkness before the dawn of constitutional government. It wants to go back into the days of the Louises of France with one man in control. It wants to go back to the theories of Napoleon Bonaparte, when the general and his council determined what was good for the people. It wants to go back to the ideals of Julius Caesar, when just a few of the chosen decided what was good for the masses. It wants to go back to the Pharaohs of Egypt, when the common people had none of the rights and privileges which we accept as everyday functions of American citizenship today.

THE REPUBLICAN COROLLARY

We hear much these days about the need for putting human rights above property rights. I believe in that formula, and I am sure that you believe in it; I think Republicans, Jeffersonian Democrats, and new dealers all sincerely subscribe to that noble objective. But there is a corollary to that formula of which not so much is heard, and today the Republican Party is fighting for the inclusion of that corollary in our governmental attitudes.

I mean simply this: To the New Deal call to place human rights above property rights, the Republican Party answers with a hearty affirmative, but we stand alone as a party today calling for that equally important safeguard in a liberal democracy which also places human rights above political privileges. It is against this growing menace of political privilege, this antiliberal drift toward an aristocracy of bureaucrats, that the Republican Party lifts its voice today as the sole hope of those actually believing in true liberal government.

THE AMERICA I WANT

In the America I want, I want the type of liberalism that Thomas Jefferson and Abraham Lincoln preached and practiced. In the America I want, I want the common people to have rights and privileges and opportunities. I want the fellows on relief to have the same rights and privileges as the fellows who, by the accident of fate, have the fancy salaried jobs of distributing relief to those who need it most.

In the America I want, I want the kind of America my father had and his father before him. In the America I want, I want a Government playing the game according to the rules. I want a Government based on constitutional practice, based on American tradition, which skyrocketed this country from a few lone colonies to the leadership of the world, and once having attained that leadership foolishly begins to discard the things which made it great. In short, in the America I want, I want a busy, thrifty, hustling, friendly Government providing a fair chance for a free people in the American way.

No Arbitrary Rule on Longevity

EXTENSION OF REMARKS
OF
HON. FRANCIS D. CULKIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1939

ADDRESS BY HON. FRANCIS D. CULKIN AT A DINNER OF THE BAR OF THE FIFTH JUDICIAL DISTRICT OF NEW YORK STATE AT SYRACUSE, N. Y., OCTOBER 29, 1938, IN HONOR OF HON. EDWARD NORTH SMITH AND HON. CLAYTON I. MILLER, JUSTICES OF THE SUPREME COURT OF THE STATE OF NEW YORK

Mr. CULKIN. Mr. Speaker, pursuant to the permission of the House, I append hereto remarks made by me at a dinner in honor of the Honorable Edward North Smith and the Honorable Clayton I. Miller, justices of the supreme court, the occasion being their impending retirement from the bench by reason of the age limit. The remarks are as follows:

Judge Smith, Judge Miller, and members of the bar and bench, the invitation to address you tonight, coming from Mr. Ray Shinaman, of your committee, was hedged about with certain conditions. Mr. Shinaman emphasized the fact that I was expected to sound a note of good cheer on behalf of the bar of the fifth judicial district. I am strongly in sympathy with the desires of the committee in this respect, for I believe that the whole atmosphere here tonight should be joyful and no element of melancholy or regret should darken our proceedings.

I know that I voice the sentiments of the bar when I say that this occasion is one of congratulation that our beloved and honored guests, Judge Smith and Judge Miller, have arrived at the statutory age of retirement unimpaired in mind and body and in the future will merely enjoy a larger leisure. During that leisure I predict that new tasks will not be shirked by our distinguished guests, but will be eagerly sought after and jealously prosecuted.

Is it so appalling to reach the Biblical age of threescore and ten? Not at all when, as I have stated, men like our distinguished guests come into this age with understanding and wisdom garnered through the years. For such men 80 or even 90 is an easy goal.

I have examined the roll of octogenarians. It carries the names of men of outstanding genius and achievement. You have all heard the story of Cato, the censor, and how at the age of 80, after having been stone deaf through life, he learned to play that most difficult of instruments, the violin.

Then there is the great Justinian, who successfully ruled the Roman Empire for half a century. Gibbons tells us that after the age of 70 he completed the compilation of what are known as the Justinian Pandects, which some lawyers constantly consult to this day. In that day, when the span of life was but 40 years, Justinian reached the age of 83.

Von Humboldt, the great scientist, our own John Adams, Titian, and a host of other celebrities lived far beyond the age of 90. The list of those who lived beyond 80 contains an extraordinary number of names of geniuses and statesmen. This list includes Plato, Herbert Spencer, Thomas Jefferson, John Wesley, James Madison, John Quincy Adams, Bismarck, Gladstone, Joseph Choate, and Elihu Root. If you scan the biographies of these men, you will be struck by their continued versatility and great mental activity down to their last hour.

Then there was the case of Count DeLesseps, who built the Suez Canal and started the Panama Canal. At 88 he married a buxom Creole, who bore him eight children, including two sets of twins. This, of course, was a physical achievement which is generally not the characteristic of the intellectual types.

As an example to the younger members of the bar, I now cite the case of Adam in Shakespeare's As You Like It. Adam wished to follow the fortunes of his young master, who was, as I recall, driven into the forest by a cruel uncle. Orlando told Adam he feared he could not withstand the perils of the journey. Adam, who was then over threescore and ten, pleaded that he was hale and hearty, because in his youth he "never had applied hot rebellious liquors to his blood."

THE UNITED STATES SUPREME COURT JUDGES

In the recent attempt to increase the numbers of the Supreme Court Bench, and thus control its decisions, the question of age played a most prominent part in the discussion. Take a look at the Court. Hughes today is 76. Not long since I saw him walk down Pennsylvania Avenue in Washington. He takes a 32-inch step, swings his shoulders with as much vigor as a man of 50, and his mind is more powerful than ever.

It was Hughes at 75 who drove back and defeated the bright young men of the "brain truster" school, Corcoran, Cohen, and company, and outgeneraled that master politician, the distinguished occupant of the White House.

Consider Judge Brandeis, now 82 years of age. Every faculty is intact, and he brings to bear on constitutional problems all the genius of his mighty intellect.

Consider Judge Van Devanter, now 80 years of age. After leaving the Supreme Court Bench he was detailed by the Supreme Court last spring to a trial term in New York City. It was a difficult trial, with modern attorneys of the first magnitude on both sides endeavoring to woo the jury by their arts and digressions. Judge Van Devanter gave the defendants a fair trial, free from collateral discussions. His charge was a model of clarity. He took the verdict late at night, and then took the subway home. No limousines or taxis for him.

So I say, that while man has fixed an arbitrary age of retirement, Dame Nature does nothing so absurd. She has no fixed rule of longevity. I cite the careers of these illustrious men to make it clear to you that the age of 70 is but the beginning of a larger wisdom.

As I look at Judges Miller and Smith tonight I can see nothing of the lean and slippered pantaloon in their make-up. They are as fully panoplied in mind and intellect as when they went on the bench many years ago. Their splendid mentalities are at once a tribute to hard work and correct living. We here tonight give tribute to these long years of service magnificently given to the people of the State and the fifth judicial district.

SERVICE TO CONSTITUTIONAL GOVERNMENT

The greatest achievement of our distinguished guests is that they have, during their long years on the bench, advanced and consolidated the gains for constitutional government in America. It is indisputable that if you take away the law and its impartial administration, all government will fall in confusion. Under such conditions an ancient writer says that "every man will become a law unto himself which must produce many enormities. Lust will become law, envy will become law; covetousness and ambition will become laws, and popular government will cease to exist."

The continuation of free institutions in America must depend upon the continuance of an upright and independent judiciary. A fearless judiciary, of which our guests are outstanding examples, is, indeed, the main bulwark of the liberties of the people.

You, sirs, during this outstanding period of service, have upheld the best traditions of the American bench. You have done this whether the matters concerned involved human liberty or the economic dispensation.

The outstanding feature of your public service is that during the years that have passed you have so ordered justice and law that human liberty, popular rights, and free government have been stimulated and advanced.

Why is it the plagues of fascism and communism gain no ground in America? The answer is simple: We have in our courts judges, of whom you gentlemen are typical, who administer justice irrespective of whether the litigant is rich or poor, strong or weak.

Sirs, you leave the bench secure in the affections of the bar and the people of this judicial district. You are the beneficiaries of long years of distinguished service, arduous work, careful living, and high thinking. You are yet young in spirit, and, more than that, captains of your own souls. The bar and bench say "Hail" but not "Farewell."

In the name of the bench, bar, and people of the State I ask that divine Providence grant you many, many years of happiness, good health, and continued accomplishment.

Defense Policy of the United States

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1939

EDITORIALS FROM KANSAS CITY STAR

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD several short editorials, really constituting one editorial, from the Kansas City Star, on the subject of our defense policy.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Kansas City Star of December 28, 1938]

I. WHAT POLICY FOR DEFENSE?

The President is expected to make his recommendations for strengthening the national defense in a special message to Congress to be delivered early next month. No state paper, we believe, has been more anxiously awaited since Mr. Roosevelt revealed his plans for dealing with the economic crisis at the beginning of his first term. None may have graver implications for the future of the Nation.

The specific recommendations, it is said, will be preceded by a general reference in the President's annual message to Congress concerning the threat that recently has arisen to the safety of the United States and its neighbors in the Western Hemisphere from developments elsewhere in the world. But the American people, we suspect, need little education on that score.

It is perfectly apparent that the last few years have seen a progressive worsening of political relations in Europe and Asia. Japan and China have now been at war intermittently since 1931. The 2-year-old Spanish civil war is being prevented from spreading only with the greatest difficulty. At least twice in the last year the European democracies and Fascist dictatorships have been on the brink of war, and peace has been preserved at a cost that has left the two principal democracies, in the words of a British observer, "down at the heel and shivering."

A new spirit is abroad in the world, compounded of a cynical disregard for treaty obligations, a ruthless determination to employ all the resources of the state to further imperial ambitions, and a growing confidence that other nations are either too cowardly or too decadent ever to resist those ambitions at the risk of war. That spirit is already at work in South America. For the first time in more than a century the Monroe Doctrine is being seriously challenged. In these circumstances a new situation has been created for the United States, demanding a careful reconsideration not simply of our armament program but of the basic objectives of our foreign policy as well.

That much is clear. It is also clear that without a definite understanding as to what our foreign policy is to be, it will be impossible to reach an intelligent decision as to the requirements of our national defense.

Every American, with the negligible exception of a few sincere pacifists, may be assumed to want his country adequately defended. More than that, every such American expects his Government to make provision for its defense. A heavy responsibility rests with the President. He is, under the Constitution, Commander in Chief of all the armed forces of the United States. The general staffs of the Army and Navy are available to him for technical advice, but in the final analysis it is up to him to determine on the recommendations of policy that shall be submitted to Congress.

Mr. Roosevelt next month will undoubtedly urge the National Legislature to increase the country's Military and Naval Establishments. It is generally agreed that he should; that he would be derelict in his duty if he did not propose stronger defensive measures in the face of recent international disturbances. Preparations that would have been entirely sufficient a few years ago are obviously inadequate today. Armaments are largely relative. To meet the possibility of a more powerful attack you must have a stronger defense. That is common sense.

There has, however, been considerable controversy over the size of the program the President should advocate, and here it becomes manifest that what is needed first of all is a reexamination of our foreign policy along these lines.

1. Preparations devised to defend the territory of the United States and its insular possessions are one thing.

2. If we intend to protect the whole Western Hemisphere, we shall need still other forces.

3. And, finally, if we are to take an effective part in world politics, so that countries as remote as Germany, Italy, and Japan will be compelled to respect our wishes, we must plan our preparations on yet another scale.

Many informed and intensely patriotic persons fear that Mr. Roosevelt is going to request an altogether extravagant program, that he means to go far beyond the necessities of national or even hemispherical defense to seek an army and navy capable of allowing the American Government to play power politics in any part of the world, and that once in possession of such a force, there would be constant danger of plunging the country into war.

They are persuaded that in grandiose schemes of this kind the real needs of territorial defense may be overlooked and the country may find itself in the end less well protected than by a more modest and better balanced program. Others see a prospect that defense will become a political football, used to distract public attention from other pressing questions of the day. War hysteria, they contend, is invaluable for that purpose.

Such speculation, however, must be beside the point until the President makes known his conception of the objectives of our foreign policy. Not until these are thoroughly understood, discussed, and agreed upon, will it be possible to form a reasonable judgment on his proposals for defense. Both Congress and the American people have the right to know what he thinks our foreign policy should be.

[From the Kansas City Star of December 29, 1938]

2. WHAT POLICY FOR DEFENSE?

THE THREE COURSES OPEN

So far the administration has failed to take the country into its confidence as to which of the three major policies for defense it proposes to adopt as a basis for armament. Yet it is perfectly evident that we must know what we are arming for, if we are to arm intelligently. The three possible policies are these:

1. Defense of continental United States, including Hawaii and the Canal Zone.

2. Defense of the two Americas, as essential to the long-run defense of the United States.

3. A world police policy backed by sufficient power to make a great democratic bloc, including France and the British Empire, with such military strength that no restless nation or combination of nations would dare start a war.

These three policies must be constantly borne in mind in considering any armament program proposed to Congress. Undoubtedly most Americans thoroughly disapprove of the governments and policies of the important dictatorships of the Soviet Union, Germany, Italy, and Japan. But just as undoubtedly most Americans at present, at least, are thoroughly opposed to going overseas to take a hand in any European or Asiatic struggle.

Certainly the American people believe in adequate continental defense—policy No. 1. Conceivably they might become hospitable to the idea of upholding the Monroe Doctrine by force, if necessary, and assuming the obligation of protecting both American continents—policy No. 2. But just now they would violently and almost unanimously turn thumbs down on arming for world police duty—policy No. 3. Possibly they might finally be convinced that they were wrong. But there is no question as to their present deep-seated opposition to any course looking toward a foreign war.

Each of these three policies may be defended as policies of national defense. But the people should be taken into the administration's confidence. The President may believe sincerely that the only adequate national defense lies in policy No. 3. But the people must pay the bills. They have a right to know what is back of any rearmament plan that is offered. There should be no attempt in Washington, at the White House or in Congress, to make the people believe they are being asked to provide a program for immediate continental defense when the armaments asked for are on a scale for use for policing the world.

The difference in cost of armaments for these three policies would be very great. The country is in much better shape to meet a war emergency than it was in 1917. Even with its present equipment and the equipment that could be fairly readily obtained, it could defend continental United States, Hawaii, and the Canal Zone. To be absolutely safe perhaps $500,000,000 more might be required. If such an amount were granted it ought to be spent on carefully prepared plans which presumably are already in the hands of the War and Navy Departments, to build up a properly balanced Army and Navy and to accumulate stocks of essential metals that are not produced at home.

The spectacular thing, which might be expected to attract Congress, would be to center on airplanes and battleships. But the military and naval experts know that many less spectacular things are required to make a really balanced and efficient army and navy.

For policy No. 2, the defense of both Americas, there is an obvious reason. For more than a century the United States has assumed that its safety would be menaced by any further European encroachments in the New World. Today German air bases in Brazil would threaten the Panama Canal and thus the security of the United States. To uphold policy No. 2 would require a different and a more expensive program than would be required for policy No. 1. Yet it might be necessary.

The emphasis here would be on the Navy as the first line of defense, with an expanded air force, and extensive airfields and air equipment in Latin America. It would be no use to send airplanes to Brazil if there were no place for them to land, and no adequate machine shops to take care of repairs.

Finally, an armed force strong enough in combination with France and England to restrain the aggressive dictatorships, would require far greater preparations and vastly greater expense than either of the other programs. The Star does not attempt to say offhand that policy No. 3 should go into the discard without consideration. It does say that the arguments against it seem convincing to most Americans and that the armament program required for it should not be adopted under the disguise of a program intended merely for continental defense. These considerations apply especially to the proposals coming out of Washington for an extravagant air fleet, out of proportion to the balanced requirements of the Nation's military forces, no matter which of the three policies here outlined should be finally adopted.

[From the Kansas City Star of December 30, 1938]

3. WHAT POLICY FOR DEFENSE?

THE AIR SERVICE

No part of the discussion of national-defense problems is more controversial, or even more spectacular, than that pertaining to the air arm. Here is where wild-eyed enthusiasm, extravagant claims, Wellsian predictions, and popular misconceptions combine to make every man an "expert." By the merest gestures vast fleets of fighting airplanes are created and manned, giant bombers fly to distant objectives under mysterious radio control, and horrible destruction rains from the clouds. Almost every development in military aviation carries with it an awesome inference of death and suffering for civilian populations.

No wonder a morbid wit remarked that in the next war "the boys in the trenches would be knitting sweaters for the folks back home."

Air defense is too serious a matter nowadays to remain in the realm of absurdity; nor should it receive the lofty dismissal of those who maintain that America is still safely distant from all threats of force. The problem is so closely attached to all other phases of our military policy that it should receive thoughtful and balanced consideration.

Planes and bombs alone do not win wars. China and Spain have demonstrated that. But they are exceedingly potent weapons in a bluffing contest, especially against nations inferior in air strength. Undoubtedly this factor in itself is responsible for the sudden surge of air-mindedness in the United States.

But there is no reason to be hysterical about it. Before engaging on so great a program as would build 10,000 airplanes, for instance, and train 20,000 pilots, certain definite facts ought to be ascertained. If the Government undertakes such a program on a mass-production basis, it is likely to have the effect of seriously dislocating the commercial aviation industry by turning plants and their mechanics entirely over to military manufacture. It is questionable, provided the planes could be produced in the short period suggested, whether training facilities would be available.

But beyond all this there is the more important consideration: Just what do we need and why do we need it?

The answer to this can be determined only by a decision as to the broad purposes of governmental policy on national defense. If that policy is to defend only the continental United States, including Hawaii and the Canal Zone, the role of military and naval aviation should be fitted to that particular plan. Some of our best military authorities believe that we have a fairly adequate continental defense at this time. It is out of balance, however, in some regards. Certain deficiencies should be made good in order to round out an army of 480,000 men which is regarded as necessary for this purpose. It is estimated that a half billion dollars will be required for new rifles, antitank and antiaircraft guns, for stocks of needed metals, such as tungsten, manganese, and tin, for powder and ammunition reserves, and for tools for airplane production.

Thus it would appear that a strictly home-defense policy places greater stress on plans for airplane production than on production itself. It is more important to be ready to build the latest models, with all the necessary tools available and plant expansion plans already prepared, than it is to have a large number of planes which would become obsolete in 2 or 3 years. Only a few years ago France had the finest air force in the world, but the planes were kept in their hangars too long. When the crisis of last September came, the great French air force was not much better than a pile of junk.

More airplanes will be needed, of course, even for a continental defense plan. Estimates of the number required vary from 1,000 to 3,000. Newer types should be provided for National Guard and Reserve units and a proper proportion of all categories—pursuit, attack, bombing, and observation—should be the objective.

On the other hand, if our policy is determined to include defense of all the Americas from foreign aggression, giving direct military power to the Monroe Doctrine, the problem of air armament becomes greatly enlarged. For one thing, air operations in Central and South America would call for a careful arrangement of bases. Commercial air lines would have to be encouraged and aided in obtaining fields and other facilities which could be turned to military uses when an emergency arose. Naval responsibility would be greater in such a case, which undoubtedly would mean that several additional airplane carriers would be called for. It is easy to see that another half billion dollars could be spent for the naval expansion necessary, and not even include any additional battleships, which are considerably more expensive than carriers.

The Army could not be left out of consideration in the defense of all the Americas. Regardless of what overseas expeditions might be attempted, military aviation naturally would be expected to reinforce the naval effort. This would call for a larger force of far-cruising bombers—and bombers cost from $250,000 up.

Thus, to insure a broad enough protection for North and South America, the cost will jump far beyond anything contemplated for a purely home defense. Congress may agree that it is necessary, but it should be certain that added billions will not be spent unwisely under any pressure from propaganda groups and selfish interests.

For that matter, it is possible that a defense plan evolved to protect all the Americas would also be extensive enough to give the United States a stronger voice in world affairs generally; Berlin, Rome, and Toyko undoubtedly would listen then.

It is absurd to consider some of the proposals heard nowadays—that we should have 15,000 or 20,000 airplanes and be ready to "take on" anybody. This may appeal to some persons as some schemes do to "Amos 'n' Andy": "It sure sounds good."

But is it?

[The Kansas City Star of December 31, 1938]

4. WHAT POLICY FOR DEFENSE?

WHAT THE ARMY NEEDS

Two major perils threaten the decision that Congress must soon make on the subject of national defense. One is that the country may be hurried into a program, without any clear idea of the needs it is expected to meet. The other is that even after these needs are determined in the light of an agreed foreign policy, the program may be drafted for spectacular appeal, thereby leaving our preparations dangerously deficient in certain routine but vital respects.

The necessity for deciding what foreign policy we propose to pursue already has been discussed in this editorial series. National defense, as has been pointed out, is an elastic term. It may mean merely the ability to resist an invasion of our territory or insular possessions. It may be expanded to cover arming to protect the whole Western Hemisphere against outside attack, on the ground that a European or Asiatic power, once established anywhere in the Americas, would create a new and substantial menace to our security. Or the term may even be interpreted to include the military and naval force required for policing the world, as constituting in the end the cheapest form of national insurance.

All three of these policies, it has been said, are arguable. But since each presupposes a different level of armament, it would be as foolish to adopt a defense program without knowing what we are to defend, as it would be to buy an overcoat in ignorance of whether it was intended to protect the wearer against a summer shower or the rigors of subzero weather.

It would be equally absurd for Congress to enact a program that might provide superfluous strength in a few categories and yet leave the country vulnerable through the neglect of other essential equipment or organization.

The recent suggestion, said to have administration approval, that the Army's air establishment be increased by 10,000 planes, well illustrates this particular peril. Military experts consider such an addition excessive for the national needs, at least under any policy short of one that would seek to maintain an American peace in every part of the world. But that is not the only difficulty with the suggestion.

It is agreed, generally, that the Army will have to have more planes, whatever defense policy is decided upon. Yet, according to the experts, there are other things that are even more urgently needed by the Army. At the top of their priority list stands the accumulation of reserves of various materials that the United States either does not produce or produces in altogether inadequate quantities.

Among these are manganese, antimony, tungsten, tin, iodine, rubber, and wool. All of them are practically indispensable for the protection of our own territory, let alone any more extended defense. All of them can be stored in preparation for a war when our foreign sources of supply might be seriously disrupted or temporarily shut off. But at present this elementary precaution has not been taken.

What good would another 10,000 airplanes be if a combination of enemies should succeed in crippling our land defenses by depriving us of essential war materials? Nevertheless, millions of dollars have been spent in buying up the world's output of silver to support an artificial price for the benefit of the silver-mining interests of the United States, creating an immense reserve of this useless metal, while no funds have been available for accumulating a similar reserve of other materials upon which the Nation's very existence may some day depend.

The primary goal of all thoughtful military men is to seek means by which the mere manpower of armies—their bulk or mass, as it were—may be reduced. The World War developed a tendency toward unwieldiness in all units, from companies to regiments and divisions. But now there is a striving for greater fire power. This is to be gained by cutting down the number of men in a unit and then giving the remaining personnel such efficient weapons that no loss of fire power will result. This means guns that will fire more rapidly and more accurately, mechanization and motorization to enable quick concentration at the critical points in combat, and, of course, a modernization of the auxiliaries that enable an army to live in the field.

The Army desperately needs much of this more modern equipment. A beginning has been made in furnishing it with the new and vastly more efficient semiautomatic rifle, but, as the phrase goes, only a beginning. The manufacture of rifles and of antiaircraft guns must be accelerated. The situation is still worse with respect to antitank guns. The Ordnance Department has designed such a weapon but so far the Army has none. It is short, too, of searchlights, radio equipment, and gas masks. At the end of the current fiscal year its motorization program will be only two-thirds completed.

Technical experts, again, rank several of these requirements ahead of additional airplanes. But somehow they are not dramatic. They do not readily capture public interest and for that reason there is a grave danger they may be slighted by the politicians who will finally pass on the defense program.

It is of the first importance, therefore, that both the public and the politicians be brought to understand that valuable as military aviation has become it has not done away with the need for a balanced defense. It would be a fatal mistake for the United States to risk its safety upon the possession of the largest air fleet in the world. Much greater protection, the experts say, is to be had from a somewhat smaller air force, working in conjunction with a slightly larger Regular Army and National Guard, than we now possess, equipped with a sufficiency of the latest weapons.

Specifically, it is suggested that the Regular Army, National Guard, and Enlisted Reserve be raised to a total enlisted strength of about 480,000 men, and that approximately a half billion dollars be appropriated for new equipment and the accumulation of necessary reserves. So far as the Army is concerned this would provide the basis for a virtually impregnable defense of the United States and its possessions. Its secret is the effective coordination of all factors in the right proportion. Like the strength of a chain, the defensive power of a nation must be gaged by its weakest link.

[From the Kansas City Star of January 2, 1939]

5. WHAT POLICY FOR DEFENSE?

A RATIONAL NAVY PROGRAM

The immense importance of creating a balanced land and air force, instead of emphasizing a few types of armaments and largely neglecting other essential measures, has been dealt with in a previous editorial. The same principle applies equally to any plan that may be adopted for bolstering our sea defenses by the Congress that meets tomorrow.

The particular danger in connection with the Army is that Congress, perhaps under administration guidance, will make an extravagant provision for new airplanes, which are a popular fashion of the moment, but fail to arrange for correcting vital deficiencies in other equipment and material reserves. Where the Navy is concerned, the temptation is to consider its needs almost exclusively in terms of battleships.

The battleship undoubtedly is a major unit in any fleet. In the large-scale naval engagements of the past the superior range and number of the guns such a ship could mount and the thickness of its protective armor have constituted an invaluable asset. The development recently of the power of air attack has produced some controversy over the continuance of its value, but the weight of authoritative opinion seems to be that the bomber has not yet destroyed the usefulness of the battleship.

On the other hand, the so-called capital ship remains only one unit of a well-balanced fleet. For maximum efficiency such a fleet must also possess fast scouting cruisers, aircraft carriers, submarines, destroyers, and various auxiliary vessels necessary for its maintenance at sea. No naval expert would propose to have a fleet consist entirely of battleships. Yet, according to the experts, while the current naval program probably will meet all immediate requirements in this category, we are weak in submarines and destroyers. We need more aircraft carriers and auxiliaries. The Marine Corps, they say, should be strengthened, the merchant marine developed, and our shipbuilding facilities improved.

Along with these deficiencies goes a shortage of torpedo supplies. How all such factors interlock may be seen by recalling Great Britain's recent experience. At the time of the attempt to halt Italy's seizure of Ethiopia the British Atlantic fleet was concentrated in the Mediterranean. It was overwhelmingly stronger than the whole Italian Navy. But the British preparations had been so lax in previous years that the fleet had on board ammunition enough for less than half an hour's firing. It was helpless. This one deficiency paralyzed all Great Britain's expensive battleships.

Balance, then, is as necessary for the Navy as for the Army. A great deal of money already is being spent on our sea armaments. The latest construction program, authorized by Congress in 1938, will entail the expenditure of more than $1,000,000,000 over from 6 to 8 years. The Navy is our first line of defense, whether that is deemed to cover only United States territory or the whole Western Hemisphere. (In recent years the Navy's plans are believed to have assumed the duty of upholding the Monroe Doctrine.)

The consensus appears to be that what is needed now for the Navy is chiefly a continuation of the present expansion program, with special emphasis on rounding out the fleet to achieve full fighting strength. This policy, the naval experts believe, would serve our defense needs, unless we decide to police the world. In that case, according to the Chief of Naval Operations, the country would require three times the force contemplated by the present program. The cost would be staggering.

There has been some talk of the desirability of doubling the current size of the Navy in order to create independent fleets in both oceans capable of withstanding simultaneous attack from two or more enemies. Most authorities oppose this scheme. They declare that the possibility of such an attack is too remote to justify the expense (estimated at $3,000,000,000) and that so long as the Panama Canal is adequately protected, the main fleet can be shifted back and forth readily enough to meet any probable crisis.

In discussing the needs of the Army, Navy, and air force, one subject constantly recurs. It is supply. If war comes, the Nation must be ready to expand all branches of the defense and to keep them furnished with effective equipment. Under modern conditions this will involve a conversion of our industrial plants generally from peacetime operations to production for military purposes. In Germany the change already seems to have been made in connection with the Nazi rearmament program. Such regimentation is not feasible in a democracy like ours. But it is possible to make certain preparations in advance.

Thus, a survey has been started to determine what factories are best equipped to produce various war supplies. About 10,000 establishments, it is reported, have been investigated and assigned their wartime duty to manufacture some 7,300 items. But much remains to be done. There are important items so specialized as to be outside the capacity of our normal productive resources, such as bomb sights, gas-mask canisters, demolition bombs, and fuses. These call for "educational" orders, allowing factories to experiment, buy proper machinery, and develop special skill among their employees.

Further, there is the need of providing the machine tools, jigs, dies, and such, required for getting into speedy production. Instead of building a large and costly fleet of airplanes that will become obsolete within 2 or 3 years, we should be equipped with the tools for their manufacture. These tools would gradually become obsolete and have to be scrapped and renewed. That would cost something, but it would cost far less than scrapping obsolete airplanes.

Finally, there is the necessity already mentioned of assembling reserves of essential raw materials like manganese, tungsten, and rubber that otherwise would have to be imported in time of war. All this is unspectacular work. But in an emergency it would be of inestimable value.

[From the Kansas City Star of January 3, 1939]

6. WHAT POLICY FOR DEFENSE?

A BALANCED PROGRAM NEEDED

The question of what constitutes a rational armament program for the United States has been discussed in some detail in a series of

editorials in the Star. Here we sum up the situation in the light of available facts.

1. The United States has the immense defense that no European nation has, of the great ocean barriers. We need not become hysterical. There is plenty of time to plan our defense program on a rational basis in accordance with competent Army and Navy advice.

2. It is essential first to determine the purpose for which we are arming. If we expect merely to defend our own shores, a certain program of armament expansion is required. If we expect to go overseas and take an active hand in European affairs on the theory that such a policy is needed for our defense, then another and far more costly program is necessary. Three major defense policies are open to us:

The defense of continental United States, including Hawaii, the Canal Zone, and the Caribbean area.

The defense of both American continents in accordance with the Monroe Doctrine, which is based on the assumption that our national safety would be imperiled if European nations or Japan were allowed to get military bases in any of the Latin-American countries.

A virtual alliance with the European democracies to restrain the aggressive dictatorships, on the ground that if Britain and France were crushed the United States would not be safe.

3. For the first policy of continental defense the United States already is fairly well prepared. It is not nearly in the position in which it was caught in 1916–17 when it had no air equipment and had not even decided on the type of rifle to be used. A moderate rearmament program to round out our defense, costing perhaps $500,000,000, would be sufficient. We would need certain additions to the Navy beyond those now planned, in order to have a balanced fleet. We would need to expand somewhat the Army organization and provide necessary equipment. Some additional airplanes would be required and an expansion of ground and training facilities. Of prime importance would be the equipment of factories with the necessary machine tools to enable them to get into production rapidly, and the accumulation of essential materials that we do not produce.

4. For the defense of the Monroe Doctrine some modification and expansion of this program would be needed. Commercial aviation companies would have to be helped to get more landing fields and equipment in Latin America. The air force would have to be expanded to meet the situation. If the Panama Canal is adequately defended there would be no need of the extravagant proposals to double the Navy in order to provide one fleet for the Atlantic and another for the Pacific.

5. To arm on a world basis in accordance with policy No. 3 would involve enormous expense, and would be contrary to what overwhelming public sentiment believes should be done.

6. In conclusion: We repeat the whole situation should be considered on a reasonable basis, without hysteria. Especially should Congress be on its guard not to stray off to provide spectacular arms like a huge airplane fleet and more battleships, when all the competent authorities agree that a balanced program for Army and Navy is required.

There would be general agreement on the need of providing adequately for continental defense in the way already outlined.

The Star believes the defense of the Monroe Doctrine is necessary for national safety, and that the continental defense program, which is needed in any event, should be expanded to meet the requirements of protecting the Western Hemisphere from European or Asiatic aggression.

The third program of arming to take an active hand in overseas politics The Star believes is unwarranted, extravagant, and against the judgment of the American people. It recognizes the possibility, however, that if there should be a world war, the United States might again become involved against its present will. But it also believes that an intelligent armament program to meet the needs of continental and American defense would be ample. If the emergency should arise this program could rapidly be expanded to meet any contingency.

In this situation it repeats what it has said before, that there should be no subterfuge, no disguising of our real purpose in rearming; and that by no means should Congress get into an extravagant program of rearming on a world basis on the pretext that it is merely providing for necessary continental defense.

Jewish War Veterans

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

ADDRESS OF HON. JAMES E. MURRAY, OF MONTANA, JANUARY 17, 1939

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at a meeting of the Washington Post of the Jewish War Veterans, at Washington, D. C., January 17, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful for the opportunity of addressing the Washington Post of the Jewish War Veterans and their ladies in this magnificent building of the Jewish Community Center, which no doubt mirrors the spirit and activities of the Jewish community of the Nation's Capital.

I speak to you tonight as an American who cherishes the American way of life. I speak also as a Catholic, loyal to my own faith but respecting the faith of other men worshiping God in their own way. As an American and as a Christian, I am filled with a deep sense of horror by the reign of rancor and bitterness which of late has been writing a bloody page in the history of our time.

The lot of the Jews in Europe has indeed become a most unhappy and tragic one. Pilloried by ruthless dictators who have descended to a degree of oppression and brutality never before reached, and the end is not yet in sight. Only God knows when and how good will among men will again be restored. I am old-fashioned enough, however, to continue to believe in the fatherhood of God and the brotherhood of man. I have an abiding faith that justice will come again, and I am proud tonight to join with my fellow citizens in holding aloft the torch of tolerance and mercy to light the way of oppressed and tortured millions to a better day.

I decry the unwarranted acts of brutality and humiliation being heaped upon a defenseless people by the demigods now in control of some sections of Europe. As a Christian, I am ashamed to repeat the record of outrages perpetrated on the Jews of Europe, bereft, as they are, of all means of defense. If these so-called leaders who are propelling Europe toward the brink of war had any faith in God or any belief in justice or humility, the world would have been spared the crimes of concentration camps, clubbings, murders, purges, and exiles.

I have no desire on this occasion to repeat the platitudes of many of my fellow Christians, who, in speaking before Jewish audiences, sometimes refer to Jews as the "chosen people," and I do not come here tonight to merely tell you that "some of my best friends are Jews." I like always to think of my Jewish fellow citizens as being no better and no worse than others. In my State of Montana we make no distinctions. Out there we are all just Americans.

You have, of course, your share of saints and sinners, and there are those among your people, as there are among all races and all peoples, who have enriched life by their contributions in the various fields of art, of science, and of commerce. I think the Jews in this country have played their part nobly and well, and have done much to shed luster on the term "American." If I were a Jew, I would say with Shakespeare: "I am a Jew. Hath not a Jew eyes? Hath not a Jew hands, organs, dimensions, senses, affections, passions?"

Of course, the Jews have the weaknesses as well as the virtues common to other peoples of the human race. They are entitled only to the same measure of sympathy and justice we of other races hope to have accorded to ourselves. Their sins should neither be exaggerated nor their virtues ignored. On the whole, they measure up with the rest of us. I, for one, am unwilling to admit that any single race excels all others.

I would be both ungracious and unjust if I did not acknowledge the peculiarly Jewish contributions to our civilization. The Jewish people gave to the world the conception of one God—monotheism. Who can be unmindful of the eternal beauty of the Psalms of David, the social implications of the teachings of the prophets of Israel, or who can forget the lamentations of Jeremiah, or the vision of Isaiah? Jesus Christ, the Saviour, who gave us the Christian faith, was born of your people.

But today a strange and peculiar doctrine has been set in motion to plague your hapless race. I refer to the doctrine of alleged racial purity, or Aryanism. If I could speak to Hitler or to Mussolini, I would tell them what Disraeli told his fellow members of the English Parliament when taunted with being a Jew. "That is all very well," said he, "but when your ancestors were chasing each other around trees with stone axes, mine were writing the Talmud."

As an American and a supporter of our American principles of liberty and justice I resent this attempt to slander a whole race. Most nations engaging in acts of oppression and injustice undertake to justify their conduct upon some high principle. Of course, you can't very well rob a man and at the same time admit that he is a gentleman and your equal, or that he is possessed of any merit whatever. You must first assert and declare him unfit to enjoy either liberty or property in order to justify the spoilation. In Germany, if Hitler was completely sincere, would he, in addition to depriving the Jews of their civic rights, also rob them of their property? I am sure that history will record his oppression and spoilation of the Jews as the basest page in German history.

We, you, all of us are privileged to be citizens of this great American democracy. To my way of thinking, the greatness of America is not to be measured solely by her material resources, for which, of course, we are all truly grateful. We should, and must, make wise use of our abundant natural resources, to the end that every American citizen may be the beneficiary of Nature's bounty. But the greatness of our country, in the end, will be measured only by its spiritual resources; by its adherence to humanitarian principles.

It is by no mere chance that this country has no minority problem. To our shores have come men and women of various religious faiths and from many old-world countries. Here Protestant, Catholic, and Jew, English, Irish, German, French, Scotch, Russian, Dutch, Swede, to mention but a few, have learned to live, work, worship God, and rear their families under a philosophy of "equal rights for all and special privileges for none." Ours is a government based upon law and not upon the caprice or whim of a dictator or a privileged few.

The rights of our citizens should not and do not depend on mere sufferance or tolerance. Of course, we must be personally tolerant, but to each citizen, under our system, must be accorded and guaranteed the full and equal protection of the law of the land, based upon right and justice. So long as this conception of government endures the rights of no man will be in jeopardy, regardless of race or religion.

An old word has lately been resurrected from the past—the word "refugee." This is a grim and impelling word. It is unthinkable that human beings—men, women, and children—in this period of civilization can be made refugees; cargoes of human lives to be dumped at the first port of call. These people are not refugees; they have a right to stay in the countries of their origin, where in many cases they have lived for generations and where they have become attached to native traditions. This problem of the rights of minorities, which we thought had been settled for all time, must finally be solved if there is to be any stability or security in the world. The settlement of this problem must be based on right and justice. Otherwise man has lost his dignity and forfeited his right to be called civilized.

It is not necessary that every man and woman must look alike, think alike, act alike, worship alike, or vote alike. The imperishable glory of our Constitution is that within the framework of that immortal document each group, each religion, each institution can and does make a vital contribution to what has come to be known as the American tradition.

Let me say here and now that I am not afraid of the vulnerability of American institutions. They have their foundations, not in the swamps of intolerance, bigotry, or hatred, but in the firm bedrock of the soil of a free people who, from Lexington to the Marne, paid for them with their blood. I have no fear of fascism, nazism, communism, or any other "ism" in America. A free people will never be wooed and won to any false "ism," but a free people must be eternally vigilant.

There are many counts in the indictment drawn by the enemies of the Jewish people too baseless to defend or to enumerate, but I do wish to mention tonight only two because they are so often used by your enemies—and may I say here that your enemies are the foes of all mankind. We have learned to know that an attack upon one people is an attack upon all people; a slander against one religion is a slander against all religions; an assault against freedom in one country is an assault against freedom everywhere.

The two charges to which I refer are that the Jew is unpatriotic and that he is communistic. Both these charges would be too ridiculous to merit discussion if it were not for the fact that many misguided and envious persons accept them and frequently further the slander by repetition.

I dislike to burden you tonight with statistics. However, let us examine briefly what part the American Jews played in the late World War. The United States in that struggle mobilized approximately 4,355,000 men, or 4.3 percent of the population. Of those mobilized, approximately 250,000 were of the Jewish faith, or 4.5 percent of the Jewish population. In other words, the Jew was no more and no less patriotic, measured by the numbers mobilized. A more interesting figure is this: Of the total number of men mobilized, there were 1,491,000 in the Infantry, or 26.6 of the total mobilized, whereas the Jews in the Infantry numbered 84,973, or 48 percent of the Jews mobilized. Is any more eloquent argument needed in support of the patriotism or devotion of the Jewish citizen?

And here is what General Pershing, the Chief of the American Expeditionary Forces, had to say:

"When the time came to serve their country in arms, no class of people served with more patriotism or with higher motives than the young Jews who volunteered or were drafted and who went overseas with our other young Americans. I well remember, in my inspections of New York divisions, seeing so many patriotic, well-disciplined, well-behaved young Jewish soldiers, whose commanders spoke of them in the highest terms."

I have read that in Germany 100,000 Jews were mobilized, or 17 percent of the total Jewish population, of which 12,000 were killed in battle. I could keep on giving you the statistics of Jewish service in every army of every power in the World War; I could also relate scores of acts of individual bravery, heroism, and sacrifice, but it is unnecessary.

The cry that the Jew is communistic is even more preposterous than the one that he is unpatriotic. The myth is being spread also that Bolshevism is of Jewish origin. I presume this is because of the fact that Karl Marx was of Jewish extraction, or perhaps the Jew may sometimes appear too eager to assist in a program of ameliorating the condition of those who are undernourished, poorly housed, or ill-clad. Obviously, that is not communism; that is just plain justice and sound Americanism. The basic philosophy of Judaism, as I understand it, is wholly inconsistent with communism. It is certainly unlikely that a people engaged in industry, in commerce, in the professions, promoting the works of charity and mercy, would at the same time deliberately undertake to destroy their government and ruin themselves.

In this country, with rare exceptions, those Jews who have attained political prominence have done so either as Republicans or Democrats and not as enemies of democracy. In Russia only 2 of the 55 leaders are Jews; namely, Kaganovich and Litvinoff. In our own country, Governors Lehman and Horner are certainly not Communists; nor are Justice Brandeis or Justice Frankfurter or the distinguished Secretary of the Treasury, Henry Morgenthau. Nor was the late Justice Cardozo a Communist. Scores of Jews have risen in this country to positions of prominence and renown, not as Communists, but as patriotic men and women wedded to our American institutions—men and women who have supported in the highest degree the principles of charity, of freedom, and of justice. I am confident of the fact that the Jewish war veterans of America, of whom there are tens of thousands, are loyal, patriotic American soldiers, willing to fight again, if necessary, to keep this country free from communism or any other subversive movement.

Consequently we must conclude that those who deliberately vilify the Jews as Communists do so despite the clear record of the case. They use the argument merely as a red herring to camouflage their true motives, which must be grounded in stupidity, hatred, and religious bias—things that can have no rhyme or reason or place in America.

I can well sympathize with those among you who cherish the ideals of Zionism and desire to build a Jewish national homeland in Palestine under the Balfour declaration. I can understand the longing of those who are persecuted to return to their historic home, there to dwell in peace on their own soil. I am sure that the peculiar genius of the Jewish people would create a state based upon justice and equality. If that could be achieved, and I see no reason why it cannot, it is possible that out of Palestine might again come some contribution which would enrich life everywhere. Certainly if Palestine is not the solution of the Jewish problem, it may at least make a substantial contribution to that solution.

The restlessness prevailing in Europe—economic, political, and social—has lately spread to our land. We cannot help this as boundary lines and oceans have been swept away by the speed of modern communication. There are gullible persons who, for personal gain and with shameless disregard of human rights, will profess to believe that these alien doctrines are cure-alls for the ills that beset us. The minds of men—even some well-intentioned ones—are often confused and misled. Let us pray, therefore, that the American people will awaken to the dangers which confront them, and stand steadfastly for justice and equality toward all races and all peoples within our gates. There is only one answer I can give to those who doubt our way of doing things: Let us have greater doses of Americanism. If we have an abiding confidence in democracy and liberty, the ship of state will never flounder but will weather all the storms that may gather about us.

By liberty I do not mean license; by liberty I mean the Bill of Rights as set forth in the first 10 amendments to the Constitution. By liberty I mean a free press, the right of every man to speak his mind without fear or favor. By liberty I mean the right of every man to select his mode of worship without jeopardy. By liberty I mean the right of every man to be safe in his person without being haunted by fears of secret police. By liberty I mean the right of every man to protest and to have an impartial trial without fear of recriminations. These precious human rights, wrested in a long and bloody struggle against tyrants lasting over a thousand years, are guaranteed in this country by that great charter of human rights, the Constitution. By democracy I mean a form of government under which every man has a voice in the selection of its servants. By democracy I mean the right of every man to be secure in his property by which he has come honestly. By democracy I mean the right of every man to share equally in economic opportunities.

But we have now learned that liberty and democracy are luxuries in a complex and changing world. We are told in some quarters that it is an expensive form of political mechanism. The citizen must pay a price in a democracy. The citizen must share alike all responsibilities, all burdens, all costs. And, what is more important, the citizen must be willing and ready to defend his Government with his life if need be.

"Eternal vigilance is the price of liberty." A free people must therefore be alert to resist any inroads upon its fundamental tenets. We must be on guard, and in its incipient stages repulse the efforts of those who would impose upon us other political and economic doctrines of thought and action. America has been tested in the crucible of fire, and it emerges today as one of the few remaining democracies.

I say with pride, but not the pride of the chauvinist, that ours is the best form of government designed by man. It offers the most effective basis for the development of our civilization and the improvement of our social and cultural conditions. It has reserved the power of government in the people, where it properly belongs. A free people must have free institutions. Our courts stand as a bulwark against usurpation of power either by the legislative or executive arms of the Government. As long as we have the writ of habeas corpus, trial by jury, and an independent judiciary, so long we shall be free men.

You have no doubt observed that in the totalitarian states there is no independent system of courts. The courts in those states are merely the tools of the dictators and instrumentalities of effectively eliminating all opposition. The ideals of justice are placed by your rabbis as above the ideals of peace. And justice can only prevail through an unshackled and courageous judicial order.

In this hour of darkness Jews should not despair. You are an ancient people. You have survived all your oppressors and traducers of the past. The names of your enemies are but memories. Your present oppressors will meet the same fate as those of other periods. You will live, if you choose, as free and courageous men under the banner of democracy, ready to defend this freedom with life if necessary.

In your fight against racial and religious bias, in your fight against malice and ignorance and hatred I pledge you my heart and hand as an American and as a Christian.

National Rally of Young Democratic Clubs

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, AT SEATTLE, WASH., JULY 16, 1938

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered by the distinguished Senator from Florida [Mr. PEPPER] at the national rally of young Democratic clubs in Seattle, Wash., on July 16, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a good omen for the future of the Democratic Party and for the hereafter of America that this national convention of Young Democrats has assembled in this great city of the great West.

Here are represented together in a common cause two of the most vital forces of this Nation—the Nation's West and the Nation's youth. It is only natural that the two should find a fellowship and a friendship which come easily, for both have much in common—enterprise, energy, courage, freshness of point of view, open-mindedness, willingness to meet and face new conditions.

It is also but natural that the occasion of the assembly should be to forward the cause of democracy, for these very qualities which so clearly characterize youth and the West are the very essence of the spirit of the Democratic Party.

The countless brave men and braver women of the West conquered a new world and made it by their enterprise and genius to blossom as the rose. Every young generation also has to conquer a new world. This young generation which is represented here today has already thrown its skirmish line far forward and soon the main army will begin to occupy the greatest destiny seen of all time.

Our forefathers, out of the deep wells of their great courage, launched their energies upon two colossal tasks in the beginning of our country. First, they set out for the physical conquest of this heart of a continent; second, they determined that their Government should be adapted to the needs and the aspirations of this country.

With their persistent sacrifice and herculean efforts they carved out of a wilderness a veritable jewel of wealth and beauty. No less unique and distinctive was the Government which they built here. In the crucible of their experiences through one and three-quarters centuries, over the fires of their own idealism and imagination, they refined all the known past about men's governments into something essentially new and unparalleled for this throbbing new Nation. It has been the genius of that Government whenever it has harkened back to the sentiments of its origin to continue to adapt itself to the new problems of each age; for well has it understood that "each age is a dream that is dying or one that is coming to birth."

It is now three and a third centuries since Jamestown, and we are no longer without experience and maturity. Long ago every nook and cranny of this gigantic country we put under foot and unchallenged dominion. We subjugated the savages and the beasts of the forests. We yoked the fields and the plows for our abundant nourishment and comfort. We bade rough, uneven Nature bow its head to our energy and enterprise as we flung highways and railways into every remote sector of mountain and plain. We bridled the timeless rivers which from their illimitable past had scorned restraint and made them turn the wheels of industry and bear upon their broad backs a nation's commerce. Even the towering mountain peaks which through their ageless lives not even to the soaring eagle had bowed their proud heads now we sail above in such comfort and security that they, like the little sands upon the seashore, bear witness to our mastery over all the eye surveys.

Our 3,000 miles of shore line embrace the oceans and the Gulf. Between the two great oceans lie 3,000 miles more of the very heart of a continent, incomparably rich, pregnant with almost every variety of resource, kissed by an equable climate, inhabited by 130,000,000 of people speaking essentially the same language, living under the same law, bound inextricably together by the consciousness of a common destiny, and possessing a physical and mental vigor and a spiritual refinement not approximated by any people on the earth. Our annual income is from seventy to eighty billion dollars, our total wealth in excess of $300,000,000,000. We live in a state of comfort; we are nourished, housed, and clad. Our means of communication and transportation are above any other people in the world. Search all history, scan all the wide world and you will find nothing like this Nation anywhere. Surely, one might surmise, here man has comes to his destiny dreamed of through the ages.

But this is America's front yard. But we also have a back yard. For example, 200 of our greatest corporations in 1932 owned nearly one-fourth of the whole Nation's wealth and about one-half of the nonbanking corporate wealth of the country. In 1935 about one-tenth of the reporting corporation earned about one-half of all the net corporate income in the Nation in the same year. In 1935–36 about 47 percent of the American families and individuals living alone made less than $1,000 a year, and in 1937 4 percent of all reporting estates transmitted by inheritance represented one-third of all the wealth transmitted by inheritance during that period. Nearly one-third of America's farmers make annually less than $500 each and nearly two-thirds of our farmers earn every year less than $1,000 each, almost one-half of the farm population of our Nation is tenantry and the number is steadily increasing. We have so permitted our soil to be dissipated that now more than 50,000,000 of acres are eroded into uselessness. "One-third of our Nation is ill-fed, ill-housed, and ill-clothed." We have a million more illiterates than college graduates. In spite of our annual crime bill being $15,000,000,000 we still have one murder committed every 40 minutes.

In fact, more than a quarter of a century ago, Woodrow Wilson with his clear eye saw that all had not been well with our national life. In his first inaugural, speaking sentiments true then and truer now, he said: "Our life contains every great thing, and contains it in rich abundance. But the evil has come with the good, and much fine gold has been corroded. With riches has come inexcusable waste. We have squandered a great deal of what we might have used, and have not stopped to conserve the exceeding bounty of nature, without which our genius for enterprise would have been worthless and impotent, scorning to be careful, shamelessly prodigal, as well as admirably efficient.

"We have been proud of our industrial achievements, but we have not hitherto stopped and thought fully enough to count the human costs, the cost of lives snuffed out, of energies overtaxed and broken, the fearful physical and spiritual cost to the men and women upon whom the dead weight and burden of it all has fallen pitilessly the years through. The groans and agony of it all has not yet reached our ears, the solemn, moving undertone of our life, coming up out of the mines and factories and out of every home where the struggle had its intimate and familiar seat. With the great Government went many deep secret things which we too long delayed to look into and scrutinize with candid, fearless eyes. The great Government we love has too often been made use of for private and selfish purposes, and those who used it had forgotten the people.

"At last a vision has been vouchsafed us of our life as a whole. We see the bad with the good, the debased and decadent with the sound and vital. With this vision we approach new affairs. Our duty is to cleanse, to reconsider, to restore, to correct the evil without impairing the good, to purify and humanize every process of our common life without weakening or sentimentalizing it. There has been something crude and heartless and unfeeling in our haste to succeed and be great. Our thought has been 'let every man look out for himself, let every generation look out for itself,' while we reared giant machinery which made it impossible that any but those who stood at the levers of control should have a chance to look out for themselves. We had not forgotten our morale. We remembered well enough that we had set up a policy which was meant to serve the humblest as well as the most powerful, with an eye single to the standards of justice and fair play, and remembered it with pride. But we were very heedless and in a hurry to be great.

"We have come now to the sober second thought. The scales of heedlessness have fallen from our eyes. We have made up our minds to square every process of our national life again with the standards which we so proudly set up at the beginning and have always carried in our hearts. Our work is a work of restoration."

The work of restoration begun by the Democratic Party in 1912 is again resumed and well under way by the Democratic Party in the same spirit which actuated Woodrow Wilson. Under our incomparable President, Franklin Delano Roosevelt, the spiritual heir of Woodrow Wilson, as was Elisha of Elijah, we are trying to restore to the American people their fundamental liberties and their basic rights, that is to say:

First. The right to make a living as laborer, farmer, merchant, teacher, professional man—anything that is serviceable and honorable.

Second. The right to enjoy something more than just a living—I mean to say, to have a decent home, to have health, some of the things modern science has made commonplace, education for one's children, some leisure, some recreation.

Third. The right to a government which in its heart wants to be fair to every one of its citizens and who will see to it that every one of its citizens is fair to every one of his fellow citizen—

We are making progress. America has stirred from her moral lethargy, and her ancient virtues speak again. But there is one way by which that restoration, the fundamental progress of the Nation, can and will continue. And that is by the Government of the United States continuing to be a truly liberal government—a government which has a genuine moral fervor in its determination to better the lot of the men, women, and children who are its citizens—a government which, like modern "medicine," has the good sense to adopt its prescriptions to the changing demands of the times.

The end of government is the welfare of the people. The means of reaching those ends change; the ends never.

In Jefferson's day the welfare of the people demanded the suppression of the Barbary pirates, the purchase of Louisiana, and the acquisition of an additional 100,000,000 acres of land from the Indians.

In Jackson's day the public welfare demanded that the Government protect the Nation against the strangling influences of a centralized and viciously manipulated money power.

In Cleveland's day the general welfare required that the giant railroads which held the destiny of this great West in their hands be restrained from exploitation and favoritism and made to perform fair and efficient public service.

In Wilson's day the promotion of the general welfare dictated the reformation of the banking structure, the strengthening of the antitrust laws, the curbing of private business abuses by the creation of the Federal Trade Commission, aid to the public health, a reawakening of the conscience of America to a thousand injustices and shortcomings in our economic and social order.

In Roosevelt's day the national interest makes it the plain duty of the Government to take up in dead earnest the work of national restoration begun by Woodrow Wilson and long neglected. The whole Nation, if not the whole world, knows what we are doing to make the Government of the United States the willing and intelligent servant of the American people—to lift up men's heads and hearts, to restore their pride and self-confidence, to give them a hand as they try to find their way through the complex and difficult life of this day; to give men and women the kind of security their forefathers came to America and, later, to the great West, to find.

The only hope for a liberal Government in this Nation is the Democratic Party. The whole political history of the country leaves no doubt of that fact. True, there is another political party which now is claiming to have undergone a change of heart (these disciples of Hamilton even are trying to steal our patron saint Jefferson) but the people know, of course, that this is just another example of the age-old story—the hand of Esau but the voice of Jacob.

And, conversely, I want to say solemnly and earnestly as one who is proud of a Democratic tradition which goes back as far as anyone in the Nation—that the only hope of the Democratic Party to be a dominant national party, to have the opportunity and the privilege of carrying on in the people's name the people's government, is for the Democratic Party to stand steadfast, day in and day out, as the truly liberal party of this country.

The people have now become articulate. They have found out by bitter experience what happens to them when their lives and their destinies are under the dominion of a government the chief concern of which is for a class and not the whole people, and the chief characteristics of which are favoritism and cowardice. They are determined that they will no longer be the pawns in the game; they will be the players.

Any party which in its heart keeps faith with them, which does not trifle with their confidence or its solemn obligation to govern, they will stand by with almost Pythian loyalty, but woe unto the unfaithful. They will spew them out of their mouths.

The hope of the Democratic Party and the hope of liberalism today lies in the West, the South, and the laboring man, the small-business man, and the small farmer of the North. This is the most important fact in the politics of the United States today.

We of the West and the South do not harbor ill will against anyone or any section and we would urge our unity only to preserve such self-interest as is to the good of the whole country. Yet we are natural allies and both of us have the common experience of having been sorely neglected until this administration came into power.

We have in common the problem of how to get a fair share of a nation's income for our agriculture; of how to break down a system of discriminatory freight rates which are throttling our efforts to establish industry which Nature has made our birthright; of how to obtain sufficient capital for our natural development and to free ourselves from the shackles of absentee proprietorship; the problems of conservation and restoration of our natural resources of forest and soil; the problem of flood control, irrigation, the development of our potential resources of water power, and the fair distribution of the blessings of modern science. Above all, we have the essential problem of keeping ever uppermost in our national policy human welfare, human health, human hope, human happiness beyond everything else.

And these things which we of the West and the South have in common we share with our brethren of the North who are the people of the North. They are asking in principle the same things we are seeking—a fair place in the abundant sun of our national life, fair wages, fair working conditions, fair security for their jobs and their old age, fair access to the avenues of opportunity, fair hope for their children to be able to find a place where they too may work, play, live honorably, and die peacefully.

If you will allow me to do so, I should like to come to you friends of the West not only as a representative of a great State but as an ambassador of good will from your good neighbor—the South. We of that South need your friendship; we extend to you our friendship in return. We need your help in our struggles; we know the Herculean battle you are winning, and we want to be helpful to you. We need your sympathetic understanding of those problems which are peculiar to us; we pledge you that we will judge you neither harshly nor hastily in any case.

Let me tell you fellow young Democrats, how very proud I am to be able to be one of this great assembly. I congratulate every one of you upon being here and upon the high purpose which brought you here. I congratulate you upon the decision which I know you have made—that the Young Democratic Club movement of America is not a training school for ward politicians, but is a great national forum where young men and women who are able and unafraid, who have in their hearts ideals and in their souls dreams, may give new vitality to our age-old aspirations for a better life.

The young men who went out to war in 1917 carried the heavy burden of a nation's honor and a nation's objectives. A responsibility no less solemn for a nation's future rests upon us young men and women of this day. As Woodrow Wilson said in 1912, let us say in 1938: "The Nation has been deeply stirred, stirred by a solemn passion; stirred by the knowledge of wrong, of ideals lost, of government too often debauched and made an instrument of evil. The feelings with which we face this new age of right and opportunity sweep across our heartstrings like some air out of God's own presence, where justice and mercy are reconciled and the judge and the brother are one. We know our task to be no mere task of politics but a task which shall search us through and through, whether we be able to understand our time and the need of our people, whether we be indeed their spokesmen and their interpreters, whether we have the pure heart to comprehend and the rectified will to choose our high course of action."

The young men and women of 1917 did not fail. The Nation knows that its future is glorious and secure in the hands of its young men and women of 1938.

Our Waterways and Our National Defense

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. LISTER HILL, OF ALABAMA, NOVEMBER 21, 1938

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an address which I prepared for delivery at the annual meeting of the Mississippi Valley Association on the 21st of last November, on the subject Our Waterways and Our National Defense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, delegates, and members of the Mississippi Valley Association, I sincerely appreciate the opportunity which your invitation gives me to attend this year's annual meeting of your association.

Your association's very able executive secretary, Mr. Lochlan Mackay, suggested that I discuss Our Waterways and Our National Defense. In the light of present world events, no more appropriate and pertinent subject could be discussed at this annual meeting of your association.

With the twentieth anniversary of the armistice just passed, the world enters a new cycle. Twenty years ago the World War, which cost 33 nations $186,000,000,000 and the lives of 10,000,000 men, ended with Germany's defeat. Today Germany arises from defeat and appears on the way toward the mastery of central and southeastern Europe.

A gigantic world armament race is on. We have the strange paradox that we can hope for "peace in our time" only by increased armaments. The New York Times in a recent editorial entitled "Twenty Years After" says:

"It is a fact both fantastic and deeply discouraging that on this the twentieth anniversary of the end of the World War sane men living under a democratic government in the safest of all nations should be called upon to recommend a further increase of American armaments. Yet that action is plainly forced upon us by the circumstances of the world in which we live. So long as offensive armaments are piling up in the hands of nations whose purposes there is reason to distrust, the ordinary rules of prudence and of common sense require that we be prepared. There is no present alternative but to make certain that our Navy is adequate to the defense of our coast line and our outlying possessions; that our

Army, while moderate in size, is brought thoroughly up to the minute in the matter of modern mechanical equipment; above all else, that our defensive forces be greatly strengthened in the air."

We read in London dispatches that Great Britain will add another $400,000,000 to her budget estimate of $600,000,000 and spend a billion dollars for aircraft next year, and that five or six thousand planes have been ordered.

In modern warfare the national security of a nation is not manpower but machine power. Modern warfare has become mechanized, and those countries like China and Ethiopia, without adequate war machines are helpless to defend themselves against the perfected and destructive war machines of Japan and Italy.

Mr. Churchill in recent London press dispatches is credited with saying that England must gain the supremacy of the air. It was not the sword of Damocles that hung over the heads of Chamberlain and Daladier at Munich, but it was the supremacy of the air armaments of Germany and Italy, as compared with the air forces of England and France.

Because of the recent changes in the balance of power in Europe and the Far East we have not only national-defense problems but economic and national trade problems as well. To solve these problems do we not owe it to ourselves to inquire whether among our rich natural resources we may have any upon which we may draw indefinitely and without exhaustion for our national defense and for our social and general welfare?

Even casual survey of our natural resources shows that our rivers can be used as a perpetual contribtuion to our national security and our industrial growth.

Waterway improvement today means locks and dams, and where dams are built power may be developed—all of us are familiar with that simple fact—but do we realize what this power along our waterways can do for national defense? Let us review the facts briefly.

As we survey the dramatic history of iron and steel since the first iron works of colonial days, established in 1643, nearly 300 years ago at Saugus, Mass., and soberly think of the many wonderful steel alloys that have brought a revolution in the steel industry in the last 25 years, when we marvel at the dramatic evolution and industrial history of aluminum and magnesium, and their alloys, and when we contemplate the amazing triumphs of the chemical and electrochemical industries I confidently declare to the Mississippi Valley Association that the power resources of our rivers are most important for our national security and for our social and general welfare.

Steel is not what it was 50 years ago; it now lasts twice as long as it did then, because of the scientific and technical developments in almost numberless steel alloys—stainless steels and rustless steels. Let me emphasize that all these alloy steels are produced in electric furnaces requiring cheap power.

While I do not forget that Disraeli once said, "There are statistics and statistics, and then there are liars," yet there are statistical facts about the steel industry that not only inspire us but that give us the proud assurance that in the steel industry we lead the world. The investment in the steel industry of our country amounts to nearly $5,000,000,000, and that industry spent over $9,000,000, in research in 1936 and provides a livelihood for nearly 600,000 employees. The industry expended nearly $200,000,000 in 1936 for new construction and equipment, and a very substantial part of this expenditure was made for building electric furnaces for the production of alloy steels. We find the range of alloy steel manufacturing running from coffee pots and surgical instruments to the Zephyr stainless steel streamlined trains of the Burlington Railroad.

In the field of alloy-steel production the latest announcement is that alloy tin plate will be produced, and it is claimed that this will prove a revolution in the tin-plate industry.

The evolution of the aluminum industry, now 50 years old, is fascinating. Unknown 50 years ago, aluminum has come to be fourth among all the commercial metals in point of world production when measured by volume. We find the amazing and varied range of aluminum manufacturing running from coffeepots to airplanes and the streamlined aluminum trains of the Union Pacific Railroad.

In transportation by rail, highway, water, and air there has been a revolution in the use of alloy steels, aluminum, and magnesium and their alloys.

Fifty years ago aluminum was worth $8 a pound, compared with 20 cents a pound today. It is claimed that in the aluminum industry there are 200,000 employees engaged at this time in making aluminum cooking utensils, and that 400,000,000 pieces of aluminumware are in use in the Nation's kitchens.

One of the largest uses of aluminum is in the aviation industry, and in our plans for increased air defense we should keep clearly in mind that three-fourths of the weight of a modern airplane is said to be aluminum.

In the wonder world of the chemical industry the latest interesting announcement is that the Du Pont Co. will build a $7,000,000 plant in New Jersey for spinning synthetic yarn from "nylon" that will be as "strong as steel." The basic raw materials required for producing these synthetic yarns are coal, air, and water. It is claimed that the production of these synthetic yarns will relieve us from further heavy importation of Japanese silk.

I would forfeit any hope of your indulgence or claim upon your patience if I undertook to give you the statistics of the vast electrochemical industries in our country; I cannot refrain, however, from reminding you that at Niagara Falls alone there have been produced more than 100 electrochemical and allied products, with plant investment of more than $100,000,000. The products have a sales value running from $75,000,000 to $100,000,000 annually.

The contribution of the water power at Niagara Falls and the electrochemical plants it serves in winning the World War are well known. This should not be forgotten but should be most especially remembered at the present time. When war comes to a great Nation like ours, it is the power supply and not the manpower which limits military strength. Power must be had for machines, munitions, and explosives, and manpower alone stands helpless without them.

Our weakness in this respect during the World War was emphasized by Grosvenor B. Clarkson, late Director of the United States Council of National Defense, in his admirable book entitled "Industrial America in the World War," in which he says:

"The shortage of electrical power in some of the congested centers, such as Pittsburgh, Buffalo, Niagara Falls, Philadelphia, Akron, Ohio, New Jersey, and a number of places in the South and elsewhere, became alarming in the fall of 1917 and the winter of 1917–18, and it became necessary to apply the priority principle very strictly, rationing and even withdrawing all power from some nonwar industries."

It is our congested centers which face power shortages in time of war. Knowing this, we should profit by our experience and locate our peacetime military plants near our large sources of electrical power. Each such military plant becomes a nucleus for an independent source of war supplies, safely removed from great cities which are the natural targets of the enemy.

Let us see where the power and the raw materials for producing our military essentials are to be found; for wherever they are most abundant, there our national-defense plants should be located. In none of the river valleys of our country can there be found a great power supply together with such a variety and abundance of the necessary raw materials for national defense as is found in and near the Tennessee Valley.

Consider aluminum: In the Tennessee Valley we find that the water power necessary for aluminum production is abundant and can be economically developed. In 1935 I inserted in the CONGRESSIONAL RECORD, in the course of my remarks in the House of Representatives on the Tennessee Valley Authority amendments, the figures on the total horsepower installation of the Aluminum Co. of America in the United States and Canada. These figures showed that the grand total hydroelectric power installations owned by the Aluminum Co. of America amount to an ultimate development of 2,721,955 horsepower, and a present development of 1,566,955 horsepower. Since my research of these facts in 1935 I find that my figures are too conservative.

On the Little Tennessee River alone we find the Aluminum Co. of America has installed at three power dams 342,000 horsepower. I am unable to give you the exact figures as to the capacity of these plants, but in the year 1937 the Alcoa aluminum plant required approximately 1,000,000,000 kilowatt-hours for its operation.

In addition to the developments of power by the Aluminum Co. of America, there are other water powers on the Little Tennessee and tributaries that invite development. Reports indicate that on the Little Tennessee and its tributaries there are perhaps five additional undeveloped sites, including the great Fontana Dam site, and that the annual kilowatt-hour capacity of these sites, added to present developments on the Little Tennessee, will amount to not less than 2,000,000,000 kilowatt-hours annually. Thus you will see that the capacity of the Alcoa Aluminum plant can be doubled when the available water powers of the Little Tennessee and its tributaries are developed.

One of the most important dams proposed by the Tennessee Valley Authority is the Fontana Dam on the Little Tennessee River. This dam is to be about 450 feet high and will create a great storage lake. It will improve the flow of the Little Tennessee and the Tennessee Rivers and add appreciably to the navigable depth of the Mississippi River below Cairo. It will justify a probable hydroelectric installation of 200,000 horsepower.

In the production of virgin aluminum, the Aluminum Co. of America has a complete monopoly. If the Government owned the power on the Little Tennessee and its tributaries, the Government could control and regulate, in part at least, the aluminum monopoly. I contend that the Government should build the Fontana Dam and own it, and that negotiations with the Aluminum Co. for its holdings at the Fontana Dam and in its reservoir area should be resumed as early as possible. I further favor and shall insist that the Government build all of the dams on the Little Tennessee River and its tributaries, own and control them, and by this ownership, in part at least, control and regulate the aluminum monopoly.

Dr. A. E. Morgan testified before the Tennessee Valley Authority Investigating Committee at Knoxville that the breaking off of negotiations between the Tennessee Valley Authority and the Aluminum Co. of America with reference to the Fontana Dam would probably cost the Government from $15,000,000 to $25,000,000. While I have respect for the former Chairman of the Tennessee Valley Authority, he obviously is mistaken when he stated that the Government would lose a trading point with the Aluminum Co. of America that would cost $15,000,000 to $25,000,000. The reason is plain.

The Aluminum Co. of America cannot build the Fontana Dam without a license from the Federal Power Commission, and hence, fortunately, the Government controls the building of the Fontana

Dam. I hold that the Government has the immediate responsibility of building it for national defense. With the expansion of the aviation industry, and with the need of additional aluminum for our increased air defense, negotiations with the Aluminum Co. should be resumed and concluded as promptly as possible, the dam site should be tested by borings during the coming year, and appropriations should be made by Congress not later than 1940 to start the building of this dam by the Government as a necessary air defense project.

If you wish a definite example of a river's contribution to our national preparedness for air defense, I cite you to the Norris Dam on the Clinch River. The power plant at this dam is furnishing power to the Aluminum Co. of America, making possible the increased capacity of the Alcoa aluminum plant, and causing the building at Mobile, Ala., of a large plant by the Aluminum Co. for treating imported bauxite ores to produce alumina to be supplied to the Alcoa aluminum plant in the electrolytic production of virgin aluminum.

It will not escape you that these increased plant capacities have given increased employment to labor. Our greatest and most difficult problem is unemployment, and when the water power on the Tennessee River can serve additional industrial plants, either for national defense or peace purposes, it will give additional employment to labor.

Recently the Federal Power Commission has issued a most informative and illuminating report on the subject of power requirements in the electrochemical and electrometallurgical and allied industries. In this report the Power Commission gives the consumption of electric energy per year in kilowatt-hours at the present time, and estimates for future requirements, for the production of aluminum, copper, electrolytic zinc, magnesium, and other electrometallurgical and electrochemical products—all needed in national defense. The total past requirements for the entire list of products given by the Commission amounts to over 13,000,000,000 kilowatt-hours annually, and at the end of 5 more years there will probably be needed over 17,000,000,000 kilowatt-hours annually.

The most reliable, efficient, and economical power for serving the electrochemical and electrometallurgical industries for national defense in time of war, and for industrial uses in time of peace, is the water power of our rivers. Our mineral resources constantly diminish with use—even our iron ores will become exhausted in time, but hydroelectric power is truly inexhaustible—it is wasted only when it remains undeveloped.

We find that there are those who are both sincere and well-meaning who contend that the water power on the Tennessee River and its tributaries should not be sold to electrochemical and electrometallurgical companies, and that to do so will deprive the public of its power yardstick.

In the first place, I hold that power for national defense should have preference over all other uses of power on the Tennessee River; and second, very happily, there is ample power on the Tennessee River which can be developed for serving both national defense needs and the Tennessee Valley Authority yardstick consumption without depriving either.

The Tennessee Valley Authority reports that there will be an installation of nearly 2,000,000 kilowatts at all of the dams proposed by the Authority in its unified system when all the installations in the system are completed. This total installation, when completed, will be four times as much as the hydroelectric power installations of the Alabama power and Tennessee Electric Power Cos. at all of their power dams on the Coosa River and the Tennessee River and their tributaries.

Let us admit for the purposes of this discussion—I do not admit it as a matter of fact—that when the total installation of about 2,000,000 kilowatts in the Tennessee Valley Authority unified system are completed there will be a shortage of power for yardstick consumption if a substantial part of the 2,000,000 kilowatts is used for national defense electrochemical and electrometallurgical plants.

I have already pointed out that when all the available power on the Little Tennessee and its tributaries is developed, there will be sufficient power to double the present capacity of the Alcoa aluminum plant. The capacity of power sites on the French Broad and Holston Rivers and their tributaries is alone far in excess of any probable demand of both yardstick power and industrial power. The United States engineers, in their final report on the survey of the Tennessee River and its tributaries, located and designated 52 proposed power projects and 20 proposed reservoir projects on the French Broad and Holston Rivers and their tributaries.

I cannot give you the kilowatt capacity of each of these power and reservoir projects on the French Broad and Holston, but on the Big Pigeon, a tributary of the French Broad, the Carolina Power Co. has a completed project at Waterville with an installation of 100,000 kilowatts, and the United States engineers located and named six proposed projects on the Big Pigeon below Waterville. It is conservative, I think, to say that the total power available for development on the French Broad and Holston Rivers and their tributaries will be in excess of 1,500,000 kilowatts.

I refrain from taxing your patience to the breaking point by attempting to state the possible power capacity at the many power sites reported by the United States engineers on the tributaries of the Tennessee River below the junction of the French Broad and Holston.

It has been suggested that the power being developed and proposed on the Tennessee and its tributaries at the present time by the Tennessee Valley Authority can find a market in Cincinnati, Louisville, and other Ohio Valley cities, and also in the Atlanta power area. I am unalterably opposed to this suggestion.

If the power developed, as proposed by the Tennessee Valley Authority in its unified system, is sold to cities situated like Cincinnati, Louisville, and Atlanta, and if it should prove that this power is needed in time of war, when mass power is absolutely necessary for mass production, we will find ourselves building steam plants because the power on the Tennessee River will not be available.

It is contrary to reason and economy to propose to ship "white coal" from the Tennessee River white coal mines when the "white coal" mines on the Cumberland River are idle and going to waste.

United States engineers report that there are possible developments of power on the Cumberland River with a total installed capacity of 1,000,000 kilowatts. The Cumberland River deserves and is entitled to the power market that is available in Cincinnati, Louisville, and other Ohio Valley cities, because the power sites on the Cumberland are 100 to 150 miles nearer to these cities than are the power sites on the Tennessee.

Likewise, in the report of the Alabama-Coosa, the district engineer makes a very significant statement, to wit:

"The division engineer finds that in either case the revenue may be expected from the sale of power at current rates to provide for the amortization of the costs of the dams and reservoirs, with large favorable balance, if and when the power market expands sufficiently to absorb this additional power."

The United States engineers, in their report on the survey of the Cumberland River, state that when the power market may be sufficient to absorb the power the most economical, efficient, and desirable plan for the navigation improvement of the Cumberland River is by high dams and locks.

So we find that the quickest way to improve the navigation of the Alabama, Coosa, and Cumberland Rivers is to develop their power. This is true of many other navigable streams throughout the Mississippi Valley and elsewhere. Power development not only creates a commercially feasible navigation improvement but brings the industries from which originate new freight movement by waterway, rail, and highway.

Keenly interested as I am in the improvement of the Alabama-Coosa Rivers by building joint navigation-power dams, I shall always oppose the transmission of power from power sites on the Tennessee River to Atlanta, when that city is nearly 150 miles nearer to the power sites on the Coosa River and its tributary, the Etowah River.

I disagree with the policy of the Tennessee Valley Authority in transmitting power from Muscle Shoals and Pickwick Landing power stations to Arkansas for the reason that the Arkansas power market ought to support and sustain the building of power-navigation dams and reservoir dams on the Arkansas River and its tributaries, especially the White River in the State of Arkansas.

To transmit power from the Tennessee River to Ohio Valley cities, to Arkansas, and to Atlanta is an unjust discrimination against the Cumberland, the White, and Coosa Rivers, and denies them their legitimate market needed to support the efforts of Senators and Members of Congress urging that the Cumberland, White, and Coosa Rivers be improved in the same way that the Tennessee River has been improved.

In our plans for the national security of the country in emergencies and for the expansion of our industries for increased labor employment and the Nation's prosperity in times of peace there are lessons that we should diligently learn from Germany's rise from her knees since Versailles to her present position as one of the world's great powers. Germany has synchronized armament and industry. When Germany needs materials not found within her borders for armaments or industry Germany's industrial scientists seek them, and find them.

Mr. Kettering, the industrial scientist in charge of research for General Motors, made what I think was an unfortunate statement when he said, at a dinner given by the president of General Motors in New York last week, "When people ask me what we are going to do when the supply of oil runs out I haven't the slightest idea, but we are going to do something long before it runs out." Compare this statement of Mr. Kettering's with what the industrial scientists of Germany have done in the hydrogenation of coal for producing motor fuel to protect Germany against the necessity of oil importations and safeguard her against the day when the supply of petroleum in the world fails.

More pertinent still to our air-defense armament plans is what Germany has done in producing magnesium for building airplanes, thus freeing Germany from depending upon aluminum alone for airplane building. Germany produces magnesium because she has to import her bauxite for the manufacture of aluminum.

Major Al Williams writes of Germany in one of his articles on air war: "I saw sheets of magnesium being molded and stamped by automatic machines, as cowling for the engines. Magnesium is brittle, hard to handle. My American aircraft manufacturer friend commented that we in America had not learned to handle magnesium sheeting as yet. I saw sheets of magnesium being stretched over forms where a one-time operation completed an intricately shaped covering for an airplane."

These two German examples I give you are merely symbols of others that challenge our study. How long, I ask, will our deposits of bauxite last for producing aluminum? We should know how long our bauxite deposits will last, but we do not know, and I regret to tell you that the Power Commission, in its report to which I have referred, states that the extent of our bauxite deposit is not known.

We must synchronize the Government's armament plans with our country's industrial plans, and to do this we must have cooperation.

The aviation industry is in its infancy, and the industry has now become a matter of national concern. No longer should it be left to the Aluminum Co. of America, the sole producer of aluminum in this country, and the Dow Chemical Co., the sole producer of magnesium, to say how much and where aluminum and magnesium shall be produced. It should not be left to the steel industry alone to say where the alloy steel plants in this country shall be located. The Government must have a voice in choosing locations to protect the national security of the country.

It cannot be left alone to the corporations mining zinc and copper in east Tennessee to say that zinc and copper concentrates shall continue to be shipped from east Tennessee to the zinc and copper electrolytic plants 1,000 miles away. The zinc and copper companies should link themselves with the Government's armament plans, and build the zinc and copper electrolytic plants in east Tennessee, where economic common sense, and the country's security, dictate they should be built. The instances of zinc and copper are merely examples of numerous other cases of plant locations which manufacture products necessary in the Government's armament plans.

I do not know what the industrial corporations of our country consider they owe to the Nation, but I believe that we will agree, that the great manufacturing corporations of our country owe their complete cooperation to protect this country against the galling humiliation which France and England suffered at Munich. Indeed, I believe that they owe more than mere cooperation. I believe, for example, that the Aluminum Company of America and all other electrometallurgical and electrochemical companies which are furnished power by the Tennessee Valley Authority should in time of war operate without profit all plants served by Government power.

I believe the Tennessee Valley Authority should insist that in every contract with every individual corporation manufacturing products necessary in time of war there shall be a provision in the contracts that all such plants served with Government power shall be operated in time of war without profit.

The power companies of our country have failed to recognize their just obligation to society—to the public. They have failed to aid the Government in national security in not promoting and encouraging the electrometallurgical and electrochemical industries of our country. I particularly refer to the Alabama Power Co. and the Tennessee Electric Power Co., which not only have not encouraged these electrochemical and electrometallurgical industries, but on the contrary have fought the companies which proposed to the Federal Government the establishment of these industries at Muscle Shoals.

These power companies failed to give the rural consumer the same electric lighting service as the urban consumer enjoyed. Due to the brave, prophetic, and unconquerable Senator GEORGE W. NORRIS, more than anyone else, hundreds and hundreds of farm homes now enjoy plentiful and cheap electric power with all its benefits and its blessings.

I would not attempt on this occasion to eulogize Senator NORRIS, but I do wish to say how much I admire, respect, and esteem him, and I pray that Heaven may keep and save him for his own and his country's sake.

I consider the Tennessee River a natural national defense river. Each of the several dams on the Tennessee River constitutes a unit of national defense. When we are called on to mobilize industry for national defense, we must mobilize mass power service. The late World War proved the accuracy of this statement.

A canal should be cut connecting the Tennessee River with the waters of Alabama linking the Tennessee with the great coal and iron fields of Alabama and the port of Mobile.

In preparing our air defense we find that our aircraft plants, and engine plants, are almost without a single exception located in danger zones, and long ago our Army War College declared that all our larger manufacturing plants serving military purposes should be established and maintained in safety zones.

I hold that the American aircraft industry should form the American Air Defense Corporation, in which should be included not only the manufacturers of aircraft and accessories but the producers and fabricators of light metals and other essential aircraft materials.

This corporation, with the aid of the Government, should build a great plant at Muscle Shoals for the mass production of aircraft. This plant should be made an important center of aeronautical research and a training station for pilots, mechanics and other expert personnel. These men should not only be trained to fly but should be given a thorough knowledge of the construction details of the various types of aircraft.

The corporation should organize a light-metals laboratory to develop methods for producing aluminum, magnesium, and other light metals at lower cost. It should work out these methods through experimental plants and make the results available to the industry.

An overruling Providence that controls the destiny of the United States and all nations and peoples seems to have given us the great resources of the rivers of our country to safeguard our national security, and to promote our social and industrial welfare. Our country is not only fortunate—it is truly blessed—in that the people have in Franklin D. Roosevelt a statesman who has had the dauntless courage and the creative genius to construct in our rivers dams built by the people, for the people, and to forever belong to the people. President Roosevelt has taught the people of this country that our rivers are not just rivers—they are the people's treasures.

When we consider the facts which have been disclosed about our rivers in the last 6 years let us be grateful that President Roosevelt has saved the Nation from the reproach that would have been only a little short of the willful destruction of the country's richest and most enduring treasures.

Among our river treasures, the Tennessee is a jewel which we should make America's Gibraltar in peace, and America's bulwark of national security in war. Let us highly resolve that the treasures of wealth in our rivers shall "hold our attention and our enthusiasm steadily, now and in the years to come, as we strive to show in our life as a nation what liberty and the inspiration of an emancipated spirit may do for man, and for society, for individuals, for States, and for mankind."

Jackson Day Dinner

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. JAMES W. MORRIS, ASSISTANT UNITED STATES ATTORNEY GENERAL, PORTLAND, MAINE, JANUARY 7, 1939

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the Honorable James W. Morris, Assistant United States Attorney General, at Portland, Maine, on January 7, 1939, his subject being Effective Democratic Government.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am very happy to be with you this evening. Your magnificent and wonderful State is an attraction to all the country. No one can know as I do the beauty of your lake regions, the majesty of your Katahdin, and your marvelous coast without sharing the pride which you have in your great State. No one can have the dear friends as I have in your State without knowing what fine and genuine people you have in Maine. I repeat it is a very great pleasure to be the one to speak for the national committee, as I do for the moment, in expressing to you its sincere appreciation for the splendid work the Democrats of Maine have done and are doing for our party. We confidently hope that in 1940 Maine will "point the way" in the right direction—another great national victory for Democracy. The Democratic Party has a right on its record and a duty to the rest of the country to ask for the support of Maine.

It was a great Republican who, in immortal words, best stated the American concept of our National Government. He called it a "Government of the people, by the people, for the people." He could see, as he did, the great objectives of our Government as well as its form, because he was a great American. I take it that we all agree that America is the product of no one man, of no one class, of no one generation, of no one political party, but that it is the product of all. I do firmly believe, however, that the Democratic Party more than any other single influence has done battle for those ideals of American government which have best furthered the welfare of the American people. It is only to the extent that it does do so that it has any claim to greatness, and when it does not do so it not only should not have the confidence and support of the American people, but we can be very sure that it will not.

It was Washington and the other framers of the Constitution who struggled with and accomplished the monumental task of constructing a "government of the people." The weak association of the original 13 State governments under the Articles of Confederation had proved pitifully impotent in dealing with matters of national concern. Theirs was the mighty task of building a government that would function—one that had power to deal directly and adequately with those matters of public interest with which the State governments were not competent to deal. One cannot study the proceedings of that great Constitutional Convention without being strikingly impressed that, with few exceptions, the framers, while

recognizing that the source of governmental power derived from the people governed, did not feel that the need for emphasis lay so much on democracy to make the government work as it did on checks and balances to keep the representatives of one section or group of States from doing harm to others. Even so, it is perfectly clear that they did the task at hand so well that within the framework of that Constitution the spirit of America, directed by the great leadership we have had at critical times, has brought to reality not only a government "of the people" but one which gives full meaning to Lincoln's prophetic words.

We have met here tonight to do honor to that stalwart leader of democracy whose election as President a century ago gave actuality to ours being a government "by the people." Until then candidates had been chosen in congressional caucus and their election usually determined in the House of Representatives. That was the way Andrew Jackson lost in 1824, but 4 years later the story was very different. The masses of the people had been almost in arms against hard times. They were convinced that Old Hickory had been defeated by political manipulation. They felt that to have him in the White House would be such a victory for them that the forces which had controlled the Government and which had made for inequality of wealth and burdens, would be put to rout by the rugged old hero of the Battle of New Orleans. Popular demonstrations took place all over the land and enthusiasm for this idol of the plain people reached a pitch which never before had been known. When he was elected by an overwhelming majority their jubilation was almost frenzied. At last the country was to be governed by the people, not by an influential few.

It is hard for us today to appreciate fully the very strong and sincere differences of view then existing as to the nature of the National Government. That it was a Government formed "by the people" and not "by the States," answerable "to the people" and not "to the States," was severely challenged in Jackson's time. Old Hickory had no misgivings and not much sympathy for anyone who did have. Great figures of that day battled over the issue as to whether or not a State could nullify the acts of the National Government. Webster and Hayne rivaled the orators of ancient Rome and Greece; Calhoun and Clay used strategem. Old Hickory, with a directness and simplicity that was characteristic, gave his famous toast, "Our Union, it must be preserved," and sent a message that nullifiers could talk, write resolutions, and print threats to their hearts' content, "but if one drop of blood is shed there in defense of the laws of the United States, I will hang the first man of them I can get my hands on to the first tree I can find." It was Benton who said to Hayne, following that message: "I tell you, Hayne, when Jackson begins to talk about hanging, they can begin to look for the ropes." Nullification did not again arise while Jackson was the leader of the Nation. Unhappily, however, the question was not answered with complete finality until that terrible conflict of brother against brother ended at Appomattox—a decision, costly as it was, which forever determined that the Union will be perserved.

Jackson did many courageous things. His determined and forthright action brought settlement from France of the delayed claims of America for acts of French spoliation. He secured the opening of the ports of the British West Indies to our trade. He favored internal improvements which contributed to the national welfare and defense, but stoutly opposed those at national expense which had only local effect. He stood for aid and protection to American industry by means of the tariff, believing, as he did, that it would benefit the whole by securing a market for agriculture.

It was, however, in that great struggle which he had with the Bank of the United States that the indomitable spirit of Jackson and his unbeatable determination to make this a Government "by the people," instead of by any other influence, was at its best. The bank which had been chartered by the Congress was controlled by 25 directors, only 5 of whom were appointed by the President of the United States, the remainder by private stockholders. Nicholas Biddle was its president, and with its 27 branches and agencies, it ruled the commerce, the industry and the agriculture of the Nation. It is true that it had given to the country the most satisfactory currency system it had so far had. It was, however, equally true that it was an institution very frankly concentrating control of the financial affairs of the people in the hands of a few men. By expanding or contracting credits, it could make money plentiful or scarce, business brisk or dull. There were those then, as there are today, who sincerely and conscientiously held to the belief that such is the best way. Jackson did not share that belief. As Marquis James, in his biography of Jackson, says:

"He felt that the financial structure of the country should be so reshaped as to diminish what he considered to be unwholesome power over the masses by an isolated coterie of almost unreachable and almost unteachable men."

The story of that fight is a stirring one. Every move made by Jackson was met with a counter move by the bank. Jackson intimated that he would not approve a renewal of the charter. The bank then made loans where lending would bring supporters to the bank. The bank called loans where pressure of that kind would intimidate opposition. A general depression with its severe hardship set in. Memorials poured in upon the President. Delegation after delegation called upon him to change his course. His implacable reply was, "Go to Nicholas Biddle." Feeling ran high. A meeting in Pennsylvania gave it as their opinion that, "if Andrew Jackson is sustained in his reckless usurpation, this country will cease to be a republic." On the other hand, another meeting in Pennsylvania declared the "United States Bank to be corrupt and corrupting." Biddle became contemptuous of the pleas made to him to alter his course. The relief of business was to him not good strategy. "The bank has taken its final course," he said, "and it will not be frightened nor cajoled from its duty by any small driveling about relief to the country." He refused a loan of $300,000 to the State of Pennsylvania, whereupon the upper house of the legislature of that State resolved that the bank ought not to be rechartered by Congress. Within 48 hours the Governor of New York recommended a stock issue by the State of four or five million dollars to be loaned to State banks to ease the stringency. The legislature authorized $6,000,000. And then Biddle blundered. He stated that he would have eased the plight of New York except for the action of Pennsylvania. It was a fatal admission. The country now knew that Jackson was right in his position that the financial needs of commerce, industry, and agriculture were at the mercy of capricious control. Within a few weeks in the Congress, the Senate tabled a resolution to extend the charter of the bank, and the House of Representatives adopted a resolution that the bank ought not to be rechartered, and that the public deposits which had been withdrawn by Jackson should not be restored. The fight was finished. His best piece of work as President—so Jackson himself put it—had been done. He had proved, as it had never been proved before, that this was to be a government "by the people." There is a touch of whimsicality about this picturesque character as he humorously expressed his only regrets in leaving the Presidency to be that he had been unable to shoot Henry Clay or to hang John C. Calhoun.

He understood the people, and they knew it. That is why they loved him so and believed in him. As Daniel Webster said, "What he did, he did with all his might." It is not surprising that, when asked by someone whether or not he thought Andrew Jackson would go to heaven when he died, his old colored servant, Alfred, replied, "If General Jackson takes it into his head to go to heaven, whose gwine to keep him out?"

A hundred years have passed. Another great crisis called for the leadership of another great man. Providence has been good to America in giving to it leadership of the kind it requires in critical times: A George Washington when we needed a government "of the people"; an Andrew Jackson when it had to be established that it was a government "by the people"; an Abraham Lincoln when the unity of that government was at stake; and a Franklin Roosevelt—when our national life had almost come to a stop—to prove that our Government can and must be "for the people."

And a government "for the people" is one which does not simply pay lip service to that phrase. It is one which uses its mighty powers to its fullest extent to deal with those problems of the people with which they individually cannot deal. Surely there never was a time when there was a greater need for that kind of government than when Franklin Roosevelt was called upon by the American people to make democracy work. We have no right to forget that then we were in truth on the brink of disaster. Business—industrial and financial—in a desperate situation, had almost ceased to function. A very large part of our economic machinery had actually collapsed. We were in the middle of a great national tragedy. With food, clothing, and shelter in abundance, there was an appalling Nation-wide want of those things. Although in the richest country in the world, people of every economic status had fear for the future. They were in despair at not being able to cope with the forces that were crushing them in mind, body, and estate. One-third of our people, constituting the agricultural part of our population, lacked the means with which to buy the products of industry. A large part of that one-third of our people engaged in industry lacked the means with which to buy the products of agriculture. The remaining one-third of our people dependent on these two great factors in our national life necessarily shared the same tragic hardships. The American people were completely "fed up" with the "do-nothingism" which had rendered their Government impotent to aid them when they were being crushed by forces with which only their Government could deal. In short, they wanted "a government for the people," and when they turned to the Democratic Party, under the leadership of Franklin Roosevelt, that is exactly what they got.

With a courage and vigor that was superb, with a leadership that was not short of providential, it was demonstrated that a government "for the people" could coordinate, unite, and articulate their efforts to save themselves from a ruin they could not otherwise be saved from.

After all, what is government for if not to do that which the general welfare of its people requires and which they cannot do themselves? Had not the National Government in the past undertaken to aid certain classes of the people where it was thought such aid was needed and would prove of benefit to the country as a whole? Had not so-called infant industry been nurtured with a tariff which all consumers had to pay? Had not the transcontinental railroads been built with Government aid, because otherwise they could not be constructed and the country would be without such transportation facilities? Did not the National Government aid the merchant marine and aviation so that these services could exist? In short, does not the preamble to the Constitution of the United States explicitly show that our National

Government was established to promote the general welfare? And, most important, Franklin Roosevelt knew how our Government, when we entered the World War, had dropped its easy-going, self-satisfied, and detail-worshipping habits and had swung into lusty hard-hitting action.

If a government, when it had to, could build an Army of 4,000,000 men, transport half that number across an ocean, and there have it do the kind of battle it did;

If a government, when it had to, could produce ships, and ships, and ships where there were none;

If a government, when it had to, could bring about huge increases in agricultural and industrial products for war needs;

If a government, when it had to, could do all of those things and many, many more in time to win a war that was being lost;

Then why should a government not be the effective agency of the people to deal—

With a Nation-wide relief problem,

With appalling unemployment,

With an insufficient purchasing power, and

The consequent decline of national income?

Why should it not be able to deal with the byproducts of those things such, for example, as bank failures, destitution of the aged and unemployed, and many, many other critical problems which do not know State boundaries but which uncontrolled make mockery of our constitutional right to life, liberty, and pursuit of happiness? Why, in short, should our Government not be able to be of the same high measure of service in time of peace as it had been in time of war?

There were many who felt sure that it could not, and, but for the courageous and determined leadership of Franklin Roosevelt, and the fine spirit of the American people, they were right. There is not one single thing easy about such a task. In the first place, there is not the popular enthusiasm and the willingness to subordinate personal interests for the general good, which are such powerful factors in time of war. But even more important is the absolute necessity of using only such methods and measures as will neither do injustice nor trench upon the substantial personal rights and liberties which all true Americans hold more precious than life. The object is to build up the industrial, commercial, and agricultural life of the Nation. Therefore nothing can or should be done which would destroy private initiative or otherwise seriously injure the economic machinery which is being mended. No; it is a terribly difficult task.

There were some also who, very strangely in the light of their later criticisms, proclaimed that what this country needed was a dictator. They had seen first one and then another foreign country turn to dictatorships from the democratic forms of government, which, in their cases, were weak and had proved inadequate to the needs of their people. Those who advocated this did not have the faith that Americans can make democracy work.

But America can, and under the leadership of Franklin Roosevelt, America has.

First, there was restored a purchasing power to more than 30,000,000 of our farm population which had lacked the means with which to purchase the products of American industry. Industry, thus stimulated, began to reabsorb a substantial part of the unemployed who had suffered idleness and privation because people could not buy what they made. The national income, instead of continuing its tragic decline, has arisen from thirty-nine and one-half billion dollars in 1932 to over $60,000,000,000 in 1938, and the present rate of increase is such that for the coming year it will surely be substantially greater. But of far more importance, in the long run, than this rehabilitation of our material resources was the restoration of the morale of the country—the spirit that makes America. Measures which have made for the security of the life savings deposited in banks; measures aimed at that soul-killing fear of want in old age and unemployment; provision for the care of those underprivileged who could not otherwise be cared for; relief to those who could not subsist but for such relief—but finest of all, relief in a way that did not break down the self-respect and hope of those being relieved; provision for the youth approaching an unemployed manhood, when organized crime was at its most hideous height, to give them healthful, clean, man-making service, close to Nature, where healthy hopes would reflect themselves in the America of tomorrow; and many, many more measures to obtain for the people of this country a fuller measure of security and protection against dishonest and unfair dealings. In short, practical, not theoretical, steps toward making America a better place in which to live.

No one, I suppose, will claim for these measures a perfection. America is grateful, I think, that action was not paralyzed with talk in a futile effort to obtain perfection.

The great outstanding fact, I think, is that since the depth of the depression our National Government in the hands of a Democratic administration, and under the guidance of Franklin Roosevelt, has been and is now a powerful, active force, doing battle day in and day out for the economic and social welfare of the whole people.

The task is not yet done, but I feel very sure that the American people have a confidence that it will be done, and that they will look to the Democratic Party and its leader for its accomplishment, rather than to those who have stigmatized these magnificent efforts as governmental interference. It is not interference when the east-and-west stream of traffic at a street intersection is held up alternately with the north-and-south traffic, so that both in good order can proceed. It is not interference to help those economically distressed, so that they will be assets and not liabilities to the Nation.

Can anyone honestly and candidly deny that the American people have made great strides in the past 6 years under the Democratic administration and its great humanitarian leader? Can anyone honestly and candidly deny that America today is stronger in its economic and social life than it ever before has been? Can anyone honestly and candidly deny that in a world troubled with threatening forces not to be so prepared would invite catastrophic tragedy? Our country has suffered agonizing trials, but our country, led by a Democratic President, has proved equal to them, and America, with the enlightened interest of her whole citizenship at heart, is unafraid to meet the future.

The American people want no dictators or foreign "isms," and they will have none, but they do want, and they now have, an American Government thoroughly adequate to their needs. In short, they want their Government as Abraham Lincoln said it should be, and as the Democratic Party under the leadership of President Franklin Roosevelt has made it, a government for the people.

Inaugural Address

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1939

ADDRESS OF GOV. ARTHUR H. JAMES AT HARRISBURG, PA., JANUARY 17, 1939

Mr. VAN ZANDT. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by Hon. Arthur H. James at his inauguration as Governor of Pennsylvania at Harrisburg, Pa., January 17, 1939:

Seventy days ago the people of this Commonwealth wrote a second Declaration of Independence. This declaration in effect was a statement of principles; not new ones, but a reaffirmation of faith in those unfailing guideposts along the lanes of human rights and constitutional government.

On November 8 last you voted for the principles of honesty, thrift, and integrity in government; for reawakened initiative; for common sense in the relations of your Government with industry, labor, agriculture, and all the other groups which make up our population.

You voted to restore the ship of state to control by the people, and to set sail on a course charted by the compass of constitutional democracy and two-party government.

JOINT RESPONSIBILITY

Your election called me from the hills of Plymouth to become your servant, charged with leading in an enterprise in which we have joint responsibilities. That enterprise is making Pennsylvania a self-supporting State in which her one-time prosperity may flourish anew.

You imposed upon me a solemn trust to do my utmost to see that your wishes be carried out.

A few minutes ago I took the oath of office and now address you as your Governor. I desire that my first act as executive head of Pennsylvania be to reaffirm all the pledges which I have made to the men and women of this State, as well as those contained in the Republican platform, and to promise you that I will spare no effort in attempting to return Pennsylvania to her proper place in the sun.

COMPLEX PROBLEMS

The problems facing our State are large and complex. They are far more than one man, unaided, could hope to solve. I have no magic wand, no rabbit in a hat, no Aladdin's lamp.

But I do have faith in the courage and enterprise of the people of Pennsylvania, in their intelligence and spirit of cooperation, and I bring to the office of Governor a full measure of my own courage and energy.

In the tasks before our State I want to help—and I want also to be helped. I will need, and I now call for, the aid and support and encouragement and patience and cooperation of all the men and women of this State, of whatever race, creed, party, or color, that together we may do for Pennsylvania the things which need to be done.

Especially do I call for cooperation by those who are in business and commerce—who, whether in a large way or a small, are employers. It is through the instrumentality of business and industry that Pennsylvania can hope to free herself from the distressing twin burdens of taxation and human misery which are presented by widespread unemployment.

EMPHASIS ON EMPLOYMENT

Previous administrations have placed emphasis upon unemployment. Today I should like to place the emphasis upon employ-

ment. I hope to see employment grow steadily until every idle man who wants a job can have one. To accomplish that we need the aid and confidence and forbearance of businessmen throughout the State.

The administration is going to try to help industry, and in return, industry must try to help the State.

In line with campaign promises, I propose the organization of a new branch of State government, a department of commerce, which will strive to halt the flight of industry from Pennsylvania and which likewise will endeavor to bring back to our State industries which already have left.

Specifically, this new department will be empowered to do the following: First, provide means whereby the advantages of Pennsylvania as an industrial State may be pointed out to those seeking sites for their industries; second, provide an opportunity for public hearings for complaints of adverse industrial conditions in the State; and third, provide a means whereby specific recommendations may emanate for the remedy or improvement of conditions affecting the expansion of business and industry.

CORRECTING OBSTACLES

By placing under this department a sufficient number of functions at present miscast elsewhere in the State administration, its operation should be made possible without additional cost to the taxpayer, while efficiency will be improved by coordinating all State activities in the three lines specified.

One of the principal tasks of this new department will be to investigate and correct punitive legislation directed against industry, whether overtaxation or otherwise. I have every confidence that the legislature will subject to thorough and sympathetic scrutiny all suggestions originating from this body or elsewhere looking to the remedying of improper obstacles in the path of industrial revival.

Pennsylvania has reawakened to the fact, already known to both labor and industry, that in this age of keen competition a customer for the State's mining, industrial, or agricultural products is hard to get, and once lost is doubly hard to get back.

The great market which we must revive and reopen is our own home market. We can make no better contribution to the national welfare than by restoring the full buying power of our 10,000,000 people.

That can be accomplished; it will and must be done. Many things will contribute to accomplishing it. The most important, of course, is large-scale reemployment at adequate wages. Another is by means of anything which encourages both the production and the consumption of Pennsylvania-made goods. We want no trade fences, no economic barriers, around our State, but, most decidedly, we want to help those who help us.

ENCOURAGING INDUSTRY

By means of this new organization Pennsylvania will be able to advertise Pennsylvania's advantages throughout the world, and at the same time will be able to offer to industry a new and friendly relationship—a new measure of sympathetic encouragement.

What Pennsylvania needs is a new kind of pump priming. She needs a private pump-priming program for prosperity in Pennsylvania—and I believe that the new department of commerce can promote exactly that. The pump which needs priming in this State is the pump of confidence. The springs of hate and fear and discouragement have been flowing freely, and their bitter waters have left a bad taste in everyone's mouth.

We need now to build for the future with hope and faith and courage. We need to bring private money out of hiding and put it to work. We want more pump priming by private capital and individual initiative, and less of it by public moneys and partisan greed.

Overspending and overtaxation have dried up the wells from which the waters of industrial life should flow. If the many experiments which have been tried upon us in recent years have no other value, they at least have demonstrated that neither man nor state can get rich by spending all he owns or can borrow. In the words of the famous Pennsylvanian whose birthday this is—as Benjamin Franklin wrote in his Poor Richard's almanac, "He who goes a-borrowing goes a-sorrowing."

EVIL PHILOSOPHY

Overspending is only another name for an evil philosophy of government which is as old as civilization, and which never has been known to work successfully—the theory of inflation. It remained for the New Deal philosophy to redress inflation and to rename it pump priming.

By means of constitutional principles first set down on Pennsylvania soil more than a century and a half ago, Pennsylvania and the United States grew great together. Issues and crises were taken in their stride. But in the midst of the world-wide economic depression of a few years ago our people suffered from a still more distressing depression—a spiritual depression—which led them to harken to the voice of the charmer and to abandon the one beacon which had always guided Pennsylvania aright, the guiding principles of constitutional American government.
